So much charcoal was lost in the recent floods, that prices have gone up 30 per cent. on the usual rates.

GOVERNOR YAMADA, of Oida Ken, will succeed Baron Sonoda, as Chief Commissioner of the Metropolitan Police.

THE Hyogo Branch of the Kanagafuchi Yarn Company commenced work on the 25th ult. with 40,000 spindles.

FRANCE has warned the Sultan that unless the Armenian persecutions cease, his deposition will be accomplished.

THE Paris *Figaro* publishes a stirring appeal by Mr. Gladstone to the French people on behalf of the Armenians.

DURING a big fire at the rice godowns at Osaka, on Wednesday, a Police-inspector and several constables lost their lives.

A COMPLETE panic prevails amongst the Derivishes in the Soudan, who are disorganized and are retreating to Omduraman.

THE autumnal review of the First Division will take place in the neighbourhood of Tatebayashi on or about the 10th of October.

SEVEN people lost their lives in Yokohama on Friday last through the breaking down of a temporary bridge across the Creek.

THE Cabinet is now completed, Marquis Hachisuka taking the Department of Education and Mr. Kiyoura the Department of Justice.

LACK of wind on Saturday again spoiled the Yacht races. Some of the boats did not get back into the harbour till Sunday morning.

H.E. LI HUNG-CHANG arrived at Yokohama on Sunday afternoon by the *Empress of China*,

from Vancouver. He did not land, but was carried straight from the mail-ship to the *Kwang-li* that had been sent to take him to Tientsin.

THE resignation of Mr. Ishizaka Shoko, M.P. for the 18th division of Tokyo, was accepted on the 28th inst.

THE statement that Russia and Japan have agreed to a joint protectorate over Korea, and that the Japanese are to evacuate that country, is without foundation.

MESSRS. Inouye Kakugoro and Fukuzawa Monosuke, of the Hokkaido Coal Mining Co., left for a tour to Shanghai, Hongkong, and Singapore by the *Empress of China*.

PROF. BURTON has returned from Formosa after making preliminary surveys for proposed new drainage and waterworks. He will return to the Island shortly to conduct other surveys.

THE Yokohama Choral, Chess, and Literary Societies commence their new sessions with satisfactory balances in hand and promises of successful work during the next six months.

MR. ZUMOTO MOTOSADA, who lately resigned his appointment as private Secretary to Marquis Ito, has started on a tour through the United States to watch the presidential election. He will then cross the Atlantic and visit Europe.

At a great meeting at Liverpool, Mr. Gladstone, who recommended that the warmest support should be given to the Government on the Armenian question, with the largest discretion, spoke with a ringing voice for an hour and twenty minutes.

MR. MIYANISHI ICHIBEI, a tea merchant of Teramachi, Kyoto, has brought a suit against Baron Otani Koson, Lord Abbot of the Hongwan temple, claiming that the temple unlawfully confiscated certain ground, valued at yen 35,900,700, some 360 years ago. The Kyoto Local Court has fixed the hearing of the case at a short date.

MR. JUSTICE MOWAT has sentenced Edwin Ryder, late second officer of the N.Y.K. steamer *Saikyō Maru*, to two years' hard labour for stealing a box of treasure from that vessel; and Edward Dawson, late third engineer to 15 months' hard labour, for receiving some of the money knowing it to have been stolen.

IN the Import trade, Textiles are lifeless, buyers seeming content to wait till they can make better terms. In the Metal market the same conditions prevail, and though nominally unchanged prices are drooping. The Kerosene trade is healthy and strong, and oil can only be obtained at a further advance in price. There has been good business done in Sugar, Takao having been moved in considerable quantities at a distinct advance, and Brown sorts generally have been taken at full rates and for more money. Whites are firm, Refined quiet but unchanged in value. The active demand referred to last week cleared 2,000 piculs of Silk off this market—then a frost set in, begotten of holders putting up prices \$30 to \$50, and nothing has been done since. A small movement has at length to be recorded in the Waste department, and buyers are mostly looking for low quality fibre. In the Tea trade the stock of leaf has been much reduced, partly due to a brisk demand for parcels of Common to Medium grade and to the fact that communications are not yet generally restored, and arrivals are consequently small. This has given holders of suitable parcels the opportunity of raising prices, which they speedily seized. Exchange has been very steady, no alteration in rates having been made during the past week.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The new Ministry has constituted a topic of strong comment this week, papers of pro-Government tone being conspicuously earnest. On the other hand, the *Tokyo Shimbun* and the *Nichi Nichi*, especially the former, are singularly reticent. Apparently they await an opportunity to attack with force. The *Nippon*, the *Kokumin*, and other journals, understood to be favourable to the Matsukata Cabinet, offer suggestion after suggestion for the consideration of the Ministry and its political supporters, the *Shimpo-to*.

The *Nippon* being something of a free lance, puts little restraint upon its comments. Persuaded that the new Cabinet is too feeble to retain a long lease of power, it denounces the idea of attempting to protract a lingering existence by means of a neutral attitude, and counsels a short life of decisive action. At the same time, judging from the organization of the Cabinet, our contemporary scarcely hopes for any display of Ministerial resolution. It detects the "camera influence" still at work, and the vice of favouritism still un eradicated. Hopeless of avoiding the reproach of being a Satsuma monopoly, the Cabinet nevertheless sought to maintain good relations with Choshu statesmen by keeping in office Marquis Saigo, who is reputed to be a kind of bridge between the two clans. Even that futile precaution did not seem sufficient. For the sake of conciliating Marquis Ito, Marquis Hachisuka was offered a portfolio; in deference to Count Inouye, Viscount Nomura was similarly honoured; for Marshal Yamagata's sake, Mr. Kiyoura was admitted, and Viscount Enomoto out of consideration for Count Kuroda. Seeing these things, the *Nippon* does not expect much from the new Cabinet. It did, however, hope at least steps would be taken to purge the Administration from accumulated abuses, even at the risk of shortening its existence. But even that expectation is apparently doomed to disappointment. The Ministry do not seem to have derived any benefit from the object lesson furnished by their predecessors. They have evidently failed to see that the downfall of the Ito Cabinet was primarily traceable to the admission of a foreign element, Viscount Takashima. Their ignominious collapse can be only a question of time. Still the *Nippon* has some curiosity to know whether they are really resolved to hold themselves responsible to the *Gen-kun* statesmen.

The same paper, and its alter ego the *Kokumin*, are anxious to have the attitude of the new Ministry distinctly proclaimed, so that their relations to the people and to the *Shimpo-to* may be placed beyond the reach of doubt. The confidence that the public originally reposed in the new Ministry, writes the *Kokumin*, is somewhat impaired by the unsatisfactory method of selecting the holders of some portfolios. Moreover, a suspicion has begun to be entertained by the people that the new Ministry are not really resolved on effecting radical reforms in the administration. Unless that suspicion be removed, the Cabinet can not look to retain popular confidence. The best plan would be to issue a manifesto as quickly as possible, whatever its contents may be. The *Kokumin* then gravely remarks that the public are eager to hear from the new Cabinet, first whether it is resolved to hold itself accountable to the Emperor and the people for its doings; secondly, whether its foreign policy will be steady; thirdly, whether it would undertake to expand the country's armaments in accordance with the dictates of national requirements; fourthly, whether it will really hold individual rights in respect; and fifthly, whether it will effect radical reforms in the Administration in the sense of retrenching superfluous expenses and removing incompetent officials.

The *Mainichi's* remarks on this subject are not more reassuring. It observes that the attitude of the *Shimpo-to*, taken as a whole, becomes more and more unfavourable towards

the new Cabinet, as though that party's support could not be counted on by the Ministry. Nor is the tone of the press less unfavourable, for even those that at first adopted a sympathetic attitude towards the Cabinet, now speak of it in greatly altered accents. The *Mainichi* is disposed to doubt whether the attitude of the people in general towards the Matsukata Cabinet is not one of disappointment.

The *Nippon* is eager to have the relation between the Government and the *Shimpo-to* clearly defined. At present, that relation seems to be one simply of mutual friendship and sympathetic understanding, no actual alliance existing between them. Such being the case, neither the Cabinet nor the Party have any real mutual responsibility. It follows that the actions of the two lack uniformity and occasionally are even antagonistic. That state of things must prove a source of trouble to both, for their rivals, the Liberals, will not make any nice discrimination as to the relation really existing between the Government and the Party, but will eagerly seize every opportunity furnished by the conduct of either to discredit both alike in the eyes of the people.

The *Chuo* is at a loss to account for the entry of Count Okuma into the Cabinet. His admission was not the result of his views having obtained the approval of the Ministry, or because he entertained any bold idea of having them carried, whether acceptable or not to his colleagues. He entered the Cabinet alone and unconditionally. Was it, asks the organ of the National Unionists, because he was tired, as well as convinced of the uselessness of vain talk in the capacity of an outsider, and because he had grown impatient to test his ability on the stage of real administration, that he consented to join the ministry regardless whether the principles and views he had always previously asserted were acceptable or not? If so, the *Chuo* can not but deplore such a manifest decay in the Count's spirit and energy. In another article, the same paper reminds the new Foreign Minister of a grave duty devolving upon him, namely, that of remodelling Japan's policy towards Korea, and reasserting her prestige in the Peninsula.

The *Kokumin* stands forth as the champion of petty Government clerks, while insisting that superfluous officials and superfluous expenses must be eliminated resolutely and promptly. As a reason why petty clerks should be treated with consideration, the *Kokumin* explains how the condition of a clerk drawing, say, 12 yen a month, actually stands. Even from that pittance, 10 per cent. is deducted as a contribution to the warships' construction fund; while an additional 1 per cent. is subtracted for the Survivors' Relief Fund. His actual income in thus reduced to 10.68 yen, a sum barely sufficient to keep body and soul together, seeing that the market prices of commodities have risen to an extraordinary extent. Our contemporary therefore advises the Government to lessen the number of clerks and to give larger salaries to those that are retained.

The *Yomiuri*, the *Mainichi*, and the *Kokumin* evidently echo the sentiment of the *Shimpo-to* when they argue that two Vice-Ministers should be appointed to each Department of State, one Executive and other Administrative, as is the habit in England. The present system is attended with several grave disadvantages. For example, when Vice-Ministers remain in office after the resignation of their chiefs, as on the present occasion, they are placed in the awkward position of having to condemn the very measures approved by the previous Administration; while should they resign simultaneously with their chiefs, Government affairs are in danger of suffering for want of experienced managers. The Matsukata Cabinet, observes the *Yomiuri*, stands on the superstructure left behind by its predecessor, for are not the Vice-Ministers the same as before and is not the personnel of the Bureaux essentially the same. The Matsukata Cabinet must organize its own officialdom, and

that can be effected only by appointing Vice-Ministers who shall undertake executive affairs and hold office independent of the Cabinet.

The want of a strict line of demarcation between executive and administrative officials, writes the *Mainichi*, has often resulted in a change of Vice-Ministers or Chiefs of Bureaux whenever the holder of a portfolio changed. The entry of Count Itagaki, for example, into the Ito Cabinet as Minister of Home Affairs, occasioned several changes in the subordinate officials of the Home Department, Mr. Misaki being appointed Chief of the Local Administration Bureau, and Messrs. Sakurai and Ishisaka, Local Governors. That was a bad precedent, and ought not to be followed by the present Ministry. If Vice-ministers or Chiefs of Bureaux be capable and strictly devoted to their duties as administrative officials, they need not be replaced by others. The *Mainichi* is confident that the new Cabinet will inaugurate the excellent custom of drawing a distinct line of demarcation between executive and administrative officials, and will set the example of not easily removing the incumbents of administrative posts.

The *Fiji* learns that the discussions on the Estimates for the next fiscal year, held at the Premier's residence at the end of last month, failed to bring the Ministers into cordial agreement, there being a difference of from 30 to 40 million yen between the amended Budget proposed by the new Premier and Finance Minister and the total sums demanded by the heads of Departments. The *Fiji* does not necessarily approve of increasing the revenue, still less of adding to the expenditures under the influence of temporary enthusiasm. One thing, however, must be pushed to the utmost limit of the national resources, namely, naval expansion. The nation should not shrink from any addition to its burdens on that account.

The *Kokumin* offers a bold suggestion to the new Cabinet. It declares that, whether the Diet prove amicable or hostile in the 10th session, it must be dissolved, for it does not really represent public opinion, as its actions in the last session show.

The same paper observes that it is to the *Shimpo-to* and not to the Liberals that the new Cabinet should devote attention in the coming session of the Diet, for the latter—supposing them to preserve consistency of action and not to oppose measures ardently approved by them in the 9th session—are precluded from making any serious attack on the proposals of the new Government, seeing that the rumour about a reduction of the scheme of armament expansion is unfounded, and that the Ministry may even be induced to remove the restraints now imposed on freedom of speech and public meeting. In short, the Liberals will have the mortification of reluctantly failing to find any objects of assault. On the other hand, there will devolve on the *Shimpo-to* the responsibility of opposing the Government should the latter's methods show no improvement on those of the last Cabinet. Hence the Government will have to pay close attention to the attitude of the *Shimpo-to*.

The *Mainichi* has a remarkable article about Formosa. On the strength of information furnished by a certain publicist who recently returned from an extensive tour through the island, the administration is declared to be quite demoralized and to call for prompt remodeling. The publicist in question told the *Mainichi* that the officials in Formosa are simply a pack of ravenous sharks, not only incompetent to discharge the functions assigned to them, but indifferent to their duties and extremely lazy and irregular in their work. One of the chief causes underlying that evil state of affairs is the instability of positions of superior officials in the island, and the resulting laxity of their superintending subordinates. So perfunctory are the officials that not a few of them appear in their offices at 9 in the morning and

leave them at noon. The conduct of the Japanese immigrants towards the natives is also open to severe censure. Inflated by the thought of their country's victories in the recent war, they behave in such an overbearing and arbitrary manner, that the natives regard them with more and more hatred, and are inclined to take refuge under the protection of kindly disposed foreigners, of whom there are not a few in the island. Many of the foreign residents, who are either missionaries or merchants that have lived many years in Formosa, anticipated with pleasure the change of rulers, believing that under the Japanese regimen, they should enjoy more freedom in the propagation of their faith and more security in the pursuit of their business. Imagine their disappointment therefore, when insurrection after insurrection broke out, and when they found themselves deprived of the blessing of security of life and property. The prestige of the Japanese Authorities is entirely gone in Formosa, and it is easily conceivable that should things continue in their present state, the better classes of Chinese will be entirely alienated from the Japanese, to be received into the open arms of foreigners as has been the case with the Koreans. Having published these remarkable paragraphs about Formosa, our Tokyo contemporary argues that the chief essentials for remedying the above flagrant evils, are to effect a thorough recasting of the civil and military services in Formosa; to make the tenure of the higher offices more secure; and to employ able natives as much as possible in subordinate posts, so that they may share the administrative responsibility. Lastly, foreigners of long residence in Formosa should be used either as advisers or interpreters.

The *Yiji* devotes an article to the necessity of improving the Japanese fishing industry. At present it yields only 40 million yen a year, of which 5 millions represent the value of exports. One of the chief reasons why the industry is comparatively so backward is because fishermen are content to ply their business in old-fashioned methods of greatly limited scope. Their boats are too small, the largest being capable of holding only 30 men, and the number of such boats is as yet very insignificant. The fact is that the fishermen, being generally without capital, can not afford to procure such large fishing smacks as are in vogue in the West, and they are thus precluded from taking full advantage of the harvest that the surrounding seas offer. Japanese capitalists must not confine their attention to enterprises conducted on land; the sea must also be considered. The *Yiji* is glad to learn that Mr. Sekizawa Meisel, an ex-Government official, whose devotion to the cause of fishing enterprise is well known, recently launched a fishing smack equipped in western style, on the coast of Awa. He is the pioneer of the new methods.

EDITORIAL NOTES.

SPANISH WAR-SHIPS.

ACCORDING to an account published in a French journal just to hand, an important discussion was held on the 21st of July in the Spanish National Assembly in connection with the building of war-ships. That day an influential section of the Cortes put a question to the Government asking why, instead of giving orders to England for the building of two new vessels, one order was given to Italy. The Minister of the Navy replied that the Government had appointed a special committee who were charged with supervising the building of the two new ships. The Committee had carried out most thorough researches and found that the Ansaldo Company of Italy could construct a vessel of the *Garibaldi* type more cheaply and more effectively than the English yards. This opinion was endorsed by the English Admiralty. The English Admiralty, commenting on the design of the new vessel, had found that though of medium size, only of 7,000 tons displacement, equipped with 25-cent. guns, 30 15-cent. guns, etc., the ship could confidently attack an iron-clad of 14,000 tons displacement. The English admiralty had ordered several

cruisers of the *Garibaldi* type to be built in England. On the receipt of this report, the Spanish Government had decided to build one vessel of the *Garibaldi* type in Italy. The Minister's explanation satisfied the Assembly. —(Nichi Nichi Shimbun).

MONTHLY CUSTOMS RETURNS.

THE following is a summary of the Customs Returns for August, showing the foreign trade of the Empire for the month:—

	1895. SILVER YEN.	1896. SILVER YEN.
Exports	16,249,954.390	7,928,959.080
Imports	18,820,847.080	17,375,241.150
Total exports and imports	25,304,200.230	9,440,289.070
Excess of imports	2,570,892.690	1,446,281.770
Exports	120,733.347	433,598.128

TURBULENT FIREMEN.

THE *China Mail* of the 14th says:—The British steamer *Asamor* (Capt. Gibson) put into Hongkong rather unexpectedly on Saturday—not under stress of weather but under stress of firemen. The steamer was on a voyage from Moji to Bombay, and it appears that the Chinese firemen did not wish to make the voyage to India, being desirous of being discharged in Hongkong. When they learned that Captain Gibson did not propose to call at Hongkong, the firemen let down the steam, and carried their mutinous conduct further by invading the deck with shovels and other "lethal weapons." The officers and engineers had to use strong repressive measures to quell the mutiny, and seven ringleaders were put in irons. For some reason or other, the men were

released when Hongkong Harbour was made, and they promptly deserted, leaving half a month's pay behind. Capt. Gibson, probably undesirous of causing still further delay on a voyage which has been already unnecessarily prolonged, did not seek to prosecute the mutineers, and a new squad of firemen having been engaged the steamer leaves for the south late to-night.

THE SEISMIC WAVE OF JUNE.

MR. IGI, of the College of Science, is assured from data that he collected during a recent tour of investigation in the Sanriku district, that the seismic wave of June was due to a submarine volcanic explosion. He places the centre of the disturbance about 200 leagues east off the coast of Yoshihama, Kisen District, corresponding to 39° lat. N. 149° long. E. He thinks that the phenomenon was similar to the Krakatoa disaster, save that instead of the volcano being on land, as in the East Indian catastrophe, in this instance it was far beneath the surface of the sea. He says that the temperature of the sea in the neighbourhood of these districts has been raised three degrees above that prevailing in ordinary years. Mr. Igi would like to see the Government, or private persons, fit out a survey vessel to conduct deep sea investigations at the spot he mentions as the centre of the disturbance.

FAILURE OF A FRENCH IRON-CLAD.

A LONDON telegram of August 21st, that appears in the Australian papers, says—The new French ironclad *Lasare Carnot* proves to be a complete failure. Owing to miscalculations she is too deep in the water. The *Lasare Carnot* is a twin screw iron-clad with two masts and two funnels, and was built at Toulon. She was built to be a vessel of 12,000 tons displacement, being only second in the French navy to the *Bowet*, a vessel of 12,200 tons displacement. Her measurements are:—Length, 356ft.; beam, 72ft. 8in.; depth, 27ft. Her steel armour is 18in. thick, and her armament, as designed, was to consist of two 11½ in. guns, two 10½ in. guns, eight 5½ in. guns, and 12 smaller quick-firing guns. Her engines are 15,000-h.p., and her speed was to be 18 knots.

THE FIRE ON THE "YEIJO MARU."

THE fire on the N.Y.K. steamer *Yeijo Maru*, on Friday night, says the *Kobe Chronicle*, was much more serious than first accounts led us to suppose. The fire originated in the engineers' mess room shortly after ten o'clock. When the alarm was raised assistance quickly arrived. Mr. C. Wills, the chief engineer, got all the pumps and hose at work with the assistance of Mr. Hands, the chief officer of the *Sakata Maru*, who went aboard with an extra hand pump and rendered very valuable assistance. The water police also went off and in a short time some two hundred hands were at work, but it was not before half-past eleven that the fire was extinguished. The engineers' quarters and mess room were entirely burnt out, the engineers losing every vestige of property that belonged to them, including a goodly sum in money, the chief engineer's loss alone, we hear, being about \$250. Fortunately, the flames were confined to the engineers' quarters for had they reached to the forward hatch where about 200 cases of kerosene were stored, not much of the ship probably would now be left. The fire is believed to have been due to the bursting of a lamp.

THE "IMPERIEUSE."

A LONDON telegram, dated 25th August, states that H.M.S. *Imperieuse*, formerly flagship on this station and now the flagship on the Pacific station, struck a rock during a fog off the coast of North America. Her injuries are but slight.

WEDDING AT UNION CHURCH.

A QUIET wedding was celebrated at Union Church, Yokohama, at noon on Saturday, when the Revs. H. Loomis and J. C. Ballagh united in marriage the Rev. Dr. J. Hunter Wells, of Korea, and Miss Lulu Ribble, of Rhoads, Va., who has just arrived from the United States. The bride, who wore a travelling dress

of brown and drab materials, was given away by Mr. Johnson, of Los Angeles, the bridegroom having for best man the Rev. J. Frazier, Chaplain of the U.S.S. *Olympia*. The Misses Harrington were bridesmaids, and each bore lovely baskets of flowers. Among the guests present at the ceremony was Mrs. Bishop (Miss Bird). Mr. Whitefield presided at the organ, and contributed two Wedding Marches.

LORD ROSEBERRY ON BURNS.

On the occasion of the Burn's Centenary at Glasgow, Lord Rosebery delivered an address of remarkable eloquence and picturesqueness, one paragraph of which we reproduce for the sake of the beautiful thought it embodies:—

I should like to go a step further, and affirm that we have something to be grateful for even in the weakness of men like Burns. Mankind is helped in its progress almost as much by the study of imperfection as by the contemplation of perfection. Had we nothing before us in our futile and halting lives but saints and the ideal, we might well fall altogether. We grope blindly along the catacombs of the world, we climb the dark ladder of life, we feel our way to futurity, but we can scarcely see an inch around or before us. We stumble and falter and fall, our hands and knees are bruised and sore, and we look up for light and guidance. Could we see nothing but distant, unapproachable impeccability, we might well sink prostrate in the hopelessness of emulation and the weariness of despair. Is it not then, when all seems blank and lightless and lifeless, when strength and courage flag, and when perfection seems remote as a star, is it not then that imperfection helps us? When we see that the greatest and choicest images of God have had their weaknesses, like ours, their temptations, their hour of darkness, their bloody sweat, are we not encouraged by their lapses and catastrophes to find energy for one more effort, one more struggle? Where they failed we feel it a less dishonour to fail; their errors and sorrows make, as it were, an easier ascent from infinite imperfection to infinite perfection. Man, after all, is not ripened by virtue alone.

A KOBE SMOKER.

A SMOKER was given in the Gymnasium, Kobe, on Monday night by the Elsie Adair Company assisted by the Sisters Giggie, Mr. Newlay Deggs, Mr. Willie Lash, and other local favourites. A couple of violin solos were contributed by Mr. Sorhagen, while Messrs. H. and F. Grimbly played the accompaniments. There were about seventy persons present and an enjoyable evening was spent.

THE "CATTERTHUN'S" GOLD.

THE steamer engaged in salvage operations at the wreck of the steamer *Catterthun* returned to Sydney on the 21st ultimo, the divers being completely prostrate from their exertions. Altogether eight thousand sovereigns have been recovered. It has been decided to abandon any further effort to recover the balance of the treasure, amounting to £2,000.

NAVAL NEWS.

THE *Hongkong Telegraph* notes that Lieut. Shakespeare, once of H.M.S. *Plover*, is about to come out to the Far East as Lieut.-Commander of the torpedo destroyer *Hart*. Commander R. G. O. Tupper, at one time serving on the *Mercury*, commands the *Hunter*, and Lieut. W. S. Lambert the *Boaser*.

A BABY DROWNED.

POLICE-INSPECTOR IKARIYAMA reports that a baby boy, two years old, the grandchild of Kobayashi Heiroku, was found drowned about 9 o'clock on Friday morning, in a small pond situated within the compound of the German Consulate. The child was still warm when found, but restorative measures were of no avail. The pond is only eighteen inches deep.

THE ACCIDENT TO H.M.S. "SWIFT."

It appears that the *Swift* cracked the high-pressure shaft of her starboard engine on the way from Korniloff Bay to Nagasaki. She steamed for a considerable distance with her port engine only, and then the *Rainbow* took her in tow. The repairs will be effected at Nagasaki.

HONGKONG'S WATER SUPPLY.

HONGKONG need have no fear for its water supply during the coming winter. In the second week of September the reservoir at Tytam overflowed for the first time since October 1894. The

bye-wash has been raised 5 feet, giving a total storage of 345,000,000 gallons. Pokfulam, is also overflowing.

TO MARINERS

THE following notices to mariners have been issued from the Coast Inspector's Office of the Chinese Imperial Maritime Customs:—

Yangtze River-Kiukiang District—N.E. Crossing Channel and Spencer Rock Light-boats.—Notice is hereby given that the Lights of the Light-boats marking the N.E. Crossing Channel and Spencer Rock have been changed from white to red.

Yangtze River-Kiukiang District—Two-Fathom Creek Beacon Light.—Notice is hereby given that the Two-fathom Creek Beacon Light has been shifted 270 yards N. 42° E. from its last position, in consequence of the subsidence of the land on which it stood.

THE YOSHIHAMA-BASHI DISASTER.

THE names and ages of the seven victims of the Yoshihama-bashi disaster are:—Mazawa Sennosuke, boy, age 7; Aoyama Toyu, girl, age 13; Negishi Maki, girl, age 8; Shimidzu Riki, woman, age 69; Nakajima Sei, girl, age 16; Yoshida Harukichi, boy, age 9; and Fukushima Take, girl, age 10.

NEWCHWANG.

MESSRS. BANDINEL AND CO., writing from Newchwang on the 8th September, 1896, says:—"The Viceroy has issued a proclamation largely increasing and extending the likin. The merchants have petitioned him to withdraw this. Meantime, business is practically suspended. The proclamation was temporarily withdrawn."

A DRUNKEN SPREE.

AN intoxicated German sailor stabbed a Japanese man in the Yoshiwara last night, but when the police arrived he acknowledged his fault, and upon paying compensation to the wounded man, was allowed to go on board his ship.

TREATIES.

THE Commercial Treaty between Japan and China, a draft of which reached the Foreign Office in the beginning of August, was lately laid before the Emperor, the draft having passed the Cabinet. The recent political changes necessarily diverted the Emperor's attention for a while, but the crisis being definitely settled, the Emperor sent the draft Treaty to the Privy Council. No objection having been taken to it by the Council, the draft was at once submitted to the Emperor by Count Kuroda, President of the Council. The Emperor sanctioned it the next day, the 25th ult. It is predicted that the ratifications will be exchanged this month.

A copy of the Revised Treaty between Japan and France, signed at Paris on Aug. 24, reached the Foreign Office on the 28th ult.

RAILWAY OFFICIALS.

Mr. Mortimer Menpes, writing from Kyoto, says:—"I am amazed at the letters people are writing about the railway officials. My own experience has been very different. On my journey here from Kobe, I was obliged, owing to the floods, to go round by Nara, and the trouble the officials took to see me through was monumental. One station-master wrote instructions for me to show to the guards on the way, so that my difficulty with the language should not prove an inconvenience. Fancy such kindness on the part of railway officials in England!"

TREATY REVISION.

Only four treaties now remain to be revised, and the negotiations have been commenced in every case. They are the treaties with Portugal, Switzerland, Austria-Hungary, and Spain. Mr. Sone is entrusted with the task of negotiating the Portuguese Treaty; Mr. Kurino, the Spanish; and Mr. Takahira, the Austro-Hungarian and the Swiss.

POLITICAL ITEMS.

Marquis Hachisuka, President of the House of Peers, having consented to accept the portfolio of Education, and having been gazetted to that post, the Cabinet is now complete, namely:—

Count Matsukata	Minister President and Minister of Finance.
Count Okuma	Minister of Foreign Affairs.
Count Kabayama	Minister of Home Affairs.
Marquis Saigō	Minister of the Navy.
Viscount Takashima	Minister of War and Minister of Colonization.
Marquis Hachisuka	Minister of Education.
Viscount Kiyoura Keigo	Minister of Justice.
Viscount Nomura	Minister of Communications.
Viscount Enomoto	Minister of Agriculture and Commerce.

The *Nichi Nichi Shimbun* says that Mr. Motono having been sent abroad in a diplomatic capacity, there remain only Mr. Mitsuhashi, a Councillor of the Foreign Office, and Mr. Yoshida to discharge the duties of Private Secretary. But as Count Okuma naturally desires to place in that confidential post somebody enjoying his full confidence, he will probably appoint Mr. Inugai Ki to be chief of the Political Bureau, *vice* Mr. Nakada, and will, at the same time, entrust to him the duties of Private Secretary. We are not in a position to say whether this forecast is correct, but it sounds probable enough. Mr. Inugai is a member of the Diet where he has greatly distinguished himself. As a parliamentary figure, moderation has certainly not been his most conspicuous trait. Indeed, were we asked to name the man who preëminently maintained an attitude of unwavering hostility to the Government in the Diet from the first to the ninth session, we should have no hesitation in indicating Mr. Inugai. Of his great ability, however, there can be no manner of question, and doubtless the responsibilities of office will produce in his case the sobering effects that they invariably exercise. On the other hand, it will be very difficult for him to do better than Mr. Nakada, who to excellent judgment and grasp of intellect adds a charming personality that never fails to win friends. Messrs. Motono and Nakada are destined, unless we judge very falsely, to rise ultimately to eminent positions in the service of their country.

The *Kokumin Shimbun* makes a comparison. It says that whereas Count Itagaki entered the Cabinet simply and solely as the leader of a great political party, and not because he possessed any special talent for the functions entrusted to him—those of Home Minister—Count Okuma, though also a prominent party leader, enters the Cabinet because he is universally accredited with eminent aptitude for the duties he has undertaken, those of Foreign Minister. So far as Count Okuma is concerned, we must all agree with the *Kokumin*. Unquestionably, Japan has few if any statesmen more competent to hold the portfolio of Foreign Affairs. But why should Count Itagaki be discredited for the sake of exalting Count Okuma? A perfectly upright, single-hearted man, incapable of partiality and respected even by his political enemies, a man who for 18 years has been moving hither and thither through the country, acquiring wide and intimate knowledge of local conditions—such a man is Count Itagaki, and such a man seems to us conspicuously qualified to preside at the Home Office.

The *Yomiuri* thinks that Mr. Komuchi Tomotsune will be appointed Chief of the Legislative Bureau, *in lieu* of Baron Suematsu, who has resigned. Mr. Komuchi has distinguished himself in the Lower House of the Diet, and his parliamentary experience should help him to discharge efficiently the duties of Government Delegate, which are among the most onerous devolving upon the chief of the Bureau.

There has not yet been time for the vernacular press to comment on the appointment of Marquis Hachisuka to the post of Minister of Education, but it is impossible to doubt that the news will be received with universal satisfaction, so far as the personality of the new Minister is concerned. The Marquis is one of the very few among Japan's great nobles—pre-Restoration nobles—that play an active rôle in public affairs. He possesses considerable wealth; not that his fief of Awa was preëminent among the

principal feudal domains in that respect, but that its treasury contained large accumulations at the time of the abolition of feudalism. He has long been recognised as man of high ability, and his public conduct has invariably been marked by strict adherence to the best canons of his order. Marquis Saionji, whom he succeeds, is of the same type, and certainly his administration of educational affairs was such that the nation must greatly regret his retirement. But we look to see Marquis Hachisuka give almost equal satisfaction. There is a very romantic side to the Japanese student's character, and undoubtedly he finds it essentially congenial and appropriate that the Educational Department should be presided over by the bluest blood, and permeated with the most unimpeachable *Samurai* traditions of old Japan. There had been very confident talk of Prince Konoye's receiving the portfolio of Education, but it appears that His Highness has other duties which he could not hope to discharge satisfactorily in conjunction with the work of the *Mombusho*.

CURRENT POLITICS.

The Matsukata Cabinet is resolved, it is said, to lay before the public the policy that it intends to adopt. Opinions were divided as to what process should be followed in taking the public into the Cabinet's confidence, some saying that the system in vogue in England should be adopted, that is, the Mayor of Tokyo should invite distinguished personages to a grand banquet and the Premier should deliver a speech on that occasion—as at a Lord Mayor's inaugural banquet in London; others that the Premier should lay the Government's policy before an assembly of Local Governors; and a third suggested that a manifesto should be published in the columns of the *Official Gazette*. The *Fiji* and other papers state that the second process is to be adopted, and that on the 11th of October a convocation of Local Prefects will be held in Tokyo, and the Premier will deliver a speech embodying the policy of his Cabinet. Steps will be taken to inform the public of this important speech. The Liberals will withhold their manifesto until they are assured of the position that the new Ministry will assume. The *Shimpo-to* are watching keenly the movements of the Government and are taking steps accordingly. A section of the Party met on the 29th ult. at the residence of Mr. Haseba Junko, M.P., an influential member of the Party, to discuss the attitude they should assume at this juncture. It was decided that, prior to the announcement of the Cabinet's platform, the Party should decide upon an attitude to be assumed, but that should the Cabinet's policy prove difficult of acceptance by them, the Party should oppose all its measures. On the 29th ult. the first regular Cabinet Council was held at the official residence of the Premier, the Budget for the next fiscal year being discussed. The *Yomiuri* states that there being no time to go over the matter anew, the Cabinet has determined to base the Budget on the measures elaborated by the ex-Finance Minister, reserving any radical changes till the occasion of formulating the Budget for the 31st fiscal year. The financial policy of the Matsukata Cabinet, observes the *Kokumin*, will be negative for next year, at least. In other words, it will take no action in regard to the extraordinary proposals of the preceding Cabinet. An "adjustment policy" may be a more appropriate appellation. The same paper says that, according to the financial forecasts of the Ito Cabinet, there will be a deficit of over 8,700,000 *yen* next year.

The news is given in the *Fiji* that Count Okuma has decided to change the Japanese Minister in Seoul. Mr. Hara, the present incumbent, will leave Seoul for home about the 5th inst. Nothing is yet definitely known about his successor, though the *Nichi Nichi* says that Mr. Oishi has been asked to undertake the duties. The new Foreign Minister is evidently determined on remodeling Japan's attitude toward Korea, as in-

deed he is bound to do, having, while outside the Government, freely criticized its Korean policy. Korea will be the first test of the Count's foreign policy. Hence the necessity of changing the Representative to that country.

THE SŌUL-FUSAN RAILWAY.

The explanation given by our Sōul correspondent of the difficulty that prevents the granting of a concession to Japan for the construction of a Sōul-Fusan Railway, has not yet been publicly stated, and is certainly very interesting. We fail to see how any importance attaches to the second argument mentioned by our correspondent, namely, that the compulsory purchase of large tracts of land at market prices would alienate the people's good will and materially reduce the revenue derivable by the State. If that be true in the case of the Sōul-Fusan Railway, it must be equally true, other things being alike, in the cases of the Sōul-Chemulpo and Sōul-Wiju lines, for which concessions have been granted to American and French syndicates without hesitation. But we can easily appreciate the first argument, namely, that owing to the great unpopularity of the Japanese in Korea, the Korean Government could not undertake the task of guarding a Japanese railway against violence at the hands of the inhabitants of the districts traversed, and that to entrust the work of protection to a Japanese force is an idea scarcely feasible, even supposing that the Japanese were willing to entertain it. We are not prepared to say how far credence may be attached to such an explanation of the reluctance shown by the Korean Government to grant the long desired concession to Japan. It is fresh in every body's mind that during the recent insurrection the Japanese line of telegraph from Sōul to Fusan was constantly cut by the insurgents who appeared to think that no readier method of inflicting loss and inconvenience on the Japanese presented itself. At the same time, we are unable to distinguish how much these outrages were purely anti-Japanese, and how much they were inspired by general hostility to the new order of things, for which Japan was mainly responsible. Moreover, if the line of telegraph was frequently injured in those days, it appears to escape molestation at present. Is it not fair to infer that the same would be the case with a railway? At first, some attempts to injure it might be made, but that they would soon be abandoned when the convenience and usefulness of the line came to be appreciated, seems a reasonable forecast. Of course the Japanese must blame themselves largely for their unpopularity in Korea, but, on the other hand, they can scarcely expect to have their unpopularity advanced as an official plea for differentiating against them. They stand on at least as good a footing as any other Power so far as concerns their title to treaty privileges and most-favoured-nation treatment in the peninsula, and we do not doubt that their wisest course is to insist on asserting that title. No Western Power would agree to have the unpopularity of its subjects in an Oriental country alleged as a reason for withholding from them concessions and privileges to which they have otherwise a right, and which are freely granted to the subjects of other States. Japan's position in Korea certainly calls for an exercise of skilful and strong statesmanship. The mischief that it suffered at Viscount Miura's hands is not easily reparable.

THE BICYCLE CABINET.

The new Cabinet has been dubbed the "Bicycle Cabinet" (*Fitensha Naikaku*). It is a witty designation. Hitherto every Cabinet has contained Satsuma and Choshu men in tolerably equal proportions; or, as folks were wont to say, the Administration has run upon two parallel wheels, Sasshu and Choshu. But now, with the exception of Count Okuma, the Cabinet contains no statesman of note that does not belong to Satsuma. It has become a bicycle Cabinet, the big wheel in front representing Satsuma and the little wheel behind, Count Okuma.

TESTIMONY FROM FORMOSA.

An interview with an Englishman who has just returned from a visit to Formosa gives the following information:—I travelled from Taipei in the north of the island, to a point some forty miles beyond Tainan in the centre, thus visiting several of the places included in the area of the recent insurrection. So far as these places are concerned, there is no truth whatever in the statement that the peaceful inhabitants, unable to trust the Japanese, have declined to return to their homes and resume their occupations. They have returned, and are living as serenely and securely as they ever did. As to places farther afield, I am unable to speak from eye testimony, but there is no reason, on the face of things, to suppose that what is absolutely false with regard to the villages I saw, should be true with regard to other villages that were the scenes of precisely similar incidents. I heard nothing whatever, and saw no traces, of atrocities such as have been described in the columns of certain local foreign journals of Hongkong and Shanghai. The foreigners in the north of the island seemed to pay very little attention to such stories. Possibly their indifference is to be ascribed to the fact that they have had intimate experience of Japanese methods, and are therefore in a position to estimate the likelihood of the stories circulating in the south. The troubles at the close of last year and the beginning of the present were on a considerably larger scale than those that recently originated with the Hoolin rebels, and as the scene of the former fell within the immediate ken of the foreign residents, their experiences garnered at that time doubtless help them to discount the reports now reaching them. Everybody remembers that during the northern insurrection terrible tales were sent abroad about atrocities committed by the Japanese troops, and I think some people remember also what a stupendous sensation one of the Yokohama journals attempted to manufacture out of the canards, bracketing them historically with the abominations of Nero, the horrors of the Huns, and so forth. Well, all those stories proved to be pure myths, and I strongly suspect that the same fate impends for the rumours now ventilated. The good folks in Southern Formosa will soon find out that they have not only been wasting their sympathies, but also committing a great injustice. I exclude, of course, the cases of innocent Chinese who lost their lives or property. There must have been many such: there could hardly have failed to be many under the circumstances. Naturally those that find themselves undeservedly denuded of their belongings, and the relatives or friends of those that suffered unmerited death, are loud, unreasoning denouncers of the Japanese. Even where the rebels were the assassins or destroyers, the victims are entitled to rail against the incompetence of their proper protectors. Besides, the fact can not be concealed that the foreign residents of Formosa do not feel at all kindly towards the Japanese. Folks in Yokohama and Kobe are bitter enough, in all conscience, but folks in Formosa, so far as my experience goes, could give them points. The explanation is not far to seek. In no part of the Chinese empire were foreigners so autocratic as in Formosa, before the island's cession to Japan. They were absolute masters of the situation. Of course, in their capacity of merchants, they had to meet Chinese competition. Whether that was a very serious opponent may, perhaps, be doubted; but it sufficed, at all events, to deprive them of any nominal monopoly. Nevertheless, they were under little or no restraint, and as for law, they were a law unto themselves. I am not speaking disparagingly. Far from it. In my humble judgment they seem to be an exceptionally fine set of fellows, full of enterprise, pluck, and resource, and obedient to most hospitable instincts. Possibly some of them abused the licence they enjoyed: that would have been only human. But, on the whole, they walked straight enough, and what they did promoted the interests of Formosa not less than their own. Still, the liberty they possessed was very pleasant, and they find it

correspondingly irksome to pass under rulers who take little on trust and are determined to exercise efficient control in every direction. Men that have held property for a long while unquestioned, strongly resent the notion of having their titles suddenly scrutinized, and traders that have managed their business for years without check or hindrance, are apt to be betrayed into bad language and strong resentment when outsiders come to subject them to rules and regulations. The foreigners in Formosa are chafing horribly, and I frankly confess that I heard more virile and less reasonable talk there in a week that I should have expected to hear in a month in Yokohama, which is saying a very great deal. The leading Japanese officials, civil and military, appear thoroughly well disposed. They are only too anxious to manage things in a smooth, conciliatory manner. As for Mr. Mizuno, the Civil Governor, nothing could be kinder or more liberal than his mood. But how can you play successfully to an audience that is determined to be dissatisfied? If the foreign residents welcomed the advent of the Japanese originally, it was because no thoughtful estimate had been formed of what must ensue when control, not always discriminating, was substituted for liberty, invariably unrestricted. The Japanese coolie, too, is, an ugly object lesson: he has a terribly swollen head. His leap from cringing insignificance at home to stalwart importance abroad, has affected him far more injuriously than the substitution of restraint for independence has affected the foreigner. To watch a coolie swaggering down the street in a Formosa town, and the Chinamen getting nimbly out of his path, is a thing not to be forgotten. I have never seen a Japanese coolie strike a Chinaman, but I have seen him thrust the latter aside pretty roughly. The common soldiers, too, are often truculent and overbearing. These faults, however, are rapidly disappearing. Evidently they have been brought to the notice of the high officials, and measures to correct than have been taken. Remember, too, that the Chinese are shrewd fellows. They can discover which way the wind blows without holding up many straws, and it has not taken them long to find out that every evil-sounding story they can vamp up against the Japanese will find sympathetic listeners among the foreign residents. I myself have come back with the conviction that all these tales about atrocities and oppression are cut out of whole cloth. You have been told, I may add in conclusion, that coolies are seized, chained in gangs, and forced to labour. That is an absurd falsehood. I saw a photograph of some of those "gangs." They consisted of men that had eagerly offered themselves as workers to earn the liberal pay given by the Japanese. When employed by the military, a certain measure of discipline and organized labour is imposed, but compulsion, chaining, and all that, can only be designated by the expressive term "Tommy-rot." Indeed, one of the things strongly complained of by foreigners is that the Japanese have spoiled the market for labour by paying the Chinese too well. The most voluble villipender that I came across was a gentleman whose bread-winning had been connected with coolie contracts, until the new rates of pay "spoiled his pidgin."

OFFICIAL APPOINTMENTS.

Mr. Komuchi Tomotsune, a distinguished member of the House of Representatives, has been appointed Chief of the Legislative Bureau and also Chief of the Pensions Bureau in the Cabinet, posts held by Baron Suyematsu in the former Ministry.

Judging from present indications, it does not appear probable that any changes will be made in the Vice-Ministers of the various Departments. The *Hochi Shimbun*, indeed, writes very confidently that no changes of *personnel* in the rank of Vice-Ministers or Heads of Bureaux are contemplated until after the next session of the Diet, if even then.

HARBOUR CONSTRUCTION IN JAPAN.

The *Shogyo* recently discussed the number of harbour construction schemes now afoot in various parts of Japan. It commences with that of Osaka, but as we have more than once described the schemes of the southern port, we need not recapitulate the details here. We shall take Atsuta first. The plan adopted for the reconstruction of this harbour, the outlet for Owari, is similar to the Osaka idea, that is to say, a dock will be built with all the latest improvements. The work is to be carried out between the promontory of Chita and the opposite coast of Kaito and Kaisei; and there will be a breakwater and submarine work to prevent the accumulation of river deposits. The break-water will be built out from the left bank of the river Shonai, and will project in a straight line for a length of 1,408 yards; then it will be deflected southward for a length of 3,404 yards, extending 4,812 yards altogether. For a length of 1,408 yards, from the mouth of the river Shonai, this break-water will be made of earth, but the rest will be built of stone. The break-water will serve to prevent an accumulation of silt from the Shonai within the harbour, and protect it against the south-east wind. The mouth of the Horikawa Canal, that extends from Atsuta to Nagoya, will be reclaimed for an extent of 60,000 *tsubo* (50 acres), and from the south-eastern extremity of the land thus reclaimed submarine work, to prevent the accumulation of river deposits, will be carried out. This submarine bed, after projecting in a south-easterly direction for some distance, will be deflected S.S.E., then south, and will extend altogether over 5,566 yards, to prevent the accumulation of deposits poured down from the Chita promontory. One extremity of the open space enclosed between the submarine bed and the breakwater will communicate with the Horikawa Canal while the other extremity will project far into the sea. Vessels of deep draught will be able to find safe anchorage in this long dock. The dock will cover 120,000 *tsubo* (100 acres), and even at low tide will be 25 ft. deep. The work, to be started in the next fiscal year, and be completed in 7 years. The total cost is estimated at 1,897,388 *yen*, of which 350,000 *yen* will be obtained by issuing a local loan, 150,000 *yen* will be borne by the district of Aichi Prefecture, and 100,000 *yen* by Nagoya. Again, 1,047,388 *yen* is to be obtained by the sale of reclaimed land, and the remaining quarter of a million it was hoped would be provided by a State subsidy. It has transpired, however, that the Treasury can not satisfy this desire of the Aichi folks. A good port was a desideratum for Nagoya, and it is therefore expected that the construction of the harbour of Atsuta will add considerably to the prosperity of that large town and its surrounding districts, especially when the construction of the central overland railway now in course of survey is completed. This railway will terminate at Nagoya.

The *Shogyo* then discusses the Hakata scheme. At present this harbour is shallow and entirely unfit for anchorage. But in the Bay of Hakata and facing the city is an indentation called Nishitogasaki which the Hydrographical Authorities declare can be converted into a safe mooring-place if sufficient dredging is undertaken. This opinion has encouraged the people of Fukuoka, and as a preliminary towards making that place into a harbour, the Local Assembly has voted a sum of 2,500 *yen* as funds to be spent this year in carrying out preliminary surveys. The Hakata Harbour Construction Railway Company was organized at the same time with a view to laying a railway between the harbour and the nearest junction on the main line. The two schemes have been submitted to the Home Office, and Dr. Furuchi, Chief Expert of the Public Works Bureau, has gone to Hakata to survey the place. Nishitogasaki is situated at the south of the promontory that projects for more than two miles into the Bay, and the promontory would be an excellent breakwater to Nishitogasaki. An island

covered with forest and lying a short distance off from the promontory also protects the place from north-westerly winds. In short, Nishitogasaki is excellently situated, and dredging alone is required to convert it into a good harbour.

NEW MILITARY BARRACKS.

Certain speculators have been greatly disappointed and have incurred heavy loss, writes the *Fiji*, in connection with land required as sites for the new military barracks. The Authorities wisely determined to select a number of sites, and to single out the one that answered best from sanitary and practical points of view. The speculators, nothing daunted, boldly proceeded to purchase all the land that they thought might be selected, and then held out for unreasonable prices. The Authorities then determined to take advantage of the competition among residents of the respective localities who desired new barracks erected in their own localities. They consulted the district, or city, councils of the various places where new barracks were needed, and asked these bodies for an estimate of the value of land in their localities, at the same time intimating that should the values be considered unreasonably high, they would seek another and more suitable situation. This plan succeeded admirably, and the Military Authorities have managed in almost all cases to obtain their land very cheap. In Kanazawa, for instance, the City Council appraised the value of a particular plot covering 300,000 *tsubo* at 70 *sen* per *tsubo*. The Authorities replied that they would not give more than 50 *sen*. The Council then declared that the balance, 60,000 *yen*, would be presented to the Government, and the land, that is, 2,50 acres approximately, was bought for 150,000 *yen*. The self-sacrificing spirit which the citizens of Kanazawa and other places displayed deserves special commendation. The retrenchments that the Diet effected in the Budget for the current fiscal year and also the necessity for taking up other public works have obliged the Authorities to defer concluding the purchase of the land for a year, but they have succeeded in purchasing seven plots, and concluded contracts to purchase 15 more, while 29 other sites are now being negotiated. Of many plots of ground presented by the nation to the Department of War for the purpose of building new barracks, the following deserve special notice:—Aomori, over 66,000 *tsubo*; Niigata, over 50,000 *tsubo*; Akita, over 43,000 *tsubo*; Yamagata, over 66,000 *tsubo*; Shizuoka, 43,000 *tsubo*; Tadasuno, Fukui Prefecture, 33,000 *tsubo*; Fushimi, 33,000 *tsubo*; Himeji, 45,000 *tsubo*; Tottori, 38,000 *tsubo*; Kochi, 40,000 *tsubo*; 36,000 *tsubo*; Ogura, 30,000 *tsubo*; Yamaguchi, 13,000 *tsubo*. It is said that presents of land to Government measuring under 10,000 *tsubo* number between 20 and 30.

THE NEW CABINET & THE CLANS.

Looking over the new Cabinet and comparing it with the one that it succeeds, we find the Clans distributed as follow:—

MATSUKATA CABINET.			
Premier	Count Matsukata	...Satauma.	
Foreign Office	Count Okuma	...Hiken.	
Home Office	Count Kobayama	...Satauma.	
Treasury	Count Matsukata	...Satauma.	
War and Colonization	Viscount Takashina	...Satauma.	
Navy	Marquis Saigo	...Satauma.	
Justice	Mr. Kiyoura	...Higo.	
Education	Marquis Itchiku	...Feudal chief of Awa.	
Agri. and Commerce	Viscount Enomoto	...Shogunate.	
Communications	Viscount Nomura	...Choshu.	
ITO CABINET.			
Premier	Marquis Ito	...Choshu.	
Foreign Office	Marquis Saionji	...Kuge.	
Home Office	Count Itagaki	...Tosa.	
Treasury	Viscount Watanabe	...Choshu.	
War	Marquis Oyama	...Satauma.	
Navy	Marquis Saigo	...Satauma.	
Justice	Viscount Yoshikawa	...Awa.

Colonization	Viscount Takashina	...Satauma.	

In the new Cabinet the Choshu element is the weakest, as in the former it was the predominant influence; while Satauma is now all powerful.

COUNT OKUMA'S POLICY.

IT is significant that the newspaper most hostile to the new Cabinet at present should be the *Chuo*, for that journal is the organ of the National Unionists, and upon the National Unionists' attitude in the next session of the Diet depends the Government's chance of obtaining a majority. The *Chuo's* chief target of attack is Count OKUMA. It endeavours to show that the Count formulated a number of important conditions by way of essential preliminaries to entering the Cabinet, and that, although he failed to obtain his colleagues' consent to any of them, he nevertheless accepted a portfolio. The principal of the conditions in question were—as has already been noted in these columns—that the Cabinet should hold itself responsible to the Diet, and that complete freedom of the press and of public meeting should be inaugurated. Now there is no manner of doubt that Count OKUMA is politically pledged to both of those doctrines, and that they represent the goal towards which, in common with many other Japanese statesmen, he has always marched. But that he believes the time to be ripe for their practical enforcement, we greatly doubt. Most assuredly neither he nor any other party leader could form a Cabinet at present without the aid of men who are emphatically persuaded that the consummation of constitutionalism would still be premature in Japan; men, in short, who have hitherto carefully stood aloof from all political entanglements, and maintained the doctrine of ministerial responsibility to the Emperor alone. The new Cabinet includes statesmen of that stamp, and Count OKUMA is perfectly well aware of the fact. Surely it is an extravagant exercise of credulity to suppose that, with such knowledge, he would have attempted to make his acceptance of a portfolio conditional upon the Cabinet's endorsement of doctrines still lying beyond the domain of practical statesmanship, and still viewed with misgivings by the most prominent of his new colleagues. Count OKUMA is neither a visionary nor a tyro. It is not at all unlikely that he reminded the Cabinet of his views when invited to enter, and that he frankly stated his resolve to promote those views by every legitimate means; but it is most unlikely—so unlikely as to be quite incredible, in our opinion—that he sought to force the Administration to open confession of a creed still incapable of public observance. Looking a little ahead, it appears to us that Count OKUMA and his fellow-thinkers may safely trust events to evolve a position much more crucial than any avowal of political faith could be at present. For the Government can scarcely hope to avoid defeat in the next session of the Diet, and the natural sequel will be dissolution and appeal to the country.

Then, if—as looks very probable—the Liberals obtain a success at the polls, another hostile vote will follow in the Diet, and even though the Ministry does not resign *en bloc* after its second discomfiture, its *personnel* will certainly undergo conspicuous change. In other words, the principle of party Cabinets will receive either partial or complete recognition. We can not doubt that Count OKUMA foresees that contingency, and if he formulated any statement of his political views when he entered the Cabinet, it must have been with the object of indicating the course to be expected from him in a given crisis. Thus the chief interest of the *Chuo's* diatribes is derived, not from any discredit that they are likely to bring upon Count OKUMA, but rather from the indication they furnish of the National Unionists' mood. Parenthetically, we may recall the fact that when Count OKUMA last entered the Cabinet, nine years ago, he was exposed from the very outset to implacable hostility at the hands of certain journalists. Apparently the same fate awaits him now. Is it not strange that, while what the nation hopes from him above all things is a strong and dextrous foreign policy, Japan's chief need at present, his attitude in domestic politics should be the handle seized by his enemies for assaulting him? Perhaps Count OKUMA is well pleased that such should be the case. To be saved at the outset from intrusive scrutiny of his real functions, he may not object to be the butt of criticism that time must effectually traverse.

THE NEW JAPANESE CIVIL CODE.

OUR readers are doubtless aware that a considerable portion of the new Japanese Civil Code, after having undergone thorough revision at the hands of a Committee of experts appointed by the Government in accordance with a resolution of the Diet in its first session (1891), was submitted to the Diet in its fifth session (1895-6), and duly passed, after which it received Imperial sanction, and is now the law of the land awaiting enforcement at an early date. The portion thus revised, passed by the Legislature and promulgated, is divided into three books, consisting of 724 articles. The first book (174 articles) contains general provisions; the second (223 articles) treats of real rights, and the third (327 articles) deals with obligations, especially those relating to contracts and wrongs. There is as yet no English translation of the Code. The Government, we understand, contemplates the preparation of an English version, but a considerable time must probably elapse before the intention becomes an accomplished fact. Meanwhile, Mr. GUBBINS, Japanese Secretary of Her Britannic Majesty's Legation in Tokyo, is engaged upon a popular render-

ing which, while giving the exact significance of every article, will be free from the technicalities that make laws so perplexing to ordinary folks. Mr. GUBBINS will lay the public under a great obligation by his work, and his well-known industry inspires confidence that we shall not have long to wait for the result. An accurate translation in German by Dr. L. LÖNHOLM, Professor of German Law in the Imperial University, was published some months ago, and the same competent writer has now compiled and published a brochure explaining briefly the various provisions of the Code, especially in relation to its bearing upon the status of foreigners under the Revised Treaties. This little book, consisting of only 31 pages, is of the highest possible interest to foreigners, as will be evident from a brief summary of some of the facts that it sets forth.

One of the principal and most reasonable complaints preferred by foreigners against the system supposed to be contemplated by the Revised Treaties is that commercial and manufacturing enterprise outside the present Settlements will be fatally checked by the restrictions imposed on the tenure of land. It has been believed that thirty years would be the limit of time for which the occupation of land could be secured, and, of course, with only a thirty years' lease, no one could think of putting up solid and expensive buildings such as are best adapted for the purposes of warehouses or factories. But though actual ownership of land will not be acquirable by foreigners under the Treaties and the Civil Code, there will be nothing to prevent their occupation of land for a lengthy period. The right to occupy land in the capacity of "superficiary" can be acquired for a practically unlimited length of time, and will carry with it the right of ownership in all buildings of any kind, trees or bamboos that the land has on it, whether such buildings, trees, or bamboos exist on the land at the time of its acquisition, or are placed there subsequently by the occupant. It is thus apparent that if, when the Revised Treaties go into force, a foreigner desires to procure a site for building or planting, it will be competent for him to do so, not merely for a period of thirty or fifty years, but for a hundred years or even more. In order to secure long occupation, however, the time must be fixed by the parties to the contract. If it be not fixed, certain noteworthy provisions become operative. In the first place, the occupant will then be entitled to surrender his tenure whenever he pleases, with only this limitation that, if he is paying rent, he must either give one year's notice to the owner of his intention to vacate the land, or must pay a year's rent calculated from the next time when rent falls due. In the second place, supposing that the occupant does not surrender his right, and that the owner

wishes to recover the land, then the latter may apply to a Court of Law to have the duration of the right limited, and the Court will have competence to limit it to any period not less than twenty and not more than fifty years. Finally, when the right expires, the occupant may take away the buildings, trees, or bamboos, provided that he has previously given the owner an opportunity to purchase them at a fair price, or can show some just cause for refusing to give such an opportunity.

It is unnecessary to dwell upon the importance of all this. In view of such provisions, the objection that land can not be secured for a sufficient length of time to make its tenure really useful to merchants, manufacturers, or persons projecting the erection of residences and the laying out of gardens, ceases to have any validity whatever.

To complete this part of the subject, we may note that if, through the operation of some natural calamity, as floods or earthquakes, the superfluous is prevented from getting any return for three successive years, or from getting a return equal to the amount of his rent during five years, he becomes entitled to surrender the land to the owner. On the other hand, if the superfluous fails to pay his rent for two years, the owner may resume possession.

The right of mortgage being secured to foreigners by the Japanese-German Treaty, the provisions relating to it deserve notice. Immovable property—as land, houses, or trees—can alone be mortgaged. Movables or immovables may be “pledged,” but as pledges on immovables are not mentioned in any of the Treaties, they will not fall within the rights enjoyable by foreigners. “That fact, however, says Dr. LÖNHOLM, “is of no consequence, as the right of mortgage is quite sufficient for all the enterprises of foreign business men.” “A mortgage on land covers all the accessories of the land, except buildings, which must be specially mentioned, if they are to be included. Successive mortgages on the same property take rank among themselves according to the time of their registration. Interest in arrears on the mortgage debt is only secured by the mortgage for two years. A purchaser of mortgaged property may, if he chooses, under certain circumstances pay off the mortgage and clear his property immediately, even though the mortgage debt is not due.”

For agricultural purposes foreigners will not be able to acquire land in any way. As to the matter of hiring movables or immovables, neither a foreigner nor a Japanese can do so for more than 20 years, the lease being renewable, however, for a similar period. In the case of immovables, hiring is not valid against a third party unless the fact be duly registered.

There are many other interesting provisions, but the above transcend all the

rest in importance. If Dr. LÖNHOLM'S rendering of the Code be correct—and there is no reason to doubt it—all grounds of complaint about the tenure of land are illusory, for although the right of ownership, is withheld, the privilege of occupation will be enjoyable in such a manner as to satisfy every requirement of business men. In short, while the objections raised by many Japanese to the ownership of land by aliens, or to its acquisition for purposes of agriculture, have been duly recognised by the negotiators of the Revised Treaties, it has, at the same time, been found possible to extend to foreigners all privileges necessary for purposes of commerce, manufacture or residence. Dr. LÖNHOLM has placed the foreign residents under a great obligation by his labours in interpreting the Commercial and Civil Codes, and the Japanese also should feel grateful to him for helping to dispel misconceptions that were largely responsible for the objections entertained by foreigners to the Revised Treaties. We conclude by quoting two paragraphs from this interesting brochure:—

There is not much original Japanese law to be found in the new code. In two respects it is better than the first draft founded upon the Code Napoléon. It shows a greater simplicity, and its separate provisions are much easier to be understood than those of the former draft, which, although a work of great diligence, was rather artificial and therefore not quite fit for a newly opened country like Japan. The second point is that the new code is written in pure, clear, and original language, while the Japanese text of the former draft, being a too literal translation of Boissonade's elegant French phrases, was almost unintelligible to any one except those who made the translation.

By their new code the Japanese have wholly accepted the European system of civil law. They have succeeded in creating a law quite sufficient for all practical purposes, and I cannot see any reason why they should not equally be able to apply this law in a manner satisfactory to foreigners. There is no ground to fear the time when extraterritoriality will have ceased. Englishmen, Germans, and other Europeans are living in Brazil, Venezuela, Peru, Mexico, Greece, Portugal, under governments and laws which do not admit of any comparison with those of Japan, and nevertheless they do a flourishing business there. The sway which the great Powers of Europe wield is so enormous that they can protect their subjects everywhere in the whole world without having recourse to extraterritoriality and other means contrary to international justice. I myself am of the opinion that under the new treaties foreign influence and foreign commerce will develop to a degree never dreamt of before. And furthermore I believe that, while at present a good deal of ill-will exists between Japanese and foreigners, with the disappearance of extraterritoriality a mutual good understanding will come about, founded upon common laws and common interests.

THE BARRIE CASE.

IT is to be regretted that the Judge of the Yokohama Local Court did not find himself in a position to inflict a severer punishment on the men that took the lead in assaulting Mr. BARRIE on August the 6th. Mr. BARRIE is the Superintendent Engineer of the Japan Mail S. S. Company. The Japanese stokers of the *Ryofun Maru*, one of that Company's steamers, dissatisfied because their number had been reduced from 37 to 30, and because, when they remonstrated against the reduction, they had been threatened with dismissal in favour of Chinese, assembled in the Public Garden of Yokohama, and decided to proceed to the residence of Mr. BARRIE and remonstrate with him, by force if necessary, their mistaken impression being that he was

primarily responsible for their grievances. Gaining admission to Mr. BARRIE'S premises, they were met by him in the verandah, and as he naturally declined to enter into any discussion with them, their spokesman, a man named TAMAWAKI, struck him over the head with an iron bar, felling him to the ground, and before he could struggle to his feet, he received a second heavy blow on the back of the head from one TAMURA, who also wielded an iron bar. Three others of the party assaulted him at the same time, but not with serious violence, and he finally escaped through the interference of Mrs. BARRIE. Such are the facts in brief. They indicate that a number of men combined with deliberate intent to obtain redress for an alleged grievance by recourse to extreme violence. Unfortunately, the law provides no means of measuring the criminality of a man's intentions except by their results. Mr. BARRIE was not fatally injured by the blows that he received, and his assailants consequently escaped the guilt of assaulting with murderous intent. But when men come to striking at another's head with iron bars, it must be chiefly a question of accident whether the issue is assassination or mere temporary disablement. The Judge sentenced the two principal offenders to three months' imprisonment with hard labour, and inflicted minor penalties on the rest. It can not be denied, of course, that three months' imprisonment with hard labour is a heavy punishment, in its way, but we are emphatically of opinion that the sentence should have been doubled. The procedure of these stokers from first to last did not possess one element of palliation. Their flagrant disregard of all the dictates of discipline was not less heinous than the cruel ferocity they displayed when eleven of them, armed with iron bars and sticks, fell upon a solitary man, beat him to the ground, and hammered him as he lay helpless. There was no question of a sudden access of passion precipitating unpremeditated violence. Some of the stokers pretended, indeed, that Mr. BARRIE struck the first blow. But even if that were true—and it appears wholly incredible—the significant facts would remain that the stokers went to Mr. BARRIE'S house carrying dangerous weapons; that they had deliberately determined to use their weapons failing other means of redress; and that they did use them with most cruel effect. Three months' imprisonment with hard labour does not seem an adequate punishment for chief actors in such an affair. With the contention of some critics, that violation of domicile should have figured prominently among the charges against the stokers, we find difficulty in agreeing. The men gained admission without exceeding ordinarily employed methods, and it was proved that Mr. BARRIE, being informed by his servant of

their presence, went, of his own accord, to the verandah to speak with them. On the other hand, after Mr. BARRIE retreated into the hall, the stokers were certainly guilty of intrusion when they pursued him, and of that fact the Judge took cognisance, for he sentenced to imprisonment with hard labour for 18 days five of the party who, though they were not proved to have struck Mr. BARRIE, followed him to the back of the hall whither he had struggled in his attempt to escape. Three others, who did not effect an entry but remained at the back gate and prevented Mr. BARRIE'S exit, received only 7 days' minor confinement. There is, however, another aspect of the affair that deserves serious notice. If, as is unquestionably to be apprehended, the Yokohama Court's sentence does not seem deterrent, all persons placed in positions like that occupied by Mr. BARRIE will adopt measures for their own effective protection. A revolver in Mr. BARRIE'S hands would have materially altered the issue, and foreigners liable to such incursions are not likely to be found without revolvers hereafter. If the Judge of the Yokohama Court had looked a little beyond the narrow limits of the case actually before him, he would have appreciated, not only the dangers of leniency from the point of view just noted, but also the fact that he was required to deal, not with an isolated act of lawlessness, but with an incident forming one of a series of recent revolts against duly constituted authority that threaten to seriously injure Japan's material interests as well as her moral reputation. The prosperous development of this country's maritime enterprise is impossible unless the strong arm of the law assists to insure ship-owners against violent defiance of discipline by their *employés*. There have been too many instances of that sort of thing lately, and we do not think that the judgment of the Yokohama Court will help much to check the trouble.

FORMOSA.

WE invite our readers' attention to the letters from Mr. J. W. DAVIDSON, printed elsewhere in our columns. Probably all thoughtful persons, after analysing the varied and often very contradictory accounts published with reference to the recent insurrection in Formosa, have come to the conclusion that, while many innocent Chinese suffered at the hands of the Japanese, such a result was scarcely avoidable, and assuredly does not warrant the sensational denunciations formulated by writers whose information is derived almost exclusively from Chinese sources. Mr. DAVIDSON was not present during the actual fighting, and it may be presumed that many of his facts have been furnished by Japanese. But most certainly his statements are not to be discredited on that account. Experience has proved

conclusively that very little reliance can be placed on rumours circulated by the Chinese when their object is to enlist compassion or secure credit for themselves, and to bring disgrace and obloquy upon the Japanese. They do not even display the commonest skill in manufacturing reports, but are content to concoct stories monstrously incredible and so intrinsically absurd that one marvels how a moment's belief can be extended to them by reasoning individuals. Take, for example, one of the stories recounted by a correspondent signing himself "South Formosa," whose letter was published in the *North China Daily News* of the 16th instant and, of course, reproduced in Yokohama, as is every article or letter that reflects injuriously upon the Japanese. He gravely asks us to believe that after the Japanese soldiers had been supplied with tea and food and courteously treated by the inhabitants of two villages, they proceeded to tie together the queues of their hospitable entertainers, in bunches of five, then and slaughtered the unhappy people indiscriminately. Are there any men in the world sufficiently savage to perpetrate such brutality? Yet the correspondent signing himself "South Formosa" believes that the Japanese did this thing. Apparently to be able to give the names of the villages constitutes valid evidence in his eyes, for not one other tittle of testimony does he adduce. He must know perfectly well, as everybody knows, that the tale he tells emanates from Chinese sources. No foreigner was present. None the less he writes:—"If any one doubts my statements I invite the most searching inquiry to be made. The report of intelligent foreigners who can speak the Formosa or Amoy dialect, I will accept, but the report of official Japanese (if it goes against my statements) I will not accept." The *naïveté* of this gentleman is as quaint as his credulity. He is prepared to place implicit credit in the assertions of any foreigner who, like himself, has sufficient knowledge of the local dialect to approach the Chinese and collect their rumours, but he is resolutely determined not to believe any contrary statement emanating from a Japanese source. In other words, he will accept Chinese hearsay so long as it condemns the Japanese, but he will not hear a word from the Japanese in their own defence! That is the kind of person whose second-hand, unsifted, and indiscriminate gossip is given a prominent place in the columns of the local press, and accepted as testimony sufficient to convict Japanese soldiers and officers of crimes inconceivably treacherous and horrible. To return to Mr. DAVIDSON, however. If he was not himself an eye-witness of the fighting during the rebellion, he has at any rate visited the villages and hamlets that were the scene of the fighting, and he assures us, on

the evidence of his own sight, that in every case except one, the people returned to their habitations immediately after the rebels had been driven out by the Japanese, and are now pursuing their avocations, as of old, in peace and security. The exception is Hoonlin, the focus of the rebellion. Mr. DAVIDSON inclines to think that most of the inhabitants of that place were more or less implicated in the rebellion, and that they consequently hesitate to return, apprehending punishment. The letter containing these statements is dated September 1st. Curiously enough, the writer signing himself "South Formosa" also dates his letter September 1st. But his account is diametrically opposed to that of Mr. DAVIDSON. This is what he says:—

Here is another fact which forms a commentary on the Japanese incendiarism. At the present time the authorities have sent a letter to each village in the district (and to Chih-an-sim-a) calling on the people to return and repair their homes. If a man occupied a house of one room, and if he now return, the authorities will give him \$1, two rooms \$2 and so on, one dollar for each room. If these people were really robbers why are the authorities now offering them money rewards? The reply of the people was a noble one and characteristic of a big proportion of the Formosa people. It was this. "We want not your money. Promise that you will not treat us like dogs, pigs, and cows, and we will return." Up to the present date very few have returned. Having been deceived so often they cannot trust the Japanese. Some few did venture back to their ruined homes, but it was only to be forced into service as military coolies.

Now which of the two accounts is to be credited? Mr. DAVIDSON speaks of what he actually saw; "South Formosa" evidently speaks solely on the strength of what he has heard. Besides, the latter's letter contains one piece of internal evidence that forcibly suggests a trumped up tale. "Having been deceived so often," he says, "the Formosans cannot trust the Japanese." But, as a matter of fact, the districts in which the recent insurrection broke out had never previously been the scene of any trouble between the Japanese and the inhabitants. That part of Formosa was occupied originally without any opposition, and it is therefore a manifest phantasy to pretend that the people had been repeatedly deceived by the Japanese previously to the outbreak: no opportunities had offered for anything of the kind. Is it not amusing, too, to be solemnly told that these villagers, who will not return to their homes because, having been so often deceived by the Japanese, they are unable to trust them, nevertheless prefer a Japanese promise to money, and declare themselves willing to come back if they get a promise of good treatment? If these tales were penned for the diversion of three-year-old children, they would be denounced as calculated to impair the reasoning faculties of the youthful mind. The Chinese account of the burning of Tsan-e-tun, as given to Mr. DAVIDSON, furnishes another illustration of the wild absurdities concocted by rumour in Formosa. On the faith of most rudimentary information elicited by a gendarme from a boy herding cattle, Japanese officers

are accused of deliberately setting their troops to burn a village and slaughter its inhabitants! The Japanese explanation of the destruction of the place has at any rate the merit of being credible. They obtained conclusive evidence that their people had been murdered in the village, and that it was the head-quarters of a rebel chief, and their attempt to enter it being forcibly resisted, they attacked it and burned it down. As to the general accusation that the Japanese have been treating the Chinese most brutally, and that their unfeeling oppression was the cause of the insurrection, how are we to reconcile it with the record of the attack upon Lokang, as related by Mr. DAVIDSON? That the Chinese in Lokang volunteered to assist the Japanese garrison to beat back the rebels, and did actually perform loyal and useful service, is a fact strikingly inconsistent with the pretence that the people had been driven to desperation by the cruelty of their new rulers and were only awaiting an opportunity to be revenged. It is to be noted, finally, that although the accusers of the Japanese speak glibly of the destruction of scores of villages, they are careful to avoid explaining that these so-called "villages" often consisted of a few mud hovels, scarcely worthy to be called a hamlet. The plain probability is that such places would never have been molested by the Japanese had they not been actually in occupation by insurgents, and that they suffered in most cases at the hands of the rebels themselves. Not one of the anti-Japanese accounts contains any reference to incendiaryism and assassination by the insurgents: the whole responsibility is laid upon the shoulders of the Japanese. Even without the experience of previous campaigns in which Chinese troops were concerned, we know enough of what happened recently in Formosa to be sure that burning and slaughter were common practices of the rebels. The Japanese are certainly responsible in so far as they failed to protect the lives and property of their Formosan subjects, but to lay all the conflagrations and slaughters at their door is palpably a gross injustice. On the whole, while not able to determine whether the Japanese troops committed any excesses, careful examination of the evidence thus far adduced convinces us that, whether wittingly or unwittingly, an attempt has been made to hold the Japanese up to execration such as their acts do not by any means justify.

DIVINE INTERPOSITION.

THE last English issue of the *Yoroso Choho* has an article commencing thus:—"A paragraph in a recent issue of the *Japan Mail*, wherein, by-the-by, sentiments wholly at variance with that journal's ordinary language are set forth, would seem to imply that there

are those who see in this year's long list of disasters and national calamities a sort of divine retribution or judgment for things which we have done or left undone." Our Tokyo contemporary is labouring under a singular delusion. The short paragraph referred to simply laughed at the absurd notion that the natural calamities suffered by Japan this year should be regarded by any sane person as an evidence of divine displeasure on account of the war with China, and pointed out that the unique object of writers attributing such phantasies to the missionaries, was to bait men who, being incomparably their superiors in everything that constitutes a title to respect, are regarded by them with the bitter animosity eminently characteristic of moral snobism in the presence of anything better than itself. If the *Yoroso Choho* will point out, in that expression of our views, any sentiment "wholly at variance with the *Japan Mail's* ordinary language," we shall be obliged. The fact seems to be that our contemporary has confounded our utterances with those of some other journals, and has thus been guilty of carelessness totally inexcusable on the part of a public critic.

The original question—namely, how the missionaries' alleged doctrine of divine intervention in human affairs could be reconciled with the calamities suffered by Japan this year, except on the supposition that the latter country is now undergoing heavenly punishment for the sin of warring against China—is too ridiculous to be seriously discussed. Not even the journalist propounding it can have expected to be taken seriously. He simply wanted to have a fling at the missionaries, whom he cordially detests, first because they are men who condemn the villainous practice of fomenting racial prejudice in order to batten upon its morbid displays; and secondly, because the chief purpose of their lives is to promote charity, not to propagate slander; to correct the sordid and grovelling instincts of humanity, not to set the contemptible example of referring every incident of daily life to the meanest and most despicable motives. We do not imagine that any Christian missionary in this country believes in Jupiter and his thunderbolts, or thinks that Providence employs rain, storm, and tempest as agencies to manifest divine interest in human affairs. If there be any such missionaries, we have never met them, nor can we conceive them so illogical, whatever the depth of their superstition, as to suppose that Heaven, having allowed China to suffer all the misfortunes directly incidental to the war—crushing defeat, wholesale loss of life and treasure and large diminution of territory—should now, after a year's interval, attempt to demonstrate the injustice of her sufferings by sending seismic waves to kill poor fishermen, and heavy rains to wash out indigent peasants,

in the realm of her conqueror. But, in truth, such absurdities were never really in question. The plain purpose of the original writer was nothing better than to raise another bark against the missionaries from the rabble that yap at their heels.

This anti-missionary prejudice is one of the most unsightly displays in the East. That a man should deny orthodox Christianity; that he should denounce every faith in the supernatural; that he should combat the dogmas preached from missionary pulpits, is quite within his right. He is entitled to his own opinions just as fully as the propagandists of any creed are entitled to theirs. But that he should endeavour to gain currency for his views by attributing contemptible motives to their opponents, by sneering at their attainments, questioning their sincerity, and holding them up to public scorn, is a miserable exhibition. When so many men and women in the foreign settlements vilipend the missionaries and speak of them as a species of hypocritical parasite, they forget, if indeed they ever knew, that among these much abused folk are highly educated ladies and gentlemen living lives of unceasing labour and self-denial, lives as noble as are to be found in any page of history, and setting unobtrusive examples of heroism that should make their traducers tingle with shame.

MONTHLY SUMMARY OF THE RELIGIOUS PRESS.

It has often been said that, when writing on religious topics, the Japanese are frequently guilty of treating the subject with a flippancy that shocks the Western mind and wounds the susceptibilities of devout souls. There is no doubt much truth in this accusation. But nevertheless it is a fact that not a few of the literary magnates of modern Japan have devoted the most serious attention to religion and have read all that representative Western thinkers have written on the subject. What these men say is evidently based on deep conviction. They show no signs of being actuated by secondary motives or of discoursing on sacred subjects as a mere literary pastime. The views of three such writers are given in the pages of the *Nihon Shūkyō*. The men selected are Professor Toyama, Dr. Mōtō, and Dr. Katō. It is considered that the opinions expressed by these three essayists represent, with slight variations, the views of a very large section of the educated class in modern Japan. Hence we may be excused for giving a somewhat longer summary of the articles published by these writers and referred to in the *Nihon Shūkyō* than they would be entitled to did they merely express the opinions of their authors.

Dr. Katō Hiroyuki's religious views have so often been discussed in these columns and are so familiar to most of the readers of this summary that it is unnecessary to state them at any length. In Dr. Katō's opinion the peace of mind derived from religious belief resembles that of the patient who has imbibed a narcotic. Narcotics are doubtless necessary in serious cases, says Dr. Katō, but to represent mankind as attacked by a disease that calls for the ceaseless administration of soul-numbing drugs is contrary to facts and fatal to progress. The peace of mind of the religious devotee is a state that is only possible to men and women that have not advanced beyond a certain stage of knowledge. I have never contended, continues Dr. Katō, that religion can be altogether dispensed with. There are doubtless people who need it. What I do

maintain is that to the man who is thoroughly acquainted with the nature of things, with the principles which control the world, religion is superfluous. That large classes of people have been permanently benefited by religious teaching is undeniable. And among religions whose doctrines have conferred benefits on the world, Christianity is the chief. No creed has better taught the doctrine of universal brotherhood nor supplied stronger incentives to virtue. On many great social questions Christianity is far ahead of Buddhism. Buddhism has always despised woman, has taught that she is defiled and the source of defilement. For the mental development of individuals Buddhism has its uses, but as an agency for the elevation of the masses to a higher level it has failed. As a philosophy it excels, but as a religion it is of no use. Many of its priests regale themselves with high class mental food on heights far removed from the haunts of ordinary men. These priests live to themselves. Of what use are they to struggling humanity. In Japan in the middle ages there were Buddhist evangelists of great earnestness, and the saying that *truth lives or dies according to the quality of the men who preach it* was well illustrated at that time. But Buddhism can no longer boast of such men. Although Christianity seems to have little influence in this country at the present time, there is no saying that mixed residence may not work a change. Among the foreign missionaries there are men of great earnestness, who feel that they are preaching truth. If their zeal is imparted to Japanese converts, we may yet see a great awakening in the land.

Dr. Motora's articles on religious topics, if collected, would make a tidy volume. He has evidently given a great deal of attention to the subject, and, unlike so many Western writers who hold advanced views on religious belief, he deems it his duty to give the world the benefit of his investigations. Here are some of the titles of his articles: "A view of Man's Nature," in the *Taiyō*; "The Way," in the *Tetsugaku Zasshi*; "Striking Traits of the Mind of Confucius," in the *Taiyō*; "Education and Religion," in the *Kyōiku Hōchi*. In a book on "Mental Philosophy," published by Dr. Motora, religion receives considerable attention. Dr. Motora's views are thus summarised by the *Nihon Shūkyō*:

(1.) RELIGIOUS EXPERIENCE.—In an article published in December, 1894, Dr. Motora stated that originally he was a Christian, but that his studies led him to see that Christ had no such perfection as is attributed to him, that he was an ordinary human being.

(2.) THE SPIRIT WORLD (*Reikai*).—In an article to which we have alluded Mr. Motora says, "Although religious believers are anxious to derive comfort from the supposed fact of the existence of a world of spirits that are unattached to matter, I have never been able to conceive of any such existence. All we know and all we need to know is that we are descended from a long line of ancestors, and that we shall be succeeded by generations of men and women like ourselves, and thus that the continuity of the human race, on which progress so largely depends, is never broken."

(3.) THE EXISTENCE OF GODS AND BUDDHIST DIVINITIES.—In order to lessen the troubles of life and to promote greater happiness in the world, men have imagined that gods and divinities actually exist and that there is such a thing as the law of Heaven. That such ideas should prevail in the early ages of the world when natural laws were not properly understood was unavoidable. In those days men were passive recipients of the teaching of priests and ministers of religion. It was assumed then that the whole world was subject to one comprehensive principle and that all things worked together to attain a definite object, whereas, to whatever quarter one turns, the battle of nature's forces, the collision of one power with another, is seen to be incessant, and there is no sign of any such subservience of forces to one purpose as religions teachers allege to exist.

(4.) THE COMFORT TO BE DERIVED FROM SCIENCE.—While dissatisfied with existing

creeds, Dr. Motora is not of opinion that even educated men can do without religion. The old foundation of belief has gone, but he is for replacing it with one composed of material furnished by modern science. The doctrine of a future life, says Dr. Motora, was invented with a view of satisfying men's desire for happiness and to provide a compensation for the cruelty of many of nature's laws. But this doctrine has met with severe treatment at the hands of science. Judged by the light of science the notion that the soul is immortal becomes untenable. There is an immortality of the soul to which no scientific objection can be made. There are those who say that a living being never dies, as the life received is given to other beings and thus the soul lives on to all eternity. But this is the perpetuity of species and not of the individual, and though there are not wanting minds which find a certain amount of satisfaction from this consideration, to the majority of mankind it affords little comfort. This is not the future life that they crave for. The perpetuation of those elements which, combined, constitute what we call life, is a very different thing from the continued existence of a living being. Yet, on the other hand, there is something grand about the idea that the individual is sacrificed to the species, and that it is the duty of members of society, not to live and die for themselves, but for the permanent good of society; and this notion that the welfare of society as a whole is of far greater importance than the welfare of any individual member thereof, constitutes what we may call the religion of the thought that his individual desires and longings must be rendered subservient to those of society. We are in favour of having this notion instilled into the minds of the young to a greater extent than it has hitherto been done. To derive comfort from the working of the law to which we have referred is the only religious comfort possible to a certain class of minds. In the case of people who can obtain no solace from the fact that throughout the whole of nature the individual is sacrificed to the species, there is no other course open but to fall back on existing religions and obtain what satisfaction is to be had. One thing is certain, that men need some kind of a religion. If, with the scientist, they are unable to rejoice over the progress of the human race in spite of or by means of the sacrifice of individuals, with believers of the established religions they must live in the expectation of rewards from the gods. Otherwise they will fall victims to the baser lusts with which they find themselves endowed and lose the dignity which distinguishes the animal man from other kinds of animals. As religion is very much a matter of education, it seems to be of great importance to place the scientific views which I have now given before the rising generation and let young men and women grow up permeated with the notion that their duty in life is to make all their individual interests subservient to those of society.

We next come to Professor Toyama's religious views. These, as is but natural in the case of active minds, have in the course of years undergone numerous changes and modifications. In an essay extending over 47 pages published in the *Tetsugaku Zasshi* (No. 114) Professor Toyama states his most recent convictions on the great questions which have engaged the thoughts of inquiring minds all the world over. The article published in the *Tetsugaku Zasshi* entitled "My belief respecting the object of Human Existence," is founded on a lecture delivered by Professor Toyama to the Philosophical Society in April last. It is almost impossible to do justice to an essay of such length and importance as that of Professor Toyama in a Summary of this kind. We can do no more than state the Professor's conclusions. The steps by which he reaches them must be left for reproduction in some other form at some other time. At the close of the essay, Professor Toyama sums up under 21 heads the articles of his belief. Even these we can only give in an abbreviated form, which we now proceed to do. (1) I am a believer in evolution. (2) I believe that like other organic existences, human beings and whatever beings are in a higher stage of progress, are sub-

ject to the law of Evolution. (3) In the case of other organisms evolution is unconscious, but in the case of human beings the progress made and the changes undergone are closely connected with consciousness. (4) Evolution follows the law of the survival of the fittest. (5) Man's consciousness renders him acquainted with success and failure, victory, and defeat and the circumstances connected therewith. (6) His knowledge of these circumstances makes him desire to control them and leads to action designed to subject them to his direction. (7) The law that self-effacement leads to self-assertion, that the individual *ego* must be absorbed and lost in the *ego* of society, plays an important part in evolution. (8) In the general struggle for existence those beings which lose their individuality in the race to which they belong, prove to be the strongest. (9) This is especially the case with human beings. (10) But it applies in *different degrees* according to the stages of progress through which nations pass. (11) Where there is no self-sacrifice for the sake of the State, dissolution and disintegration take place. (12) It is of the nature of animals to cling to life, and human beings are no exception to the rule. They desire to live for ever. (13) There is an everlasting life that is attainable and an everlasting life that is unattainable. As individuals, the existence of beings lasts but a short time, but as members of the race to which they belong they live for ages. (14) Where intelligence is only imperfectly developed, there is no knowledge of the eternal life that is attainable (that of the race), and men are ready to believe that they as individuals are destined to live for ever. (15) Persons who have these proclivities are taught that there is a heaven and a hell, and various other articles of religious belief, and by this means the spirit of self-sacrifice is instilled into them after a fashion. But they lack breadth of mind. Their *ego* is still that of their individual selves, and not the *ego* of society as a whole. (16) Religions based on future rewards and punishments may satisfy imperfectly developed minds, but the highly developed consciousness can never allow, as a motive for action, the existence of any external authority such as religious devotees claim for their objects of worship. Persons who subject themselves to such control and who profess to order their lives so as to make them accord with this external authority have not yet reached a state of perfect virtue. They must be regarded as men and women whose moral natures are not yet fully developed. The sanction which the actions of the fully developed individual receives is *exclusively* internal, the sanction of his own mind. (17) All persons whose intelligence is properly developed find the fullest internal sanction for their actions, and they well know that it is utterly vain to hope that when this life is over there will be any continuance of an individual existence similar to that we have known here. But there is a future existence which every enlightened man knows will be his. He will exist in the children that he begets, if he has any, if not, the efforts he has made to help forward the progress of the world, the influence of his life upon his fellow men, will bear its fruits in distant ages and thus he may be said to live for ever. (18) Persons whose one idea is to benefit themselves in the world may be expected at any time to sacrifice the interests of society to their individual interests. No person whose rational peculiarities are developed can endure such persons. Steps should be taken to expel them from the society of their fellow-men. (19) It is immensely important that in every community people should be taught how to cultivate a spirit of self-effacement and self-renunciation, and be shown that this is the only way to preserve their individuality. (20) It is of great moment that all men should be reminded of their dependence on society from the day of birth to the day of death, that as isolated individuals they have no real existence either here or hereafter; that they should be told that the idea which originated in the dark ages that individual souls are to exist for ever as separate units, is a selfish idea, and that the teaching of such a doctrine is detrimental to the interests of society, and something of which men in this

enlightened age ought to be ashamed. They should be informed, too, that those who bow to some external standard of conduct are not moral beings, as it is of the nature of true virtue that its standard should be subjective, should embody the convictions of the person who practices it. These and similar truths should be impressed on the mind of every member of society.*

Commenting on the views given above, the *Nihon Shūkyō* observes that the majority of noted Japanese scholars hold these opinions. Mr. Takahashi Gorō and one or two others profess the Christian faith. No one who does not acknowledge Christ as God can be considered a real Christian, says this organ. This excludes a number of writers who are in the habit of arguing in favour of Christianity as a system of morality, such as Mr. Tokutomi Ichirō, the editor of the *Kokumin-no-Tomo*, and Mr. Yokoi Tokiwo. The *Nihon Shūkyō* doubts whether the creeds of such writers as those whose opinions we have just been giving are worthy of the name of religions. It would be more appropriate to describe them as systems of social ethics. Of the sufficiency of moral education such as is recommended by modern Japanese scholars, this organ is not at all certain. It sees no necessity for any such new system of religion as is projected by Dr. Motora. Existing religions can supply all the moral stimulus and teaching that is necessary.

Under the heading of "Religious Conferences," the *Waseda Bungaku* informs us that, after considerable preliminary correspondence, it has been decided to hold a general Conference of representatives of religious bodies in Shiba, Tōkyō, at the house of Viscount Matsudaira, on the 26th of this month (September). Among the gentlemen entrusted with the calling and management of this meeting are Shimaji Mokurai, Nanjō Bunyū, and Murakami Senjō, representing the Buddhists; Ishikawa Masayoshi, Matsumura Kaisei, and Yokoi Tokiwo, representing Christians, and Maruyama Sakura and others, representing Shintoists. The meeting will be attended by most of the leaders of thought in the religious world. It is said by some that conservative Buddhists and orthodox Christians are very much opposed to each other, and that this opposition will manifest itself at the meeting. Others regard the movement as likely to lead to an amalgamation of certain sects, but this is not the view of the projectors of the movement. The results of the conference which they expect to see realised are a better understanding among religious teachers and greater friendliness of feeling for each other, and the general intellectual benefits to be derived from interchange of thought. The *Hansei* (反省) *Zasshi* (a Buddhist organ) exhorts those intending to speak at the meeting to suppress their own special views, confine their remarks to subjects of general interest, and to forbear from attacking other sects. This course, says the *Waseda Bungaku*, if followed strictly, might lead to relicence respecting a man's deepest convictions and thus prove detrimental to those who are in search of religious truth, in addition to rendering the meeting barren of lasting results. We, says this organ, are in favour of a lucid exposition of both the Buddhist and Christian creeds being given, without any attempt to force an agreement that does not exist in actual fact.

On the subject of the union of Japanese Buddhists and Christians, the *Sekai no Nihon* says that there are writers who are of opinion that the world is about to witness an entirely new religious movement, namely the amalgamation of two hitherto antagonistic faiths. The Christian organs are entirely opposed to any such mea-

sure. The *Fukui Shimpō* is astounded that any such proposal should have been made. The Methodist Organ, the *Gokyō*, shows its antipathy to the movement in a most outspoken manner, and the Kumiai churches, which in their theology and their conduct show great liberality toward other bodies, treat the proposed amalgamation with the greatest indifference. Hence the much talked of *rapprochement* between the two great religions of the world exists only in the imaginations of a few sanguine agitators.

A writer in the *Awoyama Hyōron*, discussing marriage rites, says that there is much that is worthy of preservation in the Japanese method of conducting nuptial ceremonies. The tendency in modern days, specially among Christians, observes this writer, is to curtail these ceremonies to the utmost extent. There are Christians who say they can be married for 2 yen 50 sen, and others who talk of getting the thing done for a yen less. All this involves the cutting down of floral decorations and economy in the use of lights, so that it sometimes happens that visitors assemble in a gloomy building and the sacred writings are read by means of a dim light, and the cakes are handed around as they arrived from the confectioners. The desire being to dispense with ceremony, some of the guests appear with naked feet, without *hakama*, and even without *obi*, and half naked *jinrikisha* coolies are to be seen standing about inside the church; and this ceremony, whose roughness defies description, is to bind two people together for life. All this is most shocking to our ideas of fitness, concludes the *Awoyama Hyōron*, and we are anxious to see it reformed.

The *Rikugō Zasshi*, under the title of "Three different opinions on Religion," remarks that in this money-making age, when almost everybody seems to be suffering from the business fever, it is important to bear in mind that such a thing as religion exists. Leaving minor points, the views of those who have a claim to be heard on the subject of religion are of three kinds. (1) There are those who hold that religion has a thoroughly rational basis. Scholars who maintain this opinion divide off into several sections: some consisting of theologians who have abandoned the old landmarks and who are bent on constructing a new system of theology, others being philosophers of various schools who think that religion is based on philosophy. (2) There are those who maintain that religion is pure superstition, and who say that since the unenlightened masses in all ages have had a hankering after revelations from another world, it has been necessary for those who are responsible for the government of nations to rely on religious teaching in order to further their ends. Such controversialists are of opinion that the stage of religion, or superstition, has to be passed through on the road to full enlightenment, and that the incident that mistaken notions should prevail during certain periods of a nation's history is unavoidable. They therefore do not deem it necessary to attack religion. It represents a state of thought that is transitional. It is an evil that will cure itself. (3) There are writers on religion who steer a middle course between the two classes mentioned above. Religion, say these scholars, is neither rational nor superstitious. It can never be proved by philosophy or by science. It is impossible to establish anything like a philosophical basis for the doctrine of the existence of God, for instance. Religion is neither to be accepted nor rejected on rational grounds. It is only to be regarded as a feeling, as the response to certain cravings of the human heart. There is a great want of clearness about this view, though it is held by a large number of writers. The standards under which various Japanese writers on religion range themselves, concludes the *Rikugō*, seem to us not to be sufficiently well marked, and our object in penning these lines is to urge the necessity of clearer definitions of the position they occupy by controversialists of all schools.

Among items of news published in the *Nihon Shūkyō*, one paragraph refers to the bearing of

the proposed revision of Criminal Law on religious reverence. According to the present law, any rude or irreverent act committed in a temple, before a shrine, or at a tomb, renders the person committing it liable to a fine of not less than 2 yen and not more than 20, while the interruption of preaching or worship rendered the person guilty of such an act liable to a fine of not less than 4 yen and not more than 40. It is reported that the revised law will be altered so as to punish the first offence with 6 months' imprisonment and a fine of 50 yen, and the latter with imprisonment up to a year and a fine up to 100 yen, according to the nature of the offence.

The organ just quoted publishes a letter from Mr. Kuzumi, which contains the following criticisms of Dr. Kato's views on prostitution. My objections to Dr. Kato's defence of prostitution are five in number, says Mr. Kuzumi, which may be stated as follows:—(1) The fact of their regarding prostitution as an immoral practice distinguishes human beings from other classes of animals. It is a step towards a higher plane of existence. (2) The condemnation of prostitution as immoral is a result of the development of the natural affections of human beings of both sexes for each other. (3) It is repulsive to find that relationships which should be regarded as of great importance should be treated as nothing better than a means of affording temporary amusement and enjoyment. (4) The feeling of dislike for prostitution is based on the sense of shame which every woman feels when she sells her body for immoral use. (5) Public opinion on this subject is the result of a moral development that sets a high price on chastity and to change men's notions on this point would be a step backward.

The *宇宙神教 Uchiūshinkō* (Universalist) has a short note on the influence of the liberal section of the Christian Church. Christian teachers of latitudinarian tendencies, says this organ, are not much before the world at present for the simple reason that their doctrines have been received and rendered a portion of the creed of many of the leaders of thought in the conservative ranks. So rapid has been the spread of liberal views, that the distinction between liberals and conservatives in the Christian Church has been well nigh effaced. Among Christians of influence, to find men who believe in original sin, the doctrine of the Trinity, the atonement, and everlasting punishment, is rare. These hitherto strongly fortified castles of conservative Christianity have succumbed before the fire of the criticism brought to bear on them. If men of advanced opinions in the Church are less conspicuous than they used to be, it is because the opposition which they once encountered no longer exists. Their present oblivion is one of the greatest proofs of the success of their cause. As a result of years of study and criticism the grain of Christianity has been separated from the chaff. The shell has been removed and the kernel only remains. If asked of what this kernel consists, I enumerate the elements that compose it as follows:—(1) Jesus of Nazareth was a man whose character and virtue has never been equalled in the world. (2) The doctrine on which he founded his ethical system was that the human race is one great family with God as its father, and hence he taught that the duty of man consists of love of God and love of fellow-men. (3) Christ's life was pure and undefiled and he devoted the whole of it to teaching his fellow-men. (4) So astonishing were many of his doings that they were called miracles by his contemporaries. (5) After great labours carried on during several months (*sugetsu*) he was crucified. (6) He taught those who loved and followed him a method of overcoming death. These are the simple elements of Christianity, which no amount of criticism can destroy. These simple truths constitute the skeleton, as it were, to which flesh, raiment, and ornaments have been added. The ornaments, the raiment, and even the flesh may be dispensed with as long as the original framework is kept intact. To impress this fact on the world has

* In many cases, in order to make Professor Toyama's statements intelligible to readers, we have been obliged to amplify them somewhat. Without reading the whole of the essay, it is not easy to understand the allusions at its close. The principle for which the Professor contends is thus concisely expressed in Japanese 没自の自我性 *Botsuji-teki-Shuga-Sei*. The state in which the highest individualism is promoted by self effacement. Altruism proves to be the highest egoism.

been the work which the Christian *Jiyū-ha* has set itself to perform.

X The *Shūkyō* (No. 59) publishes some recent statistics showing the number of Buddhist priests, temples, &c., that there are in Japan. Japanese Buddhists consist of 12 sects and 40 sub-sects, with temples exceeding 73,000, and about 100,000 priests. If these numbers be compared with the number of square miles of which Japan consists, it will be found that there are over 3 temples and 4 priests for every square mile. And if the population of Japan, 40,000,000, be considered, it is found that there is a temple for every 540 persons and a priest for every 400. It is somewhat difficult, says Mr. Saji Jitsuzen, the author of these statistics, to estimate the number of *tsubo* these temples cover, but even at the lowest estimate, they cannot be less than 10,950,000, and reckoning that 25 *sen* per year is required to keep these buildings in repair, the sum thus expended amounts to 2,737,500 *yen*. Adding to these items the expense of maintaining the priests and their families and the cost of festivals, evangelistic work, and the like, a sum of 22,500,000 *yen* is reached.

This vast sum of money is derived from 5 sources:—(1) from endowments and a large amount of immovable property; (2) from subscriptions and donations made by devotees, and from presents given at funerals and other ceremonies; (3) from the money received by priests for their services at private houses, from divination, the sale of *Ofuda* (written charms), and from the profits accruing from the private property which the priests possess. In addition to gifts of money, it is customary to present to temples at certain times of the year such articles as *toshidama*, *higan*, *bon*, *sekihan*, *dango*, and *manjū*. Moreover, in recent years priests have devised means of making money of which their ancestors would not have approved. In some cases they sell medicines, keep silkworms, or play the part of small usurers to their parishioners. With the exception of Hyūga, Satsuma, and Osumi, Buddhism may be said to be prospering all over Japan. It is no great task, then, for the richer temples to support the poor ones, and many cases are recorded of the bequeathing of ecclesiastical property to parishes needing regular pecuniary aid. The total sum required annually for the maintenance of the Buddhist faith when divided up among the population does not exceed 57 *sen* per person, or about 2 *yen* 50 *sen* for each household.

The only Roman Catholic organ we have been able to procure is a small magazine called the *Koye* (voice), issued in Kyōto once a fortnight. It has been in existence over five years. A recent number of the *Koye* contains a strongly worded attack on Buddhism. The author, Mr. Okada Kanji, after singing the praises of his own religion, proceeds to describe Buddhist teaching as benighted and designed to lead people astray. Buddhist exposition, says this writer, while made to appear profound is in reality most shallow. As a philosophy, Buddhism has merits, but as a religion there is no satisfaction to be found in it. Shaka was ignorant of the origin of all things, and hence he deceived himself and deceived others.

In another paragraph of the same magazine reference is made to a Foreign Missionary Society that was organised in Paris more than 200 years ago. Eastern countries were divided up into 27 districts, which were situated as follows:—4 in Japan, 1 in Korea, 8 in China, 7 in Annam, 4 in Burmah, Siam, and Malacca, and 3 in India. According to the latest annual report of this Society, the total number of converts in the 27 districts has now reached 1,097,922. The report from Japan states that during last year the total number of baptisms were 3,623, consisting of 2,241 adults and 1,382 children. Protestants who joined the Roman Catholic Church numbered 33. Among infant baptisms no less than 1,068 are described as having taken place when the infant was at the point of death

(*shi ni nosomishi mono*). The total number of Roman Catholics in Japan is stated to be 50,302.

In the Appendix of the *Kokumin no Tomo*, Mr. Uchimura Kanzō, a Christian, has been giving to the world a series of criticisms of things in general, and he is very severe on certain youthful preachers of Christianity whom he describes as poorly educated, full of conceit, and fond of using grandiose language. In order to give to their countenances an appearance of gravity their years do not warrant and to make it seem as though they had injured their eyesight by hard study, they appear at the preaching desk with spectacles and use terms the real significance of which is entirely beyond them. Among other things they talk about "Japanese Ethics" and "Japanese religion," as though ethics and religion, if worth anything, were not equally applicable in every country. The impressions such preachers leave on the mind of the discerning is that they use religion as a means of bringing themselves into notice, for in many cases these glib-tongued representatives of the Christian Church are the last to recommend by their lives and demeanour the religion they appear so anxious to propagate.

SALVATION ARMY ANNIVERSARY.

A series of meetings to celebrate the first anniversary of Salvation Army work in Japan have just been brought to a close in Tokyo. According to Col. Wright's report it appears that during the year five stations, or corps, have been opened, two in Tokyo, one in Yokohama, one in Hachioji, and one as far West as Okayama. Meetings have been held every evening and three times each Sunday. The attendance on the whole has been very good, and six hundred and nine persons have come forward in public as enquirers. One hundred and fifty have definitely identified themselves with the Army, and many of them take active part in the "War." Over three hundred *yen* has been subscribed in the meetings, principally in copper coins. In addition to this, seventeen hundred *yen* were raised in the country from other sources. There are now seventeen Japanese officers in full work, four of them holding the rank of Captain. A "Training Garrison" situated at Shintomicho, Kyobashi-ku, has done good service in familiarising candidates for officership with Salvation Army tactics. Perhaps the most pronounced success seems to have been achieved with the *Tokino Koye*, a paper published fortnightly and sold at one *sen* per copy. In nine months it has risen to a circulation of 1,750 copies per issue. It claims for itself two things, first it has double the circulation of any other Christian paper in Japan and second, it pays its own way and leaves a profit—not a *sen* of foreign money is needed to keep it alive. Let it be observed this paper is sold not given away, sold on the streets, in the parks, and at temple feasts, and sold by Japanese officers and soldiers. Other Army literature in pamphlet form has been translated and disposed of freely. A new Song Book, containing over 100 songs and choruses, is just leaving the press. Colonel Wright regards the first year as satisfactory. Turning to the new year upon which they are entering, the programme includes the establishment of at least one Prison Gate Home in Tokyo, and a Sailors' Home in Yokohama. It is to be regretted that the state of Mrs. Wright's health necessitates Colonel Wright's return to England at an early date, nevertheless a worthy successor will be found and the work will go on.

JAPAN AND RUSSIA IN KOREA.

With regard to Reuter's telegram that *The Times* contains a statement to the effect that Japan and Russia have concluded an agreement by which the former binds herself to evacuate the peninsula, we are officially authorized to say that the allegation is entirely baseless. It is a pity that Reuter did not indicate the source from which *The Times* obtained such a piece of illusory information.

KOREAN NEWS.

We gather the following from Korean correspondence received by Tokyo papers, covering events up to the 18th inst.:—

The most important item of news mentioned refers to a concession that Russia is alleged to have succeeded in obtaining from Korea for cutting and planting trees in Mu-san, Hamgyong-do, Uis-neung-do, Kan-won-do, and along the banks of the Yalu. The ostensible recipient of the concession is Mr. Brino (?), a Russian merchant, to whom a charter was granted on the 9th instant, in the immediate sequel of a Cabinet meeting. The *Nichi Nichi*'s correspondent sends the details of the concession. It commences with a provision that, in order to encourage the cultivation and planting of foreign trees in Korea, the Government of the latter grants, to Mr. Brino, a Russian merchant of Vladivostock, the right of forming a mercantile corporation, to be called "the Korean Trading Company," under a charter extending over period of two decades. The felling of trees in Government forests and the planting of saplings is limited to Mu-san, Utsu-neung-do, and the right bank of the upper course of the Tu-man-gang, but so soon as forestry affairs shall have been placed on a proper footing in these localities, the company is to be entitled to make a survey of the woods growing on the Korean frontier of the Yalu, to select, in any part whatever of that district, places suitable for the planting of trees, and to extend its plantations freely, in conformity with the provisions applicable to woods on the banks of the Tu-man-yang. It is provided, however, that the privilege, in so far as it relates to the Korean frontier of the Yalu, will become null and void should no practical action be taken under the charter within 5 years computed from the signing of it. The felling of trees is to be limited to one place each year, and the forests conceded to the lessee are to be subdivided into twenty sections, in which tree cutting must not be carried on earlier than May 15th or later than Sept. 15th. The Korean Government is to be entitled to send officials or students to work-shops established by the Company, with the view of obtaining for them instruction and experience in dendrology and cognate matters, and the same Government pledges itself to assist the Company should the latter desire to obtain a supply of native labourers. Moreover, Koreans are to be engaged as far as possible for work in the forests, provided that they may be replaced by Russians or Chinese should expediency dictate such a change. The import of machines and the export of timber are to be free from the imposition of Customs duties, but the Korean Government is to receive 25 per cent. of the profit accruing from the business. Otherwise the Company is exempted from all pecuniary obligation. The Company is to establish its Central Office in Vladivostock, with branch offices in Sōul and Ninsen, and a general meeting of shareholders is to be held once a year. The King of Korea reserves power to commission one of his officials to superintend all matters having any concern for the Korean Government in the business of the Company, and also to despatch officials, from time to time, to examine the quantity of trees felled and of timber in the work-shops, and the books of the Company. The yearly royalty to the Korean Government is to be paid in Sōul through the medium of the Russo-Chinese Bank, and to insure punctual payment, the lessee is to deposit 15,000 roubles in silver in the Bank, which deposit must be always maintained at that figure. The concession is to become ineffective in case the business is not started within one year, computed from the day of signing; but in the event of War, or any other contingency beyond the control of the Company, the term may be prolonged after conference between the lessee and delegates of the Government. The lessee is entitled to transfer the privileges set forth in the concession to any competent Russian individual or Company.

Since the annexation of Ussuri, writes the correspondent of the *Nippon*, Russia has been intent, as everybody knows, on extending

her frontier southward, and on adding to her dominions the northern portion of Ham-gyong-do, that is to say, the districts watered by the Tu-man-gang. At Ham-heung, which is distant some 80 miles from Gensan on the north, and where, according to the Overland Commercial Treaty between the two States, a market is located; and also in Pok-chhông and Ham-gyong-do, Russians own land in direct contravention of the provisions of the Treaty, and are engaged quite extensively in the business of farming and pasturing cattle. The districts now conceded for forestry purposes to the Russian merchant, who is carrying on business at Vladivostok under the patronage of the Russian Government, are the only thickly wooded portions of the whole Peninsula. Elsewhere, the hills and plains are almost entirely denuded of timber, owing to the reckless cutting of trees that has long been going on. Mu-san, which signifies "luxuriant hill," and the banks of the Yalu are reputed to possess an almost inexhaustible supply of timber, and to offer, at the same time, great facilities for river transportation. Uisu-mung-do is a small island off the coast of Kang-won-do. It has a certain historical connection with Japan, for it was there that the celebrated merchant of Kaga, Zeniya Gohai, established a station and carried on an extensive commerce, in contravention of the law enacted by the Tokugawa Regency. Bamboo and oak grow abundantly on the island, the latter of magnificent dimensions. The same correspondent writes that it is not on account of the timber industry that Russia wished to secure access to the island, but because she intends to convert it into an anchorage and coaling station for her Pacific Squadron.

Another correspondent writes that Russia has also succeeded in securing a lease of Chak-yak-do "Peony Island" (so-called from the abundance of peonies growing there), which is situated at the mouth of the Han-gang. It is a small island, not measuring much above one mile in circumference. Rumour says that Russia had previously obtained a lease of the western coast of Wôl-mi-do, but it was found too small, the other portion having already been leased by Japan years ago, and, moreover, the coast is destitute of any supply of water. After long search, a spring has been discovered in "Peony Island": hence Russia's decision to lease that place. Her marines are now guarding the island, and the work of clearing it and constructing a road has been going on since the 10th inst. Coal storehouses are also in course of erection at Wôl-mi. The opening of Muk-pho, Cholla-do, and Chin-nam-pho, situated on the bank of the Ta-dong, for foreign commerce was decided upon some time ago, but the troubles that overtook the Korean Government from one cause or another, prevented the carrying of the decision into practice. We are now told that the Sôul Authorities have at last made up their mind to open Chin-nam-pho, and that the fact will be announced in a short time. The reason why the Government hastens the opening of this particular harbour is attributed to its desire to prevent smuggling and the consequent diminution of Customs duties. Being situated not far from Phÿng-yang and other important towns in the same locality, shipping business at Chin-nam-pho is very active, and native or foreign merchants smuggle large quantities of goods, thereby considerably affecting the Customs receipts at Ninsan. Mr. Osborne, an employé of the Ninsan Customs, started for Chin-nam-pho on the 13th instant, taking with him the materials needed for establishing a branch of the Customs there. The actual opening of the harbour for purposes of commerce may be expected within 40 days. As to Muk-pho, its opening is said to be problematical, Russia being believed to entertain some secret design with regard to the place.

The eyes of foreign residents in Sôul are now centered on M. Bokochilof (?), President of the Russo-Chinese Bank, who, after having visited China, arrived in Korea about the beginning of the month. His arrival is said to have been the signal for a sudden change in the attitude of Mr. Brown, Financial Adviser of the Korean Treasury, towards the Korean Bank project. It has

to be remembered that Mr. Brown was originally hostile to the scheme, and that the projectors were obliged to sever connection with him, and start the bank as a private concern. They had to encounter many obstacles in consequence, but they steadily persevered with their programme, so that of the estimated capital of 200,000 yen, as much as 80,000 yen has already been raised. A few days after the arrival of the Russian banker, Mr. Brown called on An Kei-su, Chairman of the Committee of the Korean Bank projectors, and recommended that the Bank should conclude a contract with the Government as had been originally proposed; that it should seek permission to farm the taxes of the Treasury, and that it ought to engage competent foreigners as advisers. The Chairman rejected all these suggestions on various pretexts, but Mr. Brown was not to be gainsaid—we are quoting from the Sôul correspondence of the *Yomiuri*—and even went so far as to ask the King to aid him. His Majesty thereupon summoned the projectors of the Bank and reminded them that it would be better to follow the advice of the Treasury Adviser in all matters relating to the institution. One of them remonstrated respectfully, and said that if the adviser's suggestions were to be adopted, it would amount to transferring the power of collecting the taxes to the hands of foreigners. The King could not press the point further, but the opinion of even the most influential American in Sôul being in favour of Mr. Brown's suggestions, the projectors are said to be considerably perturbed as to the course they should pursue.

The Sôul-Fusan Railway negotiation remains at a stand-still, and the attitude of the Korean Cabinet towards the project is now believed to be entirely unfavourable. They are discussing, not whether they shall grant the concession, but what method they shall adopt to reject the application. If they convey their refusal indefinitely, in courteous, diplomatic language, they incur the risk of being constantly importuned on the subject; while, if they refuse in any positive manner, they may give offence to the Japanese. Hence the difficulty in bringing the question to a definite issue. The best way for Japan is to assume a more decided attitude and to employ all her influence with the Korean Cabinet, if she wishes to expedite the negotiations. Baron Ozaki, who remained several months in Sôul in connection with the matter, has returned home.

The *Nichi Nichi's* correspondent wires from Sôul, under date of the 26th inst., that an extra of the *Official Gazette* was issued the preceding evening, announcing the abolition of the term *Naikaku* (Cabinet), and the restoration of the old term, *Giseifu*. The Royal Edict that makes the announcement was to the following effect:—"Sometime ago, rebellious subjects usurped the legislative power of the Kingdom, effected alterations in the policy of the State, and arbitrarily changed the term *Giseifu* to *Naikaku*. They put restraints on whatever was straight and just, and encouraged crookedness and wickedness. The result was that the laws of the kingdom became corrupted, disturbances occurred throughout the realm, and both rulers and ruled were inspired with deep indignation and distress. Inasmuch as this matter bears a vital relation to the well-being of the country, the term *Naikaku* shall be abolished, and the old term *Giseifu* shall be restored." At the same time, Kim Ping Su, who refused to accept the Premiership when the post was offered to him after the assassination of the late Premier, and who was subsequently nominated a Court Councillor, has been gazetted President of the *Giseifu*, and four statesmen, whose previous official standing is not very clear, have been appointed high officers of the new Cabinet. Min Yong-su also has been nominated President of the Privy Council, and his relative, Min Yong-hwan, is among the principal officials of the *Giseifu*.

FURTHER PORTFOLIOS.

Viscount Nomura has been gazetted Minister of State for Communications, and Mr. Kioura Seigo, Minister of State for Justice.

CHINESE ITEMS.

The Empress-Dowager of China left Peking on August 30th to take up her residence at the Ewo Park, on the beautifying of which such large sums have recently been spent.

The Mahomedan rebellion in Shensi is now said to have been completely quelled. But the province still suffers severely, for of the soldiers that were engaged against the rebels, thousands have been disbanded, and are wandering about, committing all sorts of excesses against the peaceful inhabitants.

Orders have been given by the Chinese Authorities for prolonging the line of telegraph from Lanchow to Lhasa.

The Empress-Dowager being now, once again, all powerful in Peking, it is held in some quarters that Li Hung-chang will have all his honours restored to him when he gets home. But it will be difficult, if not impossible, to divert from Pekinese hands the power formerly wielded by Li at Tientsin. In the great Viceroy's days, Tientsin was virtually the diplomatic and military capital of the empire. With his fall, the statesmen in Peking succeeded to the puissant and profitable functions discharged by him, and they will not readily divest themselves of such privileges. Li will have to gravitate to Peking, and it will be hard for him there to climb to the old empyrean from the clouds of his recent failures.

Tientsin, following the example of Hongkong and Shanghai, has imported a force of Sikhs to act as police. It is just thirty years since the idea of employing Sikhs for that purpose occurred to Sir Richard McDonnell, then Governor of Hongkong. Experience had shown that the greater part of the Chinese police were in the pay of the gambling dens, and those places consequently served as safe asylums for the robbers and pirates with whom the colony and its adjacent waters abounded. The importation of Sikhs saved the situation, and since that time their reputation as plucky, patient, and incorruptible constables has been growing steadily in the Far East.

After considerable negotiation with the Government in Peking, the Japanese Representative succeeded in getting an order conveyed to the Viceroy of Nanking for the delivery of the bodies of the two youths arrested in Shanghai as spies in the summer of 1894, and subsequently executed in Nanking. The lads were apprehended in the French Concession, and then handed over to the United States Consul-General, who, acting under instructions from Washington, gave them up to the Chinese. It was confidently alleged that, after their transfer to Nanking, they were horribly tortured, but the story is now strenuously denied on authority that seems credible. Before taking delivery of the coffins, they were opened in the presence of the Chinese magistrate and the Japanese Consular agent, and it was seen that the corpses had been properly buried.

The promoters of cotton-spinning industry in Shanghai are evidently quite sensible of the danger that threatens their enterprise should the Chinese Authorities adopt an exclusive attitude. They have sent a delegate to Peking under instructions to induce the Diplomatic Corps to come to some understanding with the Chinese, so that the products of the cotton mills shall not be taxed more highly than imported goods, either directly or by taxing the raw material before it reaches the mills. It is to be hoped that this affair will be successfully arranged, but the Shanghai cotton-spinners appear to have been strangely slow in their action. Their mills are now approaching completion—four mills—and very large sums have been invested, yet no steps have been taken to secure the whole enterprise against proving a fiasco. Possibly some hope was entertained that the question would be definitely settled by the negotiators of the new Treaty between Japan and China, but a little reflection should have shown that nothing of the kind was probable. Indeed, even before the negotiations had commenced, it was pointed out by the *Japan Mail* the foreign projectors would be unwise to

rely on any aid from Japan after her liberal procedure in the case of the Shimonoseki Treaty have been so unjustly ignored and misrepresented.

The celebrated foreshore question at Chefoo has been settled in an unexpected manner. The Tsung-li Yamén has fully admitted Messrs. Fergusson and Co's title to the land in dispute, and has instructed Sir Robert Hart to effect some arrangement by way of compensating the British firm, the land, as our readers are aware, having been sold by the local authorities to a Russian. This result was brought about by Messrs. Fergusson and Company's being able to produce a French lease in which the sea is distinctly stated to be the boundary of the lot on the east. Since that lease was signed, the sea has been pushed back a considerable distance by accretions, and the question was, were these accretions the property of Messrs. Fergusson and Co., or were they the property of the Chinese Government. The land in dispute measures 14 *mow*, or $2\frac{1}{3}$ acres, and Sir Robert Hart has offered compensation at the rate of Tls 1,000 per *mow*, together with 15 per cent. by way of solatium for disturbance. But Messrs. Fergusson and Co. assess the land at Tls 4,000 per *mow*, or Tls 26,000 per acre, a liberal value, it must be confessed. The matter of price is to be arbitrated by Mr. Consul Jamieson and M. L. Rocher, Commissioner of Customs.

Viceroy Chang, of the Hukwang provinces, has distinguished himself by declining to receive the costly presents sent to him by his subordinates in Hunan and Hupeh, or to sanction a *flte* projected in the vice-regal yamén on the occasion of his sixtieth birthday. He would accept nothing save scrolls of gilded paper carrying carefully penned panegyrics, and of these nearly 2,000 reached the great man.

It is calculated that the Buddhists and Taoists of the three prefectures of Sungkiang, Soochow, and Chinkiang, in the province of Kiangsu, spend nearly a million and a half dollars yearly on the purchase of silver joss-paper, for burning. If that be true, what must the total expenditure throughout the Chinese empire amount to? A German merchant in Shanghai is said to have gone into partnership with a Chinese for the purpose of manufacturing tin-foil with foreign machinery to supply this big demand.

A Chinese newspaper, called the *Shantung Times*, has been started in Shantung. It is printed at the press of the American Presbyterian Mission in T'eng-chou-fu.

The *Shanghai Daily Press* has the following:—

A little girl, aged twelve years, fell off the Kiangse-road bridge into that evil smelling stream about two o'clock on the 23rd Sept. Though there were hundreds of persons about, and the creek was, as usual, crowded with sampans and cargo boats, not one person would put out a saving hand and the poor little thing was drowned before the very eyes of the callous Chinese, many of whom could, at no risk to themselves, have saved her.

The possibility that the Chinese tariff may be revised in the sense of increased duties, after Li Hung-chang's return to Peking, is beginning to excite much attention in foreign commercial circles in China. *Le Messager de Chine* writes with conspicuous vehemence on the subject, and upbraids the merchants for not taking timely steps to avert such a misfortune. It anticipates that Mr. Dudgeon's mission to Peking will end in a fiasco, "as in Japan, where the agitation carried on for so many years in connection with extra-territoriality, which our Governments ought never to have abandoned, served only to expedite its deace. The time has not yet come for the Europeans to pass under Japanese jurisdiction, and already the profound and inveterate hatred of the Asiatic for the white, betrays itself by arrogance without limit or by incessant provocations which will not fail to involve a conflict on the day when some one loses patience." That is a curious hallucination on the part of our French contemporary. We who live in Japan see nothing in the way of limitless arrogance and incessant provocations, engendered by the profound and inveterate hatred of the Japanese for the white. The whole horror exists solely in the imagination of *Le Messager de Chine*.

With reference to the question of increasing the Chinese Customs duties, Mr. E. H. Parker has written the following interesting letter to *The Times*:—

It is being generally stated that one of the chief objects of H.E. Li Hung-chang's visit to England is to endeavour to obtain the consent of the British Government to a general increase of the import tariff, in order that China may be better able to meet her numerous obligations. The loans she has contracted total £38,610,000, all on the security of the foreign Customs revenue, and rendering China liable for an annual sum of £1,723,605 interest. The foreign Customs revenue for 1895 amounted to Customs Tls. 21,385,380, or roughly nearly double the sterling sum for which China is liable in interest on loans.

Her main expenses at the present moment are (famines, rebellions, Yellow River, and other accidents apart)—Tls. 7,000,000 for the Manchu organisation at Peking, Tls. 1,000,000 at the outside for the Court, Tls. 5,000,000 for the frontier armies as distinct from the internal forces—the frontier armies of Kashgaria, Dzungaria, Kansu, Taisihar, Manchuria, Tientsin, Yunnan, and Kwangsi; to which add Tls. 2,000,000 for permanent Yellow River repairs. This modest sum of Tls. 15,000,000, or say £2,500,000, is about the amount now produced by general *likin*—i.e., by the inland barrier taxation which so harasses foreign trade. Of course double, or even treble, the sum is actually collected, but the excess serves in part to make the fortunes of the official body in the provinces.

The land-tax ought to produce about Tls. 30,000,000 a year, but what with exemptions, dearths, floods, &c., it may be safely said that Tls. 20,000,000 is the maximum ever officially reported. It has been frequently stated by Peking censors that five, or even ten, times the nominal tax is wrung from the people, and I have over and over again ascertained this to be a fact in my travels through many provinces; but this excess, again, serves to support a bureaucracy for whom the central Government does nothing, and an army of police, "satellites," &c., for whom the bureaucracy does nothing.

As to the salt revenues, which rank above *likin*, and are almost on a par with the land-tax, salt is the backbone of innumerable industries, and it is quite out of the question to interfere with it at present; as with *likin* and the land-tax, a fraction of the receipts, but in this case even a less proportion, say Tls. 10,000,000, is officially reported, and is available to the central Government; untold millions go to the bureaucracy, the armies of official harpies and the innumerable syndicates, junkmen, and others who fatten on the salt industry in one way or another. If, therefore, we leave to China her salt and her land tax, to manage as she may list, until such time as she may be ripe for further financial improvement, we run no risk of causing popular discontent; we abandon to the bureaucracy their chief "squeezes," and we in no way disturb the existing administrative harmony.

But, I submit, there is a way, and a simple way, in which we can double or treble the revenues of the central Government; compensate the bureaucracy for any imaginary damage done to their interests by the course I am about to advocate; enormously increase the volume of foreign trade; confer a great boon upon European merchants; and work an inestimable benefit upon the Chinese people at large.

If we were to consent to raise the average import duties to double what they now are (or a quarter more, or a third more), and stipulate in return for the absolute abolition of *likin* throughout the whole Empire we should be doing what the instance of foreign opium has shown to be perfectly feasible. In 1887 we consented to an enormous *likin* being collected on opium at the same time that the insignificant import duty was levied. This *likin* amounted in 1891 to the respectable sum of Tls. 6,200,000, or a million sterling. There could not be a better proof of the ease with which the central Government can, if it chooses, put a total stop to *likin* barriers, than the fact that ever since 1887 all *likin* trouble with opium disappeared as if by magic. In one or two cases a misguided Viceroy—for instance, Li Han-chang, brother of Li Hung-chang—has tried a 'pretence hand upon opium, but such attempts have always been instantly suppressed by express telegraph from Peking.

At first sight our merchants may look askance at a wholesale increase in import duties, and special measures would certainly be necessary to protect our cotton goods from local manufactures. It would also be necessary to have some hold upon the increased revenue, so that the instantaneous compensation might be offered in cases where any attempt should be made to impose taxes in the interior. Against all this, however, must be set the enormous impetus which would be given to foreign

trade by the utter disappearance of all trading obstacles through the length and breadth of the land; the enhanced activity in land; the consequent increase of wealth and confidence; disappearance of irritating diplomatic questions, and so on.

Out of the largely-increased revenue thus raised, it would be necessary to set aside, say, Tls. 15,000,000 to compensate the provincial governments liberally for the losses incurred by them. Thus they would become the friends instead of the enemies of the foreign customs, and the first solid and important step would be taken towards the regeneration of China.

It is reported that the Chinese Government purposes selling the Han-yang Iron Works to private merchants, and some speak of Taotai Shêng as the probable purchaser. Five million taels have been sunk in the enterprise, and the plan is that the buyers should agree to pay a royalty of one tael per ton of iron produced. Another report alleges that Shêng will put up a sum of a million taels as purchase money.

Tientsin was visited by a very severe storm on Monday, Sept. 14th. The foreign settlement suffered much damage, the partially constructed wall of the Club Concordia being demolished, iron railings and brick piers wrecked, corrugated iron roofs lifted off and swept away, and mat-sheds sent flying in all directions. Twenty Chinese were drowned by the upsetting of a boat, and two were killed by lightning.

A NEW METHOD OF COINING.

"When I was in London a few years ago," says Mr. Edward Atkinson, "I heard a rumour that measures were being taken to make dies exactly corresponding to the stamp of our standard United States dollars, which were to be sent to China to be used in converting United States trade dollars and Mexican dollars into standard dollars. It was said that this could be done only at the expense of coining, the silver being already assayed and alloyed and each dollar weighing 82 grains more than our standard dollar. It was said that these coins could be sent from China through Mexico, British Columbia and the Sandwich Islands in sufficiently large quantities to make it a very profitable business. I was unable to trace this rumour to its source and have never seen any evidence that it had been carried into effect. But how could that evidence be obtained? We know that there are only about 66,000,000 standard dollars of our own coinage in circulation. How do we know that there are not many more of exactly the same weight and quality, carrying the same identical stamp, which may have been made for us in China and Japan, or in Mexico, where the profit would now be nearly 50 per cent.? How long will it be before such a plan is worked on very extensive scale, even if it has not yet been worked?"

THE COST OF RAILS.

Our contemporary, the *Shogyo Shimpô*, from which we quoted on the 24th instant, appears to have been very ill-informed as to the prices at which the Railway Bureau has of late years been purchasing rails, when it stated in connection with a contract recently placed with the Mitsui Bussan Kaisha at £5.53 per ton, that:—"This is the first time that rails have been purchased at less than £6 per ton; a price far lower than that at which the Bureau used to give in England when dealing direct. Even when a private Railway Company put its orders up to public bidding, the price per ton was £6.50 or so." We are informed that of late years the Railway Bureau, as well as private railway companies, have purchased many thousand tons of steel rails from the best English makers, which have been laid down in Japan at less than £5 per ton.

A Reuter telegram from St. Petersburg says:—"The Russian Squadron to be despatched to the Pacific in the autumn under the command of Admiral Alexejeff will consist of an ironclad, six gunboats, and seven torpedo vessels."

ARRIVAL OF LI HUNG-CHANG.

About noon on Sunday the news got abroad in Yokohama that the *Empress of China*, that had left Vancouver a day late, had been signalled from Kanonsaki and would be at the anchorage before two o'clock. On this steamer was travelling His Excellency Li Hung-chang, Grand Secretary, and late Viceroy of Chihli and Superintendent of Trade for Northern China—a man whose name has been a familiar word on the lips of the last three generations the world over as the foremost man of China, and whose tour round the world has been watched with more than ordinary interest from the time of his departure from Peking, through the gorgeous ceremonial of the Czar's coronation, and the regal entertainments given him in Germany, France, Holland, and Great Britain, till he crossed the Atlantic to that "strange new world, that yet was never young," where the President of the United States extended him the greetings of a nation destined to fill as large a space in the history of our planet as any of the old-world Empires that have bulked largely on the bead-roll of fame. Sunday opened bright and fair, and as the morning wore away the general expression of the man in the street was in accord with the transient stroller over the Bluffs, that it was a most glorious, golden September day. A slight autumnal haze hung over the Bay, tinting the Boshu hills with a delicate, dreamy pink that changed by slow gradations into a far-away indistinct blue; lordly Fuji stood out clear to the westward with a tiny cap of fleecy snow, forerunner of its winter mantle; while the rising ground of Ikegami, across the harbour, shimmered in the rays of a fervent sun. It was one of those lovely days that usher in so gently the St. Martin's summer in Japan. By half-past one the stately *Empress of China*, Captain Archibald, was seen rounding the Tomioka Spit, and her further progress was watched with absorbing interest. She slackened speed just before reaching the harbour limits and then slowly proceeded to her buoy. Meanwhile, the C.P.R. agency launch, the *Spindrift*, with a large crowd of residents, had gone out to meet her. As soon as possible the gangway was lowered and the eager crowd boarded the big liner. Foremost among the company was Surgeon-Major Sato, in full uniform, the skillful physician who attended Earl Li at Shimonoseki at the time of the dastardly attack there upon the distinguished Chinaman. Surgeon-Major Sato was at once ushered into the presence of Li Hung-chang, whom he found enjoying the best of health after all his arduous journeyings. A long and intimate conversation ensued between the two lasting for more than half-an-hour, during which Li Hung-chang frequently gave expression to the deep and unfeigned pleasure it gave him to meet Dr. Sato again. Li occupied rooms on the upper deck and the curious crowd observed that the great Chinese appeared in the enjoyment of perfect health and spirits—his age indeed is "like a luscious winter, frosty but kindly." He wears the weight of his years and the crushing responsibilities of his position with a philosophic calm that all must envy.

From passengers on board the *Empress of China* we learn that with the exception of one day, the voyage was very pleasant, and that the Chun-tang gave no trouble to anybody, being only too willing to subordinate his habits to the general discipline of the ship. That Li thoroughly appreciated the kindness, attention, and seamanship of Captain Archibald and his officers, is borne out by a remark he made to Captain Wallace of the *Kwang-li*, the vessel that conveys the Grand Secretary to Tientsin. Said Li Hung-chang, "I am pleased with all I saw on the *Empress of China*; I am delighted with my passage, and with the attention showed me by Capt. Archibald and his officers. From what I could see and learn, all the officers are navigators." This is praise indeed.

As soon as the *Empress of China* came up to her buoy, the *Kwang-li* shifted from her berth and ranged alongside. The manoeuvre was no easy task, and Capt. Wallace is to be con-

gratuated on the clever display of seamanship. To the ordinary landsman the feat was the more impressive when the relative size of the two steamers is taken into consideration, the extreme neatness that characterised the operation is beyond praise. When all the ex-Viceroy's baggage had been transferred to the *Kwang-li*, a gangway was rigged up between the two steamers and the Chun-tang, seated in a handsome Chinese chair, was carried by English sailors and Chinese bearers from the *Empress* packet to the Chinese steamer. This took place about four o'clock. He was received by Capt. Wallace, and officers, Mr. Peihick, Li Ching-mai, Dr. Liu, and others, who have come over from Tientsin to accompany him home. Li was dressed in a plum-coloured jacket with an under-robe of some yellowish material, with blue trousers. He wore the Chinese insignia of his rank. Among the many residents of Yokohama who visited the *Empress of China* during the afternoon was the British Consul, Mr. J. C. Hall; and the representatives of the Japanese Traders' Guild, who offered a formal letter of welcome. Other visitors included Count Soyeshima, representing the Tobo Kyokai; Baron Sannomiya, Grand Master of Services to the Imperial Court; Viscount Enomoto, Minister of Agriculture and Commerce; Surgeon-General Ishiguro; Messrs. Hara Zenzaburo and Otani Kahei, of the Yokohama Chamber of Commerce; Messrs. Watanabe and Ikeda, of the Tokyo Chamber of Commerce; Governor Nakano and Chief Police Inspector Yoshida, of Yokohama, with all of whom Earl Li held slight conversations. Owing to the unexpected arrival of the packet on Sunday afternoon, no Chinese officials from Tokyo were present to welcome Li Hung-chang, and though the mail-boat came up the bay flying his flag no salute could be fired in his honour. Throughout the day, however, a good many fire-crackers were discharged in China Town. At nine o'clock in the evening the *Kwang-li* left harbour en route to Tientsin.

DEATH OF CAPTAIN LANG OF THE "NARCISSUS."

We regret to have to record an accident that has resulted in the death of Captain Henry B. Lang, of Her Majesty's ship *Narcissus*, and three of the crew of that vessel, by the capsizing of a cutter in Grossevitcka Bay, on the 11th inst. We have received the sad news by telegraph, but no further particulars are given. Grossevitcka Bay (Fish River) is in the Gulf of Tartary, in lat. 47° 55' N. Captain Lang was born on Feb. 23, 1845, and entered the service on Dec. 11, 1859, attaining post rank on June 30, 1889, and commissioned the *Narcissus* at Portsmouth on Nov. 19, 1895. He was a midshipman of the *Bombay* (84), when that ship took fire and blew up off Monte Video in 1864, and 97 officers and men perished.

The particulars, which we gather from a private letter, of this lamentable accident are meagre, indeed there is but little to add to what is already known. It appears that there were several officers in the boat with Captain Lang, and that the accident happened while crossing the bar of Fish River, the cutter, after capsizing, rolling over and over. It is now stated that two seamen, not three, as given in our telegram, were drowned with Captain Lang, and that the body of one of the men was subsequently recovered, but the body of the Captain was not afterwards seen. It would appear that no other boat was in the immediate neighbourhood of the *Narcissus'* cutter at the time of the accident, and that those who were immersed drifted some distance before they could be picked up, several having secured oars when the cutter capsized. Commander McAlpine, of the *Swift*, is in temporary charge of the *Narcissus*.

Upon the arrival of H.M.S. *Rainbow* and *Swift*, says the Nagasaki *Shipping List*, they brought the sad intelligence of the capsizing of the galley of H.M.S. *Narcissus*, in Grossevitcka

Bay, and of the deaths by drowning of Captain Lang and two able seamen belonging to the vessel. It appears that upon Friday, the 11th instant, two parties of officers left the ship in boats for a day's fishing in the Fish River. They had crossed the bar at the entrance and were engaged in the sport, when it was noticed that the *Narcissus* had her recall signal flying, as the approach of heavy weather compelled her to heave anchor and put out to sea. Captain Lang immediately gave orders to return to the ship, but, on reaching the bar, his galley capsized in the heavy swell rolling in. The other boat had not left the shore. The accident was seen from the *Narcissus*, and a cutter, under the command of Mr. Gaunt, the Gunner Lieutenant, was at once despatched to the rescue. Captain Mercer, R.M.L.I., a midshipman, and three seamen were picked up, but Captain Lang and two other seamen had sunk by the time it arrived. The bodies of two of the men were afterwards washed ashore, but that of the Captain had not been found when the sad news was received by the *Rainbow*, on the 19th instant, at Korniloff Bay. The weather was so bad that the officers and crew in the other boat were obliged to remain ashore for three days before they dared attempt to put off to the ship.

PUBLIC WORKS IN FORMOSA.

The Japanese are virtually re-constructing the Kelung railway in Formosa. Not only was the original road a most defective piece of work, but its vagaries of direction might have inspired any engineer with horror. The reconstruction means straightening the line, a task that sometimes involves carrying it several miles out of its former course. Surveys for the extension of the line southward have been nearly completed, and it is expected that the work will soon be in full progress. Meanwhile, much has been done in the way of converting into good roads paths that in their previous state could scarcely contribute anything to facility of communication. The necessity of providing a pure water supply as quickly as possible has also been fully appreciated. With that object the services of Professor Burton, late of the Imperial University, were enlisted, and he recently completed a plan for a system of water works at Taipeh. An abundance of excellent water can be obtained by artesian borings at a depth of 90 feet below the surface, and under those circumstances the estimated cost of the works does not exceed three hundred thousand dollars. Keelung and Taiwan are also to be similarly provided, and we understand that Professor Burton will shortly proceed to the southern part of the island to make surveys and prepare plans for water-works in the chief cities there. Having before their eyes the striking object lesson of Hongkong, where by means of a plentiful water supply and judicious planting the island has been converted from a hot-bed of disease into a salubrious and pleasant resort, the Japanese seem resolved that Formosa shall profit by that experience.

THE "KOKUMIN-NO-TOMO" ON YOUNG MEN.

Recent numbers of the *Kokumin-no-Tomo* contain articles dealing with the rising generation. An article headed "The tendency of young men's education" says that the present system of learning is causing young men to become more and more materialistic, and that their watch-words now are "livelihood," "money," and "profit." A great and considerable difference is observable between the young men of to-day and those of yesterday in the way in which they endeavour to assimilate particular studies. Many of the latter who took up politics or political economy did so with the view of becoming statesmen or publicists. Such ambitious aspirations are now very rare. Politics do not seem to attract young men as they used to do, and now studies are pursued for bread-winning purposes. The same cause underlies the gradual diminution in the

numbers of law students. The *Kokumin-no-Tomo* does not necessarily condemn this state of things: in fact in some ways it rejoices at the change, but it grieves to find that the rising generation do not possess the large ambition and high aspirations of their predecessors. Young men above the average in intellectual qualities now aim to become experts or clerks in banks, business firms, etc. The triumph that this country achieved over China does not seem to arouse their martial ardour, only candidates for admittance to military and naval colleges show any martial inclinations, but these men, both in intellect and knowledge, are decidedly second-rate.

Another article deals with the transition stage through which education is passing. The writer considers that the system of education now disappearing was more liberal than the present and enabled its recipients to become gentlemen and citizens. Persons trained under the old régime were admirably suited to mingle in society and act as guides and leaders in any important national movement. On the other hand, the present system of education tends to making specialists only, and general wide-reaching culture is not observable among the rising youth of Japan. In a third article the essayist charges the young men of the present day with loss of moral stamina. In another essay the same journal discusses the importance of young men's organizing political parties. It thinks such a step of great importance, because the senior statesmen and their followers all lack qualities essential for constitutional statesmanship and cannot develop into leaders of true political parties. The best among them are, at most, statesmen of an irregular type. The dearth of coming men is truly regrettable, especially when it is remembered that the present is an important stage in the history of Japan. The *Kokumin-no-Tomo* suggests two remedies, viz.:—The development of a spirit of citizenship in the nation, and the appearance of political parties organized by young men. The political ideas of citizens must be developed, and the new political parties must be organized by persons who have some fixed occupation.

AMERICAN RAILS FOR JAPAN.

The result of the first public tender for steel rails to be used in Japan, has been a success for the great American firm of Carnegie and Company of Pittsburg, whose name was so much before the public two years ago in connection with the Homestead riots. Hitherto it has been the habit of the Japanese Government to entrust to its agents the business of supplying rails, and we entertain no doubt that the commissions were always executed as economically as possible. But a departure has now been made, for the first time, from the regular method of procedure, and the issue is that English manufacturers have been cut out by an American. In the present depressed state of American industries, it appears to be possible for a United States firm to sell steel rails at a lower rate than they can be purchased for in England. The quantity of rails required on this occasion was thirteen thousand tons, in round numbers, and Messrs. Carnegie and Company's tender is said to have been some eight thousand pounds sterling lower than any other. That means ten per cent., approximately; a very appreciable difference. It is the custom in Japan to fix a maximum figure beyond which the Authorities are not prepared to purchase, and when the tenders in question were opened, three proved to be within that figure, Messrs. Carnegie and Company's being the lowest.

The rebels in Korea concealed in the vicinity of Heijo (or Ping-yang) have made an unexpected attack on Pingyang. About two hundred soldiers from Chinai-tai were sent to the relief.

Mr. Miyoshi, President of the Supreme Court, who recently sent in his resignation, was called to the Premier's residence on Wednesday and requested to resume office. He, however, declines to do so.—*Tokyo Shinbun*.

THE DEGENERATION OF BRITISH MANNERS.

Lord Meath's very pessimistic article on the degeneration of British manners has evoked much comment, generally of a dissenting nature. No one can deny, however, that there is much truth in what his lordship says, nor is the truth less striking because it has often been uttered before in almost the same words. Consider this paragraph, for example:—

Some Britons, as soon as they have planted their feet on foreign soil, live as though this planet and the dwellers on it had been specially created by Providence to cater for the enjoyment of the inhabitants of the British Isles. . . . How often, with hot indignation, has one seen British men and women behave abroad as he knows they never would dare to do at home. . . . It is not uncommon to see Englishmen in the halls and corridors of foreign hotels wearing their hats, when every foreigner is bareheaded. . . . How many are there, for instance, who, when seating themselves at, or on leaving, a *table d'hôte* abroad, remember that in most foreign countries it is considered exceedingly rude not to bow to the guests on either side; or will bear in mind that the hat should never be worn indoors, and should always be raised when meeting a male as well as a female acquaintance, when addressing any stranger, or when going in or out of a shop or public restaurant: that in Germany, when paying a visit, no well-bred man or woman ever sits on a sofa without being specially invited by the hostess to do so, that in the same country the unmarried girl invariably grants precedence to the married woman, and that in the case of both sexes youth, when walking with age or rank, should place it on the inner side of the pavement?

What would be the feelings of British noblemen and gentlemen of position if a Hindu official of no birth or manners, sent to govern an English country, were to treat them in the way in which some British officials are in the habit of dealing with natives of distinction?

A true gentleman is naturally courteous—he could hardly be the reverse if he tried; but in these days when so many lay claim to the title who possess few of the qualifications, it may be well to point out that a courteous manner possesses a distinctly commercial value. However boorish we may be ourselves we appreciate civility and courtesy in others.

If British boys and girls were taught to subordinate self, to respect their neighbours, and in non-essentials not to run counter to their prejudices, we should probably in a few years find that although for political reasons Great Britain might still maintain that "splendid isolation" of which we have lately heard so much, her people were no longer disliked but by their politeness and urbanity had won the respect and friendship of foreigners and had thereby increased the influence of their country, and taken the most effective steps to diminish the chances of international misunderstandings.

It would be difficult to gainsay the above, or to question the wisdom of the recommendation that manners should be taught to young people with as much care as any other branch of learning. But, in truth, perfect manners are the outcome of fine sympathy. *The Speaker* seems to get to the kernel of the thing when it says:—"Natural politeness is a growth which is not always careful of convention. It is an affair of individual delicacy, and sometimes possesses an originality amounting to genius. It is remarkable chiefly for its swift perception of the feelings of others, and for its skill in asserting a personal view without exciting susceptibilities to leap into unseasonable argument. It conciliates unreason, defers to the harmless prejudices that simmer through the world, and suffers fools, if not gladly, with no over-fatigue. So rare a temper is above forms, and treads the social atmosphere as if walking on clouds." A "gentleman" has been defined by some as one that never by any chance ruffles the susceptibilities of those around him; by others, as a man that never attracts attention to his own personality. Either definition seems good enough in its way. Courtesy, in fact, is the art, or rather the instinct, of adaptation. Everyone agrees, of course, that to make oneself conspicuous in society is an evidence of bad manners. To laugh loudly is as bad as to dress loudly; to make a noise in eating is worse than to dance sensationally long without resting; in short, to challenge observation in any way is a sign of vulgarity. No Englishman will deny that code at home, or willingly fail to conform to it. Yet, undoubtedly, as Lord Meath says, the Briton abroad often seems to take a pride in not adapting himself to the customs of the people among

whom he moves, and in challenging observation by his singularity. Are Britons worse in that respect, however, than they used to be? We do not believe it. On the contrary, we believe that they are immensely better.

THE "SHANGHAI TIMES."

The *Shanghai Times* seems to us to have made an excellent beginning. Its articles are bright and thoughtful, and its tone essentially moderate. As yet the dimensions of the journal are small, but the amount of reading, and very readable, matter is disproportionately large. We fancy that our new contemporary has mapped out for itself a path steering absolutely clear of controversy, but we doubt the possibility of its realization. Certainly the best answer to many of the journalistic attacks penned in the settlements of China and Japan is to ignore them altogether. One can not touch pitch without suffering more or less defilement, and where personalities, the attribution of low motives, and cognate devices are the stock-in-trade of controversialists, they had better be left severely alone. Unfortunately, however, silence is too often misconstrued by the public as an evidence, if not of assent, at any rate of inability to answer, and thus one has frequently to choose between suffering falsehoods to circulate without protest, or correcting them at the expense of enduring a shower-bath of mud. The *Shanghai Times* will not have lived long before it finds itself impaled upon the horns of that dilemma, for unless it is to be a failure journalistically, it will soon become an object of envy and detraction. However, to prophesy evil is not our purpose, but rather to welcome our contemporary very heartily, and wish it all possible success.

THE REBELLION IN MANILA.

The *China Mail*, on the strength of a private letter, confirms the statement that the rebellion is more serious than the Manila authorities are willing to admit; but, its correspondent adds, the rebellion will most certainly be crushed so soon as sufficient reinforcements come to the aid of the Spanish troops. The Province of Cavite is completely in the hands of the rebels, together with the arsenal and ship-slip. The Spanish troops have made futile attempts to oust the rebels. The effect of these repulses has been direful, and the foreigners prophesy that it will inevitably lead to the temporary strengthening of the insurgent forces and the spread of the disaffection to other parts of the Island and into other Provinces. Cavite is only seven miles distant from Manila.

The Chinese have suffered very seriously by the loss of life and property, and all the rich Chinamen, with their wives and families, as well as the humbler classes of Celestials, are leaving the Philippines as fast as they can get steamers to carry them away. The *Sungkiang* brought over to Amoy as many as 500 Chinese passengers.

Another correspondent says that a monastery at Cavite was broken into by the natives. The inmates barely escaped with their lives. One of the refugees has arrived in Hongkong. There are three Spanish warships in Manila Harbour in addition to H.M.S. *Redpole*. The rebels in Cavite have obtained possession of 8,000 Mauser rifles, presumably with an ample supply of ammunition from the Arsenal, and they are now carrying on a guerilla warfare that harasses Spanish soldiers and worries them by keeping them constantly on the *qui vive*. Roxas, one of the members of a wealthy native family, was captured by the Spaniards, but he was able to escape from prison—the result evidently of the far-reaching system of bribery which the Spaniards have so assiduously cultivated in their Colonies.

As was feared, a portion of the native troops has gone over to the insurgents, a welcome addition that will help to give organisation to the otherwise headless, leaderless, and misguided natives and half-castes for whom a terrible retribution is in store. The Province of Tarlac is said to have gone against the Govern-

ment, and portions of other Provinces are beginning to show signs of throwing over their allegiance.

With martial law proclaimed, Manila has a deserted appearance after six p.m. No natives are allowed abroad inside the town after curfew.

A few days before the arrival of the *Sung-kiang* at Manila, four rebels were shot dead on the Praya, and on the 9th inst. twenty-four men and one woman were condemned to a similar fate, but it is not known whether the order was carried out.

Messrs. Warner, Barnes and Co. report in their trade circular of the 2nd September:—On the 30th August, there was a rising of discontented natives in the adjacent provinces who advanced to the suburbs of Manila, where they were met by the Government troops, and dispersed with a loss of some 200 men. We do not look for any serious troubles, but it is not impossible owing to the number of natives who have left their villages and joined the bandits in the mountains, that there may be raids from time to time on the cultivated districts and perhaps damage to the growing crops.

INUNDATIONS FUND.

We have to acknowledge the following sums in aid of the distress caused by the recent floods:—

Mr. H. Loomis	\$10.00
J. N. C.	10.00
O. Letourneur	10.00
Messrs. J. Witkowski & Co.	25.00
Dividend	—27
J. C. Hall, Esq.	\$5.00
Charles Gardner, Esq.	£1 1 0
Miss Elizabeth Matthews.	10 0

	\$19.11

CORRESPONDENCE.

THE RAILWAYS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I wish most heartily and emphatically to express agreement with your correspondent who bears witness to the courtesy shown to foreign travellers by the railway officials but suggests the great desirability of having the booking-office opened for a longer time before the departure of each train. The last time I had occasion to come from Yokohama I was at the station with my luggage long before the train started, and yet had a disagreeable and hurried time in getting my luggage weighed and checked, simply because I could not get a ticket till a very few minutes before the train time. Here, in Kyoto, the booking-office is open much earlier than it was there, and yet even here the third-class passengers (who I suppose have some rights, even though they travel third class) would be accommodated much better if the office were opened earlier. In the United States, at all principal stations—so far as my experience goes—the ticket-office is open continuously, and those who do not wish to be crowded can get their tickets and checks as early as they please. Why should it not be so here? What would be thought of a post-office where stamps could be bought only during ten minutes before the departure of each mail?

Yours, etc., D. W. L.
Kyoto, Sept. 22nd, 1896.

SILVER AND GOLD.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—As the gold standard advocates will not be placated by the free coinage of silver at the ratio of 16 to 1, as advocated by the silver party in the United States, the claim being urged that to do so means anarchy, repudiation, dishonour, loss of national credit, robbery, confiscation—all that is disreputable in morals—for the reason that no government can legislate silver into honest money at a ratio other than 32 to 1—that being the nominal ratio of the present time (how long the goldites will allow it to remain so who can tell?)—within the next twelve months they may so manipulate matters that a ratio of 40 or 45 or even 50 to 1 will be the then nominal ratio, and consequently any movement to rehabilitate the white metal to the normal ratio of 16 to 1 would then be claimed by them to be dishonest, anarchist robbery, repudiation, so on. Let it be supposed that the argument prevails, and the free coinage of silver is still denied. The ounce of gold that will

now purchase 32 oz. of silver, or the products valued at 32 oz. of silver, is represented by stamped coins. How does the *Japan Mail* consider the following proposition, and will it be good enough to elucidate to its readers the possible effects to follow its adoption, if the United States should go for a change of base, and by legal enactment ordain that instead of a ratio of 16 to 1, the ratio of 16 to $\frac{1}{2}$ should be adopted, leaving the silver dollar as it now is, 412 $\frac{1}{2}$ grains fine silver, but making 12.89 grains of gold the equivalent of the silver dollar. The number of gold dollars would be doubled of course. There would remain to the holders of silver all the dollars they now have at their face value—and make the 12 or 13,000 millions of gold dollars, which the *Japan Mail* estimates the volume of gold in the United States to be, 2,500 or 2,600 millions. I am led to make the request as above formulated because of the profound presentiment of the sequel of adoption of free coinage of silver by the United States, under the head line, "Silver Awaiting Rehabilitation" by the *Japan Mail* of the 23rd inst. Would there be dishonour in that? Would that flood the country with gold? Would the purchasing power of the gold remain as now? Would gold-standard Europe take to the thing kindly? Would the holders of gold consent to having their money doubled after that fashion? Would the holders of silver consent to seeing the gold dollars of the world doubled in number that they might have a good square look at the situation as it is now behind the veil?

We have had reams upon reams of argument regarding the coinage of silver at the 16 to 1 ratio; it will be a recreation to wrestle with the possibilities of the free coinage of gold at the ratio of $\frac{1}{2}$ to 16.

Yours, &c.,

September 28th, 1896.

[The free coinage of gold at the ratio of $\frac{1}{2}$ to 16 is precisely what is happening in the United States at present.—Ed. J.M.]

THE FLOOD RELIEF FUND.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I beg to enclose the following list of subscriptions received by me up to date, in answer to Bishop Bickersteth's appeal, for the sufferers from the recent floods in Gifu Ken. Some of these subscriptions have been designated wholly or in part to one or the other of the forms of relief mentioned by Bishop Bickersteth, but generally the donors have left it optional to use their subscriptions in whichever way may seem the better, as the individual cases for relief are investigated.

Thanking you and the Bishop for your appeals on behalf of the fund, and the subscribers for their generous response,

I remain, yours truly, H. J. HAMILTON.

THE YOKOHAMA CHIHIO SAIBANSHO.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In your paper of Saturday, the 26th September, the following judgments by the Yokohama Chihio Saibansho were published.

J. P. Collaço, the Portuguese charged with the theft of some old and valuable postage stamps from a Japanese stamp-dealer in Motomachi, Yokohama, was sentenced to six months' rigorous imprisonment. Eleven Japanese firemen of the Nippon Yusen Kaisha for assault and battery and unlawful intrusion on Mr. W. Barrie, an Englishman, thereby wounding him on the head and other parts of the body with iron, wood, and other instruments, are sentenced to terms of three months, and less, with rigorous imprisonment.

The manner in which Japanese Law and a Japanese Law Court have dealt with the two cases is very different. A Portuguese steals a few

stamps of little official value, and he receives 6 months' rigorous imprisonment.

Several Japanese go around to the house of a foreigner at night expecting to commit an assault, and are sentenced to short terms of imprisonment.

If the two sentences are equally disinterested under articles of the Japanese Criminal Code, there appears to be a great reason for revising the said Code.

Yours, &c.,
September 28th, 1896.

NEM. CON.

YOKOHAMA CHORAL SOCIETY.

The annual general meeting of the members of the Yokohama Choral Society was held at Van Schaick Hall on Wednesday afternoon. Thirteen members were present, ten ladies and three gentlemen, and Mr. J. T. Griffin, President, was in the chair.

Mr. GRIFFIN, after remarking upon the smallness of the attendance, presented the following:—

COMMITTEE'S REPORT.—30TH SEPT., 1896.

The past season has been fairly successful, although only two Concerts were given as against three in former years. The first Concert which was projected for the month of December, 1895, was postponed, for various reasons, until 20th February, 1896; when a very good performance was given of Smart's Cantata—"The Bride of Dunveer." The second Concert was a "Mendelssohn Evening" on 1st April: on which occasion that composer's "Lauda Sion" was performed, with orchestral accompaniment. The customary third Concert was fixed for May; but the lateness of the season caused it to be abandoned.

The Society has again had the inestimable advantage of the friendly co-operation of the Yokohama Philharmonic Society; an alliance which greatly enhances the value of our performances. May the friendship long continue! Appended is the Treasurer's Account, showing a balance in hand of \$79.19. This compares favourably with our financial position of a year ago, when we had to report a debit of \$7.04.

No fresh music has been ordered or purchased this year; as it is the opinion of the Committee that our stock of unperformed works is ample for the ensuing season.

We have to chronicle with regret, the departure for their respective home-lands of our esteemed Treasurer and Secretary (Mr. Townley and Rev. E. S. Booth). We hope for their return in 1897; but in the meantime it will be necessary to elect other members to fill these offices.

			\$240.24

Yokohama, September 30th, 1896.

JOHN GRIFFIN, President.

Upon the motion of Mrs. POOLE, seconded by Mr. WHITEFIELD, the report and accounts were adopted.

Miss THOMAS moved, and Miss WILKIN seconded, the re-election of the old committee.—Carried.

Miss POOLE moved and Miss GRIFFIN seconded that Miss Lloyd Thomas be added to the committee.—Carried.

Mr. GRIFFIN then proposed that Mr. F. W. Whitefield be elected Secretary, and Mr. A. B. Walford, Treasurer, of the Society.

Miss WEBB seconded the proposition, and it was carried unanimously.

The PRESIDENT then addressed a few remarks to the meeting upon the future better working of the Society. He first of all quoted a new rule that had been passed by the Committee after several debates upon the subject. The rule ran:—

"It was unanimously resolved to endow the Conductor with power to exclude from a performance those members of the Choral Society who were absent from rehearsal more than one night without good reason therefor." The Committee also instructed him to speak out freely upon the matter at the general meeting of members. But it seemed to him that the chief sinners were not present, and he should have to preach, like some clergymen, a sermon directed against those who were staying away.

The Choral Society found itself with a good many members who had not much voice and less application, but they had joined because it was, perhaps, fashionable to do so. These good folks only attended rehearsal when no other engagement prevented, such as a tea-party, a tennis game, or other engagement that might be fitted into another occasion. They certainly had given more or less support to the Society, but that was not enough. In fact, the nuisance grew so pronounced last year that several active members, who always attended, learnt their parts, and were ready at the rehearsals, threatened to resign if the inefficient

were not asked by the Committee to stay away. Now it was not pleasant to have to go up to a member and say, "Look here, your presence is not desired." Yet something had to be done, and finally it was decided to pass the rule just quoted, leaving it in the hands of the conductor to choose the chorus for the concerts. Several prominent members of the Society had been approached upon the matter and they thoroughly agreed with the proposition of the Committee. Looking at the list of their members, he found that they could get a good chorus of 40 voices, well balanced, and determined to do thorough work. It had also been determined to appoint superintendents of parts—three of them were already selected and the fourth was in view. These would superintend the practices of the sopranos, contraltos, tenors, and basses at private houses, so that at the Monday practices the parts would be found to have been put in hand and possibly learnt. All the large Philharmonic and Choral Societies elsewhere, and many small ones, too, pursued that system. It was a principle that must be applied here, and he thought that by working on these lines the Society would have a most successful season. The first practice of the season was fixed for Monday evening at 5.30 o'clock, when the remarks he had now made would be submitted, and members in their summonses would be asked to notify him if they disagreed with the new rule. He thought that the proposal would meet with general approval, although of course some members might drop out through it. The first piece for rehearsal would be Cowen's "Sleeping Beauty," a cantata quite as harmonious as the "Rose Maiden," but a trifle more ambitious.

YOKOHAMA CHESS CLUB.

The annual meeting of the Yokohama Chess Club was held on Thursday evening at the Club Hotel. There were present, Mr. J. T. Griffin, President, in the chair, Messrs. M. Wollheim, O. Keil, E. C. Fox, E. Batavus, F. W. Thomas, L. Stornesbrink, S. Komor, H. Tennant, F. P. Solomon, H. Pollak, T. W. McIlraith, and J. Davieson, Honorary Secretary and Treasurer.

The PRESIDENT called the meeting to order and presented the following report:—

SECRETARY'S REPORT 1895-6.

The number of members on the roll is 44 as compared with 47 at the end of last season.

The Treasurer's account annexed hereto, shows a balance in hand of \$139.21 against \$139.05 at 30th September, 1895.

The rooms occupied during the past season at the Club Hotel, and the attention shown to the members by the Manager, have been satisfactory. On account of proposed alteration to the building, it is possible that your incoming Committee may be compelled to seek other quarters at an early date, but, in such case, the Manager has courteously promised to notify the Committee as soon as possible.

The Championship games, for the handsome cup presented by Mr. O. Keil, were won by Mr. J. T. Griffin.

Two prizes were offered—one by Mr. S. Komor and one by the Club—for a handicap tournament, but although a fair number of members put their names on the list, so many withdrew that your Committee deemed it advisable to cancel the match.

Your Committee earnestly hope that members will take a greater interest in the royal game and assemble in larger numbers than hitherto.

Again it was found impossible to arrange a club match with our Tokyo friends, but a private contest took place at Tokyo, the result being even, the Yokohama team being hospitably entertained at dinner by their opponents. Your Committee now resign and tender their best wishes for the future prosperity of the Club.

J. DAVIESON, Hon. Treas. and Sec.

J. DAVIESON, Hon. Treas. and Sec.

Audited and found correct.

O. KEIL.

Yokohama, 30th September, 1896.

The PRESIDENT regretted that the Club had had no outside opponents to fight with during the past year. The absence of such opponents had an influence upon the Club. When it was known that such a fight was forthcoming the members rallied round the Club and fought well and generally

enabled the Club to win. When there were no outside opponents to meet, the members thought that it was not good enough to leave their homes after dinner.

Mr. KEIL proposed and Mr. STORNEBRINK seconded the adoption of the report and accounts.—Carried.

Mr. KOMOR proposed and Mr. KEIL seconded the re-election of the old officers and committee. These were, Mr. J. T. Griffin, President, Mr. J. Davieson, Secretary and Treasurer; with Messrs. Batavus, Mendelson, and Tennant.

The old members of the Committee expressed their willingness to serve again, and after some amusing repartee the proposition was carried.

Mr. GRIFFIN proposed and Mr. DAVIESON seconded that Mr. Komor be added to the Committee.—Carried.

Various proposals for keeping up the interest in the Club, the more frequent meeting of members on Club nights, etc., were discussed, and then the Chess boards were got out and the members sat down to the royal game. A match with Tokyo was announced as out of the region of possibility during the coming season, as Tokyo is weaker than ever in regard to players.

CRICKET.

SHANGHAI CONTINGENT VERSUS MR. CRAWFORD'S TEAM.

On Saturday afternoon the cricketers who will represent Yokohama at Shanghai in the Interport Cricket Week, assisted by some others, were pitted against a team picked up by the Secretary of the Y. C. & A. C. The weather was at times overcast, but improved as the afternoon proceeded. Walford, who captained the "Shanghai" men, won the toss, and sent in his side first. Within a few minutes of the commencement a sad accident happened, Mr. R. C. K. Johnson, who had arranged to play at Shanghai, retiring hurt. It appeared that Goddard sent down a full pitched ball; Johnson attempted to play it, but the ball glanced off his bat and struck him on the right eye. The force of the blow split the eyelid and cut the cheek. Johnson at once retired to obtain the nearest medical assistance. This morning he was doing as well as could be expected, but it is still a question whether he will be able to retain the use of his eye. The sympathies of everyone in and out of the Yokohama Cricket and Athletic Club are extended to the injured man, for during the short time he has been a resident in Japan he has entered into the sports of the Club with right goodwill carrying off a good many events in the Athletic sports and doing good service in the cricket field. After Johnson had left the field play continued, Walford eventually declaring his innings closed at 184. Crawford's team followed, but time did not allow of the match being played out. Scores:—

The Shanghai Cricket week will not see such a strong eleven from Japan as was at first anticipated. Owing to unexpected misfortunes, many of the team first selected cannot now get away, Dickinson, Libeand, and Johnson being among the latest to find that they cannot go. Yokohama

will now be represented by Messrs. A. B. Walford, F. E. White, H. S. Goddard, A. Kingdon, and probably B. Hyde Pearson; Kobe sending Messrs. C. Lucas, A. L. Robinson, M. Smith, E. W. Tate, Townend, Drewel, and Wilkinson. The combined team travel by the *Empress of China* to Shanghai.

KOREAN AFFAIRS.

(FROM OUR OWN CORRESPONDENT.)

Soul, Sept. 3rd.

It is two hundred and ninety odd years since Chong Dong, the south-western ward of Soul, has seen such lively days as those that are now passing. It was at that time that the king, In Jong Tai Wang, returned to Soul from the north, whither he had fled before the victorious arms of the Japanese. Finding the palace in ashes, he selected Chong Dong, the present foreign quarter, as a place of temporary residence, and the Myung Yé Kung was fitted up as a palace. It was occupied by the king fourteen years while the palace was being rebuilt and re-fitted. And now, again, this same Myung Yé Kung is being repaired for royal occupancy, not under the same circumstances as before but with just enough of possible suggestion to make it a coincidence. All day long, and all night too for that matter, the ears of the foreigners over in that part of the city are filled with the loud but not unpleasant chanting of the workman as they toil in unison. It is safe to say that no building was ever put up in such good time as this, if we except the one constructed by the genius of Aladdin's lamp. The main building that is being now erected is the one in which the obsequies in honour of the dead queen are to be held. Her body is to lie there in state and early in this month a grand royal funeral will be celebrated. The fact that seven hundred pall-bearers have been appointed is enough to give an indication of the style in which the pageant is to be carried out.

In spite of the strong conservative tendency, the work of repairing the streets of Soul goes steadily on. This is one real, tangible and lasting benefit, an outcome of all the reform talk of the last two years. There are doubtless other good results, but if so they are "moral" results. A process of education is unquestionably going on, especially in the country where the people have learned that they have little to fear from the central government. But these broad, smooth, hard roads are a positive luxury and are a standing rebuke to men who say that the *kat-wa* has done nothing for Korea. The 2nd inst. was the King's birthday and all Soul was in gala attire. The event of the day was a monster demonstration by the members of all the protestant Christian churches in the capital. It was held at Mo Wha Kwan, outside the west gate of the city, in the ancient reception hall, supplemented by an immense awning, lent by the War Office for the occasion. It was a Christian demonstration of loyalty to His Majesty, and we have reason to believe that it was not only not objectionable but highly pleasing to him. The leading speakers of the day were Yi Chai Yun, Vice-Minister of Agriculture, Commerce and Public Works, who was, for some time, *Chargé d'Affaires* in the Korean Legation in Washington, and Dr. Philip Jaisoin, editor of *The Independent*. Special patriotic hymns were composed for the occasion, and the Koreans sang them with enthusiasm. Before the exercises commenced a painful accident occurred. The terrace, some five feet high, in front of the reception hall, is faced with heavy stone, and as the crowd gathered, part of this stone work gave way, crushing a young boy of thirteen years and seriously injuring another. Before the meeting broke up, a collection was made for the sake of the parents of the injured boys and a goodly sum was forthcoming.

On Tuesday last, Mr. Hara, the new and popular Japanese Minister, entertained a number of friends at a garden party, the main part of the entertainment being some clever tricks performed by a Japanese juggler's troupe. Those that were present report a most enjoyable time.

The ceremonies attending the bringing of the late Queen's remains to the newly built shrine in the foreign settlement were according to the old style, although there was some considerable sprinkling of the new element in the shape of foreign uniforms. As *The Independent* observed, the mixture showed the political status of the country to-day. There is no doubt that the conservative element, headed by Sin Ki Sun, is well organized and thoroughly in earnest. An amusing incident has just occurred in this connection. It has been believed here that this champion of the old régime, Sin Ki Sun, was hand and glove with the insurgents in the country, that they, in some sense, considered him their man. But if that ever was true, it is no longer so, for they have sent spe-

cially to denounce him and shake the dust off their feet at his door step.

The matter of the Soul-Fusan railroad is one of no little importance, but it is likely to be misunderstood in Japan. There is no doubt that the Korean people as a whole are feeling very strongly against the Japanese. However reasonable or unreasonable that may be, is no concern of mine or of any other foreigner here, but the simple fact remains—and a melancholy fact it is—that the Korean Government could not take upon itself the responsibility of keeping the natives of the provinces in order in case a Japanese road ran from Soul to Fusan. The Japanese might be willing to assume the responsibility, but that would mean a permanent force of soldiery here, which would irritate the people and call forth constant efforts at reprisal. The argument, also, that the Government cannot afford to exercise its right of eminent domain and sequester the immense tracts of cultivated land that would be necessary, paying the market price for it, alienating still further the goodwill of the country people and decreasing, at the same time, the amount of rice land from which it even now draws too scanty a revenue—this argument, I say, is by no means insignificant. It would be a great thing for Korea to have such a road, but no one can ignore the actual obstacles that lie in the way.

Meanwhile, the country still suffers from the bands of robbers that sport under the inappropriate name of the "righteous army," and the only way that seems at all feasible to put them down, is to form bands of militia throughout the country, who will be able to defend themselves. Mr. Hunt, who has in hand the interests of the Soul-Chemulpo road, has arrived, and we expect that the surveys will be made this Fall, so that, with the opening of Spring, ground may be broken at once and the work pushed to speedy completion.

LETTERS FROM FORMOSA.

(From the Hongkong Daily Press.)

Taipeifu, Formosa, Sept. 1st.

I have just returned from my country trip, having visited the districts touched by the late rebellion. The first stage made by railway brought me to Hsin-chu-ku (Teckcham) 43 miles distant. This city is the southern terminus of the old Chinese railway and a regular passenger service of two trains a day has been established. The place is a particularly filthy settlement of 2,500 Chinese, while the Japanese are located there to the number of a hundred civilians, officials and others, with 500 soldiers for the city and surrounding villages. Although the space enclosed by a wall is not large, a considerable portion of it is under cultivation, and a dirty stream for irrigation purposes runs through the city. The streets are crowded and the place seems to be in a very flourishing condition. A fairly comfortable Japanese hotel affords accommodation for all strangers.

From Teckcham I selected the route which would enable me to first visit the coast districts. Following south by chair I passed through numbers of villages all more or less similar, giving special attention to Hongsan, Anlung, Oan Taika, and Goche. For 80 miles all appeared quiet and prosperous, with the fields occupied by busy workers, while the villages were swarming with Chinese and the salesmen were crowding even the streets with their wares.

At Changwha (Shoka) the removal of the market makes the place appear less prosperous than of old. During the Chinese days this big inland city was the centre to which hundreds of country people daily gathered, to dispose of the country produce. It was not always a quiet crowd, and offering too great an opportunity for bad characters to enter the city unsuspected, the Japanese ordered that the market should be moved to the outside of the wall. Many of the city Chinese who received employment either directly or indirectly as a result of the existence of the market, removed to the outside of the gate where a new settlement was built. This principally accounts for the quietude of the big city as we find it to-day. The rebels attacked outside the wall, but being unable to get past the gates and receiving no encouragement from the townspeople, they deserted the city in disgust. Chinese report had it that the city was captured and a thousand Japanese killed. From Changwha it is but a short distance to Lokang (Rokka) the important sea-coast city. This place is splendidly built for a Chinese town, the main street containing the largest and best built business houses I have found in Formosa with the possible exception of Tainan-fu, and even there they are not excelled. As a result of the rebellion, 308 houses were reduced to ruins, the loss being principally confined to block after block of

the large brick and tile structures I have mentioned, while about a thousand Chinese were rendered homeless.

Returning to the days of the rebellion, we find a small force of Japanese guarding the city. They were informed of the approach of the rebels, who having been successful at Hoonlin and Hukto were marching through the country adding to this strength hourly, by forcing the country people under penalty of fire and sword to join their ranks. The Japanese force was not sufficient to defend the whole city, so they all gathered together in a old Chinese yamen just at the outskirts, throwing up hasty barricades and enclosing all by a bamboo stockade. The Chinese of the city were greatly disturbed, and an offer of raising volunteers was made, and accepted by the Japanese although there was no means of arming them. A force of one thousand was thus obtained, and they were rendered recognizable by a band placed about their chests. They rendered splendid assistance on the stockade, and aided the people in reaching safe retreats during the fighting. The Japanese officials are enthusiastic over the loyalty of the townspeople who thus gave such valuable aid when, with their 20,000 inhabitants, they could have torn the Japanese into pieces had they so desired. The rebels came and the attack commenced. Unable to drive the Japanese from their improvised fort and being subject to a deadly fire whenever they came into close range, an attempt was made to burn the Japanese out. Accordingly, the Chinese houses in close proximity were fired, but fortunately for the Japanese the wind was in the wrong direction and the conflagration thus started, spread down the principal business street for many blocks. The rebels were apparently enraged at the refusal of the Lokang people to join them, for this fire was allowed to spread and the torch was applied to other houses until for about a half mile only blackened ruins remained. The fighting continued for six hours, the rebels then retreating but leaving about a hundred dead in the streets. The Japanese loss was 5 killed and 16 wounded; Lokang natives killed, 6; wounded unknown. All the Japanese property and much of the Chinese were looted. One Chinese, a wealthy farmer, afforded special assistance by disguising himself as a coolie, and, acting as a spy, bringing the Japanese much valuable information as to the movements of the rebels. I understand it is the intention to reward this man in particular for his loyal aid.

The principal Chinese sufferers were of the wealthier class, but as there were still many who lost all their earthly possessions, the Chief of the civil office had applied to Taipeifu for aid and as a result had already obtained \$2,156 for distribution, with more expected to follow. Lokang was the only settlement on or near the coast touched by the rebels.

My next stage was on farther south to Hukto, a small village of mud huts. Upon the arrival of the rebels at this place, many of the villagers joined them, and after a plucky defence, during which the Captain commanding was shot and killed from a house, the Japanese were obliged to retreat. The Captain seems to have been an uncommonly brave fellow, for although fatally wounded he yet commanded for some time, and when finally forced to turn the command over to the lower officer, he implored those about his death-couch not to surrender, his last words being that his body should be buried in this same village where he fell and that under no circumstances should the Japanese retreat. The village, with the exception of two houses destroyed by the rebels while making the attack, remains entire.

Upon the Japanese recapturing the village the inhabitants returned at once, and, as I saw them, they appeared to be without exception the roughest most villainous-looking lot of Chinese I had ever seen. From Hukto my next objective point was inland to Hoonlin, a city located at the foot of the mountains, the most important place held by the rebels, and one that furnished many men for their ranks. In reaching the city my route lay south over the military road for a few miles, and then turned in towards the mountains, following a buffalo cart track through an apparently fertile but uncultivated plain of considerable extent. The city itself is pleasantly located in a grove of bamboo. It was a pitiful sight on arriving, to see the deserted streets with not even a Chinese dog visible, for out of a once prosperous population of 4,000, but 150 are now living in the town, while 679 out of the 1,206 houses which the city contained, have been burnt to the ground.

At the time of the arrival of the rebels at this city, about 250 armed Japanese held the place. The rebels came from two directions and made a fierce and determined attack simultaneously. So soon as an entry had been effected, many towns-

people joined the rebel's ranks. The Japanese had gathered together in a large Yamen, which had been partially cleared of surrounding huts and underbrush, although still not sufficiently to give them a clear space all round. In the vicinity of this Yamen, which was used for headquarters, were many other buildings occupied by Japanese. In the frenzy to destroy everything Japanese the rebels burnt every house in the whole district, regardless whether the occupant was a friend or an enemy, a Chinese or a Japanese. The Yamen, which was a commodious affair, was so completely destroyed that it must be nearly all rebuilt and many valuable documents were lost in the fire. In other parts of the city only those buildings were burnt that were known to be the homes of Chinese loyal to the Japanese. Melancholy was the fate of several Chinese servants who would not retreat with the Japanese but remained behind to care for their personal possessions. These unfortunates were beheaded, and on the return of the Japanese, one of the heads was still to be seen outside the wall. The treatment of such Japanese as fell into the hands of the rebels was characteristically Chinese. The head of one unfortunate was severed from the body and placed outside the gate, while the body itself was set up as a dummy by running a stick up through the abdomen out at the neck, and fastening on to the protruding end one of the hands which had been cut from the body. Horses heads were cut off and placed on human bodies while the human heads were placed on the carcasses of the horses. Bodies were found of persons that had had kerosene oil poured upon them and had then been set on fire. In the case of some corpses, the heart, liver, and kidneys had been removed, and other mutilations that cannot be mentioned here, in which the Chinese seem to take delight, had been effected. The city was easily recaptured by the Japanese, but regardless of the proclamations issued calling the good people to return, very few have come back, either because they have not confidence in the promises of the Japanese or because they were all so much mixed up with the rebellion that they fear punishment. In fact, when one looks over the number of other villages, some of which were the scenes of much greater Japanese loss, and notes how the townspeople returned at once and settled down with seemingly perfect confidence in their new masters, it would appear that perhaps the latter explanation is the true method of accounting for the long continued absence of the citizens of Hoonlin.

One point that struck me forcibly was the apparent carelessness of the Japanese military in occupying quarters so surrounded with straw huts, underbrush, and shingle that they actually invited attack, which could be made with more or less safety, and moreover, were placed at so much of a disadvantage that a total repulse of the enemy was rendered extremely difficult.

During the Chinese régime, it was considered necessary if possible to place the troops in such quarters as would in themselves afford protection against the enemy. If the Chinese, who were among their own people, considered this necessary, why not the Japanese who are among strangers? As I mentioned above, the Japanese troops at Hoonlin, after being warned of the approach of the rebels, commenced clearing their quarters, work that should have been begun upon their first arrival. The task was not completed, but even with things as they were, that Major Sato with his two hundred and fifty soldiers were unable to hold the place, and that a retreat was ordered, seems to me to have been very weak judgment on the Major's part. The largest fire-arms the rebels possessed were muskets, and their bullets could not penetrate the walls, while the Japanese standing behind loop holes were afforded an opportunity of opening a deadly fire whenever the rebels appeared in the clearing. To this unfortunate retreat may be attributed the whole after success of the rebels, for had Hoonlin been held, reinforcements would have soon arrived and the rebels would have been confined wholly to the mountains. Major Sato has been summoned to Taipeifu to account for these strange proceedings.

Upon the return of the Japanese troops, all villages were captured with more or less difficulty, and many settlements situated along the foot of the hills that had furnished the ranks of the rebels were burned by the Japanese; about thirty in all. But one must understand when villages are mentioned that a small hamlet of a dozen or twenty mud and straw huts which ordinarily represent no capital and but a few days labour of the builder, who is usually the occupant, is classed as a village and included in this number. Of those of more importance destroyed, chief is the village of Chip-chip, the inhabitants of which are nearly all rebels. The main part was burned by the Japanese, although the rebels had previously destroyed many houses. Tsan-e-lun, a

village of about 300 mud houses, was totally destroyed, as were also three small villages near Hoonlin. Of the other twenty-five villages but few were totally destroyed; groups of huts only were picked out here and there. There were innocent people killed and innocent people lost their property, but the Japanese officials lament that as much as we, and the generosity with which the individual Japanese in the island have subscribed to their relief and the large amount turned over from the government fund, and the gracious gift from the Emperor and Empress are evidence that Japan has a truly humane interest in her Formosa subjects. The following figures, except in one instance, where, after a hurried inspection, the estimated number has been given, may be taken as exact. They show the number of houses destroyed either by Japanese or by rebels:—

Taichun (Taiwanfu) District	1,182
Lokang (Rokko).....	308
Polisia (Horisha)	810
Hoonlin (Uurin).....	1,500
Kagee	1,274
Total	5,074

In arriving at this total, every straw shanty or mud hut is included. The houses of greatest value destroyed were those burned in Lokang and Hoonlin. There, however, especially in the former city, the natives felt the loss of their property less, having other means of subsistence, than those poor unfortunates throughout the country that had their whole store in the little home that shelters them.

It is therefore hoped that the relief fund will be so carefully distributed that this specially needy class may be reached. The Chinese that can afford to lose, will be the first to come forth to plead with tears in their eyes the most absolute poverty and misfortune, if it will bring them a few pennies, regardless of their neighbour next door who may be starving.

I made a special trip outside of my intended route to visit a Chinese in whose sincerity I have most perfect confidence, to hear from him the Chinese version of the burning of Tsau-e-tun, for the report was brought forth that the inhabitants of this village were perfectly friendly and that the Japanese had without any cause or reason killed the innocent people right and left and then burned the town to the ground.

The report I obtained, which was told my Chinese friend by other Chinese with whom I am unacquainted, is as follows:

While fighting was in progress at Pak-tan, a village some miles distant, a small number of Japanese troops arrived in Tsau-e-tun and endeavored to employ coolies to carry stores with them to Pak-tan. The coolies refused to aid, and the numerous old women of the town were loud in their warnings that to go to Pak-tan with the Japanese would only get them into trouble. The same women also jeered at the Japanese and made numerous semi-cheerful remarks to the effect that their last day had come, that the rebels would get them this time sure, and that their heads would all be cut off before night, etc., etc.

The Japanese remained there during the night, and the next morning, a gendarme tramping about in the outskirts, came across a boy herding cattle. He inquired of him if there were bad people here, at the same time pointing towards the village; the boy, who had apparently learned a little Japanese, answered "arimas," whereupon the gendarme re-entered the village, reported to the Commander who gave the order to the troops, and the Japanese one and all turned to and began killing the villagers right and left, burned down the town and departed. There is the tale pure and simple as it was told to me.

The Japanese account differs materially. I made numerous inquiries among military and civil officials high and low, and the answer was always the same. At the time of the rebellion, troops were not regularly stationed at Tsau-e-tun, but as it was on the road on which were many of the villages that rebelled, soldiers oftimes had occasion to pass through. During the attack, messengers were sent out on military matters, in one instance calling for reinforcements. Their route carried them through this village, but they never reached their destination. A rebel was subsequently captured, and on his person were found documents all sent from a rebel chief whose head-quarters were in this same village. This aroused a suspicion that the Japanese messengers had been done away with there. Later when troops were passing south, the head of one of the missing men was found hanging from a pole outside the village. Upon attempting to enter, the Japanese were stoutly opposed from the outskirts. A fight ensued, the villagers retreated and the place was burned.

Here are the two accounts; readers can choose for themselves. That Japanese or any other body of men in a similar position, who were being hunted and killed at every opportunity, should deliberately increase the extreme danger of their position by arousing the hostility of a whole village, by entering a perfectly peaceful community and killing right and left without provocation, seems to me very improbable.

There seems to have been considerable friction at Polisia between the civil and military officials. The village was considered quiet and peaceful and the large number of Peopluans who live in the vicinity were known to be on very friendly terms with the Japanese. However, a small party of soldiers was attacked outside at about the beginning of the rebellion, and returning reported the existence of the rebels. The Peopluans, those splendid fellows of the plains, came to the front with a thousand volunteers. Three hundred of the number were accepted by the Japanese, sixty being posted on duty at the city gates and the others placed to guard the wall. This with the two companies of Japanese regulars besides armed gendarmes and police must have seemed a sufficient guard to oppose the entrance of an ordinary force of rebels. But the captain in command apparently thought differently, for after hearing the report of the officer in charge of the small party that had been attacked, he ordered a retreat. To this the civil officials made objection, so the story goes, and gathering the policemen and other armed attachés of the department prepared to hold out alone, even though the military should retreat to the last man. However, eventually the order being repeated and the chief of gendarmes using his influence, the civil officials were induced to join and all departed from the city. When the news of this premature movement, reached head-quarters, the Captain was ordered to return at once and, if the city was in the hands of rebels, he was told that the proper thing for a Captain with soldiers at his back was to recapture it. It is needless to add that an error of this kind would not long remain unnoticed, and the result is that the Captain is now at head-quarters and there is a whisper of court-martial.

More lamentable than the injury the rebels are able to inflict upon the Japanese in these rebellions, is the suffering that is brought upon the peaceful Chinese. Often forced to join the rebels against their own will and to engage directly in conflicts with which they have no sympathy, their property may be destroyed, they themselves captured and even their lives taken, and all the while at heart they are as innocent of any desire to do harm to the Japanese as the most friendly person on the island. Again, if they refuse to join or at least give aid to the rebels, their property is looted, and if they cannot make good their escape, death may be their fate. This is all most unfortunate, for the poor people have every reason to expect protection from the Japanese, and when that is not given, they naturally lose confidence in the latter and would be inclined to join the rebels if they thought they were the stronger party; not with the idea of an intended act of hostility against the Japanese, but simply to protect themselves.

Whether dealing with the rebels rigorously is the best policy is a question I will not here discuss. Suffice it to say that so far the same district has not rebelled twice. Last year, the rebellion of the Hakkas about Tokcham, the rebellion of the Kapsutan plain, the rebellion of January first, in the north and near the capital, and the Hakka rebellion in the south, all occurred in districts that the Japanese had on their first arrival been able to occupy with practically no resistance. These districts later rose in rebellion, and the participants had their first taste of Japanese lead. It was sufficient, and after peace had been re-established there seemed to be no further desire to rebel.

The Japanese occupied the territory of the present rebels without resistance; consequently the natives were ignorant of the power of the new rulers. They have now opposed them and been defeated. As a result there will probably be no more rebelling in that part of the island although we may expect occasional rows and riots. The rebels are still confined to the mountains, and will probably for some time fight, knowing, as the poor wretches do, that there is not a pleasant welcome awaiting them down below. It may be impossible, but were the Japanese able to induce the border rebels to surrender and to transport them across to China, it would not only be an act of mercy but it would rid the country of a number of bad characters who are sure to make trouble as long as they are allowed to live along the mountain borders.

Taipeifu, Formosa, Sept. 15th.

While on my trip in-country last month, when about sixty miles distant, I was informed that the Higher Court would open in Changwha two days

later. I was determined, upon receiving this information, to reach there in time to attend the opening session. By rushing the coolies, starting early and travelling late, I was able to arrive in Changwha on the afternoon of the day before the sitting of the Court. While in the city and before the opening of the Court, I asked permission to visit the quarters where the Chinese prisoners were confined. Consent was willingly granted, and Mr. Hamasaki, the Prosecutor for the State, kindly accompanied me. On arriving, I found one of the large yaméns had been converted into a prison, several large buildings being occupied by both the prisoners and their guards. The central and largest building in Chinese style consisted of a large roof with a passage way open at both ends occupying half the space, while on each side the space was divided into two large rooms with the side facing the centre open to the passage way. These rooms were prepared as quarters for the prisoners. To prevent their escape bars of bamboo were erected along the side open to the passage way. Every prisoner was provided with a straw mat to sleep upon. Although roughly prepared the place made comfortable quarters, far cleaner, cooler, and with more fresh air than the prisoners would get at home. Sixty-two prisoners were here confined, with the exception of three or four sick who had been removed to special quarters provided for the sick. The men are exercised daily, and also obliged to undergo the discomfort of a daily bath. Blue clothes had been provided for them by the Japanese and were changed and washed when they became soiled. Those detailed for the care of the prisoners number twenty, with two public officers.

Mr. Hamasaki had previously stated that he took a great interest in the prisoners, which remark was rather substantiated, for as he came into sight of the poor wretches they all with one accord set up a howl, and as we entered the building, prisoners trying to attract his attention, fell down before him and with moans and groans and frantic gesture each pleaded for release. He had a kind word for all, which, if it was in Japanese, seemed to satisfy them, and they eventually settled back on their mats resigned to their fate. One wonders now that the court has sentenced several prisoners to long terms, what the authorities will do to provide prisons for them. The quarters they now occupy are all right, in fact better than the ordinary foreign prison would be for summer use, but during the cold and stormy months, they would not do at all. It would seem that the Government would be wise, now that winter is approaching, to commence work on a small prison to shelter their inmates for the coming year, and the building of the more extensive affairs can be postponed for a few years. I presume prisons, insane asylums, and other retreats for the unfortunate must come with the rest of the improvements.

The Civil Court opened at Changwha for the first case on August 23rd, and I felt myself fortunate in being present. Changwha, the big inland city, is about one hundred miles south of Taipeihu.

The Court was held in a large yamén which had been refitted for the purpose. The day and place had been extensively advertised, and all Chinese, regardless of class were invited to attend, the only conditions being that they must come in their best clothes and with the idea of being quiet and orderly. Court was advertised for nine in the morning, but long before that hour Chinese dressed in their best and with clean shaven heads were seen gathering in little groups near the yamén, all showing the greatest curiosity in the new sort of mystery, that was about to be solved before them. In fact, the general demeanour of the whole public, many of whom were collected about a big bulletin board bearing proclamation of invitation, was at least, at this stage of proceedings, indicative of a genial conviction that the whole affair was a sort of spectacle prepared and sent thither for their express entertainment. The occasional glimpse of a gorgeously robed official, and the elaborate decorations of the interior heightened the impression.

Upon the opening of the main doors the Chinese as they entered were conducted to benches which filled one large room, and all were given seats, and when the number was greater than the accommodation had been previously arranged for, numbers of Japanese were sent out skirmishing in the different offices to obtain seats that all arrivals might be provided for. It was kind and courteous treatment extended to all, whether rich farmer or coolie, and I could not then but think, how easily many difficulties could be overcome would other classes treat the deserving natives with as much consideration. All through the long and hot morning the audience sat quiet and respectful, without a whisper disturbing, making the presence of the gendarmes who glared at the guests as though they might have been prisoners out on a fresh air leave, quite unnecessary.

An attempt was made to arrange the room

the same in the court rooms of Japan, and every detail of the whole proceedings was given as careful attention as though the accused had been one of their own nobles. The idea was to impress the Chinese with the importance and the solemnity of that power which holds life in balance, and that there were other and better methods of determining guilt than that of the torture block. A platform covered with rich fabrics ran from side to side, while on this was placed a second and smaller platform entirely hidden by a large drapery of purple embroidered silk. Above it all, extending from side to side, was a beautiful rich embroidered blue silk canopy. Tables were likewise covered with rich embroideries. On the platform sat the President of the Court and five judges, two interpreters, and a secretary. The prisoner, a boy of 18 years, was the first case to be tried: He was brought in by the police and upon reaching the stand fell cringing to the floor imploring for mercy. He was kindly bid to stand and did so during the rest of the trial. The case, as stated by the Prosecutor, was that, upon the arrival of Japanese officers at a certain village which was rebelling, the young accused, cut off from other retreating natives, was caught attempting to escape, and upon entering the house from which he had so hurriedly absented himself, a long Chinese spear similar to those used by the rebels was found. (The instrument in question was then placed before the accused.) The examination which occupied the first day's session was devoted entirely to cross examination of the prisoner, who as the trial progressed gained confidence and answered freely in a manner which appeared to me to be frank and honest. I must say I was favourably impressed with the young lad and was greatly pleased at his acquittal and release. The case following also resulted in acquittal. That an idea of the usual judgments may be obtained I may say that up until September 9th but one received the death sentence, one imprisonment for eleven years, two for nine years, and the others were acquitted. It must be remembered that these are not cases previously unexamined, and when the number of accusations are noted and the few that eventually reach the court, it appears as though it was the intention to look upon their errors leniently, and give them every benefit of the doubt. Nearly 3,000 accusations were made as a whole, this number after investigation was cut down to 417, and of this, after preliminary examination, but 67 reached the higher court. Every attempt is made to obtain evidence, but it is a very difficult task and one requiring much time, and I presume most of the previous acquittals have been the result of insufficient evidence.

I cannot speak too highly of this court and the officials connected with it, and I hope that other correspondents, and foreigners generally, if they are in the vicinity of Changwha will find time to spend a portion of the day in visiting it.

The Chief of the Court, Mr. Jinsaburo Kato is a splendid man, I believe, and I have the greatest confidence in his ability, but specially must I speak of Yashimo Hamasaki, the Prosecutor for the State. I have many acquaintances among the Japanese, and many whose friendship I greatly value, but I have never met one who impressed me more as a man of sterling qualities than the gentlemen of whom I speak. I had a most interesting conversation with him, continuing for the greater part of one day. I should like to speak much of him but for fear of proving tedious to certain foreign friends who seem to be possessed of the idea that to be a true man and a Japanese at the same time is almost an impossibility. I will but add that I am confident as long as Mr. Hamasaki represents the State in the Formosa Supreme Courts, Chinese need have no fear of injustice, and Japanese will find that they cannot break the laws of their country with impunity.

I cannot better describe the system of establishing the Formosa courts than to present the regulations which I give in a condensed form.

Art. 1st.—The Law Courts are under the control of the Governor of Formosa and have the function of judging all suits, civil and criminal.

Art. 2nd.—The Law Courts consist of the District Courts, the Court of Appeal, and the Supreme Court; and their jurisdiction are the same as administrative jurisdictions.

Art. 3rd.—The District Courts sit in those places where Prefectures, Sub Prefectures, and Insular offices are situated. Their function is to pass first judgment on both civil and criminal cases and to make preliminary examination of criminal cases.

The Governor may institute, in case of need, branch offices of the District Courts, sitting permanently or temporarily in any locality within their jurisdiction.

The Court of Appeal and the Supreme Court sit at the place where the Central Government of

Taiwan is established. The former gives judgment on cases that are appealed from District Courts; and the latter deals with the judgment as given by the Court of Appeal.

Art. 4th.—The judges are either *Choku-min* (a rank given only to officers who are entrusted with their positions by His Majesty the Emperor,) or *So-min* (a rank given only to officers who are appointed by the Cabinet with His Majesty's approval).

No man can be a judge in Formosa unless he has the rank and has been appointed according to the "Regulations for the Organization of Imperial Courts," with the exception of the judges of the District Courts who are for the time being exempt from the above restrictions.

Art. 5th.—In each Court the President is appointed from among the judges. He overlooks the judicial administration of his own Court and lower Courts.

Art. 6th.—The trial and judgment shall be given by one in the District Courts, by three in the Court of Appeal, and by five judges in the Supreme Court.

In case of the latter two the President of the Court, or in case of his absence the judge next in rank, shall be the chairman.

Art. 7th.—The Prosecutors are either *Choku-min* or *So-min*. They institute and carry on criminal suits and represent the State in all suits, in which the State is a party.

The Prosecutors in the high Courts overlook those of the lower Courts.

Chief Police Inspectors and Police Inspectors may act as Prosecutors in District Courts.

Art. 8th.—The Clerks are *Hannin* (a rank given to officers who are appointed by the superior under whose direct orders they are controlled. They make preparations for the trial of both civil and criminal cases, attending to the memoranda, adjusting documents, etc., etc.)

Allow me to return to the days of the rebellion sufficiently to present a proclamation issued by the rebels and scattered broadcast.

OFFICERS HEAD-QUARTERS.

Proclamation of the Formosa Volunteers.

Several Japanese posts have already fallen into our hands as the result of our great courage and the bravery of our Officers. After this success we must not retreat.

With Heaven's aid the cruel dwarfs will be swept away. This is the right way.

We are now about to attack Changwha and victory will crown our efforts.

Let this be known to all the people, that they may not be possessed with fear. All merchants should continue their trade as in the past. Those who have been filled with false fears and fled from their homes, must return and assist their neighbours that support may be bountiful. This is important.

Let all people be informed of these things.

Formosa Volunteer Head-quarters.

Shalengho.

We will reward all persons male or female who will bring to us Japanese heads, twelve dollars; silver, for each head.

These words from Head-quarters are truthfully spoken. 22nd Kwangsu, 5th month 30th day, at Shalengho.

The Chinese running junks have been having considerable fun with the Formosa Government. The foreign trade of the island is expected to pass through the four open ports of Tamsui, Kelung, Anping, and Takow, and of course as mainland Chinese are now foreigners they are subject to the same restrictions. Lokong (Rokko) and Cheungkong are two ports opened for the benefit of Japanese subjects, which of course includes the Formosan natives, and a lively junk trade exists with the mainland. Smuggling has been going on and the authorities found it difficult to catch the offending parties. After the opening of these two ports the shipping owned by Formosa natives increased with such great rapidity, that it was but a very short time before the whole trade seemed to be in the hands of the Formosans. But not for long, as investigation yielded the information desired. The mainland Chinese had found it not inharmorous with ideas of patriotism to become Formosa subjects as they neared the Island, and were not opposed to even flying a Japanese flag on their craft if necessary. The result was that tricksters who usually seem to know "where they are" partook with thanks of the privileges given to Formosans when in the inland, and of course likewise of the privileges that were to be secured in their own country. It led to the Governor-General's issuing a set of regulations which will put an end to this easy shift of nationality. Reviewing them I extract and give as follow, the more important points:—

Owners of junks shall register them at the local government office and apply for a license. Should junks be built or procured in any other place than in the place of registration, they shall be subject to a temporary registration and a temporary license will be issued. Within half a year commencing for the day on which the temporary license is issued they must apply to the local go-

vernment for the permanent license and be subject to the present registration.

When the details mentioned in the license have been altered, or the license lost, or injured, a new one will be issued by the local government. When the ownership of junks has been transferred, or junks have been injured, lost, sunk, or in anyway become useless, report shall be made of the same to the local government, and the license returned. If the owner does not reside in the place of registration an agent should be stationed there and his appointment reported to the government. Applicants for a license shall pay one yen. For re-writing a license, fifty sen. Junks plying along the coast of the island shall report their departures and arrivals to the customs or their branches, and in case neither exist to the gendarmes or police officers. There is the usual inspection to be made by Custom Officers, etc., as to passengers, crew, cargo, destinations, etc., after which a certificate is to be presented by the holder upon his arrival at other ports. Those who ply their junks while unprovided with a license, or who purchase, sell, lend or borrow a license, or who violate the articles of these regulations, shall incur a fine not exceeding twenty-five yen. These regulations shall come into force on and after the first of October, 1896.

There still exists a discrepancy between the purchasing value of the yen paper and the yen silver, paper money being at a discount of about one per cent. The amount to be exchanged monthly, has been fixed by the Government at 197,000 yen, to be distributed as follows:—Taipei 65,000 yen. Kelung 15,000 yen. Taichun 24,000 yen. Kanglee 12,000 yen. Tainan 48,000 yen. Fungshan 18,000 yen. Pescadores 6,000 yen.

There seems to have been a good deal written by one or two Correspondents, especially by one contributor to a Shanghai journal, regarding the inactivity of the Japanese in introducing improvements. Just exactly what these correspondents expect, when it is taken into consideration that it is not yet a year that the Japanese have been in actual possession of the island, is difficult to conceive. Perhaps it would have given their statements more force, if they had dwelt on the early days of some other colonies that a precedent might be established. The 900,000 yen that is being spent in improving the old Chinese railway line brings forth only sneers, and the several hundred miles of splendid road that has been built by the Engineers throughout the country, the narrow gauge line, and the improvements at Taichun are not mentioned. Verily, Japan has a difficult task if she pleases all her critics in Formosa.

Mr. Ishiguro, Harbour Engineer; Mr. Ishibashi, Light House Engineer, Prof. W. K. Burton, Sanitary Engineer, and their assistants have returned to Japan after many weeks of hard labour at professional duties. Prof. Burton prepared the plans for water-works and sewerage at Taipei, Hobe, Kelung, Tai-chung, and cities in the north, and will return in a few months to continue his investigations, after which the work of construction will be pushed rapidly forward.

Mr. Paul Schubert, of the firm of A. Butler & Co., collected nearly \$400 in subscriptions for the *Illis* fund. The foreign residents of the north of the island will long remember the plucky action of the little gunboat during the troubles with the Chinese soldiers at Tamsui last year.

As showing the anxiety of the Government to do all they can to bring themselves into closer contact with the past condition of this island and the wants of the natives, I may mention that they have appointed Dr. Wykeham Myers to a post of importance, and there is no doubt the authorities will avail themselves to the full of that gentleman's long experience in Formosa. Not the least of Dr. Myers' duties will continue to be in the medical line, and it is to be hoped that he may be able to continue those investigations and observations on the somewhat unique but none the less important type of malarial disease which at present proves to be the source of so much anxiety and suffering. Dr. Myers' headquarters are at present fixed at Takow, but of course he will be available for service wherever required.

I am glad to hear that the Japanese authorities have at last decided that the various missionary chapels which have been occupied from time to time as the exigency arose, are to be permanently vacated. It must be admitted that they have taken full advantage of the mission hospitality and kindness, and it is certainly full time to grant that which church routine requirements undoubtedly call for, and that if there be any claims for damages done to the buildings during the occupation they may be made good at once.—J. W. DAVIDSON.

IN H.B.M. COURT FOR JAPAN.

Before R. A. MOWAT, Esq., Judge—MONDAY,
September, 28th.

THE THEFT OF THE "SAIKYO MARU'S" TREASURE.

This morning at 10 o'clock, Edward Dawson, late third engineer of the Nippon Yusen Kaisha's steamer *Saikyo Maru*, was charged with receiving yen 1,000 in 20 cent silver pieces, part of a sum of yen 2,000 packed in a box and shipped on board the N.Y.K. steamer *Saikyo Maru* at Kobe on Aug. 12th last, well knowing the money to have been stolen.

In answer to the Clerk of Arraigns, the prisoner said that he took the money ashore, but he was not guilty of taking the money knowing it to have been stolen.

His Honour—That is a plea of not guilty.

The following jury were then empanelled:—Messrs. E. B. Jones, W. Tucker, H. W. Fraser, W. R. Bennett and W. H. Hardy.

Mr. R. N. St. John was fined \$50 for not being in attendance in accordance with summons.

Edwin Ryder, late second officer of the N.Y.K. steamer *Saikyo Maru*, was then formally charged with the theft of the money and with receiving \$1,000 of the treasure.

He pleaded guilty to the charge preferred.

His Honour then dismissed the remaining jurymen, thanking them for their attendance; and the trial of Dawson commenced.

Mr. H. C. Litchfield, Crown Prosecutor, conducted the prosecution. Mr. Okumiyama, Chief Public Prosecutor; Inspector Waki, of the Yokohama Settlement Police; and Mr. Tamio Hayashi, Manager of the Yokohama Branch of the Nippon Yusen Kaisha, were present in Court.

Mr. Litchfield, in opening the case for the prosecution, said that the prisoner was charged with the theft and unlawful receiving of certain silver coins part of a box of silver treasure the property of, and belonging to, the Nippon Yusen Kaisha. Briefly the circumstances were these:—On the evening of the 12th August some silver treasure, packed in boxes, was shipped on the *Saikyo Maru* for conveyance from Kobe to Yokohama. There were 50 cases shipped, and between the time of their shipment at Kobe and the time of the arrival of the ship at Yokohama one case of the treasure was removed from the mail-room, in which it was stowed, and the contents thereof were taken away. A search was made for the box, and eventually a part of the money was found in the possession of the accused, Edward Dawson, who at that time was one of the engineers on board the *Saikyo Maru*. Part of the money was found in Dawson's possession at Shanghai, but the greater part was found in a box or trunk of Dawson's in Yokohama, where he had deposited it at the house of Mr. Pass, living at No. 184, Bluff, where Pass kept a boarding-house. The question for the jury to decide was whether or not the accused received the money knowing it to have been stolen; whether or not he knew, or had good grounds for believing, that the property was stolen or had been improperly received. The question of intention was gathered from the conduct of the parties accused. To guide the jury in their decision he would submit that where a man hides property that he knows does not belong to him and takes the precaution of stitching this money into a belt—as he would call evidence to prove—he confidently asked them to assume that that man at the time he took those precautions, had a guilty knowledge of how that money was acquired and that he knew it was property that had been stolen.

Maki Komatani, the former Purser of the N.Y.K. steamer *Saikyo Maru*, cautioned, deposed to being on the ship on 12th August when the treasure—\$2,000—was shipped at Kobe. It was shipped in 50 boxes in accordance with a Japanese shipping order. The boxes were marked in Japanese with the amount of money each contained, and a description of the coins—20 cent pieces of the 20th year of Meiji. These boxes were locked up in the mail-room of the steamer. When the vessel arrived at Yokohama only 49 cases could be found, and a thorough search was instituted, but in vain.

Miyahashida Rinzo, the freight clerk of the *Saikyo Maru* on the date in question, deposed to receiving the treasure, locking it up in the mail-room of the *Saikyo Maru*, and giving the key to the Chief Mate, Mr. Rehberg. During the voyage up to Yokohama no one entered the mail-room. At Yokohama Toyoshima, the Tally-clerk, unlocked the door of the room.

Mr. Tamio Hayashi, cautioned, deposed—I am manager of the Nippon Yusen Kaisha, at Yokohama. The missing treasure consisted of \$2,000 in twenty cent pieces, all of this year's make.

To Mr. Jones—There is a treasure room on the *Saikyo Maru*, and I do not know why the treasure was put into the mail-room instead.

Mr. George Washington Connor, deposed—I am the Captain of the *Saikyo Maru*. On the voyage of the 12th to 13th August, the accused was Third Engineer of the vessel, a position he retained on the subsequent voyage of the steamer to Shanghai. In consequence of cable instructions, received at Shanghai, I took means to prevent Dawson leaving the ship at Shanghai, and then he was taken to the Hongkew Police Station until we left the port. On the morning of the 20th August, I went into Dawson's room and found some money in the man's luggage. I found a large box, locked; a Gladstone bag, and a small trunk: all were packed. I had the box opened by the carpenter and found \$120 in new twenty cent pieces, some in rolls just as if they had come from the mint. The rolls of coin were packed in Japanese paper, with certain written characters upon each package. The rolls were in an old blue cloth. This cloth was at the bottom of the box underneath nails and all kinds of things. The bag of money now produced is the same that I found in the box. I recognise the purse now produced as the one I found at Shanghai that contained a quantity of new twenty cent pieces. On the evening of the day we sailed from Shanghai I spoke to Dawson and told him what I had found in his room. I asked him to confess the whole truth to me.

In answer to His Honour, the witness said that he was only the third engineer's superior officer.

Mr. Litchfield thought that the evidence of the confession was admissible. There had been no inducement held out to the man that would take the statement out of the meaning of a voluntary confession.

His Honour said that if prisoner was defended he presumed that his Counsel would object to the confession being entered as evidence; but he was inclined to admit the statement as evidence, Captain Connor not being the accused's master, and the alleged crime not being committed against him.

Witness then repeated the confession that Dawson had made him, and which was given in the course of the Police Court proceedings three weeks ago. Dawson said that Ryder opened the box, which was in the Second Officer's cabin, with a hatchet. Dawson also said that he took a portion of the money ashore in a flannel belt. Dawson further said that most of the money that Ryder had given him was at Pass's boarding-house, at Yokohama, with the exception of \$120 or so on the *Saikyo*. He said that Ryder's portion would be found at Wright's Hotel. I then asked if any Japanese were concerned, and he said, "No; so far as I know, no Japanese are concerned."

To the Prisoner—I thought, I understood you to say that you took the money on the night you arrived in Yokohama. I supposed that you would leave the ship at Shanghai at the last moment, so as to prevent us from searching for you. All your boxes were packed. I was told that you intended leaving, by the Chief Engineer.

Prisoner—Those boxes were packed before reaching Kobe. The money was all loose in the bottom of my tool box—the iron chest.

The present purser of the *Saikyo Maru*, deposed to searching Dawson's boxes at Shanghai, in company with Capt. Connor, and finding the new silver coins in the iron-box.

Sydney Chas. Pass deposed to Dawson leaving a trunk at his house, No. 184, Bluff. Accused lived at his house in April, May, and June, and left in July on the *Saikyo Maru*. When he left the house to join the *Saikyo Maru* prisoner left this large camphor-wood chest behind. The chest was locked and corded. On about the 17th August, the day previous to the *Saikyo* sailing for Kobe, prisoner came to the house.

George Kircher, Usher of the Court, deposed to proceeding on board the *Saikyo Maru*, in accordance with the terms of a search warrant, to arrest Dawson. In company with the prisoner he went to No. 184, Bluff, and found a big trunk there. The trunk was locked and Dawson gave him the key to unlock it. Continuing—I found a canvas bag containing two flannel belts, in which money was sewn. Most of the coins were loose; others were packed in *roleaux*. The coins were all new. This bag was brought to the Court. The blue cloth bag was taken out of an iron-box on board the *Saikyo Maru* in the presence of Dawson. The canvas bag in which the rolls of money were found was marked "G. E. Dawson."

Mr. Litchfield then read and put in the prisoner's statement made before the Magistrate.

This concluded the case for the prosecution.

Prisoner said he had no witnesses to call. Then he added—The statement that I made before the magistrate is all that I could say. There is nothing more for me to say, save that when I squared myself up I tried to get rid of the stuff. I wanted Ryder to take my keys and get the money away from Pass's. I was looking over the side of the ship at Kobe when the silver came off and remark-

ed that the man who owned that amount need not worry or need to work. But it was only in jest. At night I was drunk and I knew nothing about the box being stolen until I saw it in Ryder's room. I tried to get him afterwards to take the stuff away but he would not.

His Honour—The charge, as I mentioned before, is that you received the money knowing it to have been stolen.

Prisoner—Of course I knew that it was stolen then; that I could not help knowing, but I never stole the box or took it out of the mail-room.

His Honour—That we understand.

Mr. Litchfield had no remarks to address to the Jury.

His Honour said that he had nothing to say to the Jury. They had to find whether or not the prisoner received the money knowing it to have been stolen.

The Jury, after a short retirement, found the prisoner guilty.

His Honour said he reserved passing sentence in both cases until 10 o'clock on Thursday. He had heard Dawson's statement and he would order that a copy of it be furnished to Ryder, so that the latter might have an opportunity to answer any part of it that implicated him.

The Court then rose.

THURSDAY, October 1st, 1896.

SENTENCES IN THE "SAIKYO MARU" TREASURE CASE.

At ten o'clock this morning, Edwin Ryder, late second officer of the Nippon Yusen Kaisha's steamer *Saikyo Maru*, and Edward Dawson, late third engineer of the same vessel, were brought up to receive sentence—one having pleaded guilty of stealing a box of treasure containing \$2,000 from the mail-room of the steamer, the other having been found guilty of receiving part of this money, knowing it to have been stolen.

Mr. H. C. Litchfield, Crown Prosecutor; Mr. Tamio Hayashi, Manager of the Yokohama branch of the Nippon Yusen Kaisha; and Inspector Maki, Superintendent of the Settlement Police, were present.

Ryder was first placed in the dock, and in answer to the formal question of the Clerk of Arraigns (Mr. C. D. Moss)—Have you anything to say why sentence should not be passed upon you?—said he wished to make a remark.

His Honour said he was willing to hear prisoner. Ryder—Is it probable that I should steal a box of \$2,000, take it up on deck into my cabin, and there give half of it to another man; bring the rest on shore and then give some more away to another man? That is all I have to say.

His Honour—I understood that you pleaded guilty on Monday?

Ryder—Yes.

His Honour—Dawson at his trial said, in a statement made before the magistrate, that he was brought to your room where the treasure then was; that he was given drinks by you, that he was generally the worse for drink; and was more or less drunk the whole of the time; I shall be glad to hear if that was so?

Ryder—Yes, he was under the influence of drink.

His Honour—Ryder, I have read the depositions of your examination before the magistrate, and I can but consider your case to be an extremely bad one. I see nothing in it that redeems it at all. Not only did you steal the box of silver, but you also tempted another man to commit a crime. You were placed in a position of trust by your employers and you wilfully broke the confidence that they had placed in you. The confidence that they considered they were honestly justified in placing in you ought to have kept you from committing this crime. I think that the discovery of your conduct has caused a great shock to the men of your class. Employers of men in your class, in this part of the world, might also reasonably have feared after this, that the confidence they reposed in men of similar station, might also be unjustified. In this way, I fear you have, by your conduct, inflicted on the honour of men of your position a serious wound. The honour of a class is made up of the honour of the individuals composing that class; this is why I think your have inflicted a serious wound on the honour of the men of your station. I am glad to hear your statement that Dawson was in a state of drunkenness on the night of the theft, and I shall take it into consideration when dealing with his case. I sentence you to undergo the penalty of two years' imprisonment with hard labour, to date from the day of your conviction, three days ago.

Dawson was then placed in the dock.

His Honour—Dawson, you have been found guilty by the jury of receiving money knowing it to have been stolen. The circumstances of your

case are very bad, though not so bad as Ryder's. He appears to have suggested the crime to you by giving you drink while you were drunk, for he states that you were drunk at the time. But I cannot attach much or any importance to that. The theft was committed on the Wednesday night; next morning you went to work. You could not have been intoxicated on the following morning and all during that day. I shall sentence you to 15 months' hard labour, to date from the time of your conviction.

Mr. Litchfield asked for an order of restitution of the bags of silver found in the possession of the convicted men.

His Honour—All that money is to be restored.

THE U.S. CONSULATE-GENERAL COURT.

Before N. W. McIVOR, Esq., Consul-General and Judge.—WEDNESDAY, Sept. 30th.

CLAIM FOR DAMAGE TO NITRATE OF SODA.

In this case the China and Japan Trading Company, sued to recover \$106.32 and costs, from Captain A. Weston, for damage done to some 20 bags of nitrate of soda; while in the charge of defendant as landing agent.

Mr. J. F. Lowder appeared for the plaintiffs; Mr. G. H. Scidmore representing the defendant.

Counsel intimated that neither desired to have Associates drawn to sit with His Honour in the case.

His Honour said that the amount involved was very small and according to the rules governing that Court, Associates were not necessary. He was prepared to hear the case at once.

Mr. Lowder then read the following petition filed in the case:—

1.—The plaintiffs are merchants carrying on business at Yokohama and elsewhere.

2.—The defendant is a citizen of the United States, carrying on business in Yokohama, as a landing and shipping agent.

3.—The plaintiffs recently imported into the port of Yokohama by the steamship *Glemorganshire*, a quantity of merchandise, among which there were 200 bags of nitrate of soda.

4.—The plaintiffs caused the said merchandise to be delivered to the defendant, and the defendant received the same from alongside the said steamer, and undertook, for reward to be paid to him by the plaintiffs, that he would safely and securely carry the same from the ship to the shore, and that as to the said merchandise other than nitrate of soda, he would safely and securely land and deposit the same in the Customs sheds, and that as to the said nitrate of soda, he would safely and securely land and deposit the same upon the Customs Wharf and that he would take adequate means safely and securely to protect the same whilst so deposited against damage by rain.

5.—The defendant, by his agents and servants duly landed the said nitrate of soda upon the Customs' Wharf, but did not take adequate means safely and securely to protect the same, whilst there deposited, against damage by rain, but negligently and carelessly deposited and bestowed the same that, by reason of such negligence and carelessness, a large portion of the nitrate of soda was damaged by rain and rendered of no use to the plaintiffs.

The plaintiffs claim the following relief:—

1.—*Res* \$106.32 for damage.

2.—The costs of this action and such further or other relief as the nature of the case may require.

To this petition, Mr. Lowder said, the following answer had been filed:—

1.—The defendant admits the allegations contained in the first, second, and third paragraphs of the plaintiffs' petition.

2.—The defendant admits all the allegations contained in the fourth paragraph of the plaintiffs' petition, except the allegation that the defendant undertook to take adequate means safely and securely to protect the nitrate of soda therein mentioned, whilst deposited upon the Customs' Wharf against damage by rain, which allegation the defendant denies.

3.—In answer to the fifth paragraph of the plaintiffs' petition, the defendant admits that he duly landed the said nitrate of soda upon the Customs Wharf, but the defendant denies that he did not take adequate means safely and securely to protect the same, whilst there deposited, against damage by rain, and he denies that he so negligently and carelessly deposited and bestowed the same, that, by reason of such alleged negligence and carelessness, a large portion of the said nitrate of soda was damaged by rain and rendered of no use to the plaintiffs.

4.—And, for further answer, the defendant says that a large portion of said nitrate of soda—to wit twenty bags—was delivered to the defendant from on board the steamship *Glemorganshire* in a broken and damaged condition, of which broken and damaged condition the plaintiffs were in duty bound to take notice.

5.—The plaintiffs neglected to take due and proper notice of such broken and damaged condition.

6.—The defendant used all due and proper care in

the landing, deposit, bestowal, and protection of said nitrate of soda.

7.—The plaintiffs neglected to remove, said nitrate of soda from the Customs Wharf within a proper time, but permitted it there to remain exposed to possible damage for an unreasonable length of time, after being landed by the defendant.

Wherefore the defendant prays that the plaintiffs' petition be dismissed, and that the plaintiffs be ordered to pay all of the costs of proceedings herein.

Mr. Lowder then opened the case for the plaintiffs. He said that the answer admitted that 20 bags of the nitrate of soda had been landed by the defendant from the *Glemorganshire* in a broken and damaged condition. Now he would bring evidence to prove that some 200 bags of the nitrate of soda were landed and that out of the 200 some 40 were damaged. Now whether it would be the plea or not of the defendant that out of the 40 damaged bags, 20 were landed in a broken and damaged condition, he would say at the outset that their contention was that the damage that we complain of is not that kind of damage at all, but damage that was caused by the negligence of the defendant after the goods were landed. The damage was caused, so he had been instructed, by rain, and the action of rain upon nitrate of soda was to cause the latter to dissolve. If the goods were landed in a broken and damaged condition, then it would have been the duty of the defendant, as landing agent, to have informed the plaintiffs of the fact and then they would have had their remedy against the ship. But this was not the cause of the action. It might seem that the sum sued for was a trivial amount, but he assured his honour that the principle involved was very important, and that it did not matter whether the amount was \$500 or \$50. The answer to the petition alleged that the damage was due to the negligence of the plaintiffs in not removing the goods within a reasonable amount of time. Now the goods were landed at 3.30 p.m. on Friday, the 26th of June. They remained on the Customs Wharf during the day following, and on Sunday, the 28th. During the night of the 28th a storm came on and damaged the goods. Now nitrate of soda is dangerous material, and the Customs' rules do not permit it being stowed inside the Customs' warehouse; it therefore has to be stowed outside. It was the duty of the plaintiffs to take as quick delivery of the goods as possible, and all the Customs requirements were fulfilled by the Saturday afternoon—that was expeditious work. It only remained for two of the packages to be taken into the Customs examination office in order that the officials should examine the goods and pass them. The defendant was required to stack the bags in sets of five so as to enable the passing officer to set the proper marks upon them. But this the defendant did not do. Saturday was a showery day, and it was deemed unsafe to examine the nitrate of soda then. The plaintiffs had endeavoured to find the Customs Officer whose duty it would have been to have examined the goods, but they have been informed that the man is not now in the service, having left the Customs, and his whereabouts were not known: this was to be regretted, for Counsel had intended calling him to prove that plaintiffs allowed no unusual delay in taking delivery of the goods. These points could all be decided on evidence of fact, but he, the learned Counsel, could also prove that in point of law even if a delay did take place, it was not sufficient to exonerate the defendant from the consequences of his neglect of duty. Whatever delay there may have been on the part of the plaintiffs, that delay, in point of law, did not exonerate the defendant from the consequences of any negligence on his part. The defendant had contracted to properly secure and properly stow the cargo at the Customs Wharf. As a warehouseman, it was his duty to exercise the same reasonable care for the security and stowing of the goods as if those goods belonged to him. Plaintiffs were in the habit of importing such goods as these into Yokohama, and it was their custom to entrust the landing of these goods to defendant. The defendant's custom was to assume responsibility for them when landed, and he invariably used skids, that he placed under these goods, to raise them from off the ground, to prevent wet from reaching them, while over all he placed tarpaulins to save them from the rain. If he, the learned Counsel, could show that the defendant in this case did not use skids, then he showed that defendant had neglected the duties for which he had contracted. That in this particular instance not a single skid was used would be proved by the evidence of a Mr. Metz, in the plaintiffs' employ, who upon discovering the fact reported the matter to a Mr. Hatch, in defendants' employ. Mr. Metz asked why no skids had been placed under the nitrate of soda bags, and Mr. Hatch had admitted that it was his fault, and thus admitted the neglect. Mr. Metz then went and

saw Mr. Weston, and Mr. Weston admitted his liability by acknowledging that his men ought to have put skids under the bags. He also said that he was willing to pay the damage. An agent of the plaintiff, an agent of Mr. Weston, and an agent of the plaintiffs' customer—who had contracted to buy the nitrate of soda—were present when the goods were weighed and it was found that the loss in weight was 19 piculs. There was no dispute as to the amount of loss. A debit note was accordingly presented to the defendant by plaintiffs. Defendant then refused to pay the damage, saying that he had no idea that it was so great. He said he thought that it might have been only \$6 or \$7, such an amount he was willing to pay, but an amount of over \$100 he refused to pay. So far, he learned counsel, had pointed out what were the defendants' duties under contract. Apart from that, as a matter of law, the Court would be asked to assume that defendant in this case was a carrier for hire, and that his responsibility did not cease when he had transported the goods from ship to shore. His duty did not end when the transport of the goods ended but further extended to his taking adequate means to stow the goods safely and securely. Whether that duty arose from being a carrier for hire or a warehouseman of the goods for the time being was not material in the decision of the present case because negligence was charged. If defendant was sued as a carrier only he would be insurer at all hazards unless he could show that plaintiffs had been contributory to the damages. He submitted, as a matter of law, that the damages were due to defendant's negligence and thus he was liable.

His Honour—The sum of it is, that you submit that he is an insurer against the result of his own negligence?

Mr. Lowder—That he may be held liable whether as carrier or bailee.

Mr. Lowder said that for convenience sake, and in order to show the Counsel for the other side, the line he intended taking, he would now mention the cases he intended to cite. They were *Walter against Jackson* (1842)—in which it was shown that the duty of a ferryman did not end with ferrying a carriage across a ferry, but in securing that carriage from the danger of sliding back into the stream; this had reference to the present case: the judges there holding that there could be no dispute that defendants' duty did not end in transit, they had not only to carry the goods, but to land them and put them in a secure place. The *Great Northern Railway Company against Swaffield*, in which the secure storage of a horse was in dispute, and was decided in favour of the owner, it being held that the Company were bound to take reasonable care of the animal though transit was at an end. *Mitchell against the Lancashire and Yorkshire Railway Company* (1874) in which the proper storage of flax was in dispute. And the great case of *Cobbs versus Barnard*, decided in 1703, that was so familiar to his Honour that he need not quote the judgment. Counsel acknowledged that all these cases were decided in English Courts under the Common Law and he was sorry he had not reports of cases in the Courts of the United States, but all the cases were cited by "Browne on Carriage," the well-known American authority, who in a foot note to his leading case said:—"The American law with regard to this subject, although there have been conflicting decisions, seems to be the same as that of England." Mr. Lowder concluded by observing that the old English Common Law was still administered by the U.S. Consular-General Court in Japan.

The Court then adjourned. Upon resuming after tiffin,

Ah Hong, a Chinese compradore, was the first witness called. He said that he was the servant of Paul Schramm, of No. 202.

Witness did not know the nature of an oath, but he said he would speak the truth.

Mr. Scidmore thought that it was necessary that the witness should be put on oath, otherwise the statement he made could not be binding on his conscience.

Mr. Lowder thought it was not necessary to put the witness on oath; he had said that he would speak the truth.

Mr. Scidmore asked the witness if he knew what conscience was?

Witness said he did not know the English language sufficiently well to give a definition of conscience.

Mr. Scidmore thought that the statement of such a witness could not be heard by the Court.

His Honour then explained to Counsel the rule of the Court in regard to Japanese witnesses, and then

Mr. Lowder asked to withdraw the witness until he could obtain the services of an Interpreter.

This request was acceded to.

Yoshida Yoshitaka, duly sworn, deposed—I am in the employ of the plaintiffs, and have been in their service since the end of July last. Prior to this I had been in the employ of Mr. Weston, the defendant in this case. I was his servant for about eight years. During that time I was his hatoba-man. I left solely on account of salary; there was no quarrel or dispute between us other than a question of wages. I am acquainted with the appearance of nitrate of soda, and during the time of my service with Mr. Weston, I landed several shipments of nitrate of soda. When it was landed, owing to its being dangerous, it had to be placed in the further part of the Customs compound. It was not placed under cover; this was by order of the Customs authorities. We used to place the bags of nitrate of soda upon planks, or skids, to prevent water reaching it, and a tarpaulin was thrown over the bags. We called these planks, skids, and they as well as the tarpaulin belonged to Mr. Weston, the landing agent. It was by his orders that we used the tarpaulin and skids; we used them to prevent the bags from getting damp or wet. I do not remember whether I ever landed nitrate of soda for the plaintiffs during the eight years I was with defendant. It was our custom always to use these skids and tarpaulins when nitrate of soda was landed. Since I have been in the plaintiffs' employ Mr. Weston has been engaged by them to land nitrate of soda on one occasion. It was landed from a "Shire" line vessel, the *Monmouthshire*, I think. This ship arrived on June 22nd. On that occasion 200 bags were landed. I do not remember their marks or numbers, nor the exact date of their landing; but they were landed on a Friday (June 26). I believe I saw them at 3.40 o'clock that afternoon. The Customs House closes at 4 o'clock. These bags of nitrate of soda were not placed on planks or skids. There was a covering over them, placed there by Weston's servants, I believe; but this I do not definitely know. The nitrate of soda was eventually removed from the Customs Wharf on July 2nd; this was when the examination stamps were placed on the bags. Some delay occurred in consequence of the bags getting wet, perhaps through rain. The wet parts were all at the bottom of the bags. I do not know how many bags were wetted. A heavy storm took place on the Sunday night, and on the Monday morning I found the bags were wet. I found that the bags were wet for a depth of about five inches. I do not know for certain what effect the water has on the nitrate of soda, but I think it dissolves it. I reported the fact to Mr. Metz, and he said I was not to remove the bags until everything was settled; consequently a delay occurred before they were taken delivery of. I did not see any of the bags landed in a broken or damaged condition; the wetted bags were the first damage that I saw. Mr. Weston's man did not inform me that any bags had been damaged.

Cross-examined by Mr. Scidmore—I was in Mr. Weston's employ for eight years. When I left Mr. Weston he did not tell me that I was no longer of any use to him. When the present lot of nitrate of soda was landed it was placed at the end of the Customs compound near the export shed, close to the water. I do not remember whether the Customs compound was crowded or not at that time. The skids were the property of Mr. Weston, and were stored together, when there was room, in Mr. Weston's godown, at other times they were stored outside somewhere. Mr. Weston has only one godown, and his office is located there. I entered the employ of the China and Japan Trading Company on June 18th, I believe.

Mr. Scidmore—Are you positive about it, or is this only your impression?

Witness—I am positive it was the 18th of June. I do not keep a diary of my daily doings.

Mr. Scidmore—You stated that this nitrate of soda was landed at the third hour, forty minutes; how do you know that it was exactly at that time?

Witness—I was in the Customs compound at the time on business, and when this was done, I went out and saw the nitrate of soda. I then found that there was not time to pass the goods so I remember the time perfectly well. While in Weston's employ my business was not fixed to any thing in particular, but I had to see to things generally.

To His Honour—I do not remember when the Customs' permit was issued. On Saturday the goods were examined, but there was no time to pass them. Then Sunday intervened, and on Monday I saw they were damaged. The goods were examined on the Saturday by the proper Customs official. I do not know when the Customs permit was finally issued. It is my duty to attend to all cargo landed in the Customs compound; attendance upon this nitrate of soda was also one

of my particular duties. It is my duty to attend to the passing of all cargo through the Customs.

Re-examined by the Mr. Lowder—I think I am not mistaken in thinking that I entered the service of the plaintiffs on the 18th June; that is my recollection.

Mr. Kwang Ho Chung was then sworn in as Chinese interpreter, and

Al Hong, the Chinese witness was again called. In answer to Mr. Lowder, he said, through the interpreter, that he did not know what an oath was, but he promised to speak the truth; such a promise was binding on his conscience.

Mr. Scidmore had no objection to the witness giving his statement under such a condition.

Al Hong then deposed—I am in the employ of Mr. Paul Schramm, of No. 202. He is in the habit of importing nitrate of soda, and employs Helm Bros. to land it for him. When it is landed the nitrate of soda is placed near the exporting shed, not under cover. Helm always take precautions to keep the nitrate of soda from getting wet. First poles are laid down, the nitrate of soda is placed on them, and then oil-cloth is placed over the whole. I do not recollect whether on the 27th July Helm Bros. landed some nitrate of soda from the *Verona*, but I could easily see by reference to my note-book. I know Mr. Weston, the defendant in this case. He carries on the same kind of business as Helm.

Mr. Scidmore had no questions to ask.

W. H. Walker, sworn, deposed—I am a hatoba-clerk in the employ of the plaintiffs. I remember that a quantity of nitrate of soda, 200 bags, arrived on the 22nd June by the steamship *Glamorganshire*. At that time this was the only vessel that had nitrate of soda for our firm. I do not think that the *Monmouthshire* was then in port; I should have known if she was. I saw the nitrate of soda at the hatoba on a Monday morning, about half-past nine o'clock. The lower part was all wet by rain, which had fallen on Sunday night. There was nothing under the bags to prevent them from getting wet from the ground. I do not know how many were wet, but at least 40. I was with Mr. Metz when he spoke to Mr. Weston with reference to the damage. Mr. Metz notified Mr. Weston that the nitrate of soda that had been landed from the *Glamorganshire* was wet, and that he would hold Mr. Weston responsible. Mr. Weston said he would pay the claim. I was not present when the nitrate of soda was subsequently weighed. I know the rules of the Customs for passing goods. I am employed by the China and Japan Trading Company for formally passing goods through the Customs House. We first file an application, the next step is to get the goods examined. After this we have to pay the duty; then we obtain a permit to have the goods stamped by a Custom-house officer. This procedure takes at least three days.

Mr. Scidmore did not cross-examine the witness. In answer to the Bench, witness said that formerly goods were passed much quicker than now; but just at present all the best men have gone to Formosa and the present Custom officials take a long time to get through their work.

W. B. Mason, in the employ of the plaintiffs, sworn, deposed—I remember the *Glamorganshire* bringing some nitrate of soda for the firm in June. I saw the material weighed after it had been damaged by water. It was weighed by the Creek-side. There were present a Japanese, representing Mr. Weston, and a Japanese representing our customer. We found that there was a shortage of a little over seventeen piculs, valued at a little over 100 dollars.

Cross-examined—I know that it was worth \$100 by the invoice. The weighing took place on the 10th July. The bags were in a wet condition. The bags were double, I think, but I did not examine them closely.

To the Bench—I do not know when the goods were taken from the Customs; I do not know whether they were exposed to rain between the 2nd July and the 18th July.

The Court then adjourned till Friday at 10 o'clock.

YOKOHAMA CHIHO SAIBANSHO.

Before Judge USHIODA, President, and Judges TANAKA and KATO, Associates.
FRIDAY, Sept. 25th.

THE ASSAULT ON MR. W. BARRIE.

Judgment was delivered this morning in the case of assault and battery and unlawful intrusion preferred against eleven firemen, late in the employ of the Nippon Yusen Kaisha, in connection with the assault on Mr. William Barrie, Supt.-Engineer of the Company, on August 6th. The ac-

cused were—Onishi Rikichi, *heimin* of Kanagawa-ken; Neba Rikichiro, *heimin* of Hiroshima-ken; Takeoka Kuranosuke, *heimin* of Hiroshima-ken; Tamura Kotaro, *shizoku* of Wakayama-ken; Tamawaki Kaname, *heimin* of Ehime-ken; Fujita Jihei, *heimin* of Hyogo-ken; Kashima Minoru, *heimin* of Ibaraki-ken; Tokutomi Monnojo, *heimin* of Kagoshima-ken; Yoshida Rinsuke, *heimin* of Yamaguchi-ken; and Kuroda Zenkichi, *heimin* of Tokushima-ken.

The sentences were:—Under Arts. 301 and 302 of the Criminal Code, Hirose Tsurukichi, for assaulting Mr. Barrie on the left temple; Tamura Kotaro, for wounding on the head; and Tamawaki Kaname, for wounding on the back of the head with a centre-punch, three months' rigorous imprisonment; under Art. 172, Tokutomi Monnojo and Takeoka Kuranosuke, for assault without causing wounds; and Onishi Rikichi, being under age, 20 days' imprisonment with hard labour. Under Articles 89 and 90, Tokutomi, Takeoka and Onishi also receive an additional five days' imprisonment. The other prisoners each received 18 days' imprisonment with hard labour.

BRITISH CONSULAR REPORT FOR YOKOHAMA.

Sir E. Satow forwarded on June 16th Mr. J. C. Hall's report on the trade and navigation of Yokohama 1895. Mr. Hall writes:—

The total trade of the port in 1895 was greater than in the previous year by close upon £2,000,000. The exact figures of the comparison are:—

Exports ... 1895	£9,185,760	... 1894	£7,681,858
Imports ... 1895	£5,896,042	... 1894	£4,410,501

Total ... 1895 £15,081,802 ... 1895 £13,092,359 making an increase of £1,989,443, or something over 15 per cent.

Considering that the perturbing influence of the war with China, slight as it was, continued to operate through the earlier half of the year, these figures are an unmistakable indication of the vigour and recuperative power of Japan's foreign trade. The increase is not confined to this port. The total trade of Japan in 1895 was greater than that of the preceding year by just 15 per cent., and of the total trade of the Empire in 1895 the share of this port was exactly one-half. And the parallelism holds further, for, of the increase of 15 per cent. in both cases, two-thirds were due to exports, and one-third to imports. It should be remembered, moreover, that an addition of about 15 per cent. ought to be added to the import values, as has been repeatedly explained in preceding reports.

Comparing the rate of increase of the four countries which are the leading participants in Japan's trade, and taking imports and exports together, the statistics for Yokohama show that Germany is making the most rapid advance, and Great Britain the slowest, the value of German trade in 1895 being an increase of over 53 per cent. on the preceding year; American trade, nearly 18 per cent.; French, 12½ per cent.; and that of Great Britain less than 8 per cent.

As regards the proportions in which the gross trade of the port is shared between the same countries, America heads the list with 34 per cent.; France next with 17 per cent.; and then Germany with 7 per cent. Of the total exports of the port America takes more than half; of the imports Great Britain supplies nearly half.

BRITISH TRADE.—Of last year's total British trade, amounting to £4,675,000, two-thirds were with the United Kingdom itself, one-sixth with Hongkong, and the remaining one-sixth was distributed between India, Canada, and Australia. Though the total value of the trade with Australia was only £100,000, this was more than double that of the previous year, and more than four-fifths of it was imports, nearly all wool. The trade with Canada, though nearly £130,000 in amount, shows a considerable falling-off, and consisted only of exports, mostly tea.

IMPORTS.

WOOLLENS.—In imports two classes of manufactured articles show a marked increase, woollen fabrics and metallic goods, due in both cases, I think, to the war. £140,000 worth of blankets were imported in 1895, as against £33,000 worth in 1894. Of cloths £255,000 were taken, as against £53,000 in the preceding year. Flannels, from £25,000 in 1894, rose to £65,000 in 1895; serges, from £4,000 to £11,000. Bunnings, which do not appear at all in 1894, reached £7,000 in 1895. Of these various woollen stuffs by far the largest part was for army use. Such fabrics as mousseline-de-laine and Italian cloths showing a falling-off, amounting in the latter case to over 50 per cent.

Woolen yarn rose from 573,000lbs., worth £54,000, in 1894 to 976,000lbs., worth £82,000 in 1895. An item small in amount, but big with promise of future expansion, is wool, of which close on 3,000,000lbs., valued at £106,000, were imported last year, or nearly double the quantity, and more than double the value of the import in 1894. Nearly four-fifths of this wool came from Australia, the remainder coming in about equal parts from China and India.

Cloths of mixed material—cotton warps and low-class woollen or shoddy wefts—show a falling-off of 60 per cent.; and as experience shows to the consumer how flimsy and unprofitable they prove as regards wear they are certain to dwindle out of consumption altogether.

METALS.—With the exception of wire nails, which show a falling-off amounting to £20,000, over 20 per cent., metals exhibit a marked improvement in nearly all branches, amounting to over 34 per cent. in quantity and value. Bar and rod iron reached 24,000 tons, as against 14,000 tons in 1894; rails 15,000 tons, as against 9,000 tons; plate and sheet iron 7,500 tons, as against 6,200 tons; pipes and tubes amounted in value to £17,000, being double the import value of 1894. Steel advanced from 2,400 tons in 1894 to 2,800 tons. Steel ware from £6,000 in value to £15,000; whilst tin-plates, notwithstanding the increased use of them for canning petroleum imported in bulk, remained stationary at £25,000 in both years. Pig-iron advanced from 14,000 tons in 1894 to 15,500 tons last year, and most of it came from the Tees. Most of the bar and plate iron, however, is now of Continental make, the import from England being apparently on the decline. Mild steel, both bar and plates, is gradually coming into favour, and, as the process of producing it has of late been cheapened in various ways, the trade in it is likely to grow. Steel rails, too, are coming into wider use, both for heavy railways up to 61½ lbs. per yard, and for local works in lots of from two miles or more down to 8½ lbs. per yard. The heavy rails are generally specified as from English works, with an exception in favour of Krupp's, and sometimes one or other of the best Belgian makers.

The demand for lead was not so much enhanced by the war as was anticipated, the Government having previously laid in a good supply. Still the import advanced from 1,800 tons in 1894 to nearly 2,700 tons, valued at £31,000 in 1895. About 55 per cent. of this import was from Great Britain, and nearly 30 per cent. from Australia.

ARMS, ETC.—After woollens and metals, the largest increased import was in arms and munitions of war, which advanced from £22,000 worth in 1894 to £168,000 in 1895. Canvas, candles, clothing, dynamite, alcohol, and cigarettes owe their improved import largely to the army demand.

GLASS.—A large increase is noticeable in the import of glass, for which there is a growing demand. Nearly all the window glass comes from Belgium. Plate glass, both plain and silvered, has also been imported to a considerable extent; but little of this is entered as from Great Britain, and even of that a proportion is Continental glass which has been silvered in England.

OF MISCELLANEOUS Eastern produce the most noticeable increase is in raw cotton, which advanced from 8,730 tons, value £268,000 in 1894, to 11,920 tons, value £353,000 in 1895, an increase of over 30 per cent. About two-thirds of this cotton comes from China and one-third from India.

The import of SUGAR shows a considerable expansion in quantity, accompanied by a falling-off in value; 92,580 tons were entered, most of it from Hongkong, of which two-fifths were white refined sugar, whilst three-fifths were browns; total value \$6,880,742. This was a decrease of over 3 per cent. on the value of the previous year, though the quantity imported was an increase of 18 per cent. The proportion of white refined to brown sugar was greater than usual last year; but that was due to the novel circumstance that in the total of the former category were included 3,274 tons of best sugar which came all the way from Germany; the abnormally low prices ruling in that country allowing of its being brought, presumably at a profit, even to this distant market. The feature in the trade in browns has been the increase in the direct importations from Manila, in addition to the large quantity of Manila sugars that pass through Hongkong on their way to this port.

COTTON: YARNS.—Of imports that show a decrease the most prominent is cotton manufactures. In 1895 the import of yarns was only 4,244 tons, value £462,000, as against 4,627 tons, value £476,000 in the previous year, a falling off of over 8 per cent. in quantity and over 15 per cent. in value. Considering the recent rapid development of the Japanese spinning industry it might almost seem strange that the falling-off was so slight; but the

effect of native competition is more perceptible in the kind of goods imported than in the gross amount. It is to the coarser counts that the Japanese mills have first devoted their efforts, driving out the Bombay yarns from the market. It is two-fold 32's and 42's and gassed and fine plain yarns which are still in demand, none of these being yet spun except in a tentative way, in this country. It is reported, however, that two mills are now in course of erection for the spinning of gassed yarns: one at Tokyo, the other at Osaka. Their success seems at least doubtful, for these yarns are made entirely from Egyptian cotton; and with Lancashire's advantages of proximity to the source of supply of the raw material and experience in that special line, it ought to be difficult for the Japanese product to compete.

Grey shirtings exhibit great tenacity in their hold of the market, £172,000 worth having been imported in 1895, representing over 23,000,000 yards, an advance in quantity of over 10 per cent. on the preceding year. The most noticeable feature in this branch of the trade is the rising demand for long length goods, measuring from 46 to 48 yards per piece, the ordinary length being only 38½ yards per piece. Ordinary to common T-cloths, which formerly figured prominently in the grey goods trade, have been entirely ousted by the Japanese made article.

KEROSENE.—During the past year consumption of kerosene shows an increase of nearly 6 per cent. over 1894. Total deliveries were American, 1,219,248 cases; Russian, 1,123,959 cases; total 2,343,207 cases. The percentage of Russian has somewhat increased, being 48 per cent. of the total, as against 45 per cent. in 1894, the American showing a corresponding decrease. The trade during the year was highly profitable, prices having risen from \$1.80 to \$2.75 per case of 10 gallons. The latter quotation was the highest point touched and was not long maintained; the average of prices for the year being \$2.20 per case. The falling-off in the American import was due to a decrease in production. Supplies of Russian were maintained till November, when the railway track between Baku and Batoum was destroyed by floods. A small lot of Langkat oil was imported, but owing to defective packages did not meet with a ready sale.

EXPORTS.

SILK.—Amongst expanding exports the leading place is, as a matter of course, taken by silk; 56,503 bales of raw silk, weighing close upon 8,000,000 lbs., valued at over £5,000,000 were sent abroad last year, being the largest export reached since the opening of the port to foreign trade, and, as compared with the previous year, an advance of 6½ per cent. in quantity and 15 per cent. in value. The average price paid to the Japanese producer per picul (133½ lbs.) in 1895 was 825 yen, as against 718 yen in 1894.

The steady expansion in this the main staple of Japan's export trade during the last 22 years must not be passed over without remark. In 1874, the year following the West's outlawry of silver, the total export was under 12,000 bales, value 5,000,000 silver dollars. In 1884 it had risen to over 22,000 bales, value over \$11,000,000; in 1894 it was over 53,000 bales, value over \$39,000,000. It is mainly the enhanced prices in dollars due to the exchange fall in silver that so stimulated production. There is now hardly a province in the empire in which the silkworm is not reared. In 1873 England took nearly half the total export; in 1883 less than one-eighth; in 1893 less than one-twentieth. At present four-sevenths of the total export goes to the United States, France taking most of the remainder.

The large increase in the production of silk in Japan has not brought with it much improvement in the quality, rather the reverse. A deterioration, especially as regards colour, is most marked in the old producing districts, whence the largest supplies are drawn. The province of Shinshu is famous for silk of the brightest white colour, and the demand for this, both in America and Europe, is so great that the cocoons produced in the province itself are quite inadequate to supply the futilities there. Hence the temptation to adulterate is irresistible. Cocoons from all parts of the country are bought up to meet the deficiency of the local articles; and the colour has suffered in consequence. On the other hand, however, the newer silk-producing districts of Kinshu and Southern Japan have made great strides, and flature silk of high merit is now coming into the Yokohama market in yearly-increasing quantities. In view of the great importance of raw silk as the staple export, it is henceforth to be brought under direct Government supervision. A silk conditioning house is now being erected, at which the flature silk intended for the foreign market will be inspected under regulations to be framed by the Ministry of Agriculture and Commerce. The need of such an institu-

tion was much more felt in the early days of the trade, when the short-sighted cupidity of the native producer necessitated stringent precautions against fraud. Now, however, such precautions begin to seem excessive, if not oppressive, in proportion, as Japanese sellers are coming to realise that in the long run adulteration does not pay.

It is not, however, only the production of the raw article that has felt the fostering influence of the recent monetary legislation of the West. Japan is now beginning to manufacture silk goods for export. At first it was in the unpretentious line of pocket-handkerchiefs that this new development was manifested; but now it is the fine choice fabric for the dresses of the rich, known as "habutae," which is rising into notice. The vigorous character of this new departure in manufacturing energy will be seen from the following table of the export of silk manufactures during the past seven years:—

Value of Silk Manufactures Exported from Yokohama for the years 1889-95:—

1889	£426,743	1890	£462,577
1891	741,457	1892	1,175,232
1893	1,062,001	1894	1,338,854
1895	£1,720,758		

The advance in 1895 over the previous year was thus over 27 per cent. Seven years ago pocket-handkerchiefs formed seven-eighths of the total export; last year they formed less than one third, whilst "habutae" was more than one-half. This expansive movement is likely to continue under present monetary conditions. At my rate, it is now time to recognise the fact that as a manufactured article, silk fabrics have for the past five years taken the second place amongst the staple exports of this port, and I have accordingly given it that position in the table of exports annexed to this report.

TEA.—Until it was overtaken and displaced by silk manufactures, tea used to hold the second place amongst the export staples; it is now only the third, and its rate of increase is not rapid. The export for each of the last two years nearly reached 30,000,000 lbs., but owing to the higher prices ruling last year, the value was £567,000 as against £520,000 the preceding year. The cost of preparing and packing tea has advanced considerably during the past year owing to the rise in the price of labour, wood, charcoal, &c. It is estimated that this increased cost of production amounted to at least 25 per cent. Five-sixths of the total export of Japan tea is taken by America, one-sixth by Canada. None of it enters the European market.

OTHER EXPORTS.—Of the remaining exports the most flourishing is the line of Japanese artistic products, curios, porcelain, lacquered ware, paper ware, wooden ware, and cloisonné; which amounted last year in value to more than £250,000, being an advance of over 30 per cent. on the preceding year. Tobacco, drugs, and cereals show a marked decrease.

SHIPPING.

The most striking feature in shipping movements in 1895 were the rise in British tonnage and the drop in Japanese, due to the fact that the Japanese ships were withdrawn from commerce to act as transports and tenders for the troops and ships of war, and the employment of British vessels to supply the place in the coasting trade of the native craft so withdrawn. This movement lasted well into the autumn, but towards the close of the year these chartered boats were dispensed with. During the year 16 steamers were sold to Japanese purchasers for £230,000, as against 22 steamers for £697,000 sold in the preceding year. Most of those sold in 1894 were first-class steamers, whilst of those sold last year only a few were serviceable vessels of recent construction, the others being of an obsolete type which could not have been sold to such advantage elsewhere. They were mostly bought in order to be chartered to the Government.

BRITISH SHIPPING.—Omitting as negligible quantities the few sailing ships and a few steamers that entered in ballast, the effective carrying trade of the port consisted of 198 steamers that entered from foreign countries with cargoes, and 370 steamers with cargoes that entered coastwise, the tonnage of the former being 389,444 tons; of the latter, 638,906 tons; total, 1,028,350 tons. Of this total of 508 vessels sailing under 11 different national flags, Japan's included, 368 vessels, 773,051 tons were British, being 72 per cent. of the vessels, and 73 per cent. of the total tonnage. This is a record percentage, due mainly to the exceptional cause already specified, and, for a reason to be mentioned presently, it is not likely to be long maintained. As further signalling the high-water mark of British shipping in the carrying trade of this country I may here mention that it has more than doubled itself in 5 years. In 1891 out of 1,285 merchant steamers,

1,603,600 tons, that entered the open ports of Japan from foreign countries, 467 vessels, 786,347 tons were British, being barely 37 per cent. of the vessels and 49 per cent. of the tonnage; in 1895, out of 1,863 vessels, 2,749,839 tons, no less than 907 vessels, 1,741,894 tons, were British, being 48 per cent. of the vessels and 63 per cent. of the tonnage.

This large carrying trade is shared between the two classes of steamers known as liners and ocean tramps. About two-fifths of the trade is carried on by steamers of regular lines, the rest by occasional steamers or tramps. There are no less than 20 British lines of steamships plying to this port. The British sailing ship has all but disappeared; only 8, averaging less than 1,000 tons each, entered during the year. Eighteen Canadian sealing schooners, averaging 75 tons each, entered and cleared at the beginning of the hunting season.

FRIGHTS to London remained steady throughout the year at 40s. per ton, being the rate established by the "Conference" lines. To the Continent much lower rates were accepted, as low as £1 2s. 6d. per ton of 40 cubic feet being obtainable to Hamburg. Consequently a certain amount of cargo which formerly went to London as a distributing centre, has found its way to the Continent, thereby placing London shippers at a considerable disadvantage. Rates to ports across the Pacific were the lowest on record, 1 cent per lb. for tea, and \$12 per ton on measurement cargo.

JAPANESE COMPETITION.—Foreign shipowners interested in the carrying trade of Japan will soon have to encounter strenuous opposition from the Japanese themselves. A law for the encouragement of navigation was passed in the last session of the Diet, under the provisions of which liberal subsidies are to be granted to native-owned steamers of suitable size voyaging to foreign countries. This law was an indirect consequence of the war with China. During the hostilities the Nippon Yusen Kaisha (Japan Mail Steamship Company) was obliged, by the provisions of its charter, to place its steamers at the orders of the Government, and the best ship of the Osaka Shosen Kaisha (Merchant Shipping Company) and other Japanese lines were likewise chartered by the War Department. To replace these vessels in the established courses of trade foreign steamers had to be either chartered or purchased, and in many cases the latter was deemed the more profitable alternative. Hence it came about that at the close of the war the Japanese had more ships than they knew what to do with. In the middle of 1894, before the outbreak of the war with China, Japan's mercantile shipping was under 182,000 tons. At the end of last year, in the course of eighteen months, it had risen to over 300,000 tons. The main object of the Navigation Bounty Law was to help to work off this redundant shipping by opening and subsidising new lines to foreign countries, England, America, and Australia. But the law has been the means of calling new shipping companies into existence, and though the old established favourite of the Government, the Nippon Yusen Kaisha, will still receive the largest share of the bounty amounting to 2,000,000 yen per annum, the newly-formed Oriental Company (Toyo Kaisha) is to receive half that amount, and another new creation, the Great Eastern Company (Daito Kaisha) is to have 400,000 yen per annum.

GENERAL.

EXCHANGE.—When the year opened rates of exchange had reached the lowest point theretofore known, viz., 1s. 11½d. to 1st. 11½d. per dollar for bank demand. During January and February rates ruled lower still, more than once touching 1s. 11½d., and only once for a brief space reaching 1s. 11½d., equal a dollar. In the middle of March the armistice and the expectation that China would pay Japan a large indemnity and would have to buy silver in London for shipment to the East gave the London market an upward direction, exchange rose, and on April 1 was 2s. 1½d.—an advance of nearly 10 per cent. in a fortnight. In four days' time it was down again to 2s. 1½d., and from this to the end of the year the fluctuations were both frequent and considerable. In the middle of May the rate had risen to 2s. 2d., at the end of June was down to 2s. 1½d., through September was mostly 2s. 2½d., and in the middle of October rose to 2s. 2½d. From this it slowly declined till, in the middle of December, the market altogether collapsed, and 2s. 1d. was only a nominal rate, at the close of the year it had recovered a little and was firm at 2s. 1½d.

The difference between the lowest and the highest point during the year is thus 16½ per cent. That is a condition of things which doubtless affords fine opportunities to financial speculators and gamblers in agio, but it is not not favourable to those who, whether as capitalists or as workmen, are engaged in the settled pursuits of industrial production. The Japanese are keenly

alive to the advantages which this monetary instability gives them in the career of manufacturing competition with the West on which they have now embarked. A commission was appointed last year by the Government to inquire into the question of the best monetary standard, and though a few of the official members evinced a leaning towards the adoption of a gold standard, the majority, composed of practical business men, were unwilling to recommend any change being made in the present system under existing circumstances.

POPULATION.—The Japanese population of the town of Yokohama on Dec. 31, 1895, numbered 170,252 persons, and that of the town of Kanagawa 16,948, or 187,200 in all, an increase of 3,770 on the previous year's figures. The foreign population of Yokohama, exclusive of Chinese, amounted on the same date to 1,745 persons, of whom 806 were British, an increase during the year of 132 in the general foreign population, and 9 in the British taken by itself. The addition of the Chinese population, which numbered 1,808 on Dec. 31, 1895, as against 1,173 on Dec. 31, 1894, brings up the total for the whole foreign population of Yokohama to 3,553 persons. An increase of 7 is to be noted in the number of British firms.

TREATY OF SHIMONOSEKI.—The event of the year which is likely to have most influence on the future of trade was the insertion of what are known as the commercial clauses in the treaty of peace concluded with China at Shimonoseki on April 17. By Clause VI. of that treaty four new ports in China were opened; the right of steam navigation on the Woosung river and canal, as well as on the Upper Yangtze, was secured, and last, but not least, it was stipulated that the Japanese established at the open ports and towns of China shall have the right to engage in industries and manufacture therein. These privileges, by virtue of the most favoured nation clause in the several treaties, are won for all the other foreign Powers as well as for Japan. The British and other foreign merchants in China were not slow to avail themselves of the newly-acquired right of manufacturing. Within four months from the publication of the treaty, four companies for working cotton mills were started in Shanghai, and two for the same purpose by Japanese capitalists of Osaka. Another curious result of this clause in the treaty of Shimonoseki was the sudden silencing of the Eastern Bimetallic League. The members thereof are giving up the uphill struggle they had so strenuously engaged in, and are not now so anxious to get the difference removed. The extent of this new cotton manufacturing industry in China will not be very great at first, but it will grow, and Manchester, severely as it has suffered hitherto, will have a harder fight than ever to make its factories pay.

Her Majesty's ship *Pique* left this port to-day for Yokohama, and the *Æolus* has arrived here.

Nagasaki, Sept. 25.

Her Majesty's ships *Rainbow* and *Swift* have arrived here from Korniloff Bay, the latter vessel having to be towed part of the way on account of a crack in her shaft. The repairs will be effected here.

Hakodate, Sept. 26.

Her Majesty's ship *Pique* arrived here this afternoon.

(Reuter's Service of Telegrams supplied to the "Japan Herald," the "Japan Gazette," and other Subscribers in Tokyo and Yokohama.)

London, September 25.

The Rt. Hon. W. E. Gladstone, addressing a great public meeting at Liverpool, recommended the warmest support being given to the Government, with the largest discretion in dealing with the Armenian question. The first step, he said, was to break off relations with Turkey. Assuming, though he did not contemplate, that war resulted with united, or mainly united Europe, yet Great Britain should be prepared to act on her own responsibility in order to enforce the broken conventions, if this was the only alternative.

The Liberal papers approve Mr. Gladstone's speech, whilst the Conservative papers deprecate taking isolated action. *The Times* says there are at least two Powers that will not tolerate the coercion of Turkey.

The Paris *Figaro* publishes a stirring appeal by Mr. Gladstone to the French people on behalf of the Armenians.

At the great meeting at Liverpool, Mr. Gladstone, who recommended that the warmest support should be given to the Government on the Armenian question, with the largest discretion, spoke with a ringing voice for an hour and twenty minutes.

(FROM EL COMERCIO.)

Madrid, Sept. 14.

At the Council of Ministers held to-day, an unlimited credit was passed on the Treasury of the mother country for expenses in the Philippines.

Madrid, Sept. 15.

The steamer *Antonio Lopez*, with 1,500 marine infantry on board, has left for Manila.

Madrid, Sept. 17.

Three more battalions have been organized for the Philippines to be despatched on receipt of orders for the superior authorities.

Col. Francisco Rosalesy Badino is under orders for the Philippines.

Sapporo, Sept. 26.

An explosion occurred in the Yubari coalmine on the 21st inst. Eight lives were lost.

Hiroshima, Sept. 26.

An earthquake was felt last night.

Matsuyae, Sept. 26.
A rather pronounced earthquake was felt at 8.30 o'clock last night.

Sōul, Sept. 25.
A Royal decree has been issued stating that the old form of Cabinet has been abolished, and that the Senate will take its place.

Nagasaki, Sept. 25.
The Commander of the corvette *Maya* has arrived.

Bakan, Sept. 26.
The *Kyoto Maru*, *Gaisen Maru*, and *Fusan Maru* left Ujina to-day for Yokohama, to transport troops to Formosa.

Kuwana, Sept. 27.
Count Kabayama, Minister of State for the Home Department, has arrived here to inspect the flooded districts. The Governor of Gifu accompanied him.

Kyoto, Sept. 28.
H.I.H. Prince Arisugawa, arrived here the day before yesterday, and left for Tokyo yesterday. Count Kabayama, Minister of Home Affairs, after inspecting the Nabeya Embankment this morning left for Shiga Ken.

Yokkaichi, September 29.
The railway line between Aichi and Kusatsu on the Kansai Railway will be restored on the 30th September.

Sōul, Sept. 29.
Mr. Hara, Minister to Korea, is expected to return to Tokyo on the 5th of next month by the *Toyoshima Maru*.

Fukui, Sept. 29.
The expenditures required in Fukui Prefecture on account of the recent flood are said to be over 1,000,000 yen.

Tokushima, Sept. 29.
Mr. Murakami, Governor of this Prefecture, who is appointed to Taichu Prefecture, leaves Formosa, here to-night.

Osaka, Sept. 30.
At three o'clock, to-day, four warehouses belonging to the Osaka Warehouse Company, at Nakanoshima, were burnt to the ground, and one half of the rice stowed there, 2,900 *koku*, was lost. Each warehouse covered 24 *tsubo* of ground. It seems doubtful whether the fire was accidental or caused by an incendiary. The watchman in charge of the houses was called up to the Police Station and is now under examination. The rice lost is said to have been already sold to a purchaser.

Later.
Mr. Motoyama, Police-Inspector, of the Osaka Police-Board, and three servants lost their lives in the fire at the Osaka Warehouse Co. One policeman, one fireman, and several others were wounded.

Nagoya, Sept. 30.
The Home Minister, Count Kabayama, who has been inspecting the inundated districts, will return to the capital after spending one night at Hamamatsu.

Gifu, Oct. 1.
Mr. Kabayama, Governor of this Prefecture, will leave for Tokyo to-morrow.

A consultation in regard to measures occasioned by the recent floods will be held to-day, and each district is to be represented.

Hiroshima, Oct. 1.
The Head-quarters Staff will remove to-morrow to the new building.

Shidzuoka, Oct. 1.
The Silk-Association of this Prefecture opened their exhibition to-day, and three hundred and thirty exhibits of silk cocoons, one hundred and fourteen exhibits of silk-worm eggs, and twenty-one exhibits of silk were exposed. On the 3rd inst. the ceremony of awarding the prizes will take place; the next day experts of the Yokohama Kiito Kensayo and Mr. Takayama, from Gumma Prefecture, will be present at a general meeting of the Association.

Sōul, Oct. 1.
Mr. Hara, Minister to Korea, will return to Japan on the 5th inst. by the Japanese steamer *Toyoshima Maru*.

Hamamatsu, Oct. 1.
The Home Minister, Count Kabayama, and suite, left for Tokyo this morning.

CHESS.

(All Communications to be addressed to the Chess Editor.)

The Yokohama Chess Club meets on Monday and Thursday in each week, at the Club Hotel, No. 5, Bund, from 5 p.m. to 11 p.m. Visitors to Yokohama, and Officers of ships (whether Navy or Merchant service) who are Chess-players, are welcome to use the Club during their stay in this port.

The Tokyo Chess Club meets at the Tokyo Hotel, every Friday, from 1 p.m. to 7 p.m.

PROBLEM No. 251.

By EUSTACE KING.

WHITE.
White to play and mate in three moves.

THE PRINCIPAL OPENINGS AT NUREMBERG.

The Ruy Lopez stands at the head. This attack was used 44 times with the following results:—White won 13; Black won 16; Draws 15. The Queen's Gambit Declined comes next. Out of the 22 games with this opening, White won 11, lost 5, and 5 were draws. The Giuoco Piano was tried 13 times, White winning 3, losing 5, and drawing 5. The French Defence shows 3 wins for White, 3 for Black, and 6 draws. These four openings were played in 91 games, or more than half the whole number.

| 36—R to Q 2 | 36—Q to B 2 |
| 37—Kt takes P | 37—R takes P (n) |
| 38—B takes R | 38—Resigns. |

(a) Black has obtained a good development. The defence of this game ought always to be conducted on these lines. Black has lost nothing by not advancing his P to Q 4, as that move very often enables White, by playing P takes P at an opportune moment, to open up the same; and as may be seen from the position, unless Black does play P to Q 4 there seems little hope for White's Q B to get into play. As regards the move of Kt to R 5, Black would not have lost anything by delaying it a move or so until he has played Q Kt to Q 5, so as to be able to support that knight by playing Q Kt to K B 4 after playing P to K B 4, which gives Black a very strong position.

(b) Up to this point Black has made an excellent disposition of his forces. Here, however, he commits an error of judgment. His knight is very strongly posted, and he ought not to have exchanged. There is no objection to Black's playing P to B 4.

(c) If Kt to Kt 5, White plays B to B 5.
(d) White has cleverly transferred the knight to a place of greater defensive utility.

(e) Black's last move was rather of a deep and complicated nature. If 23—B takes P, Black would probably have replied with Kt takes B P, and in any case, whether queen or king took this knight, White's bishop on B 5 would be pinned, and Black would have no difficulty in gaining his piece back with additional advantage.

(f) Another splendid defensive move, the intention being to transfer this bishop to the King's side, or to play B to Q 2, threatening P to K 4, &c.
(g) A counter-attack of a very peculiar nature. White could of course have defended his pawn by playing simply P to K B 4, but that move would provide a specially convenient square for the Black knight, either on K 5 or Kt 5 later on, besides weakening the White K P. White therefore goes in for a deep counter-attack, the effect of which he must have foreseen.
(h) If R to K 5, White plays B to B 6.
(i) White had a bad game he therefore does not shrink from this heroic line of play which at once relieves his game and provides him with some compensation for his queen, though the two pieces in ordinary circumstances would be barely sufficient.
(j) This looks a tempting move, but it did not turn out well, as it allowed White's K P to pass. He could not play Kt takes P on account of P to R 4. It was perhaps best not to take the pawn at all, and content himself with keeping what he has got by retiring his Q to Q sq., and to remain on the defensive for a time.

until all danger from these centre pawns had passed. Kt to B 3 might also have been played.
(1) Black should have had a more effective move at his disposal R to Q sq. was much superior.
(2) This is worst of all, as Black wants this bishop to help him to stop the advancing pawns.
(3) An oversight. Black must have overlooked that after 58—B takes R, Q to B 8 ch, 59—Kt to B sq. covers the rook; but in any case he would hardly have succeeded for long in stopping White's pawns.

AMERICAN CHESS NOTES.

(From the San Francisco Chronicle, August 29th, 1896.)

Jackson W. Showalter arrived in New York on Thursday from Nuremberg and appeared to be in the best of health. He was inclined to talk about the great tournament in which he fared so badly, and mentioned many interesting details of the great struggle.

"Maroczy, winner of the second prize," Showalter states, "is not only a handsome man and a splendid player, but proved, also, to be a capital fellow, and was much interested in America, so much so, indeed, that he might be easily induced to make us a visit ere long and exhibit his chess skill. It is not unlikely that he would play a match in this country if one could be arranged. Maroczy is of real Magyar blood and occupies an important post as engineer of water works at Budapest. He is but 26 years of age."

Showalter is loud in his praises of Pillsbury. He states that Pillsbury's score after his start, where he was too ill to play, and consequently lost three games out of his first five, was wonderful, and that a less plucky man would have broken down utterly. Pillsbury, however, said nothing, but went to bed every night at 9 o'clock and gave his whole mind to winning. He certainly deserves all his success and more for the struggle that he made. His winning from Tarrasch, Tschigorin, Lasker and Steinitz is considered a most wonderful feat in Europe.

In speaking of his own play, Showalter says: "My own score was so bad that in connection with the games themselves every chess player must admit there was something wrong. That something, so far as I can understand it myself, was simply due to the hour for commencing play. The clocks were started at 9 o'clock every morning, and that involved my getting up at about 6 o'clock an hour at which I had much rather retire than rise. The force of a long continued habit would not permit me to sleep before 1 a.m., and as a consequence I was irresistibly drowsy during the early hours of play each day and was generally beaten at an early stage. Some of the games I prolonged in a desperate effort to draw them. Most of the games in which I had a winning advantage, notably in the game with Lasker, I threw away. I simply could not play good chess at 9 o'clock in the morning, and I should have to faithfully practice for a full twelvemonth before I could be in a condition to play at that hour. Except that I was unable to do myself justice, I enjoyed my visit immensely, and I hope it will be possible to organize a great international tournament in 1897."

"SHORT SHARP SHOCKS."

GAME No. 577.

WHITE. Mr. Shelley.	BLACK. Mr. Godhard.
1—P to K 4	1—P to K 4
2—Kt to KB 3	2—Kt to Q B 3
3—B to B 4	3—Kt to Q 5 (a)
4—Kt takes P? (b)	4—Q to Kt 4
5—B takes P ch. (c)	5—K to K 2
6—P to KB 4	6—Q takes Kt P
7—R to B sq.	7—Q takes P ch.
8—K to B 2	8—Q takes P ch.
9—K to Kt sq.	9—Q takes Kt
10—Kt to B 3 (d)	10—Kt to KB 3
11—B to B 4	11—K to Q sq.
12—P to Q 3	12—B to B 4
13—K to R sq.	13—P to Q Kt 4 (e)
14—B to B 4	14—B to Kt 2 ch.
15—B to Q 5	15—B takes B
16—Kt takes B	16—Q takes Kt ch.

and White resigned.

(a) A trap move which the beginner should study.
(b) Kt takes Kt is of course far better.
(c) If 5—Kt takes P, Q takes Kt P; 6—R to B sq., Q takes K P ch., and wins.
(d) 10—R to K sq. loses, Q takes R, ch. being Black's reply.
(e) Played well. Black now focuses his B's on the enemy with killing effect.

GAME No. 578.

KING'S GAMBIT EVASDED.

WHITE. Mr. A. Charlick.	BLACK. Mr. Hocking.
1—P to K 4	1—P to K 4
2—P to KB 4	2—Kt to Q B 3
3—Kt to KB 3	3—B to Q 3
4—B to Q B 4	4—P to R 3
5—Castles	5—B to Q B 4 ch.
6—K to R sq.	6—P to Q 3
7—P to Q B 3	7—B to Kt 5
8—Q to Kt 3	8—B to K R 4

9—P takes P
10—Kt takes Kt
11—B takes P ch.
12—Q to K 6 mate.—*Adelaide Observer.*

GAME No. 579.

KING'S GAMBIT.

WHITE. Mr. Burt.	BLACK. Mr. Blackburne.
1—P to K 4	1—P to K 4
2—P to KB 4	2—P takes P
3—Kt to KB 3	3—P to K Kt 4
4—B to B 4	4—B to Kt 2
5—P to B 3	5—P to Kt 5
6—Q to Kt 3	6—P takes Kt
7—B takes P ch.	7—K to B sq.
8—B takes Kt	8—R takes B
9—Castles?	

Mr. Blackburne now announced a mate in nine moves. Thus:—

1.....	1—B to Q 5 ch.
2—R to B 2 (best)	2—R takes P ch.
3—K to B sq.	3—R takes R ch.
4—K to K sq.	4—R to B 8 ch.
5—K takes R	5—Q to Kt 4
6—Q to Kt 4 ch.	6—P to Q 3
7—Q takes P ch.	7—P takes Q
8—P takes B	8—Q to Kt 7 ch.
9—K to Q sq.	9—Q mates.— <i>Ibid.</i>

GAME No. 580.

SICILIAN DEFENCE.

WHITE. Mr. Napier.	BLACK. Mr. Ruth.
1—P to K 4	1—P to Q B 4
2—K Kt to B 3	2—Q Kt to B 3
3—Kt to B 3	3—P to K Kt 3

9—P to Q B 3	9—K B to R 4
10—P to Q Kt 4	10—K Kt to K 2

and White mates in two!!—*Ibid.*

YOKOHAMA CHESS CLUB.

The annual meeting was held at the Club rooms, on Thursday. The Club appears to be flourishing financially, although the 44 members on the roll seem to have been pretty lazy during the last season. Doubtless the absence of opponents has caused a lack of interest, but this should not be. The President said that the members apparently thought it only necessary to come out for training just before a contest was coming off. He pointed out that this was not sufficient: a standing army ought to be kept continually at exercise so as to be ready to enter the field at a moment's notice.

Mr. Komor proposed "that in case the Tokyo Chess Club found themselves unable to meet us in match-play this winter, we should arrange matches among ourselves, the members taking sides against each other."

This was greeted with enthusiasm, and Mr. Komor added to the Committee. Such a scheme ought to work well. There is no reason why we should not see matches within the Club between "the President's team" and "the Secretary's team," and so forth, just as we have in the local Cricket Club.

MAIL STEAMERS.

THE NEXT MAIL IN DUE

From America	per P. M. Co.	Saturday, Oct. 10th.
From Europe, via Hongkong	per M. M. Co.	Wednesday, Oct. 7th.
From America	per O. & O. Co.	Monday, Oct. 12th.
From Hongkong	per P. M. Co.	Thursday, Oct. 8th.
From Hongkong	per P. M. Co.	Wednesday, Oct. 7th.
From Hongkong	per P. M. Co.	Saturday, Oct. 10th.

SLEEP & REST

For Skin Tortured

BABIES
And Tired
MOTHERS

In One
Application of

Cuticura

A warm bath with CUTICURA SOAP, and a single application of CUTICURA (ointment), the great skin cure, followed by mild doses of CUTICURA RESOLVENT, the new blood purifier, will afford instant relief, permit rest and sleep, and point to a speedy, permanent, and economical cure of the most distressing of itching, burning, bleeding, scaly and crusted skin and scalp diseases, when all other methods fail.

Sold throughout the world. British depot: F. NEWBERRY & SONS, 1, King Edward-st., London. FOREIGN DRUG AND CHEMICAL CORPORATION, Sole Proprietors, Boston, U. S. A.

THE GREATEST WONDERS OF MODERN TIME

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the druggist Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of a kind. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Mr. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining stock."

Sold by all Chemists and Medicine Vendors the throughout World.
May 1st, 1896.

FOR SALE,

Strongly bound in Leather and Cloth, with a Full Index,

HALF-YEARLY VOLUMES OF
THE "JAPAN WEEKLY MAIL."

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, OCT. 10TH, 1896.

BIRTHS.

On the 3rd inst., at 34, Yamamoto-dori, Ichome, Kobe, the wife of GEO. J. MELHUISH, of a son.
On Oct. 1st, at Hakodate, the wife of Rev. D. M. LANG, of a son.

DEATHS.

On Oct. 1st, at Hakodate, ADELAIDE NORTON, wife of Rev. D. M. Lang, aged 28 years.
On October 5th, at his residence, No. 273-B, Settlement, J. A. JARR, age 45.

SUMMARY OF NEWS.

THE autumn regatta took place this afternoon.

A BAND of insurgents in Macedonia have annihilated a Turkish detachment of fifty men.

THE retrenchments in the Budget proposed by the new Cabinet total about thirty million yen.

THE maples on Higashi-yama, Kyoto, are said to have already begun to assume their autumn tints.

THERE have been three births and one death among the foreign population of Yokohama this week.

THE Scotsmen of Yokohama intend giving a ball on the 30th of November, St. Andrew's Day.

THE Yokohama Choral Society's first concert programme this season will include Cowen's "Sleeping Beauty."

LIEUT.-GENERAL OKU, Commander of the 5th Army Division, has been offered the Governor-General ship of Formosa.

F.I.H. PRINCE TSUNENO, and Teruhisao and Princess Tomiko left Tokyo for Hayama, Sagami, on Tuesday morning.

THE French press in welcoming the visit of the Czar as a guarantee of peace, hinted that Alsace-Lorraine was not forgotten.

A BOAT belonging to H.M.S. *Satellite* has capsized on the Alaskan coast. The first lieutenant and six men were drowned.

ONLY one of the four yacht races was finished on Saturday, the big boat *Mary* getting in on the last minute of her time allowance.

THE death is announced by drowning in Siberian waters, of Assistant-Paymaster Troughton, Secretary to Rear-Admiral Oxley, on this station.

THE N.Y.K. steamer *Yamashiro Maru*, the pioneer vessel on the new Australian service, left Yokohama on Saturday. She had only 400 tons of cargo on board when she left Kobe.

JAPAN made a poor showing at cricket on Monday in the Interport match at Shanghai, being all out for 90. Shanghai made 176 for six wickets; then rain stopped the play.

THE autumn military manoeuvres are now taking place in different parts of the country. It is expected that the Emperor will inspect the troops who are encamped in Saitama Prefecture.

THE 3rd of November being Tenchosetsu (the Emperor's Birthday), Count Okuma, Minister of State for Foreign Affairs, will give an entertainment to foreign and Japanese high officials.

REUTER learns that there will be no advance beyond Dongola this year, finances rendering it impossible. British and Egyptian Officers will administer the whole province of Dongola and organise the police.

GENERALS Nodzu, Yamaji, and Sakuma will all have seats in the new General Staff Office that is to be organized in November. Viscount Katsura will be appointed Commander-in-Chief of the Tokyo Bay Defence.

MAJOR-GENERAL NISHI, commander-in-Chief at Wei-hai-wei, and Major-General Kodama will be promoted Lieut.-Generals. The former will be made Commandant of an Army division after his return from Wei-hai-wei.

THE treaty of Commerce and Navigation between Japan and China, having been sent to

Baron Hayashi, Minister to China, will be ratified about the 20th inst.

THE Seventh Anniversary of the attack on Count Okuma will be celebrated on the 18th instant at Waseda. This year the ceremonies will be more ornate than usual owing to the Count's re-entry into the Cabinet.

A HAVAS message, dated Paris 23rd September, states that there have been more engagements between the rebels in the Philippines and Spanish forces, resulting in the rebels being twice defeated, leaving 17 killed on the field.

SAID Khalid, who escaped to the German Consulate after the bombardment of the Sultan's Palace, has been conveyed on board a German warship at Zanzibar. The British Consul has protested against the action of the German officials.

THE English press, discussing the Czar's visit to England, emphasizes the fact that whatever may be the political effects, his Majesty has learned that the pro-Armenian movement in Great Britain is genuine and is wholly foreign to any political object.

THE Mitsui family have made the following contributions to relieve sufferers by the recent floods:—Yen 3,000 to Kyoto; yen 1,000 to Tokyo; yen 2,000 to Gifu and Miye Prefectures respectively; yen 1,000 to Aichi, Shiga, Nara, Osaka and Hyogo Prefectures respectively; and yen 1,000 to Akita Prefecture.

HIS MAJESTY the Czar has arrived in Paris where upwards of a million visitors are assembled. The weather was favourable and everything passed without a hitch, extraordinary enthusiasm being shown. His Majesty expressed gratification with his reception. President Faure, in toasting the Czar, referred to the union of the powerful Empire and the Republic as having a good effect for the general peace of Europe and as a union that will continue to extend good influence. In his reply, the Czar said that he was deeply touched by the welcome accorded him in Paris, and the tie between France and Russia will continue to have good influence.

THE Import trade has improved in general, though Textiles mostly remain dull, buyers seeming to be affected by the stringency of the money market. There is nothing doing in Yarns and Shirtings, and not much in Fancy Cottons, though super Blue Cambrics and Turkey Reds have had a fair turn. Woollens do not revive, and with the exception of a few Blankets, nothing has been moved in this department. There is at length a good general demand in the Metal market, and nearly all descriptions have been well taken at a considerable advance in prices. There is a large business in Kerosene, at a further advance. In the Sugar trade there have been heavy transactions in all descriptions of Brown, though rates have advanced considerably; in Whites there is a moderate business at full rates. The value of the principal Export has again seen a strong upward movement, and Silk has been extensively purchased at rates that must be called high. This business has been in full-sized Filatures and Reels for the States, prices for fine-size being nominal. At length a movement has been made in the Waste department, and holders having met buyers as to terms, a considerable quantity has passed the scales. The Tea trade is fairly active at full figures, and the stock is now much reduced. Exchange has been steady, the fluctuations having been very slight, but the general tendency of silver has been downward.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

Monday next is waited for with eagerness by the public at large, for on that day the Premier will address an assembly of Local Governors as to the policy that the new Cabinet is resolved to pursue. The *Shimpo-to* were busy this week attempting to arrive at a previous understanding on the subject with the Premier. The *Fiji Shimpo* says that the representatives of the Party called on the Premier and laid before him the views that the Cabinet must adopt if it wishes to secure the support of the Party, and that the Premier refrained from making any definite observations.

In commercial circles signs of a panic are apparent. Thirteen wholesale cotton-cloth dealers of Tokyo are in difficulties, having negotiated bank-bills beyond their means. The same trouble has overtaken Mr. Sawa Kichiemon, the largest wholesale merchant in Kiryu. The amount of the aggregate debts is variously estimated, as is also the probable outcome of the complication. It is generally admitted that a reaction from the temporary enthusiasm into which the public were betrayed after the war has begun to set in, though none venture to predict its extent. In Osaka, the insolvency of the Union Savings Bank (capital 40,000 yen), and the suspension of payments by the Nakanoshima Bank (capital 100,000 yen), have caused considerable disturbance in the markets of that busy city.

The intelligence from Manila receives due attention at the hands of the vernacular papers. They assert that the Japanese Government should despatch one or more warships to the scene of the trouble, and must take steps to insure the safety of the lives and property of some seventeen Japanese subjects residing in Manila. The *Fumiuri* discusses the matter in a very strong tone. It alleges that the despatch of the Japanese Consul in Hongkong to the scene of disturbance is insufficient. Recourse must be had to the help of men-of-war. One of the tests for gauging the difference between the foreign policy of the present Government and that of the last, is furnished by the promptitude shown by the ministry in dealing with an important foreign question before the public begin to clamour for its settlement. Hence the *Fumiuri* regrets that more alacrity has not been displayed in the case of Manila.

The *Chuo* invites the attention of the new Foreign Minister to the same question. The Spanish Authorities, it argues, are not only endangering the lives and property of the Japanese residents, but are also endeavouring unjustly to create an unfavourable impression in Manila against Japan. Witness the arrest of a Japanese subject in the island and the search of the residences of two others, as also the apprehension of one old blind citizen of Manila merely because his son had been sent to Japan for purposes of study. And of two Manila doctors because they had visited Japan. The Japanese Government must demand satisfactory explanations from the Spanish Authorities, especially in connection with the treatment of the Japanese residents. The *Chuo* concludes by asking why men-of-war are not at once despatched.

The *Osaka Asahi* goes a step farther than even the *Kokumin*. It recommends that the present House of Representative be boldly dissolved at once, without waiting for its convocation. Our Osaka contemporary professes to have been so frequently disappointed by the specious promises of the Japanese Government, specially when presided over by Marquis Ito, that it does not repose much confidence in the so-called platform of the new Cabinet, which is to be made public a few days hence. If the Cabinet really desires to satisfy public expectations as to its competency, some bold stroke must be taken. The dissolution of the existing Parliament would be the best and fittest measure for the purpose. The new Cabinet has to strike out a path different from that pursued by

the last. Evidently, therefore, its measures can not secure the support of the present House, which gave its cordial approval to all the plans formulated by the Ito Cabinet. Further, if, as is generally believed, the Matsukata Cabinet intends to be the pioneer of responsible cabinets, still more cogent reasons present themselves for dissolving a House elected when political conditions were entirely different, for simultaneously with the introduction of a radical change in the administrative system, the people should effect a corresponding change in the composition of the Legislature. With that object, a new House should be elected before the opening of the tenth session.

The *Tokyo Shimbun* gives the *Shimpo-to* politicians a Roland for their Oliver. It bids them ponder well what is meant by such expressions as "invertebrateness," "unconditional surrender," "illegitimate connection," and so forth; expressions that they applied to the alliance between the Liberals and Marquis Ito's Cabinet. It believes that such expressions are really more applicable to the case of the *Shimpo-to* than to that of the Liberals, who, impelled by the unavoidable circumstances of the time, and appreciating the gravity of the situation resulting from the War, effected an entente with the Ito Cabinet without fixing any conditions of the alliance, but on the broad promise of moving hand in hand-in-hand with mutual sincerity and friendship, and conforming their acts to the dictate of the great principles of the Constitution. Are there any grave circumstances that necessitate the "unconditional surrender" of the *Shimpo-to* to the new Cabinet? None whatever. The *Shimpo-to* contended, in the last session of the Diet, that the expansion of the Army must be limited to one-half of the original programme, and they regarded with disfavour the second-period programme of naval expansion. Has the new Cabinet satisfied them on those points? By no means. The Budget for the coming year has been framed, according to public report, practically on the basis of the previous Cabinet's financial measures. In short, the *Shimpo-to* are in danger of really meriting the odious epithets that they unjustly applied to the Liberals, unless they take some decisive step as to their relations with the Matsukata Cabinet.

With admirable earnestness the *Fiji* has devoted itself this week entirely to upholding the cause of Naval expansion. It has published three or four articles on the subject, viewed from different stand-points. It argues that Japan is essentially a military country, in striking contrast to the pre-eminence given to learning in China and Korea, and that, therefore, just as the *Samurai* felt uneasy when they did not wear swords, or did not have them close at hand, so the Japanese people feel uneasy when they are without efficient armaments. The motive of the present expansion of national armaments being referable to that cause, the world need not be alarmed at it. In another article the *Fiji* insists that the strengthening of the national armaments is not for purposes of war, but simply to give efficiency to the State's diplomacy. In a third article it returns to the position that the question of Naval expansion must be taken in advance of that of the Army, and that Japan must go to the utmost limit of her resources in respect of the former.

The *Nippon* doubts whether the public do not carry their zeal for national defence too far. So intolerant has public opinion grown in this matter that anybody daring to question the wisdom of military expansion incurs the risk of being denounced as a traitor. People seem to have forgotten that without losing even one soldier Russia has realized in the East such schemes as the Russo-Chinese Bank and the Russo-Korean Railway. Carried away by military ardour, the public seem to have forgotten to bestow due attention on questions of domestic organization and reform. Have they duly considered, for example, the problems of encouraging navigation and ship-building, and improving railway communication? The *Nippon* wonders that persons so enthusiastic about military programmes should be so careless of many im-

portant measures having an intimate relation to the efficiency of the Navy and the Army.

The *Mainichi* also desires to warn the public against ill-considered expansion of the Army and the Navy, for however formidable the appearance these may present, they can be nothing more than a splendid display if the country lacks means to employ them effectively. Our contemporary points to the last War and explains how far the triumph obtained was ascribable to the surplus in the possession of the Treasury.

The *Kokumin* poses as the champion of the rising generation. Many names, it says, appear in the pages of the vernacular papers as fresh candidates for ministerial seats and as officials competent to supersede the worn-out statesman now monopolizing power. Yet, no great confidence can be reposed in the reputed competency of these so-called fresh candidates. They are not men of a new generation. Born either in the *Kaei* (1848-53) or *Ansei* (1854-59) era, and educated in the old manner of teaching English, current at that time, their brain-fibre is generally of poor quality; they are unsystematic, illogical, and lacking in constructive ability. Destined as they are to succeed the senior statesmen, all that can be said of them is that they will serve to fill the gaps created by the withdrawal of their seniors from the field of active politics. They are merely media for transferring the power of which they will be temporary repositories to men of the younger generation, who are more competent in all respects. The new candidates, when really installed in important offices of State, will soon exhaust the patience of the public, just as the elder statesmen have already done. Therefore steps must be taken from this time forth to furnish men that will satisfy the nation. The best plan will be to amend the Law of Election of the House of Representatives, in the sense of lowering the age-limit of men eligible for election to 20 years, and the property qualification to the payment of taxes amounting to 5 yen, and finally to increase the number of members to 500 or 600.

The resignation of Mr. Miyoshi, Chief Judge of the Supreme Court, has been discussed by the *Nichi Nichi*. The cause of his resignation is understood to be incompatibility between his views and those of the majority of the Judges that were appointed to investigate Judge Besho's case. While some papers construe the affair in a sense not favourable to the ex-Chief Justice, the *Nichi Nichi* is inclined to take a more magnanimous view. It contends that the gravity of the question at issue justified Mr. Miyoshi in dissenting from the opinion of the majority which he could not conscientiously approve. It was a delicate question, appealing to his sense of right. That he obeyed the dictates of conscience although obedience involved resignation of the highest post in the Judiciary, redounds to his credit and integrity. This observation gathers additional strength when it is remembered that the post of chief justice, while carrying with it the relative rank of a Minister of State or Privy Councillor, has a far stronger basis of tenure, being a life appointment.

The *Shogyo* rejoices at the recent sudden briskness of the silk market, after months of extraordinary depression. On July 27th, the quotation stood as low as 660 yen per bale of the Kaimeisha chop, but it has now risen to 860 yen. This unusual appreciation is attributed by the *Shogyo* to the decline in the gold price of silver, as also to the scarcity abroad. The following table shows the quantity of silk exported from Yokohama during the last two years up to September 4th, and that exported during the corresponding period of this year:—

	To America, bales.	To Europe, bales.	Total, bales.
1894	7,759	7,331	15,090
1895	11,739	10,414	22,153
1896	2,205	2,358	4,563

The quantity exported this year amounts to only one-fifth of that exported last year.

The *Fumiuri* writes strongly on the vexed question of the Sout-Fusan Railway. "We have

once argued observes," that paper, "that Japan must choose one of two alternatives in connection with this flagrant injustice on the part of Korea; namely, either to have recourse to force, or to sever relations with that country. But the time does not warrant the former alternative, and therefore Japan must content herself by declaring the Treaty between Japan and Korea null and void, and by placing her relations with the little Kingdom on the footing of non-Treaty Powers. Some may object to so drastic a measure and may argue that Japan's withdrawal from the sphere of Korean politics would be to abandon the field altogether to Russia. The *Yomiuri* cannot share that apprehension, seeing that even while Japan preserves treaty relations with Korea, Russia has pushed her influence in the Peninsula to the utmost limit of decency. If Russia wants to go a step further, she can only annex the peninsula, a proceeding that even she must hesitate to adopt in the face of the understanding of 1886 with England. Another probable objection is that to sever treaty relations would seriously impair the commercial intercourse of the two countries. The *Yomiuri* does not apprehend anything of the kind, for the Japanese residents in Korea would be placed under the protection of some Foreign Representative. But even if the trade with Korea were reduced to nothing, no great harm would result, for it does not amount to more than about 2 million yen. Japan can well afford to sacrifice such a petty source of income for the sake of maintaining her dignity.

EDITORIAL NOTES.

DEATH OF MR. J. A. JARK.

We regret to announce the death, early on Monday morning, of Mr. J. A. Jark, who succumbed to an attack of diabetes, at the comparatively early age of 45. The deceased first came to Japan about ten years ago, and then returned home. After a while he came out again to represent in Japan the big French firm of Orosdi, Bock, of Paris, and has been living at 273-B Settlement since the beginning of the year. The deceased gentleman was a member of the Masonic fraternity, and passed up into the higher degrees of the Ancient Scottish Rite.

The remains of the late Mr. J. A. Jark were cremated on Wednesday at the Yokohama Crematorium. Previous to this ceremony, a Lodge of Sorrow was convened by Lodge "Star in the East," 640 S.C. at the Masonic Temple, the W. M., Mr. H. W. Lea, taking the principal part. The coffin was covered with beautiful wreaths sent by Messrs. E. Binder, E. Berger, C. Bretschneider, R. Bleifuss, O. Bergmann, F. Bielfeld, the Club Germania, Mr. J. G. Doering, Establishment Orosdi-Bock, Messrs. R. Fachtmann, J. Feicke, H. V. Gielen, E. C. Fox, A. Holm, M. Kaufmann, O. Keil, H. Koch, E. Leopold, "Star in the East" Lodge, "Dai Nippon Chapter" of Rose Croix, Messrs. E. Orth, J. Okada, A. Oehmichen, J. P. Paulsen, G. Petersen, Th. Ruehen, O. Schinne, P. Schramm, J. Schedel, J. Tornoe, J. Westphalen, Ueno, Nagai, S. Sarahiya, Murai, H. Kanemoto, Kaneko, B. Kagiage, and the Nippon Gami Kaisha. Among those present at the Masonic Temple or at the Crematorium, were Messrs. H. W. Lea, C. D. Moss, R. N. St. John, F. Retz; and P. Chirou, P. Launay, Marquis de Nembrini, Bruehl, O. Meyer, J. Helm, A. Baud, G. Stadelmann, A. Dumelin, J. Diak, S. Tschuchiy, Dr. Eldridge, Dr. Howe, W. Braune, Chas. F. Rhine, and nearly the whole of the Swiss and German community.

NAVAL ENTERTAINMENT.

"SEMPER IDEM" writes:—On Thursday evening, 24th September, at Korniloff Bay, H.M.S. *Undaunted* gave a very pleasant farewell entertainment to the Squadron, at which the Commander-in-Chief and his staff, together with a large number of Officers and men from all the ships at anchor there, were present. The programme, which was divided into three parts, was chiefly sustained by the Officers, whose

hearty efforts were thoroughly appreciated by all. The first part consisted of J. M. Morton's brilliant little Farce "An unwarrantable Intrusion," cleverly acted by Dr. McNabb and Staff-Engineer Rayner. The former played with the cool assurance that only long practice and natural talent can produce, and was ably backed up by *Snoodle*, who, however, displayed rather eccentric than low comedy in his reception of the intruder. The second part was equally successful, the Quartette being energetically encored, whilst Hill's Hornpipe met with well merited applause. The Programme concluded with the sensational drama "Rosebud of Stinging-nettle Farm" developed into a burlesque. The excellent acting and topical songs called forth round after round of genuine appreciation and hearty laughter. Mr. Rayner, as *Farmer Turmutfield*, was in his element, and his quaint rendering of entirely new words to a good old song occasioned repeated recalls. Mr. Kitching, as *Sir Narcissus Slapdash* (the villain of the piece), both looked and acted his part, the careful attention paid to "make-up" greatly increasing the effect of an exceptionally good performance. *Hugly* was so realistic as the tramp and ticket-of-leave man, that the fell purpose for which "he had kept himself respectable" was plainly discernible in the glare of his "beetle-browed eyes." Dr. McNabb's acting is too well-known in the squadron to require further remark than that in the last piece he was quite up to his usual form. Mr. Anderson, as *Giles Furrow*, did uncommonly well in an always trying position, the stage lover, but his success perhaps was not surprising, after a glance at the blushing *Rose*, represented by Mr. Talbot-Ponsonby, the tact and good taste of whose acting was only equalled by the piquancy of his get-up. The whole entertainment, including the stage, was thoroughly ship-shape, and the guests were most hospitably entertained throughout the evening.

PROGRAMME.

PART I.
A Farce in 1 Act, by John Maddison Morton, entitled "An unwarrantable Intrusion."
CHARACTERS.
Mr. Nathaniel Snoodle Staff-Engineer A. Rayner
The Intruder Surgeon D. I. P. McNabb
PART II.
Quartette:—Messrs. C. Oxford, E.R.A.; T. Bowdler, Ldg. Stoker; Assist.-Engineer C. F. L. Donkig; and Surgeon D. I. P. McNabb.
Hornpipe J. Hill, Able Seaman.
PART III.
Sensational Drama
"The Rosebud of Stinging-Nettle Farm."
CHARACTERS.
Farmer Turmutfield Staff-Engineer A. Rayner.
Sir Nathaniel Slapdash Assist.-Eng. H. W. Kitching.
Hugly (A Tramp) Surgeon, D. I. P. McNabb.
Giles Furrow Midshipman L. G. Anderson.
Rose Turmutfield Midshipman F. W. Talbot-Ponsonby.
Chorus of Yokels and Maidens By the Company.
Musical arrangements under the conductorship of Mr. Harrison, Bandmaster.
"God save the Queen."

SUDDEN DEATHS IN YOKOHAMA.

Two shockingly sudden deaths occurred in Yokohama on Sunday. James Harrison, about 48 years of age, who was paid off, as a hunter, from the *Golden Fleece* a few days ago, went into a public-house on Honmura Road, in an intoxicated condition on Saturday night. When the house closed, he was allowed to sleep in the bar-room. Next morning, about 5 o'clock, he was found to be suffering terrible pain, and Mr. J. Kernan was called in. Kernan ordered the barman to give the poor fellow a glass of brandy and peppermint, but before this could be administered the man expired. Dr. Munro, who appeared just after life was extinct, found that death was due to alcoholic poisoning.—The other case is extremely pitiful. James Nelson, a Swedish sailor on board the U.S.S. *Olympia*, came ashore on Saturday and put up at the Central Hotel. He retired to rest about half past eight in a perfectly sober condition. About 11 o'clock a guest at the hotel noticed a pronounced smell of gas, and traced it to the bedroom occupied by Nelson. The room was entered and the man was found in bed, groaning, and in great agony. It was discovered that the gas jet was turned fully on, and the fumes were filling the room. The unfortunate fellow must have unconsciously turned the cock on again while under the impression that he was turning it off. Dr. Eldridge, Dr. Rokkaku, and Dr. Stoughton did all they could for the man, remaining with

him all night; but their exertions proved of no avail. At nine o'clock on Sunday he was removed to the U.S. Naval Hospital, where he expired at one o'clock. The deceased was known on board ship as a quiet, respectable man, of a saving disposition, and inclined to hold aloof from most of the ship's company. He was generally liked. His remains were interred with naval honours on Monday.

UNION INSURANCE SOCIETY OF CANTON.

THE following is the report for presentation to the shareholders at the twenty-third ordinary meeting to be held at the Society's Offices on the 8th October:—The directors have now to submit to the shareholders a report of the business of the society for the year 1895, and for the six months ending the 30th June, 1896. 1895.—The net premium collected for the year, after deducting returns and reinsurances, amounts to \$1,588,229.25. After providing for a bonus of 20 per cent. on contributions paid in April last, there remains at credit of working account a balance of \$613,500.65, as per annexed statement. From this sum the directors recommend the payment of a second bonus of 5 per cent. on contributions, a dividend of \$15 per share, equivalent to 30 per cent. on the paid up capital of \$50 per share, and an addition to the reserve fund of \$150,000, raising the reserve to \$1,200,000. The balance remaining of \$247,950.00 they propose to carry forward and thus close the account for the year 1895. 1896.—The position of the society for the present year, as far as it can be ascertained, is as follows:—balance of working account to the 30th June, as per annexed statement, \$748,585.30; add estimate of premiums to 30th September, 420,000.00; \$1,168,585.30. Estimate of losses to pay, 484,000.00—\$684,585.30. Since the last general meeting, Mr. A. G. Wood and Mr. D. R. Sassoon have resigned their seats and Mr. A. Ross, Mr. H. Stollerfoht, and Mr. C. S. Sharp have joined the Board. In accordance with clause 86 of the Articles of Association, Mr. N. A. Siebs and Mr. R. L. Richardson retire, but offer themselves for re-election.

LAUNCH OF THE "FRIEDRICH DER GROSSE."

THE recent launch from the "Vulcan" ship-building yard of the first of the six great twin-screw steamers ordered last year by the North German Lloyd, marks a noteworthy event in the history of the Company. Two of these vessels are intended, as is well-known, for the express service between Bremen and New York, and the remaining four for the regular passenger and freight traffic of the line. Of these four, the steamers *Friedrich der Grosse* and *Königin Luise* are being built at the "Vulcan" Company's works at Bredow-on-the-Oder, the steamer *Barbarossa* at the yard of Messrs. Blohm & Vossin Hamburg, and the steamer *Bremen* by Messrs. F. Schichau at Dantzig. The steamers of this class show, in the first place, a considerable increase in dimensions compared with the existing steamers of the fleet. With a length between perpendiculars of 525 feet, a breadth of 60 feet, and an inside depth of 34 feet, they will measure over 10,000 register tons and, upon a draft of 28 feet, will have a displacement of nearly 20,000 tons. Whilst the whole cargo capacity of the ship (including the space for third class passengers), equals about 11,000 cubic metres (say 9,500 tons), the cabin arrangements provide for the berthing of 100 first-class and 76 second-class passengers. If, however, the room available for steerage passengers is used wholly for that purpose, no less than 2,300 passengers can be accommodated in a single trip. The first-class dining-saloon of the *Friedrich der Grosse*, the details of which are executed in the Queen Anne style, has its walls painted in old-gold tint, with the ornamental parts picked out with light gilding. The ceiling itself is in ivory tone, with panels of old-gold ground, adorned with light and airy paintings. The large skylight which also serves for purposes of ventilation, is in the same style, and carried out in the same tints, and, being the centre of the whole, is of a slightly richer shade. Great mirrors, sculptures, and paintings enliven the place, which is closed above with an enormous dome of English glass.

work. The paintings include allegorical representations of War, Peace, Art, and Knowledge, surrounded with friezes and single lunettes with symbolical figures of children. The paintings in the dining-saloon represent favourite palaces of the Great King, with allegorical subjects and landscapes depicting Schleswig and the county of Glatz. In the centre of the cross-wall opposite the entrance is the King's portrait. The sofas and seats running round the wall, which will accommodate 100 persons, have sea-green leather covers, and the table-cloths are of the same colour. Window curtains and portières are of sea-green silk, with rich embroidery and lace. The pianos and buffets are in the same style and colour as the saloon, and command the whole room. The walls of the ante-room are adorned with paintings, trophies, and allegories. The large and unusually lofty first-class smoking-room is decorated with bright oak in the German Renaissance style; the panels of the walls being adorned with grotesque scenes from the life of Frederick the Great. Convenient seats with red-brown leather covers run round the walls forming divisions and lounges, with handy tables and chairs. The window curtains are of red-brown Chinese silk. The skylight window is formed of English glass. The skylight itself contains views of old Berlin, Potsdam, Breslau, and Glatz. The engines of these four twin-screw steamers consist of two quadruple-expansion engines with four cylinders. The engines of the first three steamers should indicate about 7,000 horse-power, which would give about fourteen knots average speed, whilst the fourth, namely, the *Bremen*, built by the firm of Schichau in Dantzig, has two engines of about 8,000 indicated horse-power, which should produce an average speed of about fifteen knots. The boiler room of the first three steamers contains five cylindrical double boilers, and two single-ended boilers, the latter available in the ports for subsidiary purposes.

ENGLISH TEXT-BOOKS IN JAPANESE SCHOOLS.

Among the many text-books selected for the English course during the present fall term in the larger metropolitan schools, we notice in particular Blackie's "Self-Culture"; "Human Intercourse"; "Thackeray's "Henry Esmond"; "Readiana"; "Life of Henry M. Stanley"; "The Opium War"; Tennyson's "Enoch Arden," and excerpts from "In Memoriam"; the perennial "Baron Trenck"—a book which ought to catch the fancy of adventure-loving Young Japan; Hawthorne's "Twice-told Tales" and "Mosses from an Old Manse"; Dickens' "David Copperfield"; Goldsmith's "Vicar of Wakefield," and several others which have now become classic. An excellent translation into Japanese of "Self-Culture" is, we hear, to be shortly brought out, as one has already been of "Modern Society." Among Readers by far the most popular is Sanders' "Union Fourth Reader." Students of English have thus quite a broad field to choose from, and study under such pleasing auspices ought to be considerably lighter and more attractive than in the dark ages when Peter Parley's marvellously unhistorical history ruled supreme. An effort is being made, we understand, to make the teaching of English in the Chugakko of a more practical nature than heretofore, greater stress being laid on conversation and letter-writing.

ST. ANDREW'S SOCIETY.

The annual meeting of the Yokohama St. Andrew's Society, was held at Keil's Building on Tuesday evening, Mr. M. T. B. Macpherson, the retiring President, being in the chair. There was but a small attendance present. The Chairman, in introducing the report and accounts for the past year, observed that the balance at the credit of the Society was \$460.40, an increase of \$110.26 over that at the same time last year. To account of the Society's claim of \$276.32 on the New O.B.C. in Liquidation, a further sum of \$17.26 had been received, reducing the claim to \$134.73. The number of members now on the list was 97, of whom 45 were on the absent list. Nine new members joined during the year, at which the Committee ex-

pressed its satisfaction. Under the auspices of the Society a Ball was given on the 29th November last to celebrate the Anniversary of their Patron Saint—which was the largest ever given in Yokohama by Scotsmen. The report and accounts were passed. The office-bearers were then elected for the ensuing year. They were:—President, W. Ross; Vice-President, J. A. Fraser; Committee, J. T. Boag, J. Dodds, J. Stewart, E. Coutts, and T. F. Cruickshank; Hon. Treasurer, J. MacArthur; Hon. Secretary, H. W. Fraser. On the motion of Mr. T. W. McLraith, seconded by Mr. Cruickshank, it was decided to celebrate the 30th of November this year in the usual way with a public ball.

SHIPPING NEWS.

THE P. & O. steamer *Shanghai* arrived at Hongkong from Shanghai on the 16th ult., flying the quarantine flag and put into the quarantine anchorage. A fireman had died of cholera on the voyage down and was buried at sea. She was released after having been disinfected.—The Norwegian steamer *Vulcan*, which arrived at Kobe on Tuesday from Hongkong, struck a Japanese junk named the *Suminoye Maru* off Wada Point, about half-past seven on the evening of the same day. The stern of the junk was damaged and caused a leakage. She was assisted by the steam launch of the quarantine station, which towed her into Hyogo. Her cargo consisted of 30 tubs of sugar and 208 bags of rice. The damaged done to the cargo is estimated it about 100 yen.

U.S. CONSULAR FEES.

OVER the signature of the United States Consul-General, for Kanagawa, the following was issued on October 5th, 1896:—

Until further notice the following tariff is established for the collection of fees at this office. Invoices should be made out in Silver Yen, which, for the purpose of this notice, are estimated as equivalent to fifty-two and eight-tenths (\$52.8) cents, U.S. Currency.

	Yen.
For Invoice Certificate.....	4.73
For Extra Copy of Invoice.....	3.79
Marriage Certificate.....	1.89
Landing Certificate.....	4.73
For Bill of Health.....	4.73
For Supplemental Bill of Health.....	.95
For Personal Effects Certificate.....	.95
For Emigration Manifest.....	.47

To avoid delay in transacting business at this office, persons paying fees are requested to present the exact change.

PERSIAN AFFAIRS.

THE *Times of India's* Bushire correspondent says it is reported that the entire harem of the late Shah have been dismissed, and the palaces are said to be almost empty of female occupants. The ladies have been enjoined to avoid contracting marriages with any civil or military officials, but they are free in their choice amongst the hordes of Mullahs, or Priests, and merchants. It is alleged that Muzzafar-ud-Din, the new Shah, is most anxious to introduce reforms in Persia, and that something like the Turkish *Tansimat* will be imitated. His Majesty's solicitude for the welfare of his people is generally considered to be genuine. Caravan traffic is going on undisturbed as before, and so there is perfect tranquility all over the country.

"UNCOMFORTABLE SHIPS."

STATEMENTS, says the *Nagasaki Shipping List*, have recently been made to the effect that the *Centurion* has been an "uncomfortable ship." Why this should be we know not, but some other vessels on this station are reported to be in about the same state. The *Daphne*, for instance, is given a bad name by her present crew, and several of the latter are trying to get exchanged into other vessels. Whether the men have any just cause for complaint or not we cannot say, but such are the facts.

TOKYO CHESS CLUB.

THE annual meeting was held on the 2nd inst. at 4.30 p.m., Mr. Peyton Jaudon in the chair. The Secretary (Mr. W. B. Mason) presented the Secretary and Treasurer's report, which showed 15 active members and a balance in

hand of \$7.74. The election of officers resulted as follows:—President, Hon. Edwin Dun; Secretary and Treasurer, Mr. W. B. Mason; Committee, Mr. W. D. Cox, Mr. Peyton Jaudon, Rev. W. J. White. This was all the business, and after some chat as to future work in the Club, the meeting adjourned.

A SHOCKING AFFAIR.

A GHASTLY discovery was made on the Bluff on Friday. It appears that a Japanese contractor named Kobayashi Yoshizo, who built the two new houses on the lot once known as 25, Bluff, lost something like \$1,500 over the job. Being unable to meet his liabilities he became melancholy, and on the night of the 9th September left his home. It was eventually thought that the man had left the country, as diligent search resulted in no trace of him being discovered. Yesterday a party of well-sinkers engaged in cleaning out the new well on the top part of No. 25, noticed a peculiar odour coming up from the water. In a little while they came across the greatly decomposed body of a man. This has since been identified as that of the lost contractor, Kobayashi. He must evidently have thrown himself into the well early in September.

VALUE OF THE YEN.

OVER the signature of Admiral F. V. McNair, the following Squadron Circular, dated U.S. Flagship *Olympia*, October 3rd, 1896, has been issued:—

By authority of the Honourable the Acting Secretary of the Navy, the following values are announced for the quarter ending December 31st, 1896:—

Imperial Japanese Yen, Silver	\$0.528
Mexican Dollar	0.532

THE "DIANA."

THE American schooner *Diana*, Capt. Peterson, arrived in port on Tuesday with a catch of only 17 otter skins. She attribute her small catch to the bad weather encountered during the voyage. The Captain spoke the *Pointer* (formerly *Artic*) Captain Snow, late in June, with 7 otter skins and 300 seal skins.

H.M.S. "THRASHER'S" SPEED.

H.M.S. *Thrasher*, one of ten torpedo-boat destroyers being built by Messrs. Laird, Birkenhead, for the Admiralty, in her trial run attained a mean speed of 30.38 knots, making 30.84 knots on the last pair of runs, or close upon thirty-six miles an hour.

THE MANILA DISTURBANCES.

H.M.S. *Pigmy* left Hongkong for Manila on the afternoon of Sept. 26 to relieve the *Redpole*. The *China Mail* believes the British Consul at Manila has made representations for the presence of a larger ship, and it is just possible the *Pique* may be sent to the Philippines.

PROMOTION FOR MR. DE LUCY-FOSSARIEU.

MR. P. DE LUCY-FOSSARIEU, whose appointment at Kobe has hitherto been that of Vice-Consul, has recently been promoted and he is now Consul in full charge of French interests in Hyogo and Osaka.

SUICIDE OF AN ENGLISH LADY.

MRS. AUSTIN, wife of Mr. A. E. Austin, of Messrs. John Little & Company, Ltd., shot herself with a revolver in her own house, at Singapore, on the afternoon of Sept. 22nd. She was only 27 years of age, but had been in a melancholic condition for about a year.

A LOST JUDGE.

DR. CARRINGTON, the Chief Justice of Hongkong, got lost on the hillside above Robinson Road, the other evening, and caused some consternation in the Colony for a while. He found his way home shortly before midnight.

THE SALVATION ARMY IN JAPAN.

WE are informed that Brigadier W. M. Powell has been appointed by General Booth to the command of the Salvation Army in Japan, vice Colonel Wright, who recently left Japan on furlough.

POLITICAL ITEMS.

The Supreme Court is at present greatly perturbed in consequence of the disagreement between Mr. Miyoshi, Chief of the Court, and a number of judges in connection with the disciplinary punishment of Judge Bessho. This Judge, it may be remembered, refused to be removed from Kai to the island of Sado, when a vacancy occurred in the island Court. Judge Bessho persisted in his refusal, and the Minister of Justice of that day issued an order for a Disciplinary Court to try the case within the Supreme Court. Judgment was given on the 7th ult., the majority deciding in favour of the Judge, in the face of the expressed opinion of the Minister of Justice and the Chief of the Court. The issue involved serious consequences, for if the Judge was acquitted, it amounted to disapproval of the step taken by the Minister. The debate was sharp and hot, the opposing parties, in their warmth, even indulging in personalities. According to the usage that the Supreme Court enjoins on subordinate courts, the finding in any case has to be submitted to the Highest Court within a week. Judgment in the Disciplinary Court was rendered on the 7th, so that the time of notifying the Supreme Court has long past. On the 17th ult. the Chief Judge tendered his resignation, on the ground of his incompetence for the post. He gave a long statement of the reasons inducing him to come to that resolution. He declared, we are quoting from the *Asahi*, that the judgment in Judge Bessho's case went beyond the competence of the Judiciary and encroached on the domain of the Executive, and that, in his opinion, it was entirely illegal. That the Judges over whom he presided should be betrayed into such proceeding, he attributed to his own incompetence. Therefore, he wished to be relieved from the high office entrusted to him. The news that the Chief Judge had tendered his resignation on this ground provoked such of the Judges as had decided in favour of Judge Bessho to express warm indignation. They argued that if the Chief Judge refused to acquiesce in the finding of the majority, why had he not entrusted the case to the decision of one judge. A judge in his position must be perfectly aware that when a finding is given by a majority of judges, the minority must be governed by the majority. This opinion is strongly maintained by the extremists in the Court, and the trouble may develop serious consequences. It appears from an article published in the *Tokyo Asahi* that arguments in the case are really not yet concluded, but that Mr. Miyoshi has resolved to resign, as he sees it impossible to induce the other judges to come to his conclusion in the matter. This withdrawal of the presiding Judge and the subsequent vacancy caused in the original number of Judges appointed to sit in the case, make it impossible to pronounce final sentence. It is believed that when the application of Mr. Miyoshi to resign is definitely settled, the discussion of the case will be continued.

The resolution of Viscount Katsura, Governor-General of Formosa, to resign his present position is inflexible, and he will be removed ere long to be Commander-in-Chief of the Tokyo Bay Defence Board, the post now held by Marshal Count Nozu. The Marshal will be removed to the First Head-quarters to be established in November.

Marquis Saionji and Viscounts Watanabe and Yoshikawa, ex-Ministers of Education, Finance, and Justice respectively, were to be appointed Privy Councillors as soon as they were relieved of office, but the limit now set to the salaries of Privy Councillors does not admit of their appointment. Next year the allowances will be extended to five or six extra councillors.

Prince Konoye Atsumaro has been gazetted President of the House of Peers, *vice* Marquis Hachisuka, who recently accepted the portfolio of Education. The President of the Upper House in Japan is both selected and nominated by the Emperor, whereas, in the case of the President of the Lower House, the Sovereign's choice is limited to one of three names submitted by the House itself after election by the members. The office carries with it an annual

allowance of four thousand *yen*. It is a seven years' appointment in the Upper House, unless the nominee happens to be an elected member, in which case he holds office for the term of his membership only. That point requires a word of explanation. The Upper House consists of two classes: members that sit by hereditary right (that is to say, Princes and Marquises), or by nomination by the Emperor for life, and members that sit by election (that is to say, Counts, Viscounts, Barons, and representatives of highest tax-payers). The elected members sit for seven years; the rest, for life. If a President be appointed from among the Princes, Marquises, or Imperial Nominees, he holds office for seven years certain from the day of his appointment. But if he be appointed from among the elected members, his term of office is measured by his term of membership: it may be seven years; it may be much less, according to the interval that has elapsed between the date of his appointment and the date of his election to membership. Prince Konoye, of course, is entitled to hold the post for seven years.

Prince Konoye is a man of great activity. When the Diet was not in session, he has hitherto devoted himself with much zeal to superintending the affairs and promoting the interests of the Nobles' School (*Gakushu-in*), of which institution he is President. Indeed, it is understood that one of his chief reasons for refusing to accept a portfolio in the new Cabinet was unwillingness to abandon his duties in connection with the School. Presumably, as President of the House of Peers, he will be able to continue the discharge of those duties. In the House, the Prince usually identified himself with the Opposition. A good speaker and a resolute reformer of the type disposed to be discontented with things as they are, he has often attracted public attention in a manner not altogether consonant with Japan's traditional conceptions of a great noble's methods. But it is to such men that the Japanese nobility must look to recover by intellectual eminence the place that it forfeited with the fall of feudalism. Prince Konoye ranks next after the Princes of the Blood in Japan. His house was formerly the first among the *Go-sekke*, or Five Ministerial Houses; that is to say, the families hereditarily entitled to furnish Regents (*Kwambaku*) and prime ministers (*Dajo Daijin*). The other four Houses are now represented by Prince Kujo, Prince Nijo, Prince Ichijo, and Prince Takatsukasa. It may interest our readers to know that the term "Imperial Guards" (*Konoye Shidan*) is written with the same ideographs as those forming the Prince's family name. Indeed, the name itself implies the great honour intended in its selection, for it signifies "close guardian," or "protector of the Throne."

There appears to be some perplexity among foreigners about Mr. Kioura Keigo, the new Minister of Justice. Certain local newspapers give him the title of Viscount, and others recognise him only in his capacity of a member of the House of Peers. Mr. Kioura has no patent of nobility. He sits in the Upper House as an Imperial nominee, which honour was conferred on him in 1891, that is to say, at the time of the Diet's first convocation. Born in 1850, a retainer of the Higo clan, he commenced his public career in 1873 as a local official of Saitama, and four years later he became a public procurator. Subsequently, he was appointed a member of the Committee for revising the Penal Code, and he served, during the next four years, as a Secretary in the Departments of Justice and Home Affairs, and in the Cabinet. In 1881, he was appointed a member of the *Sangi-in* (Privy Council), and in 1884, he became a Chief Secretary, from which office he was promoted, in 1886, to be chief of the Criminal Bureau in the Department for Home Affairs. Six years later (August, 1892), he became Vice-Minister of Justice, from which post he has now passed to be Minister of the same Department. Mr. Kioura is a well-known figure in the House of Peers, where his speeches upon legal questions and matters of domestic administration are always listened to with attention.

BARON OZAKI & THE FUSAN-SŌUL RAILWAY.

Baron Ozaki, who proceeded some months ago to Sŏul, in company with Mr. Omiwa, to urge forward the proposed railway between Fusan and Sŏul, has returned to Tokyo, and been interviewed by representatives of several metropolitan papers. The Baron's story corroborates the statements made by several correspondents of Tokyo papers now living in Korea, and impresses upon every Japanese the fact that their country and its nationals are deeply hated by Koreans. Needless to say the fountain head of this anti-Japanese feeling is the King himself, who labours—we are quoting the Tokyo press—under the misconception that should he leave his asylum at the Russian Legation, his person would not be safe against the attacks of Japanese marauders. He is possessed of the absurd notion that his choice lies between disgrace and safety, and so, while admitting that his stay at a foreign legation is derogatory to his dignity, he can not bring himself to leave that asylum, so deeply-rooted is his dread of the Japanese. Anything relating to Japan is, therefore, entirely distasteful to his mind, and a Korean who speaks well of Japan incurs the strong displeasure of the King, and is even branded as a traitor. Even Count Inouye is regarded as a liar by the King, on the ground that while promising to send a competent diplomatist to Korea to take his place, he recommended such a person as Viscount Miura. When a statesman of Count Inouye's position proves so faithless, argues the King, the character of the rest may be easily inferred. His Majesty still believes the Japanese were ringleaders in the assassination of the Queen, and denounce the judgment of the Hiroshima tribunal as lacking every principle of impartiality and justice. The Japanese had better re-examine this affair, he says, before they trouble themselves with building a railway between Sŏul and Fusan. Li, Minister of Foreign Affairs, is placed in a very painful dilemma, being denounced by the King and his Cabinet colleagues whenever he refers to the Sŏul-Fusan railway scheme, and yet continually having to receive urgent messages regarding the affair from the Japanese Minister. It is suspected that Li is keeping back the official notes forwarded by the Japanese Representative on the subject. Baron Ozaki is of opinion that this problem is no longer a question of commercial speculation but a matter of vital interest to the national prestige. Unless the attitude of the Government toward the question be firm, and unless negotiations are renewed on that basis, any further dallying will simply discredit Japan entirely in the eyes of Koreans and foreigners. The Baron has returned to Tokyo to ascertain the position of the Government and to learn the opinions of his fellow-projectors. Baron Ozaki has also much to say upon the manner in which Russia is noiselessly but shrewdly securing one practical benefit after another in Korea.

NEW PORTS FOR FOREIGN COMMERCE.

An Imperial Ordinance, issued on the 3rd instant, announces that, in accordance with a law passed by the Diet last session, the under-mentioned ports will be opened, from the 1st of November, to Japanese-owned vessels for the purposes of the foreign export and import trade:—

Hakata, in Chikuzen.	Tsuyama, in Echizen.
Karatsu, in Hizen.	Sakai, in Hoki.
Kuchinotsu, in Hizen.	Hamada, in Iwami.

OFFICIAL APPOINTMENTS.

Baron Nambu Kameo is gazetted President of the Court of Cassation, Mr. Yokota Kuniomi, Vice-Minister of Justice, and Judge Takagi Toyozo, Chief of the Bureau of Civil Law in the Department of Justice.

THE CABINET AND THE BUDGET.

The Budget for the next fiscal year is likely to prove the first obstacle for the Cabinet to surmount. The first Cabinet Council of the Matsukata Ministry, says the *Yiji*, was held on the 29th ult., the Budget for the next fiscal year being the only topic of discussion. The Council sat from about 11 a.m. to 5 p.m., but did not come to any definite issue, some members strongly advocating retrenchment and other maintaining the contrary opinion. Under the circumstances, the meeting was indefinitely adjourned.

The *Chuo* and the *Nippon* print long accounts of the affair, the former publishing the details of the items in the Budget that have led to division of opinion among the Ministers. The Premier advocates a policy of retrenchment of a decided character. In the section of Revenue, besides striking out clauses relating to the floating of the Public Undertakings Loan, appropriations of the Indemnity, and so forth, he has also struck out all items in every Department of State relating to new undertaking. In the Second-period naval expansion programme, for which 80,000,000 yen was demanded, the appropriation is to be reduced to 30,000,000 yen, a reduction of 50,000,000 yen upon Viscount Watanabe's idea. Such a radical retrenchment will never be accepted by the Naval Authorities who have elaborated a scheme of development in accordance with their ideas of the future of Japan. Marquis Saigo, Minister of the Navy, was closeted for many hours with the principal officers of the Department after the meeting of the 29th ult., and it is thought that he will protest resolutely against the retrenchment proposed by the Premier. He may even sever his connection with the present Ministry should the Premier persist in affecting such a reduction. The attitude of the other Ministers in regard to this policy of retrenchment is not harmonious. Viscount Takashima, perhaps as the result of a previous understanding with the Premier, alone keeps silence, contrary to public expectation. Count Okuma, too, has not made any definite stand. Next to the Minister of the Navy, the Minister of Communications is placed in a very difficult situation. Not only have all the items for new undertakings and continuing expenditures in his Department been struck out, but the retrenchments have been extended even to the postal service. Viscount Nomura is said to be stoutly opposed to these radical measures of the Premier. The probability therefore is that the Budget will lead to several Ministers' severing their connection with the Matsukata Cabinet. Should the Premier be induced to withhold his amendments and acquiesce in the views of his colleagues, he will find himself in a very difficult situation. He would, in fact, have to resign. The *Chuo* further states that, at a meeting on the 30th ultimo, none of the amendments to the Budget formulated by the estimates of the respective Departments of State secured the cordial approval of the Cabinet, and the meeting was adjourned on the understanding that the Treasury would reinvestigate the subject and submit the result to the next Cabinet meeting.

The *Nippon*, writing on the same subject, differs a little from the above and indicates greater hope. It states that no particular objection has been raised by the Ministers of State to the amended Budget formulated by Count Matsukata, so that the amendments so loudly spoken of promise to be effected with comparative ease. The *Nippon* learns that the so-called reforms, once so much discussed, have been laid aside for the present on the plausible pretext of the near approach of the meeting of the Diet. The notion that the period for carrying out the expansion of the national defence must be prolonged, will not be maintained and only one or two continuing undertakings, not yet put in hand, will be suspended this year. The retrenchment of administrative expenditures being a grave question will not be attended to until after the close of the coming session of the Diet. One retrenchment worth mention is that incidental to the rise

in the market price of commodities. That is a subject that attracts public attention. Suppose that market prices rise 10 per cent. next year, the result will be an addition of over 18 million yen to the total expenditures of the State. At any rate, an appreciation of 5 per cent. is unavoidable. An increase of over three millions in the Local Administration Expenses of the Home Office, for instance, is based on the assumed appreciation of market prices, and is intended to ameliorate the condition of petty Government clerks. If similar claims are advanced by other Departments, the total increase will amount to several millions. The Finance Minister has struck out these items. Therefore, even with the same amount of money at its disposal, the new Government will be obliged to effect great economy. Another noteworthy point is retrenchment in the new undertakings fund. It ought not to be hastily concluded that the Matsukata Cabinet is going to strike out all the new undertakings. On the contrary, any new undertaking that is absolutely urgent will be taken up with increased vigour, the various public works in Formosa in particular. The fall of the Ito Cabinet was attributable to the plethora of new undertakings; Marquis Ito acceding to every project of the Liberals. With a change of Ministry and the disappearance of these practices, the Treasury will be able to carry out part of the original financial programme bequeathed by the previous Cabinet. Such is the *Nippon's* account.

THE BUDGET FOR THE NEXT FISCAL YEAR.

The estimates presented by the respective Departments of State while the Ito Cabinet was in power, showed a deficit of 25 million yen, the Revenue and Expenditure standing at 220 and 245 million yen, respectively, and it was the Cabinet's intention to effect equilibrium by retrenchments aggregating 25 millions. Now, continues the *Nichi Nichi*, from which we take these facts, the reductions of expenditure contemplated by the new Ministry being 30 million yen, their economies exceed those of their predecessor by only 5 millions, so that their financial schemes are obviously of a moderate character. Considering the estimates of the various Departments separately, we find that the ordinary expenditures of the Department of Finance will stand as in the current fiscal year; while the extraordinary expenditures will include an item of about a quarter of a million yen, by way of aid to the establishment of the Industrial and Agricola-Industrial Banks, and will also include sums required for organizing the Tobacco Monopoly and collecting the increased tax on *saké* brewing. In the Department of War, an amount of 870,000 yen is to be retrenched under the heading of new undertakings in Formosa, that is to say, about 15 per cent. of the total appropriation; that outlay, as well as about one half of the Working Fund of the Arsenal—or 400,000 yen—being postponed for a year. The sum by which the new Premier desired to reduce the Naval expenditures was a little over 8 millions, but such a reduction was not easy to accomplish, the Navy having already effected every possible economy in preparing the Budget for next year. After much investigation, a compromise was arrived at in the sense of cutting down a portion of the expenditures that did not seem to demand immediate attention. It may be mentioned here that the amount required for carrying out the second-period expansion programme is more than 90 million yen. The Budget of the Department of Home Affairs has not undergone any particular alteration, only two items, relating to the emoluments of an additional clerk and of another engineering expert in each locality have been struck out. Grants-in-aid of Nagasaki harbour re-construction fund were suffered to stand. The application of the Department of Colonization to have special offices built for it has been refused, and, consequently, the ordinary expenditure of that Department will not differ much from the figure for the present fiscal year. The expenditures for Formosa, however, show a con-

siderable addition, their total being more than double of that for the current fiscal year. At first the Governor-General's Office asked for an additional appropriation of 22 million yen, for the purpose of erecting various Government offices, perfecting the local administrative mechanism, and increasing the Police force. But as the Government subsequently decided to entrust the business of railway construction to private capitalists, a sum of 5 million yen, included in the Budget on that account, was struck out, bringing down the total of additional expenditure to 17 million yen in round numbers. Subsequently, after a Cabinet Council, a further retrenchment of 3,800,000 yen was effected, so that, the additional expenditures for Formosa next year aggregate only 13 million yen, approximately. None the less it results that Japan is to spend on her new dominion a sum more than double of that appropriated during the current fiscal year, but since that heavy outlay is required for the purpose of increasing the number of local administrative offices from 3 to 7, and inaugurating measures to perfect the administrative machinery, it must be considered as ordinary expenditure and defrayed without hesitation. Of the new sources of income to the Treasury, the receipts from the Business Tax may fall short of the estimates by a million yen or thereabouts; but, by way of compensation for this, additional yields of as much as 1½ million yen and 2 million yen are expected from the Registration and the *saké* brewing taxes, respectively. Hence the deficiency under the heading of the Business Tax is amply covered.

The information that the *Mainichi* gives on the subject of next year's Budget is widely different from the above. That journal alleges that the Cabinet has decided to effect retrenchments aggregating no less than 60 million yen in the estimated expenditures, and that the retrenchments will be accomplished by striking out or reducing such appropriations on account of new undertakings as are not of the character of continuing works. The same journal adds that the Government will not float a special loan, as reported in some quarters, to obtain funds for the development of Formosa.

Of the two journals quoted above, the *Nichi Nichi* is incomparably the more trustworthy. Such a retrenchment as that indicated by the *Mainichi* would bring the national expenditure to about 85 million yen, a sum considerably smaller than that required before the war.

FINANCIAL AFFAIRS.

The fact that the national finances present exceptional difficulties to Japanese statesmen at present, is persistently advanced by vernacular newspapers. The *Mainichi Shimbun* enters into the subject in a recent issue. Asserting, at the outset, that a deficiency of some twenty million yen has become apparent in the revenues of the current year as compared with the expenditures, our contemporary at the same time admits that the incomings from Government railways, telegraphs, posts, and so forth show a steady increase, and that private enterprises of commerce and manufacture are also developing satisfactorily. On the other hand, owing to the series of inundations from which the country has suffered, an extraordinary outlay of about ten million yen will be called for, and the Treasury is not in a position to meet even that call, much less to deal with a deficiency of twenty millions in the revenue. Owing, again, to the marked rise in the price of rice and other necessities of life, the expenditures on account of the Army have considerably exceeded the sum appropriated by the Diet last session, and a supplementary budget will have to be presented in that section. As for the domestic loans sanctioned by the last Diet, loans on account of industries, railways, Hokkaido, and so forth, aggregating over two hundred million yen, the *Mainichi* thinks that the time is now quite unsuited for floating them, and that, even though the attempt were made, few subscriptions would be forthcoming. The Ministry, however, can not, on its own responsibility, refrain from carrying out measures duly sanc-

tioned by the Diet, and the problem consequently assumes a very perplexing aspect. No course seems to offer except large reductions of administrative expenditure, and with that object in view the Government intends—we still quote from the *Mainichi*—to appoint a committee whose duty will be to undertake a thorough investigation of the financial situation, and submit an accurate report thereon.

In translating the above, we ought to note that the *Mainichi Shimbun*, being an organ of the former *Katshin-to*, is naturally disposed to magnify the financial difficulties bequeathed by the last Cabinet to their successors. To bring discredit on the Ito Ministry by painting the affairs of the Treasury in the darkest possible light, and to gain credit for the Matsukata Ministry by treating in the same manner the troubles they have to deal with, is precisely the rôle that we might expect the *Mainichi* to play. We do not, of course, desire to suggest that there is any wilful deception. But until official figures are available, it will be well not to attach full credit to any partisan statement. In our opinion, there is a want of reflection displayed by critics that take a gloomy view of Japanese finance. The present year has been altogether exceptional, and can not for a moment be regarded as a standard. What we have to fall back upon is the solid fact that the nation's annual payments into the Treasury average only some six shillings per head, and that, even though the sum were doubled, complaints of over-taxation would not be justified. If Japan wants to take her place in the ranks of important States, she must be prepared to put her hand into her pocket.

ECONOMIC NEWS.

At last a reaction, though happily still feeble, has overtaken the economic world of Japan. The Union Savings Bank of Osaka, is bankrupt. Mr. Daimon Shimbel, a wholesale yarn merchant of Osaka, who was President of this small bank, speculated in time bargains on yarns, and incurred serious losses. He had induced several other banks to accept his promissory notes to a considerable amount just before he failed. His largest creditor, the Kashima Bank, seized his property, and the upshot was a run on the Head and Branch Offices of the Bank. On the third instant, the shareholders held an extraordinary meeting, and resolved to go into liquidation. The Bank has announced that it will repay its depositors within the space of two months computed from the 3rd inst. It is said that the deposits total only about 45,000 yen, the Bank having been started but a short time. The Directors of the Bank are legally bound to redeem all the debts incurred by it, but it is highly problematical whether this provision will be fulfilled to the letter. Most of the depositors are mechanics and labourers, and the rush they made at the end of last month was very pitiful to see; one man who had been tempted by the offer of higher interest had drawn the sum of 6,000 from another Bank, to deposit with the Union Savings Bank just before ruin overtook the concern.

Another ominous sign of the times is reported in the Tokyo papers, concerning the wholesale cotton cloth merchants of the city. They have been issuing notes of hand considerably above their means. All went well while the money market was tranquil, but when the Bank of Japan raised the rates of interest a month ago, trouble at once loomed in sight. Other banks followed the big Bank's lead, so as to be on their guard against any emergency. The cloth merchants began at once to feel the pinch, for no one would consent to receive their notes. It was evident that if they were required to redeem their cheques at once they would be reduced to ruin. Some twelve of the merchants met on the 2nd inst. and decided to appeal to their creditors for special consideration. Mr. Uratajihei, member of the Tokyo Bar, is to conduct the negotiations on their behalf. The merchants desire to have their cheques run for a space of three months, and then to redeem them in two years by monthly instalments. If these merchants cannot obtain

some temporary measure of relief, they will be reduced to ruin, besides inflicting heavy loss on many banks and creditors. The *Porosu Choho* says that the total of unredeemed cheques issued by these merchants and thus far brought to public notice amounts to over two millions. The *Choho* gives the list of the principal creditors with the amounts due to them. They include, the Commercial Bank, 400,000 yen; Aikoku Bank, 100,000 yen; Narita Bank, 100,000 yen; 1st National Bank, 300,000 yen; Tokyo Bank, 150,000 yen; Yasuda Bank, 50,000 yen; 100th National Bank, 1,200,000 yen.

INDUSTRIAL AND ECONOMIC TOPICS.

The damage done to railways by the inundations total, on the State lines alone, 200,000 yen. If to this be added the loss in railway receipts, the whole exceeds 500,000 yen. It is estimated that the total loss to State and private railways will not fall short of 1,000,000 yen.

The Yokohama City Council has decided to float a city loan of 365,000 yen, bearing 6 per cent. interest, as a fund for reclaiming 55,000 *tsubo* (137 acres) of land at Takashimacho. The loan is to be redeemed within 24 years dating from 1898, when the work will commence. It will be finished in five years. The matter will be come before the City Assembly, for final decision in a few days.

The following is a return of 133 national banks for the first half of the year as compared with the corresponding period in the preceding year. The figures show considerable increases in profits:—

	1st half 1896. Yen.	1st half 1895. Yen.
Capital	48,856,100.000	48,816,100.000
Profit	1,004,975.000	4,408,388.249
Reserves	21,362,514.286	1,632.966
Special Reserves..	17,200,258.000	592,224.000
Dividend.....	274,603.872	105,874.424
	3,008,577.000	2,839,604.000
	23,533.000	
Rate of dividend..	per cent. 12.48	per cent. 11.80

The figures marked by the asterisk (*) show dividends on additional shares.

The volume of currency on the 1st of September, as compared with the corresponding period of last year, is as follows:—

	Sept. 1st, 1896. Yen.	Sept. 1st, 1895. Yen.
Convertible		
Notes	163,598,892	159,207,554
Government		
Notes	9,888,278	9,182,428
Banks notes..	19,777,706	19,778,005
Coins	73,915,160	72,732,095
Total	267,180,036	261,700,082

The volume of currency during the nine months from January last, is as follows:—

	Yen.	Increase or decrease Yen.
January	270,819,679	—
February	260,960,698	— 9,858,981
March	256,762,577	— 4,198,121
April	248,668,089	— 8,094,488
May	243,463,454	— 5,204,635
June	251,094,074	+ 7,630,620
July	259,554,387	+ 8,460,313
August	261,700,082	+ 2,145,695
September	267,180,036	+ 5,479,954

ALLEGED TORTURE IN JAPAN.

It did not appear conceivable that serious attention should be paid by foreign critics to the statement made in the Yokohama Local Court by Tamura Kotaro, one of the stokers recently tried for assaulting Mr. Barrie, Superintendent Engineer of the Japan Mail S.S. Company. In his preliminary examination before the police magistrate, Tamura admitted that he had struck Mr. Barrie, but when brought up for public trial, he denied his former statement, and alleged that it had been extorted from him by torture. If he had stopped there, some attention might

have been attracted by his story. But he went on to explain the nature of the torture: his fingers, he said, were pressed with a pencil and his cheeks were pinched! Did any one ever hear of such childishness? A stalwart man subjected to the torment of having his finger-tips pressed with a pencil and his cheeks pinched, asks people to believe that the pain overcame him and that he should not choose but incriminate himself! Ridiculous as the tale was, however, it received solemn attention from some foreign local journalists, and the Japanese Authorities were conjured to institute vigorous inquiries! Quainter still, perhaps, was what followed. A Japanese, who was present at the trial, addressed a letter to one of the Yokohama English journals, over the signature of "A Native," pointing out the absurdity and incredibility of Tamura's story. He mentioned, among other things, that "the statements of the accused in the Police station were not made in answer to questions to be answered 'yes' or 'no,' when torture might conceivably be employed," but that "every defendant had been asked to state all he knew, and so each told his story implicating others as well as himself." Possibly the argument of this Japanese might have been set forth more lucidly, but could any one mistake his meaning? Clearly what he intended to convey was that the method of verbal examination pursued by a Japanese police magistrate offers no conceivable opportunity for torture, and that, consequently, to talk of torture's being applied is merely a display of ignorance. Yet his letter elicited the following comment from a Kobe journal:—

May we be permitted to ask "A Native" what he means by saying that "torture might conceivably be employed" in obtaining a reply "to questions to be answered 'yes' or 'no'?" This is a point which deserves our Yokohama contemporary's consideration. There is something decidedly suspicious in such an admission on the part of a Japanese capable of defending his country's name and fame in the columns of a foreign journal.

Considered calmly, that is assuredly one of the funniest specimens of sententious asininity we have ever come across: Following such a method of logic, we arrive at this, that if a man denies an act of shooting on the ground, among other reasons, of not having had a gun in his possession, he virtually admits that he would have shot had he possessed a gun. Eliza, Elizabeth, Bessy, and Bess hunting for mare's nests would be quite shrewd little folks by the side of these critics.

A NEW CITY IN FORMOSA.

We learn that the Japanese Authorities have planned out a complete new city of Taiwan (Tai-chu) in Formosa. At present it consists only of a space enclosed by mud walls, fast crumbling and dissolving away, with a few *yamlets* and such like public buildings inside, and a small portion of a particularly filthy Chinese town, which intrudes through one of the walls from the outside. No information has yet been published as to the manner in which the work is to be carried out, but the site is a gentle slope, lending itself excellently to drainage purposes, and a plentiful supply of pure water is within easy reach. It will be interesting to observe how the Japanese deal with the problem of the Chinese city. There is no greater abomination on the face of the earth than the place where Chinese congregate, for drainage, sewage, scavenging, water supply, and all such things are totally neglected. It looks strange, at first sight, that a people so gifted, physically and morally, should quietly submit to such conditions as those existing even in great cities like Peking, Tientsin, and Nanking, but, after all, the reason is not far to seek. The Japanese, however, will surely not endure such a state of affairs in the new dominion, but what methods they will adopt to alter it is a question that perplexes us.

A transport ship, which leaves Portsmouth about October for Gibraltar, afterwards executes a round of troop service, conveying the 1st Battalion West York-shire Regiment (14th) from Gibraltar to Hongkong, the 1st Battalion Rifle Brigade from Hongkong, to Singapore, and the 2nd Battalion Northumberland Fusiliers (5th) from Singapore to England.

FINANCIAL AFFAIRS.

ALTHOUGH an idea prevails very generally that difficulties have arisen in connection with the Budget for the next fiscal year (1897-8), as well as in balancing the revenue and expenditure for the current year, and although it is alleged in many quarters that the resignation of Viscount WATANABE, Minister of Finance, was owing to his inability to strike out any scheme of re-adjustment acceptable to the Cabinet, yet none of the vernacular journals seems to have a clear idea of the precise troubles that have presented themselves. It is evident, at any rate, that Count MATSUKATA has shown extraordinary diligence since his assumption of the portfolio of Finance, for already, after a very few days' tenure of office, he has been able to submit to the Cabinet a scheme according to which the estimates of the various Departments of State are to be re-compiled. Since the 29th of last month, conferences of the Cabinet Ministers have been daily held at Count MATSUKATA'S residence, and it is now alleged that His Excellency's programme has been adopted, with slight variations, and that the Departments will forthwith proceed to re-cast their several Budgets in accordance with the new lines, the necessary information and directions having been compiled and sent to them in written form on the 3rd instant. These preliminaries having been agreed to by the Cabinet as a body, there is no further reason to attach credit to rumours circulated by the vernacular press, in the sense that several of the Ministers have declared their inability to endorse the retrenchments proposed by the Finance Department, and that differences of opinion sufficiently acute to threaten disruption of the Cabinet have arisen. A consensus of opinion seems to have been now reached, and so far, at any rate, as the Cabinet is concerned, the amended Budget will encounter no serious opposition.

It is alleged that the reductions of expenditure indicated by Count MATSUKATA aggregate thirty million yen, and that they will be effected, in great part, by prolonging the period for completing certain national enterprises, and postponing the time for commencing others. How far these changes will affect the expansion of the national armaments, we are not in a position to say. It is an open secret that the late Minister of State for War declined to serve with the new Cabinet chiefly because he found himself unable to accept the idea of extending from seven to ten years the period fixed by the Diet last session for completing the programme of Army expansion. We do not, for our own part, perceive that any serious objection would attach to such a change. Doubtless it would be a very fine thing for Japan to possess an army of half a million men in 1903, but a

moment's reflection will show that, according to her present programme of marine-transport development, she can not hope to be able to utilize such numerous forces abroad seven years hence, and assuredly there is little reason to imagine that she will have need of them at home. In fact, the scheme of military expansion submitted to the Diet last session seems to have been slightly of a sentimental character. Its framers, not guided solely by the practical needs of the nation, allowed themselves, perhaps, to be influenced by a feeling that whatever attention was bestowed on the Navy ought to be extended in an equal degree to the Army. From that point of view we are inclined to think that an extension of three or even four years in the case of the Army's period of expansion would not materially signify. The Navy, however, is a very different question, and we should be much surprised to learn that the plan for developing it is to be subjected to any procrastination. But all these things can not yet be discussed with assurance. There is room for large retrenchments in other directions, though we greatly doubt whether the Diet will be disposed to sanction them. It is now becoming plain that the divergence between the policies of the two Cabinets will be conspicuous chiefly in their respective estimates of the country's capacities for development; the views of Marquis ITO and his fellow-thinkers being larger and bolder than those of Count MATSUKATA and his colleagues. Unavoidable circumstances may, of course, be mainly, if not altogether, responsible for the difference, but the public will not readily take that fact into account.

To what precise causes the deficiency in the funds at the Treasury's disposal is to be attributed, we have still to learn. The *Fiji Shimpō* says that the principal difficulty is in connection with the Business Tax, the Brewing Tax, and the Registration Tax. From these three sources Viscount WATANABE estimated returns of 7½ million yen, four million three hundred thousand, and five millions respectively, making a total of nearly seventeen millions. But it now appears that, although the Registration Tax may realize the Treasury's expectation, there will be a deficiency of from three to four million yen in the proceeds of the other two taxes. That, however, is a comparatively small matter, leaving a great deal still to be explained in connection with reductions of expenditure aggregating thirty millions. Evidently the vernacular newspapers are much in the dark about the whole matter, and although we have here summarized their statements for the information of our readers, it will be well to await fuller and more authentic particulars.

The barracks for the Artillery of the Guards and the Artillery of the 1st Army Division will be built at Ebura-gori.

THE CODES.

SINCE a correspondent who addresses us over the signature "M.N." says that the replies to questions propounded in his letter will be "both interesting and valuable to many," we willingly devote space to the subject, but, at the same time, we trust that he will pardon us for pointing out that he might easily have obtained the information he seeks had he employed the means upon which we ourselves rely for answering his queries, namely, reference to Dr. LÖNHOLM'S pamphlet. He asks, in the first place, whether the terms "hypothek" and "hypothekenrechte," which, he says, are "the exact words in the German Treaty," have precisely the same meaning as "mortgage," the English term used by us. The German-Japanese Revised Treaty not being yet in the hands of the public, we are not in a position to refer to its precise language. But, under any circumstances, if the term "hypothek" be used in the Treaty, it can not, as our correspondent seems to suppose, be defined in accordance with German law: we must go to the Japanese Civil Code, and to the Japanese Civil Code only, for the import of the term. There we find that the word employed is "*teito-ken*" (抵当権), which signifies the right of a creditor to obtain satisfaction from an immovable in the order of his claim. As to our correspondent's second question, namely, whether the holder of a mortgage is not entitled to take possession—or, in other words, to become the owner—of the thing mortgaged, even if the thing be land, in the event of failure to obtain satisfaction by the other means provided, the answer is that the holder of a "*teito-ken*" has not, under any circumstances, a right to take possession of the mortgaged property. His sole right is application to a law court for either a compulsory sale by auction, or a compulsory administration of the immovable. In the latter case, the Court appoints an administrator, and the debtor is not allowed to interfere with the management of the administrator. The income collected during the period of administration is distributed among the mortgagees according to the rank of their claims. With regard to the exercise of the above rights, no difference is made between Japanese subjects and the subjects or citizens of foreign Treaty Powers. The "pledge" of an immovable—*fudosan-shichi* (不動産質)—is a very different thing. There the creditor at once obtains possession of the property pledged, and has the right to use it by way of interest on his claim. If our correspondent desires fuller information on this point, we recommend him to peruse Dr. LÖNHOLM'S brochure itself. Indeed, the reception given to that work has been a very great surprise to us. Of two local newspapers that have noticed it, one confined itself to a brief epitome of the book's references to the phraseology, and general

character of the New Code; the other, at the close of an article devoted to disparaging the Japanese Judiciary, reproduced, with the most perfunctory of comments, a paragraph setting forth the rights of land tenure that foreigners will acquire when the Revised Treaties go into operation. Now, it has been a perpetual complaint on the part of the foreign residents that, in the absence of trustworthy translations, access to a clear knowledge of the laws of Japan is virtually impossible. No newspapers have been louder in urging that complaint, and in utilizing it as a weapon against the abolition of Consular Jurisdiction, than the two mentioned above. It has also been vehemently complained that, since the limitations prescribed by the Civil Code and by the Revised Treaties, as was supposed, deprive land tenure of all useful potentialities for foreign merchants and manufacturers, therefore the chief solatium for the loss of Consular Jurisdiction, becomes a worthless pretence. No newspapers have been more insistent in ventilating that complaint and in emphasizing its justice than the two mentioned. Well, here we have a German Professor of Law in the Imperial University, an expert of indubitable competence, who is, moreover, equipped with an intimate knowledge of the Japanese language—here we have such an authority coming forward, and giving us in succinct form, in the English language, a clear and accurate synopsis of the new Civil Code, with special reference to its bearing on the privileges that foreigners will enjoy under the Revised Treaties; a synopsis demonstrating, further, that the great and important complaint about the tenure of land is based on a complete misapprehension, and that foreigners will be able, as superficiaries, to enjoy the right of holding land for any period whatever. One would suppose that the fact of the long desired knowledge being thus rendered easily accessible, as well as the fact that the much criticised restrictions on the tenure of land are shown to have no existence in reality, ought to be proclaimed with something of the animation that marked the iteration and re-iteration of the original complaints by local journals opposed to the abolition of Consular Jurisdiction. Nothing of the kind has taken place, however. One editor does not even give himself the trouble to read the pamphlet—for on no other hypothesis can we account for his total silence about its preëminently interesting and important portions—; another seems to think that his principal duty is to combat Dr. LÖNHOLM's brief and incidental expression of favourable opinion about the competence of the Japanese Judiciary to apply the new Code. Such methods are doubtless consistent with the customary procedure of the journals in question, but we venture to think that a different course would better conduce to the general interests.

"TOO LATE."

SOMEbody recently addressed to one of our Kobe contemporaries a letter suggesting the advisability of forming a foreigners' defence league. Upon that text the *Kobe Herald* pens an almost plaintive article, the gist of which is that the suggestion comes too late. The *Japan Mail*, we gather, is thought to have been left too long in possession of the field. It has poisoned public opinion, and the mischief is now irrevocably wrought. The foreign residents by their apathy, have sown the "wind and are henceforth about to reap the whirlwind." Is it not strange to hear Englishmen talk in that fashion? What is this whirlwind that is to play such havoc in our peaceful existences? Assume that there are two thousand British subjects residing in Japan, temporarily or permanently. How many of them will ever see the inside of a criminal court? What on earth does criminal law or criminal procedure matter to the vast majority of us? Police tribunals, jails, and forced labour have no place in the life of a respectable individual, except in so far as they contribute to the preservation of the good order essential to his comfort and to the undisturbed prosecution of his daily avocations. Truly, to judge from the wailing predictions of evil pronounced by the opponents of Treaty Revision, one would imagine that the abolition of Consular Jurisdiction meant the inauguration of a general reign of police outrage and judicial despotism such as no self-respecting citizen could endure. Dwelling around us are millions of Japanese, happy in their home lives, totally undisturbed by police interference, and enjoying just as much inviolability of domicile and security of property as any European enjoys in his own country. Are we to be less fortunate than they when the Revised Treaties go into force? Are we, simultaneously with the loss of Consular Jurisdiction, to pass from beneath the shadow of the flag that has everywhere and in all time been omnipotent for the protection of the humblest British subject? If the vernacular journals, only too quick to discover cause of complaint against officialdom, contained frequent charges of police tyranny or magisterial injustice, there might be grounds for misgiving. But we ask any of our readers to recall how many instances of the kind stand on record during the past twenty years. Outside the realm of politics—a realm into which foreign residents are not likely at any time to make incursions—we do not remember a solitary authenticated example of undue police interference with the liberty of the subject, or of flagrant maladministration of the law by a criminal tribunal. What is there to apprehend in that part of the prospect? Nothing, so far as we can see. On the civil side, it is true that the foreigner will

be liable to be sued in a Japanese Court, and it is possible that the greater facilities of procedure thus afforded may encourage unnecessary appeals to the law. That is a risk. We make no attempt to minimize it. But it seems to us that Japanese Civil tribunals, being, in a manner, on their trial, will show a tendency not only to extend the fullest measure of justice to the foreigner, but also to strongly discourage anything like frivolous litigation against him. In the back-ground, too, stand the foreign Ministers and Consuls, constituting a final and potent court of appeal. On the whole, then, the perils of the situation are infinitesimal, and to talk of the foreign communities "reaping whirlwinds" and "working out their own undoing," savours distinctly of hysteria. It will not be supposed, of course, that in pointing out the absence of any appreciable connection between criminal procedure and the lives of ordinary respectable folks, we under-rate the importance of good penal laws and their efficient administration. Were we not persuaded that Japanese criminal Codes and Japanese criminal Courts have long ceased to offer just ground for complaint, we should certainly oppose the abolition of Consular Jurisdiction. But when there is question of the foreign residents' submission to those codes and courts, it is well to remember that the matter concerns only an insignificant fraction of the community, and that to represent the event as something possessing sinister import for all Western nationals in Japan, is to substitute emotion for judgment. If that kind of sensational misrepresentation be continued, the only result must be that when the now inevitable abolition of Consular Jurisdiction becomes an accomplished fact, there will have been engendered on the foreign side such a sentiment of prejudice and apprehension as to render the smooth working of the new system entirely hopeless.

AN INTERVIEW IN THE "DAILY NEWS."

AMONG the interviews published by Mr. BLATHWAYT in the London *Daily News* after his visit to Japan, one was with the editor of this newspaper on the subject of Japanese journalism. The interview proper is given with remarkable accuracy, considering that the notes taken by Mr. BLATHWAYT were very brief. In the last paragraph, however, which does not form part of the interview itself, but is nevertheless so worded as to convey the impression that its gist was obtained from us, the following statements occur:—

The feeling between the Japanese and the English in Yokohama, Kobe, and Nagasaki, a feeling which is not in the least shared by the diplomatic corps, the official English residents, or the missionaries, is very bitter, and is quite likely one day to be productive of serious consequences, and even now it is a source of anxiety to the political authorities, both English and Japanese. In the eyes of these foolish and headstrong English merchants, who, I regret to say, are vigorously

supported by the editors of the seven or eight English newspapers, all of which are violently anti-Japanese, nothing that their hosts—for, as Captain Brinkley well puts it, they are after all but guests in the land of their adoption—nothing that the Japanese can do is right, and yet it is palpably unreasonable on the part of the English that they should expect and demand that the Japanese shall make laws only of which they, forsooth, approve. The Japanese undoubtedly are very irritating, but this intense bitterness of feeling for which they are little, if at all, to blame is to be traced mainly to the possible abrogation of the treaty laws, by which Englishmen exist under special jurisdiction. In three years' time these laws will be done away with, and they will be under Japanese jurisdiction entirely. Now, as Captain Brinkley points out, to display bitterness is not only absolutely unfair to the Japanese, who are almost certain to act towards the English with absolute impartiality, but it is extremely impolitic, to say the least, and as I have indicated, this attitude, commercial and journalistic entirely in its origin, will very possibly lead to complications of the most serious nature.

This paragraph is distinctly misleading, in so far as it is supposed to represent the views conveyed by us to Mr. BLATHWAYT at the interview in question. The subject, indeed, is so delicate and difficult of immediate comprehension by a stranger, that we can not feel any surprise at Mr. BLATHWAYT'S failure to reach its precise significance by means of a cursory conversation only. That, however, is no reason why we should accept a false position, and we therefore crave our readers' indulgence while we explain that we really did say. In the first place, we repeated the observation, often expressed in these columns, that critics conspicuously prone to attribute anti-foreign prejudice to the Japanese, are also preëminently blind to the fact that a strong anti-Japanese sentiment prevails among a considerable section of the foreign residents. It would be quite idle to deny the existence of such a sentiment. Every European or American tourist discovers it after he has been a few hours in Yokohama or Kobe, and inquires with surprise what it signifies. Time and again the discovery has been recounted to us, or in our hearing, and an explanation has been sought. The answer has never seemed difficult. Three causes are apparent. First, an Englishman—for obvious reasons we confine our comments to Englishmen—when he goes to the Orient, either as a settler or on temporary business, carries with him an inherited conviction that to be masterful is, in a sense, his duty. The people of the country are semi-civilized "natives" in his eyes. He feels that he must assert his superiority over them, or sacrifice the distinction that his nationality confers. Now that sort of thing works excellently in countries where matters have to be carried with a high hand; where, in short, British domination is to be established. We do not say a word against the spirit. On the contrary, we admire it in many respects. It is the spirit that has made the British empire, and its disappearance will preface the decay of that empire. But Japan is a place distinctly ill adapted for its display. The Japanese themselves are engaged, earnestly engaged, in the business of showing that they are as good as any Europeans or Americans. They are bent upon proving their title to be treated as equals by

all Western nations. That a great deal of moral friction should be evolved by the clashing of these two pretensions, must remain inevitable until Englishmen recognise that their wisest plan, in the interests of themselves and of their country alike, is to abandon a mood quite unsuited to Japan and its conditions. The second cause operating to produce an anti-Japanese feeling is the instinct of combativeness evoked by the circumstances in which an Englishman finds himself here. He is one of a little band of a thousand or fifteen hundred among a multitude of forty millions. He conceives that the odds are hugely against him, and he "braces up" all the more stiffly in consequence. Probably many people will deny the operation of such a consciousness. We deem it undeniable. It shows itself in many ways, conspicuously in the disposition to attach a generic interpretation to every incident; to lose sight of the individual and discover always the national. Of course the result is to preserve and emphasize racial distinctions, an invidious and unlovely tendency. Then, in the third place, we have the question of submission to Japanese jurisdiction. To what Englishman could that prospect be welcome? Just in proportion as a man respects the laws of his own country and looks up to its judges, will he be reluctant to exchange them for the laws and judges of another country. The natural and proper struggle made by the British residents to retain their own jurisdiction as long as possible must have received the sympathy of thoughtful Japanese. But unfortunately almost every attempt to perpetuate exemption from Japanese jurisdiction took the form of trying to prove the Japanese quite unworthy of high trust. We know to what wretched displays of injustice, falsehood, slander, and prejudice some English champions of the extraterritorial system have been betrayed by their blind desire to establish that proposition, and it is easy to see how a wish so importunate must ultimately have grown into antipathy on the part of those into whose ears the sins, shortcomings, and general moral obliquity of the Japanese were constantly dunned. Such are the reasons as they present themselves to us. But that they are universally operative among the foreign residents—that is to say, operative in an objectionable sense—we do not for a moment believe, and have, indeed, never asserted. Further, the expression "foolish and headstrong English merchants" is entirely Mr. BLATHWAYT'S own composition. The applicability of any such epithet was never even hinted at by us. But we did speak strongly of the tone adopted by several local foreign journals; the tone of unvarying hostility to the Japanese and unconcealed dislike of them; and we did say that, whatever excuse might have existed for such a tone in the days when the Treaty Revision battle was

at its height, no excuse whatever can be discovered now, the Treaty question being finally disposed of, and the plain duty of every publicist being to soften and dispel, not to deepen and perpetuate, prejudices which may entail very serious consequences when foreigners pass under Japanese jurisdiction. Mr. BLATHWAYT would have done better not to touch at all upon this intricate and many-sided problem, rather than to obscure it by an incomplete and incorrect statement.

"X" ON SILVER AND GOLD.

WE confess ourselves unable to follow the line of reasoning adopted by our correspondent "X." He declares that to recoin gold in such a manner as to make 12.89 grains of it the currency equivalent of 412.5 grains of silver, would "double the nominal value of all the gold in the world." We presume that by "value" "X" intends to convey the meaning "silver value." The weights indicated by him signify a ratio of 1 to 32, which is, approximately, the market ratio between gold and silver at present. Now the facts of the case, as we understand them, are these:—Owing to the immense appreciation that has taken place in the silver price of gold since the coinage systems of Europe and America were fixed, a wide discrepancy is to-day apparent between the nominal gold value at which silver subsidiary coins circulate and the actual gold value of the silver that they contain. Nominally every ounce of silver contained in these coins is equivalent to one-sixteenth of an ounce of gold—we use approximate figures for the convenience of our correspondent's argument—but in reality each ounce of silver contained in them, were it offered as bullion in the market, would exchange for only one-thirty-second of an ounce of gold. Hence, it is apparent that the silver subsidiary coins of Europe and America circulate at a nominal gold value equal to twice the real gold price of the silver they contain. There is no possibility of denying those facts, we presume. The extremist advocate of silver has no conceivable ground of complaint against the consideration shown towards the white metal by the mints of Europe and America for purposes of subsidiary coinage. But, in truth, the question of subsidiary coins is not at all material in the eyes of men that advocate the free coinage of silver. The white metal needed for subsidiary coinage is purchased by governments at its actual gold cost in the open market, and the nominal augmentation of currency value that it acquires after coinage represents no profit whatever for holders of silver in general. Were it within the competence of anybody and everybody to carry silver to the mint and have it coined into florins, shillings, half-crowns, dimes, and so forth, these coins remaining always exchange-

able for gold at the ratio of 16 to 1, then indeed subsidiary coins would acquire a very vivid interest in the eyes of silver-miners. But, of course, nothing of the kind is possible under existing financial systems. Mr. BRYAN and his followers, however, desire to make it possible. They would confer on any and every man the right to take silver in unlimited quantity to the mint, and have it converted into any current coin at the ratio that subsidiary silver coins now bear to gold coins. One result of that would be, as we showed in a previous article and as many financiers of recognised ability have showed, that gold would cease to circulate in the United States, that the country would become in practice silver monometallic, and that great quantities of the white metal would be transported thither to purchase commodities marketable in gold-using lands. The mechanical processes pursued at the mints would differ in no respect from those now in vogue. Gold pieces would remain exactly as they are to-day in respect of weight and fineness; silver pieces would remain exactly as they are to-day in respect of weight and fineness. The only difference would be that silver pieces, instead of being limited to a merely subsidiary rôle, would become legal tender to an unlimited extent, retaining in their extended use the nominal gold value that they now possess in their restricted subsidiary function. We have here stated the case so as to include the subsidiary coinage, because the difficulty of following "X's" arguments seems to arise chiefly from his confounding subsidiary silver coins and silver coins in general. "To establish by law," he writes, "that 32 oz. of silver shall be minted to represent, or become the equivalent of, 1 oz. of coined gold, would destroy the minting value of silver bullion just one half, and take from all silver coins now in circulation one half of their nominal value." That statement seems to be greatly deficient in accuracy. "X." appears to forget that all the silver coins of silver-using countries, as China, Japan, India, Russia, Mexico, and so forth, circulate today at a gold value of one-thirty-second part (approximately) of their weight. Hence, the minting value of silver for the purposes of these coins would not be changed at all were the ratio of 32 to 1 fixed by law. As to the minting value of subsidiary silver coins, their fate can not be settled in the cursory fashion adopted by "X." The governments that issued them originally are responsible for their value. In the case of such of them as might be invested with the status of large legal tender, it would evidently be necessary to double (approximately) the weight of fine silver that they now contain; but the loss thus incurred must obviously devolve upon their issuers, not upon the private individuals in whose hands they might happen to be found at the moment of the ratio's legal enactment. In the

case, again, of subsidiary silver coins invested with very limited legal-tender status, no change of weight would seem essential, for, being virtually mere tokens, a discrepancy between their bullion value and their nominal value in terms of gold need not cause any special inconvenience. At any rate, it is plain that the sweeping conclusions of our correspondent are very misleading. And precisely the same considerations, *mutatis mutandis*, apply to his reasoning in the matter of the ratio of $\frac{1}{2}$ to 16. "To coin $\frac{1}{2}$ of an oz. of gold," he says, "into coins—call them what you may, sovereigns, dollars, napoleons, ducats or thalers—that will pass concurrent with silver coins at the ratio of 32 to 1, would not disturb the present nominal value of the silver coins of the world, but would double the nominal value of all coined gold and gold bullion. The sovereign would be re-coined into two sovereigns and the twenty dollar pieces into two twenty dollar pieces." Yes, the sovereign would be re-coined into two sovereigns, and the twenty-dollar piece into two twenty-dollar pieces—though what could be the object or what the benefit of such a minting vagary we can not perceive—but the divided sovereigns and twenty-dollar pieces would buy only one half the quantity of silver that the bullion contained in the whole coins now exchanges for, and would possess only a moiety of the latter's general purchasing power. Holders of gold would not profit one cent. by any change whatever in the dimensions of current gold coins so long as the ratio of gold to silver remained unaltered. Here, again, our correspondent seems to confuse the nominal value of gold in terms of subsidiary silver coins and its real value in terms of silver bullion. It is true that if the British Government resolved, by reducing the size of the sovereign, to bring about equality between the bullion value of the coin in terms of grains of silver, and the number of grains of silver contained in eight half-crowns or twenty shillings, twice as many so-called sovereigns—approximately—as there are at present in England would result from the operation. But the purchasing power of eight half crowns or twenty shillings would immediately be reduced by one-half, so that the owner of the divided sovereigns would be no richer than he is now. Neither holders of gold nor holders of silver would be affected in any way. Truly, we must apologise to our readers for devoting space to such rudimentary propositions, but "X." refuses to be content without an answer, and appears to construe our silence in the sense of a desire to avoid the question. We are entirely at one with him in advocating the re-monetization of silver, but it is impossible for us to approve the heroic measure contemplated by the American silver-men, or to regard without extreme uneasiness the commercial and financial confusion into which their scheme would plunge the whole world.

THE FORMOSA COURT-MARTIAL.

Lieut.-Colonel Masuda and Captain Furuichi have been suspended, and Major Sato and Capt. Ishizuka have been Court-martialled in Formosa, the cause of the trouble being connected with the late insurrection at Yun-lin. The public, observes the *Kokumin*, must not be betrayed into passing any hasty judgment upon the conduct of those officers. It would be wrong to stigmatize them, as some persons seem disposed to do, as guilty of cowardice. The Lieut.-Colonel received, while he was at Kagi, the news that the defence of Yun-lin was broken; that things were in the most critical condition. He hastened to the garrison, taking with him only one company of men. He succeeded in beating back the insurgents at Yun-lin and at the same time took steps to clear the vicinity of lurking Hakkas. In the meanwhile, other serious tidings reached him that the insurgents had appeared before Kagi and had surrounded it, and he was thus obliged to lead back his troops at the double to rescue that important post. Now the steps that the Colonel took to clear the vicinity of Yun-lin of Hakkas were strong and decisive; in fact he burned down houses and even killed law-abiding people. This proceeding furnished a good pretext to the Hakkas to say that, rather than be passively murdered by the Japanese, they should, as they were to die anyhow, rise against the invaders and oppose them to the death. It was this indiscreet bloodshed that provoked some of the natives to desperation, and has now led to the Colonel's suspension. The Colonel, however, is not without justification for the steps he took. He must have found it impossible to discriminate between rebels and law-abiding people, as the former frequently hid themselves in the dwellings of the latter, while the existence of such shelter exposed the troops to extreme danger, as the Hakkas entered other people's houses and used them as shelters to fire at the Japanese troops. Captain Furuichi commanded the garrison of Yun-lin when it was besieged by the insurgents, and had only one company under him. That handful of men had to encounter a body of insurgents numerically several times stronger than themselves. When a message was carried to Major Sato, who commanded Yun-lin and its vicinity, and relief was urgently requested, the Major told the Captain that he should evacuate the place and withdraw to a safer position, an injunction which he obeyed. In this respect, therefore, no blame could be laid upon Captain Furuichi. The reason why Lieut.-Colonel Masuda was suspended was more indefinite. He was said to have failed in exercising due vigilance and to have suffered the insurrection to assume formidable proportions. This officer, however, must have found it extremely difficult to keep watch over a large district with only one company of men at his disposal, especially when his want of knowledge of the native language is remembered, added to which was ignorance of the topography of the country. The conduct of Major Sato and Captain Ishizuka was doubtless open to grave censure.

RAILWAY OFFICIALS.

Mr. Mortimer Menpes, writing from Kyoto, says:—"I am amazed at the letters people are writing about the railway officials. My own experience has been very different. On my journey here from Kobe, I was obliged, owing to the floods, to go round by Nara, and the trouble the officials took to see me through was monumental. One station-master wrote instructions for me to show to the guards on the way, so that my difficulty with the language should not prove an inconvenience. Fancy such kindness on the part of railway officials in England!"

Mr. Miyamura and other promoters have applied to the Authorities for a license for the Shinano Railway (30 miles) that is to run from Iiyama-machi, Shinshu, to Inariyama-machi. The capital is fixed at yen 1,200,000.

POWERS IN THE KOREAN PENINSULA.

The correspondent of the *Mainichi* writes an interesting letter from Söul on the influence that the respective treaty Powers enjoy in Korea in matters not directly connected with politics, such as education, religion, and so forth. First as to education. There are nine Government common schools in Söul, the list of pupils aggregating 534. Public common schools are to be established in 38 localities, but these are not yet open. The common schools in Söul were opened last year, the curriculum at first being modelled on the primary school system of Japan. Subsequently to the appointment of the present Minister of Education, morals and Chinese classics were almost exclusively taught, and other subjects, as history, geography, and so forth, were more or less disregarded. The course extends for six years, three years in the lower course and the remaining three in the upper. Pupils are mostly sons of the middle class. Not only is no fee charged, but books are furnished by the school. The *Song Kuyu Kwan* is an institution where the old classics are taught and where pupils, about 30 in number, are inculcated into the doctrines of the saints. The school is carried on at an annual cost of 2,000 yen, which, it is said, is secretly obtained from the fund set apart for normal and common schools in Söul. It is decidedly an institution that is out of date. The normal school in Söul was established not long ago to train common school teachers. The course is six months, and the first batch of graduates was turned out last June. The teacher is Mr. Takami Kame, a Japanese, in the employ of the Korean Government. The fixed number of pupils is forty, and it is believed that the school will not admit any new pupils. The English Language School was opened about nine years ago and is a most flourishing institution, the number of pupils reaching one hundred. There are two English teachers and a few Korean assistants. The French Language School, also under Government control, was started in January last, and has 34 pupils, under the direction of M. Martel and Korean assistants. The Russian Language School was opened in May last, and the 40 boys that attend it are taught by Mr. Nicolai Vilikoff (?)—who receives a monthly salary of 200 taels—and Korean Assistants. The Japanese Language School was opened in the summer of 1892, and has 45 boys, who receive lessons from Messrs. Nagashima Ganjirō and Yoshida Tadasu, with Korean assistants. Last year and the year before, the scholars numbered 150. The course extends to three years, and a general education is given. A branch school of the last-named is established in Ninsan, but it has only about 30 boys. Fusan has a private school organized on the same lines as the Government institution in Söul. But by far the most flourishing private school is the *Mai-chai-hak-tang*, established by two American missionaries in Söul, the Revs. Messrs. Appenzeller and Bunker, who have several assistants. This school has no less than 177 boys, divided into 106 for the English-language course, 60 for the Chinese, and 6 for divinity. The school is supported by the American Methodist Church Mission Board, and the tuition is free. It is said, however, that the Korean Government bestows upon it a subsidy at the rate of 1 Korean yen per month per pupil. The institution was opened in 1888, and promises to continue with increased prosperity. There is in Söul a private school established by a Japanese, Mr. Kojima Kesatarō, but it has only 30 boys and is a somewhat insignificant establishment. Coming to religion the same correspondent says that there are four American missionaries of the Methodist Church, Messrs. Bunker, Appenzeller, Bostick, and Hulbert, the last being the editor of the *Korean Repository*. There is also one other American missionary belonging to the Baptist Church, Mr. Mitchell, an Englishman, is the sole representative of the English Episcopal Church in Söul. The above churches have five American missionaries with them as itinerant preachers in

the interior. The Roman Catholic Church enjoys the largest influence in Korea, counting no less than 60,000 believers, while it employs several hundred missionaries, foreign and native. The Greek Church does not undertake the business of evangelization. The Hongwanji has its temples at Söul and at the three open ports, but the priests of those temples do not preach to the Koreans. The American missionaries now occupy a very peculiar position in the Peninsula, and are more influential in politics than in religion. It seems as if they hold the Korean Court under their control. With regard to business, the Russians and Americans enjoy the lion's share, leaving the fisheries to the Japanese.

THE SÖUL-FUSAN RAILWAY AFFAIR.

The Söul-Fusan railway construction problem, writes the *Yomiuri*, now constitutes one of the tests by which to gauge the foreign policy of the new Ministry. Public attention is now rivetted on the subject, and people are anxious to see what attitude the Government is going to assume with regard to it. A section of the projectors of the railway hold very strong opinions on the matter. They argue that, the construction of the railway having been already determined upon by a provisional agreement concluded between the two countries in 1894, only the conditions bearing upon its construction remains to be settled. Even that is needless, as the conditions relating to the construction of the Söul-Ninsan Railway by the Americans and the Söul-Wiju line by the French have already been agreed upon, and Japan is entitled, by virtue of the most favoured nation clause, to make use of those conditions in the laying of the Söul-Fusan Railway. Therefore, should Korea endeavour, by one pretext or other, to evade the provisional agreement of 1894, Japan should disregard all objections, send out experts and coolies to Fusan, and start the work from that point towards Taiku. Such a proceeding being merely the adoption of the existing agreement, could not be described as arbitrary. Some jurists declare that Japan, as compensation for the breach of the convention of 1894, should occupy an island on the coast of Korea, but such a troublesome step need not be taken, as Japan is entitled, by the agreement concluded between the two countries, to construct the railway, and, in virtue of the most favoured nation clause, to adopt the conditions already granted to other Powers.

The same paper states that as Mr. Hara, now on his way home from Söul, is understood to desire appointment to another post, Mr. Oishi, ex-Japanese Minister in Korea, will be appointed to succeed him. Evidently the Korean Government is considerably perturbed in connection with this railway construction problem. The *Yomiuri* publishes two telegrams wired from its Söul correspondent, under date of the 4th inst., one saying that the sudden departure of the Japanese Minister has caused the Korean Government to entertain apprehensions, so that it has taken trouble to make the Japanese residents understand that another Cabinet council will be held to discuss the railway question. The second message says that Mr. Hara has refused to accept a resolution from the Korean Foreign Office on the railway construction affair, the resolution being to the effect that the question should be deferred till the suppression of the local insurrection.

ART EXHIBITIONS.

The Japan Society of Oil Painters, of which the President is Prince Nijo, opened its annual exhibition of paintings on the 25th of September in Hall No. 5, Ueno Park, Tokyo. The exhibition will remain open until the 31st instant.

The Japan Fine Art Society, which is under the presidency of Count Sano, will open its autumn exhibition of works of ancient and modern art on the 10th instant, in its galleries, Ueno Park, Tokyo. As the number of exhibits is unusually large this year, the galleries will be open for a private view by special invitation on the 9th instant, from 8 a.m. to 4 p.m.

JAPANESE PEDLERS IN THE INTERIOR OF KOREA.

Japanese pedlers in the interior of Korea, writes the Söul correspondent of the *Shogyo*, are now in a very wretched plight, in consequence of the defective Korean policy of Japan and the doings of those pedlers themselves. When the pedlers travelled in the interior for the purpose of trade they used to call upon the Headmen of towns or districts and compel them to act as their agents and to even demand lodging and refreshment at their houses. They would then frequently entangle themselves in quarrels with the native merchants, and from their ignorance of the manners and customs of the people and a want of knowledge of the vernacular, would give such a shock to the feelings of the Koreans as to ultimately bring upon them the contempt of the people. Some pedlers did not scruple to pose as medical practitioners and in that way extorted money from unsophisticated folk. No small number of vagrants prowled about the country, and, pluming themselves on the victory Japan had won over China, would bully the natives. Such conduct created a very bad impression of the Japanese as a nation in the minds of the simple folks in the interior, the result being that the credit of Japan, and especially of Japanese pedlers, is entirely gone. The unpopularity of the Japanese, traceable to the sale of shoddy goods, is even more striking. *Holan*, a preparation made by Messrs. Morita, of Tokyo, is the most popular drug known in Korea, and its fame is widely spread throughout the Peninsula. In Ninsan alone there are three Japanese establishments where spurious *holan* is made. The innocent natives were at first easily imposed upon and bought the counterfeit article at the same price paid for the genuine. This knavery was soon discovered, and so utterly worthless has the spurious drug proved to be, that its price declined with alarming rapidity, till one tin fetched no more than one *sen*. The result is that the credit of the once popular *holan* has vanished, and no one now speaks of it except in terms of derision. As if to complete the discomfiture of Japanese drugs and drug-sellers in Korea, foreign missionaries are now administering genuine medicines *gratis* to the natives, and the striking contrast between foreign and Japanese drugs both in price and efficacy has entirely deprived the latter of what popularity they formerly enjoyed. The position of Japanese cigarettes is no better, the trouble arising from the same cause. This is the more regrettable, seeing how much the Koreans are addicted to smoking, and how, owing to the failure of the tobacco crop this year in the Peninsula, there must be a large quantity imported. Matches, made in Osaka, are in the same category, and the Koreans are obliged to use matches made in China.

FORMOSA WANTS.

A correspondent writes:—"Reading what has recently appeared in your columns about Formosa, and arguing from my own observations there, I think the situation, so far as the Japanese are concerned, may be summed up in this—there is need of more police, especially to look after the roughest classes of the Japanese themselves, and every effort should be made to lessen the demonstration of militarism." These suggestions seem altogether in point. They have been made frequently by leading vernacular journals in Tokyo, but not in the outpoken fashion adopted by our correspondent. On the contrary, the impression conveyed by the writing in Japanese newspapers has been that the Chinese inhabitants of Formosa stand in want of more efficient control, and it has never been suggested, so far as we know, that private soldiers and Japanese coolies behave in a manner calculated to bring the administration of the island into general disfavour. There is reason to believe, however, that this fact has now been appreciated by the Authorities, and that the truculent swagger of the coolie, and the miniature god-almightiness of the soldier will cease to be prominent traits of Japanese manners.

SHIPPING NEWS.

Of the four new lines of navigation—Bombay, Australia, Vladivostok, and Korsakoff—for which special subsidies are to be given by the Government, the Nippon Yusen Kaisha has offered to undertake the first two, while the others have been given to Mr. Oya Hichibei. The following is a brief account of the undertakings:—

Yokohama-Adelaide: one service a month from each of these ports, to be opened from the 3rd inst. The ports to be called at either on the outward or on homeward voyage are:—Kobe, Nagasaki, Hongkong, Thursday Island, Townsville, Brisbane (?), Sydney, Melbourne. Subsidies: 175,109 yen in the current fiscal year; 350,218 yen per annum from the next to the 33rd fiscal year.

Yokohama-Bombay: one service a month from each of these ports, to be opened from the 10th inst. Ports to be called at either on the outward or on the homeward voyage are: Kobe, Hongkong, Singapore, Colombo. Subsidies: 99,142 yen in the current fiscal year; 198,285 yen per annum from the next to the 33rd fiscal year.

Niigata-Vladivostok: one service a month from each of these ports, to be opened from the 1st inst. Ports to be called at: Niigata, Hakodate, Vladivostok. Subsidies: 5,865 yen in the current fiscal year; 11,730 yen per annum from the next to the 33rd fiscal year.

Hakodate-Korsakoff: one service a month from each of these ports, to be opened from the 10th inst. Ports to be called at: Hakodate, Otaru, Korsakoff. Subsidies: 3,161 yen in the current fiscal year; 6,320 yen per annum from the next to the 33rd fiscal year.

The Kwansei Steamship Company that was started last year in Osaka with a capital of 1,000,000 yen, is likely to acquire an unenviable reputation as the pioneer of companies organized without any definite prospect of success, and therefore destined to burst like bubble when the present temporary prosperity passes away. The Company had to encounter various adverse circumstances even at its birth. Just at that time, a number of steamship companies already existing in Osaka organized themselves into a league, and then announced that any one desirous of joining must pay for admission at the rate of 2 yen per ton of the steamers owned. The Union announced, at the same time, that a new comer would not be entitled to share the profits accruing from the business of the Union until after the expiration of one year. As this amounted to a challenge of competition, the new Steamship Company was obliged to take up the gauntlet, and for some time competition ensued between it and the Union, resulting in the discomfiture of the former. The jealousy of the Union went ever further; the new Company was sued on the ground that it had violated the provisions of the Commercial Code in connection with registration. The Company had been imprudent enough to start business with no ships of its own, and was therefore under the necessity of chartering them. Various other mishaps that befel the Company deterred shareholders from paying their calls. The condition of affairs therefore went from bad to worse, and Admiral Isobe, the President, and two or three Directors, resigned. From the beginning of the business to the present, the Company has incurred a loss of 30,000 yen, or about 1½ yen per share. The remaining Directors have determined to call an extraordinary meeting of shareholders on the 5th prox., to discuss what steps should be taken at this juncture. The debit and credit account shows that, had the Company carried on business with ships of its own, it might have made fair profits.

Ship-owners are now placed in a very trying situation, writes the *Shogyo*, owing to the extraordinary fall in freights since last spring. Freight from Bombay to London, that had stood as high as 15 shillings per ton, is now reduced to 2s. 6d.; freight from London and Singapore has fallen from 25s. to 7s. 6d.; freight Hongkong to Japan, from 2 to 1 yen. The cause of this remarkable fall must be sought in the excess of supply over demand, due to the sudden additions to the mercantile fleet of Japan since the War, and to the lack of cargo for return voyages of European steamers coming to China and Japan.

PROFESSOR DR. LÖNHOLM.

The Biblical type of scepticism is a Thomas that will not believe even the evidence of an angel unless it be confirmed by his own eyesight. We are reminded of that record by the treatment that has been extended to Dr. Lönholm. In his recently published pamphlet on the Civil Code of Japan, he ventured to express the opinion that the new laws were good, that he "saw no reason why Japanese Judges should not be able to apply them in a manner satisfactory to foreigners." The reception accorded by a local English journal to this declaration is that "University Professors move only in a calm academic atmosphere;" that they "know nothing of the vexations and victimizations which persons in trade unfortunately are made to suffer;" and that Dr. Lönholm would "have done better to confine himself to an exposition of the law as settled, rather than to have ventured upon an expression of views liable to question." Dr. Lönholm has for several years been a Professor of Law in the Imperial University; in his own country he holds the office of Judge; he is an accomplished Japanese scholar, and his position has brought him into close contact with hundreds of the men that are now serving, or will hereafter serve, as administrators of Japanese law. It would scarcely be possible to find an expert better qualified to speak of the competence of Japanese Judges and the character of Japanese laws, and certainly nothing could have been more modest than his manner of speech. Yet he is insolently discredited as ignorant of the practical side of his subject, and is haughtily recommended to confine himself to an exposition of the law as settled, instead of venturing upon the expression of views liable to question. Moreover, these criticisms are penned by a journalist incapable of deciphering a line of the Japanese laws that Professor Lönholm reads with facility; knowing only by slenderest hearsay one or two of the Japanese judges and barristers, scores upon scores of whom Dr. Lönholm has instructed or associated with; and himself possessing nothing whatever of the legal training that it has been the business of Dr. Lönholm's life to acquire. Such purblind intolerance of adverse opinion is supremely stupid. These are the kind of exhibitions that have brought the opponents of Treaty Revision into perpetual ridicule, and effectually discredited their cause.

RUSSIAN OFFICERS IN JAPAN.

The *Osaka Asahi* is responsible for the following story said to have emanated from Colonel Tsuchiya, Chief of the Second Section of the Central Staff Board, who lately returned from a trip to Vladivostok. Russia, he says, has sent over ten staff officers disguised as traders to Japan. These disguised officers, either by undertaking trips through the interior on ordinary passports, or by having the vernacular papers translated for them at the Legation, are said to have gathered information relating to the general aspects of Japan and the scope of the expansion of the national armaments. Such conduct is despicable under the circumstances. When an official of a treaty Power visits Japan publicly with a view to taking observations of the country and people, the Government receives him with due respect and affords him every convenience. It is exceedingly regrettable that Russia does not take these straightforward methods, and chooses to send officers in a secret manner. Japan, in matters of this kind, acts differently. Officers despatched to a treaty Power, such as attachés, travel as ordinary tourists, but as soon as they arrive at their destination they resume their uniforms, and acquaint the respective Authorities with the nature of their business. That was the system that the Colonel himself adopted on his last trip to Vladivostok. Therefore the Generals, officers, and their subordinates received him with cordial hospitality, giving banquets to the Colonel and his party. As the period allowed him was only 30 days, he could only proceed some 70 miles into the interior north-east from Vladivostok. He there-

fore had no time in which to return the friendly attention of the Russian officers. To us (*Japan Mail*) the above story seems incredible. The Russian Legation in Tokyo can furnish all the required information. No occasion exists to send disguised officers.

THE RUSSIAN OFFICER CANARD.

We reproduced in our last issue, from the columns of the *Osaka Asahi Shimbun*, an incredible story about Russian officers said to have been sent to Japan in disguise, for the purpose of spying, and to be receiving assistance in their project from the Russian Legation in Tokyo. The extravagance of the tale could scarcely fail to strike any thoughtful person, but as the *Asahi* openly alleged the authority of Colonel Tsuchiya, a well known Japanese officer, who returned recently from Vladivostok, it seemed advisable to institute some inquiries. The result has been to confirm the absolute baselessness of the rumour. All the Russian officers that have hitherto visited Japan have come either officially, in which case their advent was perfectly open, or as simple tourists without any official mission whatever. The passports issued to these officers invariably contained a statement of their military rank, as furnished by the Russian Legation. It is scarcely conceivable that Colonel Tsuchiya, who speaks of the hospitable reception given to him at Vladivostok, can have made himself the propagator of such absurd canards, but he would certainly be acting wisely did he publicly dissociate himself from the *Osaka* journal's most offensive falsehoods.

DEPARTURE OF THE "YAMASHIRO MARU."

On Saturday, at noon, the N.Y.K. steamer, *Yamashiro Maru*, Capt. Jones, left Yokohama as the pioneer vessel of the Nippon Yusen Kaisha's new Australian line. Prior to the departure of the steamer, a cold collation was served in the handsome saloon, and an opportunity was afforded of presenting an address to Mr. Kondo Rempai, President of the Company, by the Tokyo and Yokohama Traders' Association. This was introduced by Mr. Ikeda, of Tokyo, and Mr. Otani Kahei, of Yokohama, in most felicitous speeches. Mr. Kondo made a lengthy reply, in which he referred to the new lines to Europe, Bombay, Seattle, and Sydney that have recently been started by the Yusen Kaisha. He trusted that their efforts would meet with success. They would do their best to merit success, and should these efforts be appreciated by shippers and travellers, then the flag of the Yusen Kaisha might eventually be seen in other parts of the globe. Three ringing *Bansais* were then given for the Emperor, for Mr. Kondo, and for the success of the Nippon Yusen Kaisha's Australian line, on the motion of Mr. Otani Kahei.

The *Yamashiro Maru* is a handsome vessel, built by Sir Wm. Armstrong and Company about twelve years ago. She is constructed for the purpose of serving as an armed transport in time of war. She was in a spick-and-span condition on Saturday, and with an abundance of flags floating—the Union Jack flew at the fore—presented a fine sight as she steamed through the harbour entrance attended by the noisy salutes of many steam launches and the discharge of some effective day-fireworks. The *Yamashiro Maru* has been specially fitted up for stowage passengers, and it is expected that this will be a lucrative part of her work in the years to come. Among her passengers on Saturday were Mr. Barrie, Superintendent Engineer of the Company, for Kobe; and Baron Harden Hickey, for Sydney.

The Russian military force in Eastern Siberia continues to be increased, and all formations are on a strong war footing. There must now be some 40,000 men under arms in that district. A new reserve battalion has just been created for Chita and the Trans-Baikal of the same strength as the battalion at Stretensk and a regiment of five battalions for Vladivostok.

KOREAN NEWS.

The change of Ministry in Japan has caused a panic in Korean political circles. On the 23rd ult., a message reached Sōul from the Korean Minister in Tokyo to the effect that Count Kabayama had been gazetted Home Minister and Count Okuma Foreign Minister. Evidences of considerable perturbation on the part of the Korean Government were, at once, apparent. They held a special council and came to the conclusion that, as the new Japanese Cabinet comprised warlike Satsuma men and a strong-minded diplomat like Count Okuma, energetic assertion of Japan's rights, and strong pushing of the Sōul-Fusan Railway question must be expected. The problem of damages for destruction of Japanese life and property during the recent rebellion would also come up for speedy solution, and if Korea showed any recalcitrance, strong measures must be anticipated. These apprehensions were entertained not by the Korean Cabinet only, but also by all publicists. It was even rumoured that Japan had already despatched 5,000 troops, and that they were landing in Korea by detachments. In short, Sōul presented for a short while a scene of unusual consternation as if a war had actually broken out. A certain Korean politician, reputed to be comparatively well informed as to the general situation of affairs, and to hold impartial views, is said to have delivered the opinion that though an actual rupture would not take place so easily as some alarmists desired the public to believe, still, since the refusal of a charter for the construction of the Fusan-Sōul railway was a manifest breach of promise on the part of Korea, grave consequences must overtake the country should it persist in rejecting the demands of Japan. It seems, therefore, that even the Korean Government are really cognizant of the justice of Japan's claims, and appreciate that the refusal is really a violation of an agreement concluded between the two States. The panic-stricken Ministers were at a loss what course to adopt, and were resolved to recall the Korean Minister, so as to obtain from him authentic intelligence about the new Japanese Government. In the meanwhile, letters and telegrams reached Sōul from the Korean Representative in Tokyo, who declared to his Government that he could no longer preserve intimate relations in Japan, or indeed, accomplish anything at all. Further, he had many things to report about Japan, and he therefore wished for leave to return home. This request was welcome to the Cabinet, and a letter of recall was at once forwarded.

As a sign of the altered attitude of Korea toward Japan, the *Yomiuri's* correspondent, from whose letter the above facts are taken, mentions that the Korean Foreign Office sent an official to the Japanese Legation on the 24th ult., apologising for the conduct of the Government of Haicheng towards the Japanese merchants residing in that town, averring that the Governor and his accomplice, the Headman of the District, had been severely reprimanded for their misconduct, and ordered to revoke an arbitrary notification issued by them. The trouble related to an unjust seizure of vegetables belonging to Japanese merchants.

The relation between Russia and Korea shows indications of a change, the former being now apparently inclined to assume the position of an outsider. It is rumoured that this may be the result of some alteration in the Korean policy of Russia, in consequence of the death of Prince Lobanoff. Nor is Korea as cordially disposed towards Russia as she used to be. The Cabinet show signs of disliking the great Northern Power, and its representative Mr. Waeber. The extraordinary privileges obtained by a Russian merchant from Korea in the matter of felling and planting trees in the northern districts of the Peninsula, is one of the chief causes that have induced the adoption of such an attitude towards Russia. The Koreans are far more sensitive to questions of individual or national interest than to those affecting the great principles of justice or national prestige, so that the King's seeking shelter in the Russian Legation does not evoke any such outburst of patriotic sentiment as would

be the case in other countries. Since the Russian Representative has secured for his countryman the concession about Korean forests, however, the Koreans profess that they have detected the ambitious motives of Russia, and whenever a number of Cabinet Ministers meet, they do not cease to speak censoriously about her power and her Representative.

No letter from Sōul to a vernacular paper is without reference to applications from one or more Cabinet Ministers for permission to resign. Correspondence received by the *Hochi Shimbun* quotes quite a number of such applications. It is customary in Korea to nominate important officers of State without any previous understanding with the nominees. The recent appointments of Kim Pyōng-si to a seat in the Cabinet, and of Min Yong-chun as President of the Privy Council, were made in accordance with that old practice. When the two Korean statesmen arrived in Sōul on the 25th ult., to be present on the anniversary of the death of Queen, couriers from the Court visited their temporary residences to inform them that they had been nominated to office. Both submitted documents asking that they be relieved from such compulsory service, Min even retiring to his country villa. The three Ministers of Home, Foreign, and Financial Departments have also asked the King repeatedly for permission to resign, and the resolution of the Foreign Minister is reported to be specially strong. The fact is, Li is now placed in a very unenviable situation in connection with the Sōul-Fusan Railway affair. When he tries to shun Scylla, the King, he is sure to fall into Charybdis, the Japanese Government. It may be noted in this context that the Educational Minister has incurred the displeasure of foreign residents by having written, or caused to be written, an essay calumniating Christianity. He has just been replaced by another statesman.

Another correspondent gives a detailed statement of the Haicheng trouble. It seems that the notification referred to forbade the sale of medical roots to foreign merchants. It was with the view to strictly enforce this arbitrary measure that parcels owned by Japanese were seized, irrespective of their contents. The Court despatched officials and tried to monopolize the products in question, to the great loss of farmers and merchants, for a bundle worth 26 *kwamme* of Korean coins under ordinary circumstances, did not fetch more than 13 *kwamme* after the issue of the notification, and even then only two-thirds of the price was paid in cash. The revocation of the notification greatly relieved both natives and aliens.

FORMOSAN AFFAIRS.

Prof. Burton, Adviser, and Mr. Hamano, expert, of the Governor-General Office, returned to Japan on the 25th September, after having investigated the questions of water supply, sewerage, and other hygienic affairs in Formosa. They visited Taipei, Keelung, and Tamsui. Both were surprised at the extreme filthiness of those places, as also the lack of wholesome drinking water. It is, in their opinion, no wonder that the island should be so unhealthy to immigrants. A supply of good drinking water is a question of urgent necessity. The trouble is how to get this supply, as no suitable headwaters are to be found in the vicinity of the Formosan towns. The only possible plan will be to construct a huge water reservoir in a retired portion of each township, and to collect rain water; the rainfall is very heavy in Formosa. Mr. Hamano told a representative of the *Kokumin*—from which we quote these statements—that an hour's fall in summer would measure 6 inches. However, the construction of reservoirs must be deferred to some other time and means must be devised to furnish good water as quickly as possible to the inhabitants. At Taipei it was discovered that a boring of 100 ft. would reach a subterranean water basin, and several artesian wells are found within the premises of the castle grounds of Taipei, the water from the wells being tolerably palatable. The excess of demand over supply soon exhausts the

water in the daytime, while at night it overflows and is wasted. To prevent this waste, an iron water tank must be constructed around each well. The well and tank would cost between 2,000 and 3,000 *yen*. Sixty or seventy such wells would furnish a sufficient water supply to the inhabitants of Taipei. Professor Burton and Mr. Hamano consider Taichu as the town best situated in respect of water supply and also from a hygienic point of view, and are of opinion that when communication with the interior is improved, it will certainly grow into an important centre of commerce in Formosa.

The *Kyōiku Jiron* (an Educational weekly journal) prints an interesting account of the progress of education in the new dominion, the facts being supplied by Mr. Izawa Shuichi, Chief of the Education Bureau of Formosa, now in Tokyo. A first batch of forty-five teachers went to Formosa some time ago. These took up at once the study of the vernacular, and were subsequently distributed to 14 schools in the island. These schools were to open from Sept. 1st. The pupils admitted at the schools are all natives and two or three boys are to be brought from each principal town. On graduation, one portion will be appointed clerks in city or village offices, and the other will have to devote themselves to the duty of teaching Japanese to the natives. Mr. Izawa has great hope for the success of these schools, his opinion being based on what he saw or heard about the enthusiasm of the natives in the cause of education. At Giran, for instance, where insurrections repeatedly broke out, so that teachers who volunteered to undertake educational duties went thither ready to die at their posts, the school presents a flourishing appearance, the natives in the vicinity looking up to their masters as oracles and asking their advice in everything. The pupils are earnestly absorbed in their lessons. Indeed, progress is so rapid that Mr. Izawa is much surprised. At Byoritsu similar enthusiasm prevails. So enthusiastic are the natives to acquire a knowledge of Japanese that the Educational Board was obliged to dispense with the age-limit. According to the by-law for those schools, students ought to be restricted to persons under 30 years of age. But the natives in the vicinity would not hear of any such restriction and wished to have it dispensed with. The Headman of the town said that in order to set an example to the natives he desired to be admitted. His wish was complied with, and he is now applying himself with admirable diligence to the study of Japanese. Mr. Izawa tells another interesting story relating to Koshun. When the school was opened at that town, influential aboriginal chiefs were invited to be present. A few days after, the patriarch of the aborigines came to the town and told the Chief of the District Office that the aborigines desired to have a school of their own. He petitioned, therefore, as representative of the 36 tribes living in the vicinity, for two Japanese teachers to be sent, and that towards the expense of building a school-house a sum of 30 *yen* should be granted. The request was at once acceded to, and Mr. Izawa heard, before he left Formosa, that one of the two Japanese teachers had already proceeded to the place and that the school-house was being built. That the aborigines should be disposed toward acquiring knowledge, reflects credit on Mr. Sagara, Chief of the District Office. When he was appointed to the place, he proceeded unarmed over the savage frontier and travelled through the district, thereby removing any suspicion the aborigines may have had toward their new rulers. He spoke freely with all the influential personages and strongly impressed upon them the necessity of becoming peaceful and industrious subjects of the Emperor. Mr. Izawa says that 75 more teachers are to be sent to Formosa shortly.

The work of doubling the Kobu Railway line has been postponed indefinitely.

The number of dysentery cases in Tokyo-fu are reported as follow:—1 in Koishikawa-ku; 1 in Ebara-gori; 1 in Kita-toshimagori; 1 in Nishi-tama-gori; 1 in Kita-tama-gori.

CHINESE ITEMS.

From the provinces of Anhui and Hukuang reports have been forwarded to Peking, describing the great hardships suffered by the people on account of inundations. In both cases a water-spout is mentioned as the prime cause of the trouble. The Emperor simply ordered the Governor of Anhui and the Viceroy Chang to devise means for alleviating the distress and for carrying off the surplus water. His Majesty is not particularly helpful, it must be confessed.

At a trial in the Shanghai Police Court, Mr. Bancroft Joly, the Police Magistrate, interpreted the law on assault to mean that if one even called a man a name, or addressed an abusive word to him, or pointed a finger at him, it constituted an assault. At that rate litigious folks would find plenty of opportunities for bringing actions.

Another case of violent assault against a foreigner is reported from China. It occurred at Pootung, near Shanghai, and the victim does not seem to have given any provocation whatever. He was assailed by a party of roughs and severely handled, but managed to effect his escape, losing only his dog, which was cruelly killed. Several outrages of a similar nature are said to have been committed in the same district.

As an illustration of the popular administration of justice in China, the case of a man that stole a farmer's wife at a place some 300 miles inland from Hankow, is instructive. The thief sold the woman for 100 ozs. of silver which appears to be about the tariff in mountainous districts of China. He was caught by the husband of the woman, and two other men, who carried him to a particular tree near a Buddhist monastery and strung him up by his wrists tied behind his back so that his body was bent forward and his toes barely touched the ground. In that position he was hammered with a large stone at the base of his spine and on his ankles. This was by way of preliminary to carrying him to the magistrate's yamén, where he was doubtless sentenced to decapitation.

It may interest the Japanese to know that the cotton-spinning mills erected in Shanghai are intended to manufacture yarns of sizes and counts such as have not been shipped from England or Europe for twenty years. The demand for these particular yarns has hitherto been supplied by India, Japan, and Chinese domestic labour. The field in China is said to be enormous and in addition to the four mills now in course of erection, two hundred spindles more are contemplated.

The population of China has always been a moot question. Formerly 400 millions was the number confidently stated, but during recent years doubts have been entertained whether 230 millions would not be nearer the mark. From investigations lately conducted, it appears that in 1741 an Imperial Edict was issued to the Governors of all the provinces throughout the Empire requiring them to collect and forward records of the population from year to year. The order was not continuously obeyed, but its immediate results, as stated in a memorial from the Board of Revenue in 1886, show that the population in 1741 amounted to 303½ millions in 13 provinces. If to these the remaining provinces be added, a total closely approximating 400 millions is obtained. Thus it may henceforth be assumed that the latter figure is well within the truth.

There is perhaps a hope that the anti-foot-binding movement in China may at last bear practical fruit. Whatever agitation might be fomented by foreigners could scarcely have much effect unless it were taken up by influential Chinese, and that is what has happened in Suifu, in the province of Szechuan. A literary graduate, together with five other prominent citizens of the place, placarded the walls of the city with a manifesto while the district examinations were recently in progress, and the place was consequently full of students. The manifesto, after quoting Confucian precepts in the sense that it is criminal for men to injure their own bodies, and after referring to an edict issued by the first Emperor of the present dynasty by which foot-binding was declared illegal, goes

on to speak of the terrible agony inflicted on girls by this barbarous custom which, the writers justly say, is a hundred times a worse punishment than that meted out to robbers. Such a manifesto emanating from such a source is not unlikely to produce a good effect.

The Hunan local authorities are reported to be taking active steps to commence mining operations. They have established a mining bureau in the capital of the province and have ordered a quantity of foreign machinery.

In the course of a newspaper controversy that recently took place in Shanghai, a writer signing himself "Britisher" makes the singular statement that although Japanese merchants keenly realize the advantages of Shanghai as a site for cotton manufacture, their Government prefers to keep them at home for the present, awaiting the issue of Russia's movements and of the commercial treaty negotiations. "Britisher" evidently has not the beginning of an idea as to the relations existing between merchants and officials in Japan. The former would certainly take the latter's advice if it seemed to tally with their own interests, but otherwise they would be no more influenced by it than they will be by "Britisher's" misconceptions.

The Shanghai Chamber of Commerce has addressed to the *Doyen* of the *Corps Diplomatique* in Peking a most able, and at the same time liberal, despatch in which China's need of obtaining a larger Customs revenue is fully recognised. The Chamber frankly expresses its consent that the scale of import duties should be increased, but urges by cogent reasoning that duties upon exports should be either abolished altogether, or largely reduced.

Another blow has been struck at the erroneous pretence that not the Shimonoseki Treaty, but the representations of the foreign Ministers in Peking, secured for foreigners the privilege of carrying on manufacturing industries in China. This time the testimony comes from the Ministers of the Tsung-li Yamén. In a report addressed by them to the Throne on the 11th of August last they say:—"After the conclusion of the Shimonoseki Treaty, foreign industrialists of every nationality became able to manufacture raw products in China." Surely if any certain knowledge exists anywhere about the influence to which the Chinese Government yielded in this matter, such knowledge ought to be in the possession of the Tsung-li Yamén.

Information has now been published showing the ideas entertained by the Chinese Authorities as to the tax that ought to be imposed upon goods manufactured in China. In a report addressed to the Throne by the Ministers of the Tsung-li Yamén, they urge that, while leaving to Viceroy and Governors of provinces the business of determining the transit dues and other local imposts on raw products on their way from the place of production to the factories, such products after manufacture in China, whether by Chinese or by foreigners, should be taxed to the extent of 10 per cent. in all; that is to say, 5 per cent. by way of export duty, and 5 per cent. to cover duties on transit from the manufactory to their destination. It may sound strange to speak of "export duty" in the case of goods manufactured in China for sale to the Chinese, but the idea of the Tsung-li Yamén Ministers is to include in a single category silk filatures for export abroad as well as cotton yarns for sale at home. In short, they regard the factory as the place of production from which manufactures must be "exported" to reach a market whether domestic or foreign. Now it appears that the imposts—in the form of *likin* and *loti-shui*—already levied upon raw silk at the place of production and *en route* for the filatures or for a place of export, aggregate 9 per cent. *ad valorem*. Thus by the time the silk had emerged from the filatures and been placed on board ship for export, it would have paid taxes aggregating 19 per cent. *ad valorem*. In the case of raw cotton, no information is as yet obtainable about the *likin* or *loti-shui* levied at the place of production and on transit to a factory. But, of course, if the Viceroy and Governors are left to fix those charges at will, they can easily choke the manufacturing in-

dustry, should they be so disposed. At any rate, if the yarns, in order to emerge from the mill, have to pay a tax of 10 per cent., the prospects of the mill-owners will be greatly impaired. The Shanghai Chamber of Commerce has protested strongly against these proposals of the Tsung-li Yamén. The position taken by the Chamber is that raw cotton should be exempted from all taxation at the place of production or *en route* for the mill, and that to clear it for sale in the interior, the manufacturer should be required to pay only the amount levied on imported yarn; that is to say, a fixed sum including import duty and transit dues to any market in China. Certainly all this discussion is somewhat belated in view of the fact that the building of four cotton mills is already nearly completed in Shanghai.

Three weeks of incessant rain at the end of August and beginning of September caused great injury to the rice harvest in the neighbourhood of Chungking. The rice, a fine crop, had been cut, but the continued damp caused it to sprout before it could be threshed and stored.

Anti-foreign feeling at Chêngtu is reported to be so bad that the Roman Catholic Fathers, who have lived there for years, no longer venture to walk in the city, knowing that to do so would expose them to insults and perhaps attack.

THE INUNDATIONS.

The vigour with which the new Home Minister applied himself to the task of inspecting the inundated districts, evokes commendatory remarks from the vernacular press. His Excellency visited the suburbs of Tokyo as soon as he was gazetted to office, and after a day or two proceeded to Mino to ascertain by personal evidence the extent of the disasters that the repeated floods have caused in those unfortunate districts. After passing through the inundated region, Count Kabayama visited Gifu and there interviewed a number of the Local Assemblymen and others. The Minister addressed a few remarks to the Assembly, advising the community not to be daunted by the repeated disasters that had overtaken the district, but to exert themselves indefatigably in the task of providing means to ward off future calamities of the kind. He promised, at the same time, that the Government would extend all possible help within its power. The Mino plain, continued the Home Minister, situated at the lower courses of the Kiso, the Yebi, and the Nagara, was formed not so much by nature as by the exertions of men. It was therefore incumbent upon men to defend their handiwork from the calamity of floods. Water was their foe, the embankments their fortresses, and it was extremely important for each district, into which the plain is subdivided, to have an expert, or experts, well versed in the science of river control. Provision must be made in ordinary times against disasters. The repeated calamities that have devastated Mino are greatly due to the reckless felling of woods and the contraction of the space afforded for the drainage of storm-water. The management of forestry during the pre-Restoration days was far more satisfactory than at present. The name of Kumazawa Banzan stands conspicuous in this context, the work which he undertook to control rivers and preserve forests being a model to this day. The relaxation of the forestry control subsequent to the abolition of feudalism was at the root of the present troubles. However, though thirty years neglect of dendrological affairs had occasioned the present evils, steps must be vigorously taken to restore order in all matters relating to the preservation of forests.

The Meiji Government, observes the *Fiji*, has achieved excellent results in preserving life, as witness the radical reforms effected in law, the organization of Courts, the system of police affairs, and the control of public hygiene. The Government, however, has forgotten to show similar vigilance in preserving land, especially in connection with forests and the control of rivers. The *Fiji* metaphorically speaks of the repeated floods in recent years in the light of complaints made by the forests and rivers, in which they

seek to ventilate their grievances. The *Fiji* urges the Government to provide measures, with the approval of the Diet, to take permanent steps, after carrying out thorough investigations, in the matter. The *Nippon*, commenting on the speech of Admiral Count Kabayama, says that such straightforward remarks as these are rarely heard from the mouth of a Cabinet Minister. He frankly admits that the floods are greatly due to official mismanagement of forestry affairs.

ALLEGED POLITICAL OFFENCE.

On the 25th ult. Mr. Endo Hidekage, ex-M.P., and leader of the political association called the *Peishin-sha*, with four confidential followers, and Mr. Inomata Kinjiro, were arrested on a charge of committing an alleged political offence. Mr. Inomata joined the Japanese Army during the late War and travelled through the Liaotung Peninsula. After the termination of the War, he turned his steps towards Korea, and attempted to prevail upon the Tonghaks to join him in an expedition to the South Seas, but his plan failed. Then he proceeded to Vladivostok and took a trip through the Amoor districts, spending more than a year in those parts. What benefit he derived from these travels is not clear, but it seems that his trips did not profit him much in the right direction, for we find him this summer calling on influential personages in Kyushiu, Shikoku, and the Kei-Han districts, avowing that he was convinced of the necessity for socialistic organizations in Japan. Most of those he called upon considered Mr. Inomata's ideas premature, and declined to give any assistance to his schemes. He next proceeded towards Hokuriku and called on Mr. Endo, of Kanazawa. Mr. Endo, it will be remembered, is a notorious *soshi* demagogue, and must have found Mr. Inomata's projects highly congenial. The latter was kindly received by that gentleman, and the pair, with four followers of Mr. Endo, met at a certain restaurant in the city on the evening of the 25th ult. At about half-past 11, as these six persons were about to leave the house, a police inspector, accompanied by several constables, came in, and, producing a warrant, escorted the politicians to the Kanazawa Police Office. Their preliminary examination having concluded on the 28th, they were at once conveyed under escort to the High Court in Tokyo. The alleged object of these would-be socialists is said to be to persuade rich people to contribute towards a fund to be expended in various enterprises for the benefit of the destitute and unemployed, and thus, while enhancing the prosperity of the country and increasing its strength, to give work to those classes. This article is taken from the *Yomuri*, which next day had to withdraw it, as being without foundation in fact, but how much is true and how much false we can not tell.

THEATRICALS IN TOKYO.

The Tokyo Amateur Dramatic Society have announced their intention of giving a performance on the 6th and 7th of November in the Hall of the Shoreikai, which has been kindly lent for the purpose. The proceeds are to be devoted to the relief of the sufferers by the recent inundations. The Shoreikai is the place where the last performance was held, namely, the buildings of the former Engineering College at Tora-no-mon, within ten minutes' drive of Shimbashi station.

ANOTHER NAVAL OFFICER DROWNED.

We regret to have to place upon record the death by drowning of another British naval officer. The telegram containing the announcement is very brief, and no particulars are given. The unfortunate victim in this case is Mr. Henry J. Troughton, Assistant Paymaster, who was recently appointed Secretary to Admiral Oxley, from the training ship *Britannia*. The accident took place in a small lake near Seivich Bay.

THE WAR BETWEEN CHINA AND JAPAN

"The China-Japan War;" by "Vladimir."

"Heroic Japan;" by F. Warrington Eastlake and Yamada Yoshiaki.

The story of the War between China and Japan has now been told as fully as the general public cares to hear it. From a purely military standpoint, a great deal more is to be desired, but the business of collecting the accounts of the various operations by land and sea, and rendering them into a narrative for popular perusal, may be said to have been accomplished. "Vladimir" took the lead as a historian, the various fragmentary and superficial brochures published prior to the appearance of his book being unworthy of serious notice. It is not quite clear why the author of "The China-Japan War"—a dreadful title, we may remark *en passant*: fancy speaking of the "Germany-France War!"—adopted a pseudonym, for his Japanese identity was at once betrayed by his diction, and he certainly would not have impaired the popularity of his work by signing it with his own name. Be that as it may, however, he produced a timely and well compiled record of the war, not, indeed, entering into any of the deeper problems upon which battles by land and sea at this period of the world's history necessarily throw interesting light, but confining himself to a general narrative adapted to non-technical readers. His work has now been followed by a much larger volume, "Heroic Japan" the compilation of Messrs. F. W. Eastlake and Y. Yamada, whose labour in collecting and collating materials seems to have been of a most exhaustive character. Broadly speaking, the difference between the two books is that the authors of "Heroic Japan" have supplemented their accounts of the fights on sea and shore by details of individual valour and signal service, whereas "Vladimir" limits himself, in the main, to the movements of bodies of troops or squadrons of ships. Undoubtedly, Messrs. Eastlake and Yamada have done well in compiling their minute record, for although the strategical capacity of commanding officers and the tactical proficiency of troops can be understood by examining the plan of a campaign and the conduct of the forces in carrying it out, nothing can convey a clear idea of the fighting quality of the men except personal annals; and, after all, it is at least as important for the Western public to know the Japanese soldier's mettle and capacity for endurance as to learn how far the Japanese military authorities have succeeded in assimilating the systems of the Occident. Quite a multitude of incidents have been collected by Messrs. Eastlake and Yamada, illustrating the moral fibre of the men that fought in Korea, Manchuria, Shantung, and on the Yellow Sea. Many anecdotes of that nature were published by Tokyo vernacular journals during the War, and it would seem, at first sight, that by merely getting these together and translating them, the greater part of a volume such as "Heroic Japan" might have been written. So, too, Messrs. Eastlake and Yamada appear to have thought originally, but inquiry convinced them that such a perfunctory method would not meet the requirements of the case. They refer to this point in their preface:—"Upon questioning the Naval and Military Authorities in the early part of 1895, it was found that a large portion of the narratives taken from Japanese newspapers and magazines was either incorrect or else quite unfounded; and, what was still more to the purpose, a vast quantity of fine material had never been published, some of the most touching or heroic stories being quite unknown even in Japan. And so it comes that most of the brave deeds published in the present volume are now made public for the first time. Immediately on learning the real situation, the test of rigid and impartial criticism was applied to what had already been laboriously compiled, with the result that one half had to be expunged and the other entirely rewritten. The authors have often groaned in spirit on learning that what they considered their best 'bits' were untrue, or not borne out

by the facts. And we must give the utmost credit to the Army and Naval Departments for their excellent conduct in this context. Time and again have they had the authors ruthlessly strike out stories that had found ready credence the Empire over, and been quoted and requoted in the columns of the foreign press at home and abroad. Nothing has been published but actual fact; fact abundantly proved and amply supported by many witnesses." With regard to some of the narratives that have survived this critical ordeal, we are bound to say that they seem too slight for permanent preservation. But perhaps that is partly because the *éclat* derived by warlike deeds from their actual environment can never be rendered into words, however carefully chosen and skillfully marshalled. Whatever may be our doubts, however, as to the historical worthiness of some of the actions embodied in this book, there can be no question about the general impression conveyed, namely, that the Japanese soldier is a man of splendid courage, devoted loyalty, and the most ardent patriotism, and that between him and his officers there exists a bond of sympathy and affection not surpassed under any military system. It must certainly be counted remarkable that such should be the case, for the rank and file of the Japanese army at present are not taken from the so-called "fighting class" of the country; that is to say, from the *Samurai* class. In England and France, during the eras of feudalism, fighting men were drawn without differentiation from every section of the populace. Hence, when the same indiscriminate method was pursued in organizing the British standing army or inaugurating conscription in France, it was naturally anticipated that martial material not inferior to that of former times would be available. But in Japan, during long centuries, there never had been any reputed warriors outside the ranks of the *Samurai*, and when, at the commencement of the *Meiji* era, the experiment was tried of substituting general conscription for traditional selection, so that common rustics and mechanics were required to play the part hitherto monopolized by the military class only, the issue naturally attracted much curiosity. Were the Japanese a military race, or was the soldier-making capacity a faculty hereditarily bequeathed to the *Samurai* alone? That was a question to be answered; a question interesting to the whole world, for if to her intelligent and rapid assimilation of Occidental strategy and tactics Japan could add really soldier-like material, her national importance must be at once recognised. The Satsuma rebellion in 1877 supplied the first test, but the issue was not conclusive, for though the Government's forces, consisting chiefly of *Heimin*, succeeded ultimately in crushing the insurgents who represented the elite of the *Samurai* class, certain exploits of the latter seemed to suggest a signal superiority of martial quality. It is doubtful, too, whether the problem would have been solved to public satisfaction even by the war with the Middle Kingdom had the records been compiled on the lines usually followed in the West; for so miserably weak was the resistance made by China that her defeat did not throw into any high relief the capacities of her conquerors. Yet, despite the general *debacle*, there were plenty of special occasions for the display of personal valour and devotion to duty, and by compiling a trustworthy account of these, Messrs. Eastlake and Yamada have given us at length an intimate insight into the qualities of the Japanese soldier. No one, having perused this volume, can remain under any doubt that the Japanese private is really a fine fellow, and that, so far as *morale* goes, he is fit to be pitted against any troops in the world. Another fact that strikes one very forcibly in reading the various anecdotes of brave deeds, is that commissioned officers are rarely accorded a central place: with very few exceptions, the heroes of the incidents are private soldiers or non-commissioned officers. It is not to be inferred, of course, that the commissioned officers deserved a smaller mead of praise than the men under their command; they are known to have shown unflinching courage and to have discharged their duties of leadership skillfully. Yet they are passed over, and the bulk of the credit

falls to the rank and file. Were such a method of distributing praise—a method exactly the reverse of Western habits—ascrivable to the authors' choice, we should be disposed to question its justice. But it assumes a different complexion when we know that all these incidents have been obtained from regimental records or newspaper columns. In short, the idea of Japanese military and civil annals alike seems to have been that whatever the officers did must be regarded as a simple discharge of duty, whereas the soldiers, whose original service is compulsory, and for whom the substantial rewards of bravery and devotion are few, deserve the fullest recognition for every distinguished deed. We can conceive no better method of educating a martial spirit among the rank and file of an army, though, of course, such a system, if carried too far, might tend to impair the subordination of individuality so necessary in developing the full strength of a disciplined mass. Passing from general inferences to the anecdotes themselves, we are constrained to say that the authors might have advantageously exercised more discrimination. Some of the acts for which they claim public applause do not rise perceptibly above the level of commonplace military doings. We can appreciate the difficulty of making selections that might seem invidious, but, after all, some standard must be maintained in the interests of justice as well as of art. Occasionally, too, one longs for sobriety of diction. A simple setting becomes noble deeds much better than a florid frame-work of fine phrases, offensive to one's sense of proportion, and derogatory to the deeds themselves by suggesting the necessity of ornate verbiage. We shall not reproduce any of the records, since the book itself will probably find its way into the hands of our readers. But special note may be taken of the fact that the fame awarded to Shirakami Genjiro, the trumpeter, is declared by Messrs. Eastlake and Yamada to be based entirely on a misapprehension. Sir Edwin Arnold composed a very stirring poem on the theme of the man's supposed exploits, and "Vladimir" represents him as having received a mortal wound, yet "continuing to blow his bugle until he breathed his last and fell dead." We could never, for our own part, detect the heroic element in that performance. Rather the contrary, indeed, since if it came to be recognised as a laudable act for a wounded trumpeter to go on blowing a call as long as his breath lasted, decidedly inconvenient confusion might result. However, the point is that the trumpeter who distinguished himself in the battle of Sōnghwan was not Shirakami Genjiro, but Kiguchi Kohei. In fact, Shirakami Genjiro was not a trumpeter at all: he was a second-class private, and how he came to be made a hero of for blowing a trumpet, and even to have his portrait inserted in "Vladimir's" "China-Japan War," remains an inscrutable mystery. Kiguchi, having kept by the side of his commanding officer, Captain Matsuzaki, as was his first duty, received from the latter the order to blow the "charge." It was nearly dark at the time, and the two men happened to be within a dozen paces of the enemy's van, so that the sound of the trumpet naturally attracted a volley, and both Kiguchi and Captain Matsuzaki were shot dead. It was a picturesque incident, the trumpet braying out defiance in the very faces of the foe, amid darkness illumined only by the flashing of rifles and cannon. But what element of heroism did the act display? Is there a disciplined trumpeter in any army that would not have done as much? Yet the authors of "Heroic Japan" tell us that the trumpeter "died a death worthy of being immortalized in song and story," and that "his deed was worthy of the chant of a poet's muse." The delirium of description could scarcely be carried further. Some of the really thrilling and wonderful performances of Japanese spies and scouts merit an illuminated page of history, but trumpeter Kiguchi's story does not fit the fine adjectives applied to it. One of the most celebrated and useful exploits during the war was that of Lieutenant Mimura and Private Harada at the Gemmu gate of Phōng-yang. Harada is popularly regarded as the hero of this affair, but

the credit belongs quite as much to Lieut. Mimura. For the details our readers can consult the book. Unfortunately, however, an element of perplexity mars the story. "Vladimir" tells us that when the Japanese assault had been repulsed and the troops were in the act of retreating, Lieut. Mimura, calling for volunteers, rushed back and with Harada's aid succeeded in scaling the wall and opening the gate. But Messrs. Eastlake and Yamada say that Lieut. Mimura was ordered to lead a forlorn hope against the gate, which would be credible enough had the Lieutenant's party carried a charge of gun-cotton or blasting powder. But the narrative gives us to suppose that they were simply told to make a breach at one of the angles, and their method of obeying the order was to scale the wall. No military man can read such a record without query. However, comparatively little importance attaches to the proximate cause that led Mimura, Harada, and eleven other soldiers to run through a hail of bullets, climb a high wall crowned by the enemy in force, and open a massive gate for the ingress of their comrades. The fact that they achieved such a feat is sufficient to obscure all the preliminaries.

It will not be supposed, of course, that the authors of "Heroic Japan" have confined themselves to describing the naval and military operations, and the gallant deeds connected with them. Their bulky volume contains also a mass of other information essential to the completion of the story. Their account of the relations between Japan and Korea covers less ground than the account given by "Vladimir," but whereas the latter fails to trace several of the causes that led to the war, the former succeeds in conveying an intelligible idea of the hopeless *impasse* that had been created by China's unpractical, suspicious, and obstinate attitude. Strange to say, both books omit to mention a most important fact, namely, that previously to the battle of Phung-do and the sinking of the *Kowshing*, the Japanese Government had warned China that the despatch of any more troops by her to Korea must, under the circumstances of the moment, be regarded as an act of war. "Heroic Japan" is excellently printed and tastefully bound, though in these respects the palm must be given to "The China and Japan War." The Shueisha has not yet reached the technical level of Messrs. Clowes & Sons. On the other hand, the superiority of the portraits contained in "Heroic Japan" is enormous. They are about as good as they could be, whereas the portraits in "Vladimir's" volume are simply execrable. We do not think that any one desirous of learning the quality of Japanese troops should fail to provide himself with "Heroic Japan."

BARON VON ZEDWITZ.

It does not appear to have been generally recognised in the East that Baron von Zedwitz, who lost his life by a yatching accident on August 17th, during the Royal Albert Yacht Club's Regatta at Southsea, was the same Baron von Zedwitz that served for several years in Tokyo as Secretary and *Chargé d'Affaires* of the German Legation. Such is the sad fact, however, and by all that had the pleasure of knowing him in Japan, a clever diplomat, a sympathetic personality, and a brilliant musician, his untimely and shocking death will be profoundly regretted. A full account of the accident is given by *The Times*:

It seems that the big yachts had just rounded the West Middle buoy. The wind was a little abate the beam coming for the home mark, and they had the tide now fair with them. *Satanita* and *Britannia* luffed out, but *Meteor* ran fair in the thread of *Britannia's* stern, and the *Kicker*, when she luffed across *Britannia's* stern, and eventually drew up and overlapped. *Satanita* was to windward of both, and the trio made a splendid race until about a quarter of a mile from the committee-boat, when *Britannia* drew on ahead and *Meteor* dropped *Satanita* a few lengths astern. *Ailsa* was hailed and informed of her disqualification; and *Britannia* next passed the committee-boat with a clear length lead of *Meteor*. The 52-footers were finishing their first turn about the same time as the big cutters, and the *Magara*, *Isolde*, and *Saint* were crowded to windward of *Britannia*. *Meteor* was luffed to thread between them and get on *Britannia's* weather beam, and she was going along with a tearing way on. *Saint*

and *Isolde* had luffed and fouled slightly, when *Meteor* found the latter fine on the weather bow and *Britannia* fine on the lee bow. *Meteor* had gone too far to get across *Britannia's* stern, and had the helm of the latter been pulled up it would only have had the effect of bringing the vessels near, while owing to the little craft, *Britannia* had not been luffed after passing the committee-boat. A collision was inevitable, and *Meteor's* bowsprit end went through the lee side of the *Isolde's* mainsail, canting her towards *Britannia's* weather quarter just in the run, and broke off. Simultaneously the rounded-up bow of the *Meteor* ran up over the stern of the *Isolde* and raised the head of the latter high in the air. The first impact had deadened the *Meteor's* way, and *Britannia* had gone on clear, but *Isolde* was still under *Meteor's* lee bow, and the big ship, running on, took the mast of *Isolde* with her main boom and broke it off flush to the deck. Some of the crew had jumped overboard and others were in the water but the mast when it fell came down with the mainsail, on *Isolde's* owner and virtually crushed the life out of him there and then, the most serious injury being apparently in the head. In a few minutes the vessels, which had just before been plowing along in pride were massed round the floating wreck of the *Isolde*.

At the inquest on the 19th, evidence was given by the captains of the *Isolde*, *Britannia*, and *Meteor*, and other witnesses. The captain of the *Britannia*, thought *Meteor*, ought to have gone to lee-ward of *Britannia*. The captain of the *Meteor* denied that his yacht infringed the rules, and said there would have been plenty of room to pass had not *Saint* fouled *Isolde* and sluiced her round out of her course. William Miles, captain of the *Isolde*, said that "If the *Saint* had not touched the boom the *Meteor* would have been under my lee, and from the time I was sluiced round to the moment of the compact was about 30 seconds. We were only off on our course for a moment or so. I should say the *Saint*, having touched us, had to do with the cause of the accident." The jury eventually returned a verdict of "Accidental death."

THE PARCELS POST.

NOTIFICATION No. 20 OF THE DEPARTMENT OF COMMUNICATIONS.

PARCELS POST SERVICE BETWEEN ENGLAND AND JAPAN.

Art. I.—Parcels-post matters exchangeable between Japan and England shall be dealt with only at specified offices.

Art. II.—Parcels-post duties must be paid in advance in postage stamps; this provision need not necessarily be observed when a parcel is returned to the sender or retransmitted to the sender.

Art. III.—Besides substances specified in Art. VIII. of the Parcels Post Contract between Japan and England and Art. IV. of the detailed rules relating to the enforcement of that contract, the following must not be transmitted as parcels-post matter:

1. Liquids, substances liable to decompose or hatch, plants, sharp instruments, glassware or other substances likely to injure other postal matter.

Provided that when properly wrapped so as not to injure other postal matter and when the transmitting office has been duly informed, the above provision need not necessarily be observed.

2. Documents, pictures, photographs, or other substances liable to impair public morality.

3. Other substances for which a prohibitory notice has been specially issued.

Art. IV.—The term "English parcel" must be written in red ink on the surface of a parcel, and a receipt shall be received at a parcels-post office where such parcels are dealt with in exchange for a parcel. At the same time the sender shall ask from the office of application for a form of Customs note, and shall forward it to the Office together with the parcel after filling in specified particulars and signing his name and affixing his stamp.

Art. V.—In case the Post Office deems that prohibited substances are enclosed in a parcel or suspects that substances contained therein differ in nature from those mentioned in the customs' note, it may order the opening of such a parcel. When this order is refused, the office will not receive the parcel for transmission; this provision to apply when on disclosure the substances contained within differ from those mentioned in the note.

Art. VI.—In case the Office of application deems the superscription of a parcel or the wrapping to be defective, it may refuse to receive it for transmission.

Art. VII.—On arrival a parcel shall be delivered, together with a delivery note, the sender to receive the parcel after signing his name and affixing his stamp on the note.

When a family or an employé of the sender is to receive the parcel on his behalf, a notice to that effect shall be entered on the note and such proxy shall sign his name and affix his stamp. This shall also apply when the master of a house in whose care the sender lives receives the parcel on behalf of the sender.

When a Government or public office, temple, shrine, school, hospital, firm, or company, and so forth, is to receive a parcel, a competent person

shall sign his name and affix his stamp on the delivery note. In all such cases a parcel is regarded to have been delivered to the proper sendee.

Art. VIII.—A parcel subject to the imposition of import duties shall not be delivered at once to the sendee, but on the arrival of such a parcel the matter shall be conveyed to the sendee, to whom, at the same time, a delivery note and a form for application for the import of the given parcel shall be forwarded. The sendee is to sign and stamp those documents within 30 days and shall receive the parcel in exchange for the import duties and the documents at the Post Office.

Art. IX.—When a parcel is subject to the imposition of import duties or when its postal duties are due, the sendee cannot receive the parcel unless on payment of both duties.

Art. X.—A parcel that is neither deliverable nor retransmissible shall be dealt with in accordance with Chapter XI. of the Postal Service Regulations. (The Chapter in question relates to dead letters.)

Art. XI.—When a parcel that is damaged is delivered, the Post Office shall append to it a note acknowledging the existence of damage. Provided that facts mentioned in that note are subject to alteration upon subsequent investigation.

Art. XII.—Those desiring to claim damages for a parcel lost or injured shall send in a written application to that effect to the Post Office that received the parcel in question for transmission or had delivered it.

Art. XIII.—The Department of Communications shall determine whether or not the claim for damages and the amount of such damages shall be acknowledged.

DETAILED RULES RELATING TO PARCELS POST, SERVICE BETWEEN ENGLAND AND JAPAN.

ART. I.

Clause 1.—Parcels-post matters not insurable and not deliverable in exchange for value to be exchanged between Japan and Great Britain, shall be transmitted via Canada or the Suez Canal and Gibraltar.

Clause 2.—The transmission of Parcels-post matters between Japan and Great Britain shall be undertaken by the Department of Communications of Japan and the General Post Office of Great Britain. The Postal Authorities that undertake the same shall be entitled to a share of the transmission cost in accordance with the provisions set forth in Art. IV. of the contract.

Clause 3.—When deemed essential, the Postal Authorities of the contracting Powers shall, on consultation with other Postal Authorities concerned, communicate the following matters to each other according to the forms given in the appendix:—

1. Names of countries at which parcels are exchangeable after passing through a given country.
2. Postal routes to be taken subsequent to the entry of a parcel into a given country or from a place at which such post comes under the charge of that country.
3. Total cost which a transmission Post Office is to pay to the respective countries concerned.

Clause 4.—The Postal Authorities of the contracting Powers shall, in accordance with the above communication, determine the routes along which the parcels post is to be transmitted, and, in conformity with the provisions for parcels to be received from or transmitted beyond, shall fix the charges to be imposed upon the senders.

ART II.

In determining the parcels-post rates, 48 *sen* in Japanese currency shall correspond to one shilling of the United Kingdom.

ART III.

Clause 1.—A parcels-post matter to be transmitted from the United Kingdom to the Empire of Japan shall measure less than 2 ft. in length, while the circumference shall not exceed 6 feet. Parcels-post matter transmitted from Japan to the United Kingdom shall measure less than 2 *shaku* (feet) in length, while the circumference shall not exceed 6 *shaku*.

Clause 2.—The measure of a parcel to be transmitted to a third country from one of the contracting countries *via* another, shall be determined according to the measures in force in the country of destination. The dimensions, however, must not exceed the limits specified in the preceding clause.

ART IV.

Clause 1.—Besides substances set forth in Art. VIII. of the Contract, a parcel containing a living animal, an explosive, or inflammable substance, or any other thing likely to prove dangerous in the course of transmission, shall not be received.

Clause 2.—Each of the Postal authorities of the contracting Powers shall prepare a list of sub-

stances whose transmission by the parcels-post service shall be forbidden, and shall communicate the list to the other.

Clause 3.—In case a forbidden substance is inclosed, or in case the value of a parcel is fraudulently stated, such parcel shall be detained and shall be dealt with in accordance with the Customs House Regulations or other laws or regulations in force in a given country.

Clause 4.—Parcels for different destinations, or containing different substances, must not be put up into one parcel. When such a parcel is detected, separate duties shall be charged on the other parcels found within.

ART. V.

Clause 1.—No parcel the address of whose sendee is not clearly and legibly written shall be transmitted. The address must not be written in pencil.

Clause 2.—A parcel must be wrapped sufficiently to protect the inclosure, having regard to the distance it has to travel, and the covering must be so prepared that damage can not be inflicted without leaving a trace of it on the wrapper.

Clause 3.—A parcel must be sealed either by sealing wax or lead or other suitable means, and the special stamp or mark of the sendee must be affixed.

ART. VI.

Clause 1.—Every parcel must be accompanied by a form given in the appendix on a Customs' note answering that purpose, the latter to be affixed upon the parcel or fastened to the parcels list.

Clause 2.—The transmitting office must put in the number of the parcel list at the bottom of the Customs' note and the number of a parcel on the list.

ART. VIII.

Clause 1.—Exchange Offices in the United Kingdom shall be located either at London or Liverpool and the exchange offices in Japan shall be located at Yokohama, Kobe, and Nagasaki.

ART. XII.

Clause 1.—For a parcel which, in accordance with the request of the sender or the sendee, is to be retransmitted from one country to another, the usual rate shall be reimposed. When this charge is not paid in advance to the retransmitting Postal Authorities, either by the sender or the sendee, a proper note must be entered in the column of the parcel list headed, "retransmission parcel charge due," and the charge shall be imposed on the occasion of delivery.

Clause 2.—When the charge to be imposed in consequence of retransmission is paid in advance or the occasion of such retransmission, such parcel shall be dealt with as a parcel sent directly from the retransmitting country to its destination, and no charge shall be imposed on the sendee on the occasion of delivery.

ART. XIII.

Clause 1.—For a parcel the delivery of which is impracticable, the steps to be taken with regard to it shall be gathered from the sender, correspondence concerning which is to be directly exchanged between the Postal Authorities of the two contracting Powers.

Clause 2.—A substance likely to deteriorate or decompose may, on behalf of the owner, be sold at once without previous notice or without any legal process, and an account relating to such sale must be rendered.

Clause 3.—When, at the expiration of six months from the transmission of an interrogatory letter, no answer as to the steps to be taken with such parcel as that in question is received, such parcel shall be returned to the transmitting office.

Clause 4.—A parcel to be returned to the transmitting office shall be entered in the parcel list and the word "undeliverable" shall be put in the remark space of that list. A parcel in such a case shall be dealt with as a retransmission parcel and appropriate postal duties shall be charged.

Clause 5.—In case a parcel, addressed to a person who has removed to a country between which and Great Britain or Japan a contract as to the exchange of parcels post does not exist, has been received, such parcel shall be dealt with as belonging to the category of "undeliverable" parcels, when the office to which it is addressed finds it impracticable to convey it to the sendee.

When Charles Dudley Warner was editor of the *Hartford Press* during the war, arousing the patriotism of the State with his appeals, one of comps. came in and planting himself before the editor, said: "Well, Mr. Warner, I've decided to enlist in the army." With mingled sensations of pride and responsibility, Mr. Warner replied encouragingly that he was glad to see the man felt the call of duty. "Oh, it isn't that," said the truthful compositor; "but I'd rather be shot than try to read any more of your blanked copy."

CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for that sentiment or opinion of our correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

THE CODES.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Referring to your interesting notice of the 2nd instant of Doctor Lönholm's pamphlet on the new Japanese Civil Law and the stipulations in the German Treaty regarding tenure of land by foreigners, permit me to advance the following questions, the reply to which will, I believe, be both interesting and valuable to many.

1.—The exact words used in the German Treaty are, if I mistake not, "Hypothek" and "Hypothekenrechte," whereas in your notice you mention "Mortgage." Are "Hypothek" and "Mortgage" of exactly the same meaning?

2.—I have been informed that the holder of a "Mortgage" is entitled to take possession of the mortgaged object (let us assume land), if certain conditions of the mortgage are not carried out by the debtor; as a matter of fact, foreigners will also in future not be able to possess land; what then becomes of this protection or right to the creditor derived from a mortgage to take possession of the mortgaged object (say land) under certain circumstances?

Yours very truly,

M. N.

Yokohama, October 3rd, 1896.

THE RAILWAYS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Permit me to add one word in favour of a longer time for the sale of tickets at railroad stations. It often happens that in passing through Tokyo or Yokohama on the way South, one has an hour or so to spare in waiting for a train in one of those places. If now the ticket office were open all the time one could immediately purchase his ticket for his destination, check his baggage leisurely and have the remainder of the time until his train starts to spend as he pleased. But at present he must hang around waiting for the first chance to get his ticket, and even then run the risk of losing his train because he cannot get his baggage checked in time. All is confusion and worry where, by simply keeping the ticket offices continuously open, all would be order and quiet.

Yours truly,

W. H. N.

Maebashi, October 4th 1896.

THE JAPANESE.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Much seems to be said in various ways of the Japanese folks. I notice, I am sorry to say, some letters and remarks rather cutting and bitter against the Japanese. Now I love to give honour to whom it is due, and after 14 years' close commercial dealing with the Japanese, I cannot say I have had one unhappy transaction with them, not one unkind word. Their house door has always been open to me and anything that the house contained was apparently at my service, if it pleased me. This is not my first visit here, and I trust will not be the last amongst a good, kind people, and, I fancy, a people not known properly to those that disparage them. Treat the Japanese kindly and courteously and as we ought, and I venture to say that kindness will be returned in multiplied kindness and goodness. I could interest your readers with facts, but I content myself with asking whether, for the acts of a few vulgar persons, we ought to blame a generous and rising nation?

Yours &c.,

M. E.

Kyoto, October 4th, 1896.

SILVER AND GOLD.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR.—The *Japan Mail*, in the foot note to the published letter of "X." in its issue of the 29th inst. tells its readers that, "The free coinage of gold at the ratio of $\frac{1}{16}$ to 16 is precisely what is happening in the United States at present." Is this so? "X." asked the *Japan Mail* to be good enough to elucidate to its readers the possible effects to follow if it should be enacted that 12.89 grains of gold, when minted, should be the equivalent of 412 $\frac{1}{2}$ gains of silver when minted into dollars. Specifically asking, "Would there be dishonour in that?" "Would that flood the country with gold?" The foot note is the response! Now for the facts. Silver dollars are not coined at all—so there can be no established ratio between gold coins and silver dollars. All silver coins now issued from the United States Mints are the 50 cent.,

or half-dollar, the 25 cent. or quarter dollar, and the 10 cent. or dime. The standard weight of the 50 cent. coin is 192.9 grains; the 25 cent. coin 96.45 grains, and the dime 38.58 grains. Which is not at a ratio of 32 to 1 nor get $\frac{1}{2}$ to 16, but at a ratio of 14.066 to 1, and they are all legal tender equal with gold to the limit and sum of ten dollars. As the mintage of these coins aggregates dollars 214,783,250, and as they circulate freely and are practically the only money used by the common people, it would appear that it is not the ratio that is so much considered as the necessity for the coins irrespective of their intrinsic value as measured by gold. Although the *Japan Mail* avers that the United States mints are now coining gold at the ratio of $\frac{1}{2}$ to 16, the gold coinage is now proceeded with under the same conditions as ever. The coinage of all silver coins now permitted mintage is regulated by the laws governing coinage of silver passed in the years 1794 and 1796. The gold and silver coins minted prior to 1873 and the coins now minted, both gold and silver, pass concurrently as legal tender coins under the provisions embodied in the coinage laws of 1794 and 1796. Free coinage is denied to silver; in all else matters as they have been. The *Japan Mail* does not appear to see any difference between a legal ratio of 32 to 1 and a legal ratio of $\frac{1}{2}$ to 16.

"X." conceives that free coinage of gold at a ratio of $\frac{1}{2}$ to 16, i.e. $\frac{1}{2}$ oz. of gold to equal 16 silver dollars in legal tender quality, does not signify the coinage of silver and gold at a ratio of 1 to 32, not by any means. Although 1 oz. of gold will buy 32 oz. of silver, to establish by law that 32 oz. of silver shall be minted to represent or become the equivalent of 1 oz. of coined gold would destroy the minting value of silver bullion just one half, and take from all silver coins now in circulation one half of their nominal value. To coin $\frac{1}{2}$ an oz. of gold into coins, call them what you may, Sovereigns, Dollars, Napoleons, Ducats, or Thalers, that will pass concurrently with silver coins at the ratio of $\frac{1}{2}$ grains of silver for 12.89 grains of gold, would not disturb the present nominal value of the silver coins of the world, but it would double the nominal value of all coined gold and gold bullion.

The sovereign would be received into two sovereigns and the twenty dollar piece into two twenty dollar pieces, or, to put it in a nut shell, 32 to 1 would mean the silver of the world for coinage purposes reduced in value one half, while $\frac{1}{2}$ to 16 would leave 412 $\frac{1}{2}$ grains of silver to represent one dollar as it now does but would necessitate the recoinage in gold, making 12.89 of gold equal to 412 $\frac{1}{2}$ grains of silver, thereby doubling the nominal value of all the gold in the world. The slight difference of all the silver of the world shrinking in value one half and all the gold of the world doubling itself may not present itself to the *Japan Mail*, but will the *Japan Mail* tell its readers which is the least dishonest for the goldites to destroy, as they have done, one half of the money wealth of the holders of silver or to double the holding of gold by a resort to minting $\frac{1}{2}$ an oz. of gold as equivalent for 16 oz. of silver when minted?

Respectfully, X.
Sept. 30th, 1896.

THE INTERPORT CRICKET MATCHES.

The following telegrams, received from Nagasaki by Mr. K. F. Crawford, Secretary of the Y.C. & A.C., have been published:—"Match began on Monday morning in magnificent weather. Japan won the toss, and were all out soon after tiffin for 90 runs. The scores are as follows:—

When the last report received left Shanghai the home team had made 176 runs for six wickets. Play was stopped by heavy rain at noon on Tuesday."

YOKOHAMA LITERARY SOCIETY.

Some thirty members were present at the annual meeting of the Yokohama Literary Society held at Van Schaick Hall on Friday. Mr. J. T. Griffin presided. After calling the meeting to order, he remarked that the year had been a most excellent one in regard to the work done, but the accounts did not turn out so well as he had expected. It appeared that the Treasurer, who was at home on holiday, had not collected all the members' subscriptions. They had their full two hundred members, but some \$30 odd in subscriptions appeared uncollected.

Mr. CRANE thought that it would be safe to pass the accounts as presented. Mr. Lias could be questioned on his return.—(Hear hear.)

Mr. WHITEFIELD seconded.—Carried unanimously.

REPORT.

It affords the Committee pleasure to report that the session 1895-96 was, on the whole, a successful one. Several excellent lectures were given by visitors and a number of the members also took part in the meetings. It will be a matter for the members to consider at the General Meeting whether the rule limiting the number of members to 200 works well.

The following is a list of the meetings held, with the subjects for the various evenings:—

1895.	
No. 159...Oct.	4...General Meeting, Election of Officers.
No. 160...Nov.	2... "England before the English," Mr. A. J. Wilkin.
No. 161...Nov.	15... "James Russell Lowell," Mr. A. E. Brown.
No. 162...Nov.	29... "Economy as a Fine Art," Anonymous.
No. 163...Dec.	23... "Picket Duty," Captain Crawford.
1896.	
No. 164...Jan.	3... "Christmas at the Antipodes," Mr. A. F. Cahusac, and "Christmas in the Olden Time," Mr. W. R. Page.
No. 165...Jan.	27... "A Hurdle of Blunders," Mr. W. D. Cox, Tokyo.
No. 166...Jan.	31... "A Journey in Korea," Rev. J. S. Gale. Recitations, Mr. H. J. Sharp.
No. 167...Feb.	14... "Sun Spots. Do they affect us?" Rev. E. S. Booth.
No. 168...Feb.	28... "Impressions of Australia," Mr. A. F. Cahusac.
No. 169...March 13.	3... "Conscience," Professor Nakashima.
No. 170...March 27.	3... "Socrates," Miss Hall.
No. 171...April 10.	10... "In Libby Prison and Out of it," Home Again," Rev. Clay MacCauley.
No. 172...April 24.	24... "With the Peary Arctic Expedition," Mr. W. J. Davidson.
No. 173...May 8.	8... "The Korean Pony," Rev. J. S. Gale, of Korea.

E. & O. E.

F. J. LIAS per E. J. LIBAUD, Hon. Treasurer.
Yokohama, 30th September, 1896.

Mr. A. H. LAY proposed and Mr. CRANE seconded that Mr. Griffin be re-elected President of the Society.

Mr. GRIFFIN said that he had been President of the Society for some time and he would be glad of a rest for a while. He thought that Mr. Wilkin would make a good president.

Mr. WILKIN smilingly declined the honour, and Mr. Griffin was re-elected to his old position.

The PRESIDENT announced that Mrs. Theodore Morris, the Vice-President, found it incumbent to resign office. He was sorry to hear this for during all the years the Society had been working it had never had a better Vice-President, if indeed so good.

To a suggestion that a three months' term of office be substituted for full the period; or until Mrs. Van Patten returns from Nagasaki, Mrs. Morris returned a negative.

Dr. CLEVELAND then nominated Mrs. Otis A. Poole for Vice-President; Mr. Crane seconded.—Carried.

Mr. A. D. LAY proposed that Mr. F. Cahusac be elected Secretary, and after some pressing this gentleman consented to accept office, and he was elected. Mr. Wilkin was elected Treasurer on the motion of the President seconded by Mr. Crane.

The Literary Committee was next elected and will now consist of Mrs. Cahusac, Mrs. Loomis, and Mr. K. Wilson. The Music Committee elected were:—Mrs. Campbell, Mrs. Wheeler, Mr. Crane, and Mr. Whitefield.

Before proceeding to the election of the refreshment committee, a discussion arose as to the

advisability of expunging the rule whereby the membership of the Society is limited to 200. Many of the speakers said that a good deal of irritation and disgust had been occasioned last year in consequence of this rule, and the President explained at length the reasons that caused the adoption of it last year—the limit of the accommodation provided in Van Schaick Hall. Mr. Wilkin testified to the rule being the cause of much embarrassment last year, and the frequent cause of trouble. The Rev. L. Dearing was in favour of rescinding it. Considering the size of the community it did not seem likely that the membership of the Society could increase to an extraordinary degree. The rule of 200 stood in the way of the best interests of the Society, and the expunging of such a rule would be the best step they could take. Mr. LAY endorsed these remarks. Mr. Clarence Griffin suggested limiting the guests to 150.

Mr. CRANE was in favour of rescinding the rule. During the past season there were very few meetings that were largely attended; the majority had seen but a sparse attendance of members and friends. He therefore proposed that the rule be expunged.

Mr. WHITEFIELD seconded.—Carried.

The PRESIDENT said he had one other matter to mention before the election of a Refreshment Committee was proceeded with. Several leading members of the Society had expressed an opinion that there should be no refreshments at all. Personally he held no opinion on the subject, but he could not help noticing last session that a good many of the juvenile members seemed to attend for the refreshments alone. Many ladies had been sufferers through the behaviour of some of these youngsters.

Prima facie, the connection of refreshments with literary work was not apparent. But the refreshment committee had come into being in the early stages of the society's career. Originally, before it was known as the Yokohama Literary Society, the Yokohama Reading Circle met at the houses of a few friends. Some 14 or 15 meetings were held in the course of the session, one member after another lending their houses, sometimes a member received the Circle twice in the course of the session. At these meetings the hosts beside offering the use of their houses, offered further hospitalities in the form of refreshments, and so when the Society migrated to its present quarters, it was resolved to retain the system of an interval for refreshments—thus was the Siamese-twin relationship of refreshments and literature originated.

Mr. F. STANILAND said that last session the refreshment interval had given rise to a rowdyism that was discredit to the Society. Indeed, one gentleman told him that it was nothing more or less than an occasion for gluttony on the part of a few people. He should like, for one, to see this rowdy element eliminated.

The Rev. L. DEARING said that the social part of the Literary Society's evenings were, in his opinion, the most interesting of the whole entertainment. These intervals produced a charming degree of sociability and he would not like to see them abolished. He would, however, like to see some limit set to the age of members.

Mr. WILKIN agreed that a good deal of annoyance had been caused last session during these intervals by the behaviour of some of the young members. He thought the interval should be limited to 15 minutes. Then again, there was the annoyance caused by a certain set of lads encoring, and vociferously applauding every item on the programme. Their conduct deprived applause of all its value. Encores were always questionable at best, but the persistent way in which they were persisted in last session brought nothing but ridicule on the practise.

Mr. LAY moved that the interval be limited to 15 minutes and that there be no refreshments.

Mrs. MORRIS seconded.

An animated discussion arose on this proposal. The Rev. L. Dearing was all for refreshments. Mr. Crane thought that the bone of contention, if the phrase were permissible, was the sweetmeats. The Rev. J. G. Cleveland thought the whole matter should be left in the hands of the President, or the Chairman, for the time being. Mr. Wilkin suggested that the refreshments be simpler and that the length of the interval should not be more than 15 minutes. Eventually it was agreed to let matters remain as they are, refreshments being provided as usual, and the President to determine upon the duration of the interval.

The following were elected on the Refreshment Committee:—Rev. L. Dearing, Miss Wilkin, Miss Thompson, and Miss Sale.

Mr. LAY then proposed that the rule providing for the issue of family tickets be abolished. He thought the privilege had led to abuses.

Mr. CAHUSAC seconded for the purpose of putting the matter to the vote.

The PRESIDENT took exception to the remarks made by the proposer. The annoyance caused last year principally arose with some lads who usually sat on the front row. They were ordinary members of the Society and brought their school chums along with them to help in the applause and other noises. The members of families who came in on the family ticket were in nearly all cases adults. It would be wrong in his opinion to meddle with the rule.

The Rev. J. G. CLEVELAND and the Rev. L. DEARING were opposed to the rule being expunged. The proposition on being put to the meeting found only the proposer and seconder voting for, and the rest of the members present against, it.

Mr. WHITEFIELD inquired if there was any check at the door in regard to visitors.

The CHAIRMAN said that since the discussion last year as to unauthorised visitors attending, the trouble had ceased. They might perhaps have to be careful as to the admittance of boys in future, otherwise there was no trouble to fear.

The Rev. L. DEARING proposed a new rule—"That no person be eligible for membership under the age of 15."

Mr. CRANE seconded.

Mr. LAY thought that it would be better if the limit was 17 years for boys and 15 for girls.

The Rev. L. Dearing's original rule was carried. The meeting then resolved itself into a social circle, music concluding the proceedings.

THE U.S. CONSULATE-GENERAL COURT.

Before N. W. McIVOR, Esq., Consul-General and Judge,--MONDAY, October 5th.

CLAIM FOR DAMAGE TO BAGS OF NITRATE OF SODA.

In this case the China and Japan Trading Company, sues to recover \$106.32 and costs, from Captain A. Weston, for damage done to some 20 bags of nitrate of soda, while in the charge of defendant as landing agent.

Mr. J. F. Lowder appeared for the plaintiffs; Mr. G. H. Scidmore representing the defendant.

The Court reassembled at 10 o'clock this morning. W. B. Mason, recalled, said--I have refreshed my memory since the last examination, and have ascertained that the loss in weight of the nitrate of soda was piculs 17.7705.

Cross-examined--I ascertained these particulars from the invoice; that is to say the amount that finally came to the hands of the China and Japan Trading Company was short by about 17 piculs.

A. C. Allcock, sworn, deposed--I am in the service of the plaintiffs. On the 28th July I was on the hatoba. I saw some nitrate of soda there. There was some skids underneath the bags, but no tarpaulin, as it was a very fine day. This nitrate of soda had been landed by Helm Bros., and I believe came from the *Verona*.

Komeya Kanetaro, in the employ of Uyeno-ya Tokubei, deposed--I have been in the firm's employ for over fourteen years. We deal largely in drugs. It is my business to take delivery of the drugs purchased by the firm. We deal principally with No. 202 (Paul Schramm); No. 70 (Carl Rohde), No. 20 (Ahrens & Co.), and the plaintiffs, the China and Japan Trading Company. About the 26th June I went to the hatoba to see about taking delivery of some nitrate of soda--to inspect it. It was imported by the plaintiffs on the *Glamorganshire*. My firm was the purchaser of these goods. They amounted in all to 200 bags. We took delivery of 160 bags--those that were not wet, and were on the upper part of the pile. I think that it was on July 2nd that we took delivery of these 160 bags. As to the other 40 bags we were told by the China and Japan Trading Company that we were to leave them, as they were going to speak to the landing agent in regard to a claim on them. I took delivery of the 160 bags at the hatoba. I was present on a subsequent occasion when the 40 bags were weighed. This took place at the hatoba at Minato-cho. There were skids under these bags, and tarpaulin on top. I do not know what shortage resulted. The original contract price for the sound nitrate of soda has slipped my memory. We sold these goods at the rate of 6 yen per picul. I think this nitrate of soda was packed in double bags. In the month of August I took delivery of some nitrate of the soda from Paul Schramm, at the hatoba. I do not know who landed this lot, but the bags were placed on skids.

Cross-examined--I do not know much about chemistry, but I know enough to tell when goods are landed in bad condition or not. Nitrate of soda looks something like sugar, and generally appears damp. It is packed in hemp bags. Nitrate of soda is generally packed in double bags, because if there are holes in the first bag, the inside bag,

the contents would run out; single bags are apt to leak. If nitrate of soda is packed in single bags, there is apt to be too much loss on the voyage: that is my experience. The 160 bags that I took delivery of were not weighed at the hatoba: they were not weighed at all. Owing to the Customs rules, that these dangerous goods should not be weighed there, the 40 damp bags were not weighed at the hatoba, but at Minato-cho.

To the Bench--I refused, on behalf of my firm, to take delivery of the 40 bags at the original weight. I refused to take delivery of them at the Customs hatoba. I refused the delivery of these bags because they were wet and I could see that they had shrunk. I had no other reason than that for refusing to take delivery. There were many small holes in the bags, but no large ones through which the nitrate of soda could leak. All these bags were at the lower end of the pile. I did not refuse any of the bags at the top of the pile: only those in the lower or bottom tier.

To Mr. Scidmore, through the Court--I refused all the bags that were touching the ground.

To Mr. Lowder, through the Court--All the 160 bags that I took delivery of were in sound, good condition.

Mr. Scidmore would have liked to have known how large were the holes in the bags, mentioned by witness.

Mr. Lowder objected, witness having given a fair answer to that question in his cross-examination.

The objection was sustained.

H. J. Metz, sworn, deposed--I am in the employ of the plaintiffs. I saw the nitrate of soda after it was landed from the *Glamorganshire*. The whole of it was in double bags. It was landed on the hatoba in good condition. If there had been ship-damage, defendant should have notified me. He did not so notify me of damage to these goods. When nitrate of soda is landed at the hatoba it is placed on skids, and then covered with tarpaulin--the skids are placed on the ground, the nitrate is then piled on top, and tarpaulins, if the weather is not very fine, are placed over all; this constitutes proper landing. I have frequently seen nitrate of soda thus deposited on the hatoba.

The case of the *Verona*, landed by Helm Bros., is one instance recently. This was since the damage done to plaintiff's goods in this case. It seems that landing agents, both Weston and Helm, are taking more care of these goods now. I recollect the arrival of the *Altmore*. Some nitrate of soda was landed from her. It was placed on skids and covered with tarpaulin; this was since the case now before the Court. The nitrate of soda in this case was landed on Friday, the 26th June, between the hours of three and four in the afternoon. It was landed in the neighbourhood of the export shed. The bags were not placed on skids, but a tarpaulin was put over them. I saw these bags on the Monday following the Friday. The bottom tier were then lying in four or five inches of water; about forty bags altogether. These forty bags presented a thoroughly soaked appearance. When I looked at them they only bore marks of damage by rain-water. A person of the name of Hatch is in the employ of the defendant. I spoke to him on the Monday in reference to the condition of these bags. He admitted that it arose from his neglect in landing the goods; and added that should Capt. Weston know that he had landed these bags in such a neglectful condition, he would lose his position. I told Hatch that the bags should have had skids underneath, when landed. I told him that they should never have been placed where they were landed because the ground near the export shed was so low and sloped. This was on the Monday. I then went and saw Mr. Weston at his office. I told him what I had seen. I said that I should hold him liable. He admitted his liability, on the ground of neglect of landing, by not placing skids underneath, and by placing the nitrate of soda in the place where it was deposited. The Customs authorities will not allow nitrate of soda to be weighed on the hatoba. In consequence of that I asked Capt. Weston's permission to remove the damaged bags from the Customs to the Creekside, the Japanese hatoba. He agreed to this. The sound portion of the goods were taken delivery of on the 2nd of July; the damaged portion was removed immediately afterwards. I think some days after, on second thought. I was present for a few moments when these bags were being weighed, to see that it was properly done. Capt. Weston was represented there by a Japanese in his employ. A bill was subsequently sent in to Captain Weston, by the plaintiffs. [Bill put in as evidence.] The claim of 6 yen per picul is arrived at through our selling price being 6 yen per picul to our customer. The amount of loss was 17 piculs, and in our claim we therefore charged the loss at 6 yen per picul. The reason the nitrate of soda, landed

on the Friday, was not taken delivery of on Saturday, was due to cloudy weather. The weather was cloudy with an occasional shower, and the nitrate of soda would have become damaged by the rain. We took one of the bags to the examining shed, and after the examination, it was the landing agent's duty to place the bags in tiers of five, so that they could be stamped quickly. The Customs officer would not stamp the bags unless so arranged. I considered it dangerous to stack the bags on the Saturday. I have since tried my best to find the Customs' officer whose duty it would have been to stamp those bags. I went at Counsel's request. I ascertained that he had left the employ of the Customs and could not be found. My hatoba clerk, Walker, was present with me when Capt. Weston offered to pay the claim. Mr. Weston's idea was that the claim would be in the neighbourhood of six or seven yen, and when he found that it was more than one hundred yen, he absolutely refused to pay our claim. That reason was given to me by Captain Weston: at least that was what I understood from what he said. I stepped into Capt. Weston's and he informed me that he would not pay the claim, because he thought it was a matter of six or seven dollars. That was about the middle of July. The conversation took place in his office.

Cross-examined by Mr. Scidmore--I have been in the plaintiff's employ since the beginning of May. This is not my first experience as a seaport landing clerk. I have had a little experience in the States, at Philadelphia. I had to deal with cargo that came by railroad for delivery in the city. I never handled nitrate soda there. All that I know about the proper way of landing nitrate of soda is what I learned here at Yokohama, and the exercise of a little common-sense. My duties at the hatoba are to examine all goods, survey the damage, and place the responsibility for the fault whether on ship or landing agent. I have not been furnished with any documents by my employers to assist me in surveying goods and determining any damage. I am entirely familiar with the manner of handling cargo from the time it leaves the ship's tackles until landed on the hatoba. I never asked Capt. Weston for any paper relative to the landing of the cargo in question. I am perfectly familiar with all the details of landing cargo. At the time cargo is taken from the ship there is a paper, given by its officer; this paper is called a boat-note. It contains a statement of the condition of the cargo at the time it is taken from the ship's tackles. Boat-notes are never correct, but at times it is the rule to base claims against the ship on statements made in these notes. These boat-notes are used in making claims against the ship, the landing-agent referring to these notes for that purpose. This is the general rule.

The Court at this point adjourned for luncheon. The cross-examination of the H. J. Metz was continued. In answer to Mr. Scidmore he said--Application was made on the 22nd July--the date of arrival of the ship--for entry of the nitrate of soda at the Customs. Plaintiffs had a clean bill of lading for the goods. We have three men on the hatoba, under my supervision, to look out for any damage to cargo. The cargo is examined as soon as landed by three of our men on the hatoba. They examined for ship damage and every other kind of damage. When the nitrate of soda was landed this examination was made, but we did not find any ship damage. When ship damage is discovered it is usual to make prompt claim on the agents of the ship. We did not make any claim on the agents of the *Glamorganshire*. Nitrate of soda, in contact with water, dissolves or melts away. These 40 damaged bags remained on the hatoba between the 26th June to the 7th July; between the 7th July and the 18th of that month they were lying on the Japanese hatoba. I took no steps to further protect the nitrate of soda, after I saw Capt. Weston. I left it lying there. I have received, on occasions, notice of damage to cargo from other landing agents. Once, in the case of iron landed from one of the "Rickmers" boats, such notice was given. I noticed the damage before the agent, Helm, drew my attention to it. I cannot at the moment recall another instance. I cannot say what the average weight of these forty bags would be at the time that they were weighed. I do not know their invoice weight.

Mr. Lowder said he would introduce the invoice of the nitrate of soda.

His Honour said that it would be as well to introduce the invoice.

Re-examined--I do not mean to imply, in the answers made to questions in the cross-examination, that no damage has been done to cargo delivered to my firm, in landing, in any cases beyond the two referred to. The removal of the 40 bags from the Customs to the Japanese hatoba was a matter of arrangement between me and the defendant. Prior to the hearing of this case, the

defendant has never, to my knowledge, claimed that it was not his duty to report to his principals, the plaintiffs, any damage that cargo may have received before coming into his hands.

To the Bench—I told Weston that the nitrate of soda had been negligently landed and he acknowledged it. He said: "If there is any damage, I suppose I shall have to pay for it." He did not say that he would pay in order to keep the peace and prevent trouble. In saying what he did I think he admitted his liability.

His Honour—I am not asking for your opinion. I want to know what Weston said.

Witness—He said: "If there is any damage I suppose I will have to pay for it!" That is all he said. The skids were placed under the nitrate of soda, in the case of the *Altmore*, voluntarily. I have testified as to the customs of the place. I knew what the hatoba customs were soon after I came here. I came here in May and learnt the customs as soon as I began to work here.

Mr. Lowder recalled the Japanese witness, who testified in the morning to 14 years' experience of the drug trade, and questioned him as to the custom of the landing agents in regard to landing and protecting nitrate of soda at the Yokohama hatoba.

Witness said—During my experience in Yokohama skids have always been placed under bags of nitrate of soda to prevent them from getting damp or wet. My experience goes back for six or seven years in regard to nitrate of soda alone. I have taken delivery of this class of goods from No. 89, China and Japan Trading Company; and No. 202, Mr. Paul Schramm. I think my employer is the principal buyer of nitrate of soda in Yokohama, and we bought nearly all of the nitrate of soda that the China and Japan Trading Company imported. Prior to this case, no nitrate of soda purchased by us from that firm has been damaged by rain on the hatoba.

To the Bench—My employer has never imported nitrate of soda direct. I am given to understand that the skids were always placed under bags of nitrate of soda by the landing agents, when landed on the hatoba. I heard this from the firms with which I deal—either No. 89 or No. 202. This information was given me before this case was instituted. I have heard it also from persons engaged on the hatoba.

H. J. Metz, recalled, produced an invoice for 200 bags of nitrate of soda—the goods in question.

Mr. Lowder said that was the case for the plaintiffs.

Mr. Scidmore—May it please the Court: I agree with the learned Counsel for the plaintiffs that the damages claimed in this case are small in comparison with the principle involved. The mercantile community here is watching this case with intense interest, and to the defendant its decision is of vast importance to his business, a business involving the handling of many millions of dollars' worth of cargo. The goods, or material involved in this case, is nitrate of soda, that also goes by the names of cubic nitre, or nitre, or Chili saltpetre. For a definition of its character I am indebted to two books, books that are quoted by the leading authorities in these cases such as "Stevens on Storage" and "The Handling of Dangerous Goods." From them we can gather the nature and character of nitre. We learn that it is—

Mr. Lowder—While not desirous of interfering with the Counsel on the other side in his opening, I must resist his bringing these books into the case, as evidence in this way. I can not resist, I know, if he brings experts in to prove the statements, but I object to his submitting them in his present manner.

His Honour—The Court does not yet perceive Counsel's object.

Mr. Scidmore—I shall introduce them later on for the purpose of guiding the Court in the matter of defining the nature and character of these goods. I expect to prove this later on.

His Honour—For the benefit of the counsel for the plaintiff, I may say that the Court can but suppose that the proper course will be pursued in the matter. It must be remembered that we have not arrived at the arguments yet, Counsel for the defendant is only opening the case for his side.

Mr. Lowder thought that this matter hardly affected the issue.

Mr. Scidmore said that the matter might seem unimportant, but he desired to introduce it as it served the purpose of his case.

His Honour thought that it was hardly an issue.

Mr. Lowder—It is not a matter of much importance I admit; and if your Honour is inclined to allow it, I have no objection.

Mr. Scidmore—I wished to prove to his Honour the character of the goods, and therefore the kind of care required in handling them. Nitrate of soda is a dangerous compound and when

brought into contact with organic matter is likely to develop dangerous explosions. It is therefore a substance that must be excluded from storage with other goods. Therefore the Customs authorities have decreed its exclusion from the covered shed. It is a powerful oxidizing agent; it is soluble in water, and it is said will dissolve in twice its own weight of water. It is used in the manufacture of sulphuric acid, and also in nitric acid; it is used as manure, as a top dressing, and when the soda is taken away from it, it forms the saltpetre used in the manufacture of gunpowder. I propose to prove that the position of the defendant in this matter of landing the bags of nitrate of soda, was that of an intermediary agent employed on behalf of the steamship company to facilitate the despatch of the steamer and to effect a greater celerity in the discharge of her cargo. He also, to a certain extent, acted on behalf of the plaintiffs as an agent in conveying cargo from the ship to the shore. In this capacity, all the leading authorities concur in stating, that it was his duty to use ordinary and reasonable care. For the definition of the term ordinary care I shall refer your Honour and Counsel on the other side to Dearing on Negligence; and for the express meaning of reasonable care to the notes on *Coggs versus Bernard*, reported in Smith's leading cases; while I place particular stress on the decision of Mr. Justice Parke in the case of *Beale versus The South Devon Railway Company* (R.C. 5, H. & M. 881.) I shall deal fully with these cases in my arguments in closing. We also expect to show that defendant's duty was finished the moment the goods were properly landed in the manner customary to the usages here: that he was neither insurer nor warehouseman. After the goods were taken from the ship they were landed and then and there delivered into the custody of the plaintiffs, who had no less than four presumably careful agents, their own employes, present to take charge of them; and it was the duty of those agents then and there to ascertain the condition and quantity of the goods, which, being of a perishable nature, should have been passed through the Customs and removed to a secure shelter without delay. This was the duty of the plaintiffs, but through their agents, they brought about the loss through their own neglect. We shall also show that the cause of the loss of weight in the goods was most uncertain. We shall also show that a large proportion of the goods were delivered into the plaintiffs hands from the ship in a broken and damaged condition, and that the failure of the plaintiffs to note this fact was gross negligence on their part. We shall also show that the goods remained exposed to the elements from the 26th June to the 7th July without adequate, or in fact any, measures being taken to protect or remove them to a place of safety. I will now proceed to call my witnesses.

Hamaguchi Anjiro, in the employ of Captain Weston, sworn, deposed—I have been in the defendant's employ for about three years. There have been several occasions, previous to the arrival of the *Glamorganshire*, on which nitrate of soda was landed by defendant. These goods being dangerous had to be landed outside the export shed at the Customs. There was only one place where they could be placed, and it was at this spot. During my three years' experience, the tarpaulin was placed over the nitrate of soda as soon as it was landed; we have no skids, Capt. Weston has no skids. I have seen Helm Bros. landing nitrate of soda, previous to this case. I do not remember whether I have ever seen Helm using skids or not. I remember seeing the nitrate of soda from the *Glamorganshire*; it was placed near the landing shed, close to the water. The ground at this place, I think, is not very well drained. The place where the nitrate of soda was landed was dry, because the landing took place in fine weather.

Mr. Scidmore then asked witness how far the goods were placed above the water.

Mr. Lowder objected to the question being put, as the answer to the petition did not set up that defence.

Mr. Scidmore said he put the question in consequence of the allegation of the defendant, that all due care and diligence was exercised in landing the goods and putting them in a proper place.

His Honour did not quite perceive what was the line of defence requiring such a question being put.

Mr. Scidmore—I put it with the purpose of showing that there was no neglect that could cause damage in general; also this defence is specifically set up in the answer to the petition.

Mr. Lowder thought that the defence was that there was no damage done to the goods after they were delivered to the plaintiffs.

His Honour—I take it that the line of defence is that the goods were not landed in a careless way.

Mr. Lowder—If that is so my objection falls to the ground.

The question was then allowed.

Mr. Scidmore, to witness—How far was it from the pile of bags to the upper edge of the wharf?

Witness—I think it was about two or three *ken*—(one *ken*, about 2 yards). In regard to the height of the wall, the tide makes some difference, but even at high tide the water would not reach the edge of the wall.

Cross-examined by Mr. Lowder—At the time of the arrival of the *Glamorganshire* my duty was to hand over cargo to the consignees. I had nothing to do with the landing of cargo at that time. A person named Hatch was employed by Mr. Weston to attend to the landing of cargo. My duty was to examine and compare the bill of lading with books containing the marks and labels of the cargo. I had nothing to do with the manifest. This work was not done in the office, but at the hatoba; I received the books at the office and compared them with the bills of lading I received on the hatoba. I know a man, named Yoshida, who used to be in the employ of Mr. Weston. I think there is no reason to use skids, as Mr. Weston has no skids. My work only deals with handing over cargo to consignees. If skids were used I might have seen them when I delivered the goods; but there were no skids belonging to Mr. Weston. I do not know that plaintiffs imported nitrate of soda recently by any other vessel but the *Glamorganshire*. Helm may or may not use skids without my knowing it. Skids could not have been used by Mr. Weston during the past three years, for the reason that he does not own any. Pressed on the point by Counsel, witness said that up to the time of the arrival of the *Glamorganshire* Mr. Weston did not use skids to place under bags of nitrate of soda. I think the skids are things used to place cargo upon, but I really am not sure, though I was on a ship for some time and heard there, as I did at the hatoba, the word used frequently. Still I think cargo is placed on skids on board ship [dunnage]. That was what I meant when I said that Mr. Weston had no skids. I do not know whether Yoshida even borrowed skids from Helm. I do not know whether, at any time, any shipment of nitrate of soda landed by Weston, was ever raised above the ground. The place where the 200 bags of nitrate of soda was landed was not level. It was such that water, rain-water, if it rained heavily, would accumulate, more or less, under the bags, and not drain away from them. I do not remember seeing these 200 bags of nitrate of soda at the hatoba on the 29th June; I do not remember the date. I did not see the nitrate of soda after it had been wetted. I delivered the 200 bags of nitrate of soda on two occasions. I think that 160 bags were all right, because the consignees took delivery by consent.

Witness refused to answer further questions, and one in particular, as to the condition of the last forty bags.

The Court then adjourned till 10 o'clock on Tuesday morning.

TUESDAY, October 6th.

The Court reassembled at 10 o'clock this morning.

Paul Helm, sworn, deposed—I was a landing agent at Yokohama up till May last. I had been in the business for ten years before I sold out. I am not now interested in such business. I have landed nitrate of soda for Mr. Paul Schramm, and other consignees. There is not very much nitrate of soda coming here. The Customs regulations oblige us to land nitrate of soda outside; we are not permitted to place it in the Customs landing sheds, it being dangerous goods. We have also to be careful with nitrate of soda because it is liable to dissolve, and then run through and damage other cargo. Consequently, it is a cargo that should be quickly removed from the hatoba, particularly as it is stored outside the sheds. It frequently causes damage on ship-board by dissolving and thus damaging other cargo. Very often on the bills of lading the clause is set, "not responsible for broken condition," when nitrate of soda is loaded. It comes here in double bags, because it has a tendency to destroy its coverings, being rich in oxygen after lying a certain time. If the bags are in a broken condition of course the contents fall out. Nitrate of soda is somewhat crystalline in appearance. All the nitrate of soda that I have seen here has been in small crystals, it looks like the crystallised sugar that comes here. When nitrate of soda was landed here by me, the consignees used to supply the dunnage—as the charge for dunnage is not included in the landing agents' tariff. If no dunnage was furnished by the consignees, I landed the goods on the ground, on a spot a little elevated on the jetty, and covered up the cargo with a tarpaulin. I would always cover saltpetre in this way, as it is easily damaged. In case of the discovery of ship-damage to cargo at the time of

receiving it from the ship, I would inform the ship's agent of such damage, so as to enable him to take further steps in the matter, and in order to settle with the consignee, as I was engaged by the ship's agent to land the cargo.

Mr. Lowder objected to any further evidence being led on this point, on the ground that it was entirely irrelevant to the issues in the case.

Mr. Scidmore referred the Court to the defendant's answer, in which it would be seen that he occupied a peculiar position towards the ship and towards the plaintiffs, while an allegation was also made that the damage was caused by the plaintiff's own neglect.

Mr. Lowder—The latter I do not object to.

Mr. Scidmore—I am putting the questions to lead up to proving the statement I made in my opening, that defendant's position is most peculiar, that he acted not only for the ship but also for the plaintiffs.

Mr. Lowder—That is the ground of my objection. His Honour understood that the questions were put to draw out what were the duties of a landing agent. That was not an issue, however, because the answer admitted the allegation that defendant was an agent for the C. and J. T. Co.

The examination then continued.

Witness—I was also paid compensation by the consignees for landing their cargo. If the landing agent was instructed and engaged by the consignee to land their cargo, then it was his duty to inform them of any damage that had been done—any damage that he considered important; any damage whether ship's or landing. Only in the case of the consignee coming directly and specially to me and asking me to land his cargo, would I consider it necessary to notify him of damage, as otherwise I would regard myself as engaged by the ship.

Mr. Lowder objected to further questions on this point, on the same ground as before.

His Honour said that the line of evidence was not excluded by the pleadings.

Mr. Lowder submitted that such evidence was excluded and quoted the answer to the petition. This excluded all evidence as to the point whether defendant in this case was acting on behalf of the ship.

His Honour—The objection to over-ruled.

Witness continuing—At the same time I would charge consignees for services in landing the cargo because it is their duty to take delivery of the goods from the hatoba or alongside, according to the bill of lading.

Mr. Scidmore—Where does a landing agent's duty end?

Mr. Lowder—That is a matter of law, and I object to it.

His Honour—The objection is sustained.

Cross-examined by Mr. Lowder, witness said—I sold my business to my brother. Myself and Mr. Weston were the only two foreigners engaged in the business at one time. I used to have offices on the Customs premises; Mr. Weston's office is still there. We have no permission to open an office there, but the Customs let us a godown at a monthly rental for the purpose of stowing cargo. We are not granted special facilities, but we rent a godown like anyone else can, and we are not permitted to put up our names.

Mr. Lowder—As a matter of fact you had offices there, as Mr. Weston still has?

Witness continuing—I had no office there; I had a godown, but the authorities do not even allow us to put out our names. I certainly had a desk, writing-ink, and a chair there, and customers could come and see me; anybody could do the same. In April, 1896, we agreed—Mr. Weston and I—on a tariff of charges for landing goods. I do not know if the document now shown me is that tariff, unless I can compare it with my own tariff. It was my custom when landing nitrate of soda, to cover it with a tarpaulin, and when cargo of this description was left on the hatoba for more than three or four days, I made a charge for the tarpaulin. Otherwise I notified the consignees that they must supply their own tarpaulin, which they usually did. You may take it that the amount paid for landing charges would cover the wear and tear of tarpaulin for the time above named. I consider that three or four days is an unreasonable time to allow nitrate of soda to remain on the hatoba; the regulations of the Customs House set 24 hours as the time. That regulation is very seldom observed in practise. Sometimes it is acted upon, but often it is not, like other regulations that are made from time to time. Mr. Paul Schramm and Messrs. Raspe, I remember, particularly have supplied me with dunnage on which to place their cargo, especially in the case of nitrate of soda. When I had finished with it, they took the dunnage away, bringing it down to the hatoba every time they wished it to be used. Their hatoba man attended to this. It was not often that they had consign-

ments of salt-petre. I had no dunnage of my own. I did not consider it my duty to supply dunnage, because it was expensive, and consignees objected to pay the charges for its use. I do not remember any particular case where they objected to dunnage charges; but they have often objected to even the ordinary landing charges. I considered it to be my duty to cover nitrate of soda with tarpaulin directly it was landed, in order to protect it from the rain. As far as I know, the consignees always supplied dunnage, and therefore I did not consider it my duty to put dunnage under the goods. I consider it the duty of the consignees to supply the dunnage. I generally selected a spot, which was high, or raised, if I could find one, or if the consignee furnished dunnage, I put that under the cargo; if not I landed it where I could. I do not remember landing nitrate of soda for the plaintiffs. I have landed other kinds of cargo consigned to them, while acting as landing agent of the ship; I may possibly have landed nitrate of soda for them in this way. I cannot say that the plaintiffs have ever furnished dunnage for cargo supplied to them. We are paid by the ship for night work; so long as I have been in business I have never been paid by the ship for anything but night-work. I have felt that the ship should pay the landing agent something for the convenience arising from our assistance in landing cargo. So far as my experience goes, I have been paid the landing charges by the consignee.

Geo. S. Nelson, in the employ of the defendant, sworn, said—I entered Weston's employ on April 20th of this year. I remember the defendant landing some nitrate of soda from the *Glamorganshire* at the latter end of June. This nitrate of soda was lying at the Customs hatoba. It was landed on the point of land that is allotted for cargo that is to be landed in the open, near the further end of the export shed, outside of the small car-tracks. I saw the nitrate of soda piled up there. The outside of the pile nearest the water was right close to the stone wall which faces the water. The other side of the pile was about 15 feet away from the wall. From the top of the wall to the water line is a matter of four feet at high tide. I consider that this spot was a suitable place, as compared with other parts of the compound, for piling such cargo. I should consider it as good a place as any at that time for such a purpose. In case of heavy rain the water would run into the hatoba basin; it would drain off. I have no distinct recollection of the state of the weather at that time, more than that the consignees complained that this cargo had been damaged by rain. I saw the cargo after it had been damaged. After the rain the whole of the Customs compound was in a similar condition. I could not say whether this place was better than other places in the compound where such cargo could be landed.

Cross-examined by Mr. Lowder—There was a person of the name of Hatch in the employ of Mr. Weston when this cargo was landed. He landed the cargo, and was general overseer during its landing. He is not now in the service of the defendant, to the best of my knowledge and belief. I do not know when he left the service, nor why he left. The lower tier of this cargo, when I saw it on the Monday, had a damp appearance. I mean that it was not wet, only a little damp. I saw it during the forenoon. I don't remember the day exactly; it was the day the complaint was made. I do not know who made the complaint. It was nearer tiffin time than anything, when I saw the bags. They were not then standing in water. The ground was wet—it was damp ground. I did not see any water accumulated under or near the bags.

Captain Austin Weston, the defendant, was then sworn. He said—I am a landing agent in Yokohama and have been in the business about 14 years. During that time I have had occasion to do with the landing of nitrate of soda. I remember the *Glamorganshire* bringing such cargo in the latter part of June last. It was landed under my supervision as landing agent. I was engaged as the landing agent of the ship.

Mr. Lowder—I object to that answer, as it contradicts the pleading.

His Honour—Do you ask for the answer to be stricken out?

Mr. Lowder—Yes.

His Honour—You did not object to the question? Mr. Lowder—No, because I did not know what his answer would be.

His Honour said that the suit not being a jury case but more of an equity action, he had been disposed to depart from the strict rule and admit a wide latitude of evidence for the purpose of obtaining all the facts he could. Mr. Lowder's objection was sound, technically, but in view of the nature of the case, it being an equity action and not a jury case, he thought he would allow the line of evidence to continue.

Witness continuing—I came to be employed in landing this cargo by the ship's agent. It falls naturally into my business, being employed by people to land cargoes as they arrive by these ships. My connection with this case is the same as that stated above. This ship arrived on the 22nd of June, and her cargo was landed between that date and the 29th. I took charge of the landing of the plaintiffs' cargo in the usual way. I had no knowledge of the China and Japan Trading Company.

Mr. Lowder—That is a contradiction of the plea, and I object.

The objection was allowed.

Witness—I landed 200 bags of nitrate of soda, consigned to the China and Japan Trading Company. The instructions came from the ship's agent.

Mr. Lowder pointed out that this was a contradiction of the defendant's written pleadings.

Mr. Scidmore said that it was no contradiction, for the instructions came from the China and Japan Trading Company through the ship's agents. There was no inconsistency in that.

His Honour thought that it was inconsistent with the pleadings.

Witness continuing—Some time afterwards I handed a bill to the C. & J. T. Co., for the landing of the cargo.

Mr. Scidmore—Now we are getting into a clearer atmosphere.

His Honour—I hope so.—(Laughter.)

Witness—I knew nothing of the C. & J. T. Co., in the matter of landing.

Mr. Lowder said that this was raising a defence that he was not prepared to meet. If it was allowed to go on, his learned friend would be enabled to argue that the claim should have been brought against the ship's agent.

Mr. Scidmore said that he did not intend to use such a argument.

After some further remarks, it was noted on the record that "Counsel for plaintiffs makes standing objection to all questions and answers tending to show that the defendant was sole agent for the ship and not for plaintiffs."

Witness continued—The nitrate of soda was examined on the 26th June during the afternoon. Application was made to clear the goods on the 22nd of June. The goods were deposited at the hatoba at the far end of the export shed, in an ordinary place. It was covered up with tarpaulin to protect it. I took no other precautions for its protection. It has always been my custom to cover such things with tarpaulin. I do not know the custom of the port in regard to consignees sending dunnage for the purpose of protecting cargoes. I have never looked to see how other landing-agents protected cargoes of nitrate of soda. It has never been my custom to use skids. This is the first complaint that has been made about their not being used. The nitrate of soda was taken from the ship's tackles in a partly broken and damaged condition.

Mr. Lowder objected as witness did not personally receive the goods.

The objection was sustained.

Witness continued—My practise with regard to damaged cargo received by me from the ship, depends upon its nature. If it is a small package that has been broached, opened, or damaged, I take it into my own godown on its being landed.

The Court then adjourned till 2 o'clock.

Mr. Scidmore applied for leave to introduce a Japanese witness, whom he had been unable to bring in the morning, before Captain Weston's further testimony was lead.

The application was granted.

Fushimi Yosaku deposed to being in the employ of the defendant.

Mr. Lowder thought that as the witness was a servant of defendant, the proper course should be followed.

His Honour said that he understood that Mr. Lowder had made no objection when the application of the other side was made. The objection came too late now.

Mr. Lowder said he had no objection to witness as a witness. It was only the manner of his introduction.

Witness then continued—I remember a cargo of nitrate of soda being landed from the *Glamorganshire* at the end of June last. I was engaged in the landing of cargo, but was not at work on the hatoba. I had to receive the nitrate of soda and see it taken to the shore. Two hundred bags were brought on shore. Some of the bags were broken, and more especially 24 of them, which were empty. I made a memorandum of it at that time.

Mr. Lowder—I object, on the ground that the memorandum was not communicated to the plaintiff.

His Honour—The objection is sustained.

Mr. Scidmore said that the subject was not important.

Witness—I handed the memorandum to Mr. Weston. The bags were of such a nature as those in which Chinese rice is imported into Yokohama; of a woven material. They were single bags, and thin, so that their contents could be seen.

Cross-examined by Mr. Lowder—I have seen nitrate of soda landed from other ships besides the *Glamorganshire* about twice before, but I do not remember the dates or the names of the ships. Nitrate of soda has been imported before in the same kind of thin single bags as those in which the *Glamorganshire* consignment came. I do not know the weight of the bags landed from the *Glamorganshire*. Hatch was not with me in the boat when I received these goods. I saw that 24 bags were empty. When cargo is landed from a ship, it is accompanied by a boat-note giving the marks and numbers of the bags or cases, and is signed by the Chief Officer; it contains, besides, a notification of any damage done to the goods. The numbers of the empty bags were not taken down; they came out of the ship in bundles of five and were so written down. I do not know who received the empty bags; all I did was to receive the cargo from the ship. I do not know the weight of the bags; they are about the size of sugar bags. I don't know if I could lift a bag, as I did not try.

Mr. Lowder—Would you be surprised to hear that if 24 bags were empty they would weight over 50 piculs?

Witness—I should not be surprised at the weight of a piece. I did not see the nitrate of soda after it was landed.

Captain Weston's examination was then resumed. He said—I have never seen the invoice of the nitrate of soda—before this case. The document you now present seems to refer to the shipment of the nitrate of soda. Previous to this case I have landed many consignments of goods for the plaintiffs. The condition under which such landings were made were similar to those under which the landing from the *Glamorganshire* was conducted. No understanding was ever entered into between myself and the plaintiffs in regard to the landing of this cargo. The responsibility for landing the goods was assumed by me as landing agent. In respect to whose authority I acted upon, I reply it was upon that of Messrs. Samuel Samuel & Co. Those were the agents of the ship. In rendering my bill to the plaintiffs for payment, my reason would be "for services rendered."

Mr. Scidmore—Why should you proceed to land the cargo on the order of Samuel Samuel?

Witness—Because I was acting under general orders, Messrs. Samuel Samuel being agents of the ship, who made a notification in the papers of the arrival of cargo.

Mr. Scidmore then read the consignees notice issued by the agents for the *Glamorganshire*, and put it in.

Mr. Lowder said that his standing objection referred to this notice.

His Honour—So far as it may be used for that purpose.

Witness—On previous occasions when landing goods for the plaintiffs I have acted in a similar manner as I did in this case. Those proceedings, I believe, were approved by the plaintiffs, so far as my knowledge extends. In the case of the landing of the nitrate of soda from the *Glamorganshire*, I acted on a presumption based on previous experience. The question as to my reporting damage of cargo to plaintiffs has never arisen previous to this case. I have, previous to this, landed lots of damaged cargo for the plaintiffs. The plaintiffs' practise has been for their hatoba men to report such damage to them. When the employés of plaintiffs employed on the hatoba find any packages that are damaged, they put them in my godown, if they are packages, such as cases and bags, for examination by the ship's agent, for the purpose of assessing any damage that has been done. I have been led to look to the hatoba people of the plaintiffs to watch for damage. So far as my observation goes, the plaintiffs have always a staff of men on the hatoba when their goods are landed. I am familiar with the methods of conducting business at the Customs House.

Mr. Lowder said that when such evidence was led by him, his witnesses had not been cross-examined on the point, and the evidence could not now be introduced.

His Honour said that the evidence could not be excluded.

Mr. Lowder said he was not familiar with such a practise.

Witness, continuing, said—The goods were landed on the 26th and could easily have been removed on the 27th. The application was sent in on the 22nd, and this would give the Customs Officers ample time to examine the goods as soon as landed, so as to complete the transaction the following day. Had there been any desire on their part to get these goods, or a part of them, through the

Customs quickly, they could have done so by depositing the duty, and had there been any shortage in packages there would have been a rebate. The duty on nitrate of soda is an *ad valorem* duty based entirely on the invoice. Shortage of contents would not count in that case. Importers frequently leave their goods on the hatoba for a great length of time. There are various reasons for this. The principal reason at present is the difficulty they have of coming to terms with their buyers. I know something of the weather between the 26th June and the 10th July. The 26th was a working day for the people at the ships. Saturday, the 27th, was also a working day for three ships; and Sunday was a working day. On Sunday night it rained. The cargo could have been removed from the Customs on the Sunday by the plaintiffs if it had been of sufficient consequence to them. It rained on the night of the 29th June. Between that date and the 10th of July, it rained several times.

Cross examined by Mr. Lowder—The boat-note showed me that there were 24 empty bags. That was after the whole of the nitrate of soda had been stowed on the hatoba. I do not remember the exact date when this came to my notice. It was before the *Glamorganshire* left the port, and while we were still working the ship in the harbour. She finished discharge on or about the 30th of June. My attention was first called to this cargo on the morning after the rain. The 24 empty bags were then somewhere about the pile. I did not see them before that time.

His Honour suggested that the witness had not made a statement as to the 24 empty bags himself, and therefore could not be cross-examined upon the point.

Mr. Lowder said that the defendant in his answer alleged that certain bags were landed in a broken and damaged condition.

His Honour said that it would be stretching that allegation too far to say that empty bags and "broken and damaged bags" were one and the same thing.

Mr. Lowder said that the evidence had been introduced that afternoon by the defendant.

Cross-examination continued—I did not see the 24 empty bags at any time referred to by Fushimi, nor did I see the 20 bags referred to in the answer to the petition as having been in a broken and damaged condition. I cannot say whether the bags in which the nitrate of soda was packed were single or double. When the bags were on the hatoba I could not see the contents through the bags as they were covered with tarpaulin. I afterwards saw the forty bags which were refused as damaged and allowed to remain. Part of the forty appeared to be damaged—part by rain and part by damage. They were not all wet; the centre of the pile, where the 160 had been lying, was as dry as this floor. The damage from rain occurred around the edges of the pile. When I saw the pile at the hatoba it was not completely covered by tarpaulin; the tarpaulin did not reach the ground. In some places it was a foot above the ground, some places two inches, and in other places the tarpaulin was lying on the ground. I do not think this was a careless way of adjusting the tarpaulin, which came over far enough to shelter from rain. It could not well be beaten in. Mr. Hatch had charge of the stowing, and he was responsible for it. He is not now in my employ; he left about three weeks ago. Mr. Yoshida was in my employ for many years. I heard him say he had used skids. He may have used skids. If so it was without my knowledge. I know that skids have been made by my employés since this claim was made upon me. If used before it was without my knowledge. This is the first claim that has ever been made for damage to saltpetre; in future cases in order to give satisfaction I shall endeavour to use skids for saltpetre.

Mr. Lowder—Now you have heard this evidence, do not you see that it is desirable not only in order to protect goods from rain but also from water coming from below? Don't you think it is reasonable that these goods should be protected? I am not saying by whom.

Witness—It has not been the custom to do it.

Mr. Lowder—Don't you see it would be only reasonable. Supposing I landed goods for myself, after all this evidence do not you see it would be reasonable for me to use skids as well as putting tarpaulins over the goods?

Witness—Where it is landed in a high and dry place I do not see that there is any particular reason.

Mr. Lowder—You have heard it in evidence that there were five inches of water there. Don't you think it would be a wise precaution?—In such a case, yes.

In this particular case?—No, I do not think it is called for, judging by the fact that it has always been the custom to lay it on the bare ground.

I am not talking about judging by what has

been the custom, but don't you think it would be a reasonable precaution hereafter to put skids under these goods?—Hereafter I am going to do it. With perishable cargo I think it would be reasonable to put skids under. The better the goods are protected the better it will be for all concerned.

In order the better to protect such goods in future it is your intention to make use of skids?—Yes.

Further cross-examined, Witness said:—The notice to consignees stated that all broken, chafed, and damaged cargo would be examined on 24th June; but this cargo had not been landed at that time. I claim that the 20 bags alleged in the answer to be ship damaged were among the 40 rejected. I do not know whether any were empty or not; I did not see them, my information came from the boat-note. I cannot say how much of the damage to the 20 bags out of the 40 bags rejected was to rain and how much to the broken and damaged condition before they reached me. I could not say at present how much I should set off for the 20 damaged bags against the claim made against me.

Re-examined—The bestowal and disposition of this nitrate of soda on the hatoba was made with ordinary and reasonable care.

Mr. Scidmore then summed up the case for the defence. He said—This not being a case before assessors or a jury, and your Honour having given such close attention to all its details, I shall omit a criticism or review of testimony and confine myself almost entirely to the authorities that the defendant relies upon in his defence. As I have already said, in a case of this character the defendant is called upon to exercise ordinary or reasonable care. My first authority on that point is contained in section 116 of "Deering on Negligence," in which he quotes a number of American cases, which unfortunately I have not here; but among the cases in which this care is referred to is that of *Whiting v. Chicago and Northern Railway Company*. The idea expressed in dealing with these cases is also expressed, though in somewhat different language, by Mr. Justice Pollock, in the case of *Beale v. the South Devon Railway Company*. This is embodied in a note to the leading case of *Coggs v. Bernard* and is given in Smith's Leading Cases, Vol. 1, American 9th Edition. The next case I will refer your Honour too is quoted in Vol. 4, of "Lawson's Rights, Remedies, and Practice." The note to Sec. 1,811 refers to the case *Campbell v. Morse*; and the case of the *Nashville Railroad Company v. David*; and I refer to these cases in support of my contention that the defendant was not bound to take unusual precautions for the care of the goods after landing. If the evidence of some of the witnesses is to be believed, there were four or five inches of water at this spot; that would have been sufficient to flood Yokohama almost to the eaves of some of the houses. If the bags were improperly packed that would, to a certain extent, relieve the defendant of a certain amount of responsibility. The evidence on this point is conflicting; man who tallied the cargo testified that the bags were of only one thickness, and I would point out that it was his duty to criticise each bag as it came out of the ship. On this point I would refer your Honour to sec. 1,812 of Lawson in the volume already quoted. It is contended by the defendant, and I think, is supported by testimony, that after the landing of these goods a certain responsibility devolved upon the plaintiffs; and in that connection I will refer your Honour to sec. 1,815 of Lawson, Vol. 4. In my opening address I stated that I should contend that from the moment of landing these goods on the hatoba the responsibility of the defendant with respect to the goods ceased, providing they were landed in the usual and customary manner. The first authority I shall quote on that point is referred to in "Carver's Carriage by Sea," an English work, paragraph 464; and next to that eminent authority, "Story on Bailments, sec. 448. I have a still later case, *Brant v. The New Jersey Steamboat Co.*, the facts in which occurred in 1889. The case is reported in the January number of *The American Lawyer* of 1895. Finally, the plaintiff cannot recover unless he proves that the injury was directly due to the negligence of the defendant. It is not enough to prove that it was possibly or even probably caused by him, or that his negligence was the remote cause or mere occasion of the damage. My authorities for that statement will be found in Abbott's "Trial Evidence." I think the evidence produced shows that the plaintiffs have not established the fact that the defendant was directly responsible for this damage. There is evidence that the goods were damaged before their arrival at the hatoba; and there is also evidence that the plaintiffs neglected to take proper care of the goods after their arrival there.

They neglected that diligence in their removal which you would expect from business men under the circumstances. They had no excuse whatever for the delay. They went to the Customs House to make the necessary application on the 22nd June and the goods might have been removed at any moment on deposit of the duty, subsequently obtaining the rebate. Further, after the removal of the goods from the Customs compound to the creek-side—they were not removed until July 10th, between which time and the date of their arrival they were exposed to the rain and wear and tear. In consideration of the character of the goods concerned, on which I think the testimony of Mr. Helm was quite explicit, it was incumbent on the plaintiffs to exercise more than ordinary diligence in the removal of the goods. These goods were peculiarly susceptible to damage by moisture and were placed in such a position by force of circumstances that their removal without delay was incumbent upon the plaintiffs. Of course as to the question of the extent of the damage, the testimony is very meagre. Only one witness has been called to show that the shortage was seventeen piculs and that the value was \$6 per picul. How much of the damage was due to the damage on shipboard and the rain storm on the 28th June, to the result of handling in the course of transportation from the ship to the hatoba, and from there to the place of examination, and how much was due to the rain between Sunday, 28th June, and the 10th of July, does not appear and it is impossible to estimate it.

The Court then adjourned until 10.30 o'clock on Wednesday.

WEDNESDAY, October 7th.

When the Court reassembled this morning, Mr. J. F. Lowder, who appeared for the plaintiffs, rose to make his closing address. He said—May it please the Court, the issues in this case, I take it, are these. First:—Did the defendant so negligently and carelessly deposit and bestow the nitrate of soda on the Customs jetty? Second:—Was a large portion of the nitrate of soda damaged by rain, and rendered of no use to the plaintiffs by reason of such negligence and carelessness? And, if so, how much, and of what value? The burden of proving these two issues is on the plaintiffs. Third:—Was a large portion of the said nitrate of soda, to wit 20 bags, delivered to the defendant in a broken and damaged condition? Fourth:—If so, what, if any, of the loss complained of is to be attributed to such damage; and can the defendant off-set it? Fifth:—Did the plaintiffs neglect to remove the said nitrate of soda from the Customs wharf within a proper time, and permit it there to remain exposed to possible danger for an unreasonable time after being landed by the defendant? Sixth:—If the last question is answered in the affirmative, does the delay of the plaintiffs excuse the neglect, if any, of the defendant? Seventh:—Was the rain which damaged the goods of such severity that the defendant is excused for the damage sustained? The burden of proving the 3rd, 4th, 5th, and 6th issues is on the defendant. For convenience sake, I will, with your Honour's permission, address myself first to the 3rd, 4th, 5th, 6th, and 7th issues, as they can be disposed of in a shorter time and in less words than the first two that have to be proved by the plaintiffs. Now in regard to the 3rd issue—was a large portion of the said nitrate of soda, to wit 20 bags, delivered to the defendant in a broken and damaged condition? The only evidence we have in regard to this point is that of the witness Yoshimi alone, who is in the employ of the defendant. He is a young man of but small experience in the work, and was employed by the defendant to take the cargo from on board the ship. Now the defendant in his pleadings admits that 20 bags were landed in a broken and damaged condition, but this witness, who was introduced yesterday afternoon, went much beyond the pleadings and swore on his oath that 24 bags, not twenty, were not only broken, but in fact received empty. He, moreover, said that the whole of the bags received in good condition were so thin that their contents could be seen, showing that they were single and not double bags. But beyond his testimony we have not a vestige of evidence that any of the bags were landed in a broken and damaged condition. The statement, in fact, can be disposed of by looking at the invoice, where it will easily be seen that if 24 bags were landed empty then the loss in weight would have been over 50 piculs instead of only 17. That, I submit, disposes of the allegation that a large portion of the nitrate of soda was landed in a broken and damaged condition. But if your Honour is not with me on this, and you find that there was a quantity of the nitrate of soda landed in a broken and damaged condition, then we come to the 4th issue—what, if any, of the loss complained of is

to be attributed to such damage, and can the defendant off-set it? If there was a certain amount of damaged nitrate of soda landed, then it was clearly defendant's duty to offer some evidence as to the amount of damage and the loss sustained thereby. But there has been no evidence offered, and I submit that he has failed to prove the allegation set forth in his petition. If he had set up the defence that he was entitled to off-set this claim because the damage was ship's damage, then he ought to have brought a claim against the ship for the recovery of any loss sustained by this damage. Now we have it in evidence that he did not inform the plaintiffs of this damage; we have it also that he did not himself know of this damage, that he did not hear of it until some time after it had been landed. His employees might and ought to have known about this damage, and if they did then it is apparent from the evidence led in the case that they took good pains to conceal it from the plaintiffs. Now the plaintiffs, we have it in evidence, had four men on the hatoba whose duty it was to receive and inspect all the cargo consigned to plaintiffs. None of these saw anything whatever of the alleged broken and damaged condition of the bags as they were landed. For these reasons, I submit, that this claim must be thrown out; besides, the amount of this loss has not been proved. The 5th issue must now be dealt with.—Did the plaintiffs neglect to remove the said nitrate of soda from the Customs wharf within a proper time, and permit it there to remain exposed to possible danger for an unreasonable time after being landed by the defendant? This, I submit, is a question of evidence. Now we have in evidence that the nitrate of soda arrived here on the 22nd of June, and was landed on the 26th June. We have it that on the 26th June all the Customs House requirements, but two, were complied with. Those two requirements were the examination of the bags and the stamping of them by the official in order to pass them through and thus enable the plaintiffs to take delivery of them. On the morning of the 26th June, we have it, two bags were taken into the examination shed to be examined by the proper Customs House officer, and they were duly examined and passed. Therefore, on the morning of the 27th June it was possible for the plaintiffs to have taken delivery. Then we have it that on the Saturday morning the purchasers of the goods and the representatives of the plaintiffs were present, ready to take delivery of the goods. We have it, also, the reason why they were not taken delivery of that day. Saturday was a cloudy day; it was cloudy and showery, and Mr. Metz, who was employed by the plaintiffs, to superintend the delivery of their goods at the hatoba, was afraid of distributing the bags into the piles of five that the Customs regulations required, lest rain might come on and the goods be so damaged. That statement has been unquestioned. Against it there was an attempt to show that consignees frequently allow their goods to remain a long time on the hatoba, and the reason given for this was that they had difficulties of some description with their customers that they had first to settle. I submit that such a reason can not be applied to this case. Both the purchaser and the buyer were present on the Saturday, ready and willing to take delivery. Both of them were called in Court to give evidence, but no questions were put to them by the other side in cross-examination upon this particular point. No questions were put to Mr. Metz, when the opportunity was presented. I take it then, it is established that no unreasonable delay occurred in not taking delivery of the goods before we did, on that the damage was sustained during the subsequent removal. Mr. Helm, who was called by the other side, said that he was willing to give the use of his tarpaulin free for three or four days to cover goods that were deposited on the open hatoba, showing that it is customary at this port to allow goods to remain on the hatoba for that length of time before taking delivery. We have it also, that it takes three or four days to clear goods at the Customs. I shall therefore ask your Honour to find that from the evidence there was no unreasonable delay on the part of the plaintiffs in taking delivery of these goods: that it was quite reasonable for them not to remove the nitrate of soda on the Saturday. That they were ready to do so is proved by the presence on the wharf that day of all the parties concerned, the agents of the consignees and the agent of the buyer. About that there is no question. But if Your Honour should decide the issue in the affirmative and say that there was delay on the part of the plaintiffs to take delivery of the goods, then we come to the question, does such delay, assuming for the moment that there was delay, excuse neglect, if any, on the part of the defendant? This is a point of law, and to assist your Honour in deciding it, I will refer you to

the case of *Mitchell and Others v. the Lancashire and Yorkshire Railway Co.*, and particularly the decision therein of Mr. Justice Blackburn. I cite it for the purpose of solving the question whether delay in the owner can excuse the defendant as carrier or warehouseman for any neglect of care on his part. This case was very similar to the present. The goods were flax or hemp, conveyed by the railway company to a station where there were no warehouses. At the time of their arrival the weather was fair, and the flax was stowed in the open, but no planks, or skids, were laid on the ground to raise the goods and thus prevent damp from reaching the flax. Some delay occurred in the delivery of the goods, and when they were finally removed it was found that the flax was completely spoiled. Action was brought to recover the damage, and it was held that the defendant company were bound to take reasonable care, and they had not done so, having neglected to use skids. On the authority of this case, which Counsel quoted extensively, he asked the Court to find that any delay on the part of the plaintiffs did not excuse neglect, if any, on the part of the defendant. My contention is, continued Mr. Lowder, that if the nitrate of soda had been safely and securely deposited in the first place, then defendant would have performed all he had undertaken; and he would be liable only for subsequent negligence. Now we come to the 7th issue—was the rain which damaged the goods of such severity that the defendant is excused for the damage sustained? For guidance on the point I refer your Honour to the *Great Western Railway Co. of Canada against Black*, wherein "bad weather" is discussed and defined. After quoting the case, Counsel contended that it showed that in the present suit, that defendant was under obligation, as a reasonable man, to exercise such precaution as he would take were the goods his own goods, to prevent them from being damaged. It was the defendant's duty to take all reasonable care that no damage should be sustained by the nitrate of soda, and the rain of the Sunday night was not sufficiently severe to excuse him from taking those precautions. This disposed of all the issues that lay upon the defendant. Turning to the 1st issue—Did the defendant so negligently and carelessly deposit and bestow the nitrate of soda on the Customs' jetty?—Mr. Lowder said—Now the key note of the defence on this point was addressed to your Honour yesterday by my learned friend, Mr. Scidmore, when he said that defendants' liability ceased on landing the nitrate of soda on the hatoba in the customary manner—if he did that his liability ceased. I say that even if it can be shown that the customary manner of this port is a neglectful manner, the defendant cannot get rid of his liability. Was it defendant's duty to use dunnage as well as tarpaulin to protect the plaintiffs' goods from rain? I shall answer: Would a reasonable man take such a precaution in respect of his own goods? If so, it is no excuse to say that the negligence complained of is customary. Customary negligence cannot off-set an obligation which the law implies. The evidence on the point of the use of dunnage in landing nitrate of soda is very contradictory. We have had the defendant asserting at one time that it was never his habit to make use of dunnage. Then we called a servant of the plaintiffs, Yoshida, who had formerly been in the service of the defendant for many years. He said that it had been his custom for many years to make use of dunnage when landing such cargo. We called other servant of a purchaser of nitrate of soda, and he deposed that it had always been customary for the consignees to furnish skids or planks. The defendant when on the stand, yesterday, flatly contradicted these statements. I asked him if it might not have been possible for his employé, Yoshida, to have used skids without his knowledge, and he admitted, quite rightly and properly, that it might have been possible for him to have used these skids, but it would be without his, the defendant's, knowledge. I think, then, that the statement is not to be disbelieved nor should the evidence of the other Japanese be disbelieved when they say that skids have always been used. One witness called by the defendant, Hamaguchi said that the defendant, Capt. Weston, had no skids, but when I cross-examined him he acknowledged that he did not understand what was meant by skids, therefore his statement that Capt. Weston had no skids carries no weight. Yoshida declared that the skids were kept in the defendant's godown at the Customs hatoba, when there was room; if there was no room they were kept outside somewhere, when not in use. Then Mr. Helm was placed upon the stand and his evidence was that the custom in Yokohama is for consignees to supply the dunnage themselves. He said that the reason landing agents did not supply the dunnage was that it was too expensive and the consignees objected to paying charges for it,

I think it quite pertinent, and will remark, that sometime or other there must have been some question of these dunnage charges between the landing agents and their customers, and the consignees came to the conclusion that the charge for dunnage was too heavy and they preferred to supply their own. But whether dunnage is furnished by the landing agent, on whether it is supplied by the owners of goods makes no difference whatever. The only point is whether dunnage ought to be used, and it makes no difference one way or another whether it is supplied either by the landing agents or the consignees. The evidence of the plaintiffs is that their cargo—of this description—was always placed on skids, and Helm said that he always supposed that the dunnage was supplied by the consignees. Weston's knowledge was to the contrary. He is a very busy man, having no doubt, on occasion, several ships at work at the same time, and he did not even see this cargo until some days after it was landed. His employees are, however, more careful than himself and they thought it their duty to supply skids. The evidence of Mr. Helm goes to prove that it was a reasonable thing for dunnage to be used.

His Honour—Did he not say that he had never had the question of dunnage raised; that charges for it had not been objected to, but that it was against landing charges that objection was sometimes raised?

Mr. Lowder—In his first answer he said that consignees did not care to pay for dunnage.

His Honour—Was not that drawn out by you in a subsequent question?

Mr. Lowder—Yes, your Honour is quite right, it came out in the cross-examination. The point I wish to make is whether it is reasonable to expect dunnage to be used.

His Honour—That I understand.

Mr. Lowder—I understand the defence to be that it is not the custom of this port to use dunnage. It has been brought forth in evidence that it was used by Helm; and I shall ask your Honour to draw the conclusion from the evidence of Yoshida and the purchaser of the nitrate of soda—and which was borne out to a certain extent by the admission of defendant himself—that it is customary here to use skids when landing nitrate of soda. Now if you find that skids are made use of when landing nitrate of soda, you have to arrive at the conclusion that the defendant did negligently and carelessly deposit and bestow the nitrate of soda on the Custom jetty. And I can't help thinking and remarking that had Yoshida not left the service of the defendant this case would never have occurred. After Yoshida left, the man who filled his place was sufficiently *au fait* with the manner of landing nitrate of soda, and the dunnage was placed under the bags. Apart from the question of evidence altogether, was it not negligent, was it not careless, on the part of a landing agent to deposit this cargo on the ground of the jetty without skids? The point we have now reached is the one I referred to in my opening: what is a landing? Your Honour will recollect that the question is answered in *Walker and Jackson*—a case arising out of a ferry accident—[case quoted]. Was it sufficient, continued Counsel, to place the nitrate of soda on the bare ground having undertaken to protect it from rain by placing a tarpaulin over it; was it not equally his duty to place skids underneath? In the case of the *flax*, quoted above, it was found to have been the duty of the defendants to place planks beneath it to raise it from the ground. The case of the *Great Northern Railway v. Swaffield*, was next cited to show that it was defendant's duty to place the goods in a place of security; and also that it was the bounden duty of defendant to take due care of the goods after he had landed them in a place of security. This, I would point out, was admitted by the fourth paragraph of defendant's answer to my petition. I will therefore ask your Honour to say whether he did so safely and securely land the goods. That he did not is shown by his not placing skids under the bags to protect them from the rain. Then I think it was argued by Mr. Scidmore that only reasonable care was required of defendant; that he cannot be held liable except for gross negligence, and he referred your Honour to *Coggs v. Bernard* and the notes thereon. Let me refer your Honour to the same case. It was an action decided nearly 200 years ago and is the leading authorities on bailments, and is remarkable for the finding delivered by Lord Chief Justice Holt. Defendant, it is contended, was not paid for protecting the nitrate of soda, but I say that he undertook to land and bestow and protect the goods for a reward to be paid him. Now I will read the note on *Coggs v. Bernard*:—It is laid down in that case that "If a man undertakes to carry goods safely and securely, he is responsible

for any damage they may sustain through his neglect, though he was not a common carrier, and was to have nothing for the carriage." Defendant's undertaking in this case was for a reasonable consideration. It is evident that defendant handled the goods as a person skilled in such undertakings; therefore what may be negligence on the part of others in such a case, in his case is gross negligence. Counsel quoted *Wilson v. Brett* to sustain his argument, and then contended that even if the defendant in this case was only a gratuitous bailee he has been guilty of gross negligence in not taking ordinary precautions to prevent the goods from being damaged by rain. It is pertinent to ask here why, if he considered it his duty to protect the goods by covering them with a tarpaulin, why was it not equally his duty to put skids under them? If it was his duty in the one instance, it was surely his duty in the other. To put my case in short, I ask you to find that the defendant has failed in the duty that he owed to the plaintiffs as their agent; that he is guilty of carelessness and negligence; and that he is liable for the damages that the plaintiffs have sustained. His Honour reserved judgment.

AUSTRALIA AND JAPAN.

By JOHN PLUMMER M.J.S.

Sydney, August 29th.

The addition of the fine steamship *Australian* to the fleet of the Eastern and Australian Steamship Company has naturally occasioned some little comment on the apparent inconsistency of the Australian colonies adopting a policy of exclusion towards the Japanese, and at the same time endeavouring to extend their trade in the Japanese market. On the arrival of the vessel at Port Adelaide there was the customary banquet, and during the subsequent proceedings, Mr. Kingston, the South Australian Premier, made a speech, in the course of which he wished success and prosperity to the venture, in its connection with the development of the trade and resources of Northern Australia. Alluding to the presence and speeches of the Premier and his Ministerial colleagues on the occasion, an Adelaide paper says—"It is true that they were appropriately feted as parties to a South Australian contract with the E. & A. Company for the conveyance of the Northern Territory mails, but if steamships like the *Australian* had to depend upon that source of income alone profits with them would be as rare as consistency is with many politicians. The Eastern trade is by far the greatest consideration with the Company, and for the members of the Kingston Ministry to join in wishing prosperity to that traffic seems as strange as would be the spectacle of a grave-digger assisting in celebrating a triumph of cremation. It was Mr. Kingston who recently led the other Australian Premiers in contemptuously casting aside the Anglo-Japanese Treaty which might have represented a great advantage to Australian producers of raw material, and consequently to the E. & A. Company. If the virtual rejection of that agreement has any direct effect at all it will be in the way of greatly restricting trade with the East, and only political diplomats could expertly perform at one and the same time in the conflicting capacities of encouragers and discouragers of the one and the same thing. Then, so far as the trade with the Northern Territory is concerned, the possibilities of fast extending business for the E. & A. Company from that quarter have been for years and are still being greatly restricted by the policy of Mr. Kingston and his colleagues in connection with the coloured labour question. The present position of that matter surely tends to discount the hopeful auguries which the Treasurer drew from the prevalent speculative revival of interest in our Northern white elephant, and it is not alone in that respect. The resources of the Northern Territory have consistently been advocated for many years in the *Register*, and we should be among the first to express gratification if Mr. Holder's pleasant hopefulness should prove to be justified. We cannot forget, however, that already the Territory has made at least two futile efforts to thrive upon speculation, and has not succeeded. Regarding the future, colonists in our distant dependency may hope for the best, but they certainly should not be unduly elated now lest they afterwards be proportionately depressed. In any case there is reason to question whether the commerce of the southern part of the colony would benefit so greatly as is expected by an extension of trade in the Northern Territory. Certainly the probability is that Sydney, being much nearer to Port Darwin than Adelaide is, would reap the greater advantage.

age. It is probable also that the increase in facilities of communication between Australia and the East will tend to encourage direct shipments between the Territory and the old world. In this relation it must be remembered that Hongkong, Shanghai, and the principal Japanese ports are not enhancing their business by the mere process of supplying new demands. They are to some extent beginning to shift the centre of manufacture from the west to the east. It is not unlikely that some lines of goods which have hitherto been imported from England to the colonies may soon be brought hither from the Orient, and similarly it is probable that a quantity of wool and other raw material which has been sent hence to Great Britain and America may be conveyed through the Malay Archipelago to the East. These prospects appear from a broad standpoint to be gratifying indications, viewed in the light of the new enterprise of the E. & A. Company, and it is satisfactory to reflect that the rise of that substantial shipping corporation was coincident with the opening up and modernizing of trade to China and Japan. To wish success to such a Company is simply to be speak good fortune for many industries in the colonies. In considering, however, the relative positions of Eastern trading vessels owned in Great Britain and those belonging to Japanese proprietors rather unpleasant and complicating circumstances must be taken into account. Not only are the ships under the European flag weighted in other special ways, but they have now to compete against such craft as those belonging to the Nippon Yusen Kaisha, the great "P. and O. Company of the East." These vessels are heavily subsidized by the Mikado's Government, and enjoy the further advantage of a public sentiment which recently manifested itself in Kobe and Yokohama in an influential expression of the opinion that raw material imported from other countries for Japanese manufacturers should be conveyed in Japanese boats only. Is there not a double significance to Australian politicians in such a suggestive hint as this? The addition of the *Australian* to the E. and A. company's fleet is generally regarded as necessitated by the intended extension of the operations of the Nippon Yusen Kaisha to Australia. It is very doubtful whether the Australian eastern trade can support three lines of steamers, and there exists a widely spread impression that the Japanese Company is destined to acquire the lion's share of the traffic.

The movements of Li Hung-chang in Europe have been closely followed by the Australian papers, and naturally so for the foreign policy of China and the nature of the relation between China and Japan must always have a direct bearing on Australian interests. The importance of Li Hung-chang's mission has been unreservedly recognised from the first, although its dual character remains only partially revealed. The *Adelaide Advertiser* says:—"The full meaning of Li Hung-chang's visit to Europe probably lies a good way beneath the surface. The typical Celestial has a fashion of concealing his real purposes, and is astute enough to disarm suspicion by assuming an air of frank simplicity. China owed a debt of gratitude to Russia, and that was enough, to account for her participation by proxy in a ceremony of national importance. At the same time the necessity of standing well with other nations was perceived, and this has apparently been a guiding principle. All Germany was complimented when Li Hung-chang obtained an interview with Prince Bismarck, expressed his high appreciation of the services rendered by that veteran statesman, and dexterously intimated that the Chinese army of the future would be reorganised on the German model, and with the help of Prussian officers. Unfortunately for itself France does not possess an empire-builder to whom, or through whom, a similar honour could be shown, but to make things even large orders for French rifles were placed, and a corresponding sense of satisfaction was thereby produced. British susceptibilities were of course taken into account, and not by ordering warships, but in other ways a distinct desire was exhibited to create a favourable impression. One of the most dramatic incidents of the tour indeed was the pilgrimage made by the distinguished foreigner and his suite to the Gordon statue in Trafalgar-square, and the Gordon memorial in St. Paul's. Though in itself the placing of garlands was a trivial act, it was one of those things that obtain immediate notoriety and go straight to the nation's heart. 'Chinese Gordon' was a man of whom all Englishmen are proud and whose memory is universally revered. Thirty-three years ago he rescued China from the peril of disruption and saved the Imperial dynasty. His comrade-in-arms during the critical time has lived to be the first Chinaman of the age, and in the heart of London to pay homage to his name.

Tactful consideration having thus been displayed in Russia, Germany France, and England, one wonders what form it will take in America whither Li Hung-chang wends his way."

The Melbourne *Argus* doubts whether the great reforms which Li Hung-chang expresses his desire to see accomplished are really possible. After summarizing these, one of the principal being the abolition of the literary class, represented by the Board of Censors, the *Argus* says:—"If Li Hung-chang can carry out all or even some of them he will earn a place among the greatest of Asiatic statesmen. At the same time it must be confessed that the omens are not favourable, and that the history of China affords little hope that such far-reaching changes can be carried out without external compulsion." This seems, indeed, to be the general opinion in Australia. If Li Hung-chang were a younger man, the position would be different; but if he were to disappear from the scene, where is his successor to be found? The *Sydney Daily Telegraph* says:—"The first need of China at the present time is to secure larger revenues, as the basis for further borrowings, and the commercial treaties with European Powers, especially England, stand in the way. Under those treaties she is bound to low import duties; and although she has added to their yield by the imposition of the *likin* or internal transport tax, she has now appealed to the Powers to sanction her doubling the import duties as essential in the task imposed upon her adequately securing her protection and development. Lord Salisbury has expressed himself favourable to the claims of China in these particulars, but, at the same time, has pointed out the serious hindrance to internal trade which the imposition of the *likin* has involved. But the Chinese envoy has not shown any desire to meet the wishes of the Shanghai and Hongkong Chambers of Commerce in that particular, and it remains to be seen whether the Powers will, under these circumstances, be prepared to abate their treaty rights. Possibly they may do so, as it will be to their advantage to see China more powerful than she is at present. But to England and India, as the principal countries which contribute to her imports, there can be no doubt that the material increase of her customs duties is an important consideration. To Australia, this appeal is of comparatively small moment. We import from China, but do not export thereto. But an even more suggestive subject for consideration in regard to Li Hung-chang's visit is the evidence it affords that China is awakening to her serious shortcomings, and it remains to be seen whether she will have the energy to remedy those manifold defects. It was this energy and readiness to learn which gave to Japan her easy victory in the late war."

Alluding to the proposed commercial and financial policy of China, above commented upon, the *Sydney Morning Herald* remarks that it has created a very pretty situation, "one, perhaps, the peculiar points of which did not strike Lord Salisbury too clearly when he said that the Chinese demands merited favourable consideration. For, in the first place, a doubled tariff will mean a heavy protective bonus for the industries of China, and this in itself is a disquieting consideration for British manufacturing interests. Britain has spent much time and some blood and treasure for the purpose of opening markets for her trade in the Far East, but, as our commercial columns show, quoted from the annual report of the China Association (Shanghai branch), the conditions of trade are changing to such an extent that the next revision of tariff in China will certainly tend to the protection of native industries newly-born, and the exclusion of foreign competitive productions. Of course, until those native industries are built up the Chinese Government will have the benefit of the doubled import tariff, which suggests the second point which may have escaped Lord Salisbury's consideration. This concerns the use China is to make of the first-fruits of her reformed tariff, which we learn are to be spent on warships and railways. Is it altogether certain that Chinese development on these lines is opportune just now for Western civilisation? For British trade it certainly is not, for what Lord Elgin spoke of nearly 40 years ago as the 'most laboriously manufacturing population of any on earth' is now acquiring the methods of scientific manufacture, and this will sooner or later close the import market to Europeans. Great Britain can hardly coerce China on this ground, but the influence of Russia in Chinese councils of late is a growing menace to England's ascendancy in the Far East. There is already talk in well-informed circles of an Anglo-Japanese alliance to defeat such a combination, and it requires no very vivid imagination to find in the developments of coming years the fulfilment of a possible prediction which would date back the decay of Britannic influence

in that part of the world to the act which relaxed our hold on Chinese revenues, and permitted the results to be spent on developments and armaments destined to raise China to the rank of a first-rate Power."

THE JAPANESE IN FORMOSA.

The following letter appears in recent editorial correspondence of the *Hongkong Daily Press*:-

Sir,—The writing of some of your correspondents in Formosa concerning the doings of the Japanese in the island has astonished me not a little, but none so much as that of your Tainanfoo correspondent. The reason has been that the deeds stated to have been done by the Japanese are so different from what I should have expected of the people, after a long experience of their nature gained from living amongst them. Still, I had no means of ascertaining the truth or the want of truth of your correspondent's statements till lately. Since, however, I have been in Formosa, have travelled several hundred miles through the country, a great part of the distance through the districts in which the affirmed "atrocities" took place, and have taken every opportunity of discovering what has been the actual truth, from what I could see and from what I could learn from both Japanese and Chinese, I have no hesitation in affirming that your correspondent's statements as to the action of the Japanese are, with a few exceptions, either exaggerations or pure fabrications. There have been no "atrocities" except inasmuch as every form of war is atrocious. Active rebels have been shot down or caught and executed without much mercy. I believe this is the custom with the people of all countries in such lamentable cases. Though in the districts in which the rebels held sway for a time towns and villages have been burned, leaving the survivors homeless, I have heard of such things in cases of war in European countries and in America. That "women and children were put to the sword" is simply untrue, though it seems to be the case, as is inevitable in war of any kind, more especially in the suppression of a rebellion, that some who were innocent suffered with the guilty and that the property of many who were not in any sense rebels was destroyed. The Japanese Government is now offering to compensate all who have lost in this manner.

Provocation for the rebellion there was some undoubtedly, but it amounted to nothing more than the overbearing manner of soldiers and coolies and the petty tyranny of petty officials, concerning whom I am so far in accord with your correspondent that I wish the higher officials were made responsible.

Besides the writing of the correspondent above referred to and that of various others, I have read the letters of Mr. Davidson, who is mentioned in your issue of August 31st, and I must say that comparing the writings of all, and taking into consideration what I have seen and been able to ascertain at first hand, Mr. Davidson's writing comes far nearer the truth than that of other correspondents. It may be the case that Mr. Davidson is over prone to believe the statements made to him by Japanese officials, but it seems to me that he has shown a fine discrimination in sifting what is false from what is true.

But what is to be said of the other side? "There are European eye-witnesses" writes your Tainanfoo correspondent. (The italics are mine. The things witnessed, are supposed to be the "atrocities" that your correspondent describes.) One cannot help asking concerning these "Europeans":—where are they and who are they? There were two or three Europeans in the district of the rebellion many weeks ago, who may have seen a little of the fighting, but they long since left it. The plain fact is that the "atrocities" your correspondent reports come to him only from Chinese sources. Any people in the position in which the Chinese in Formosa now find themselves would be unlikely to tell the pure unvarnished truth, and the Chinese have never, so far as I know, had a particularly high reputation for the article in question. Rather, they have had the reverse.

The real fact seems to be that the foreign community of which your correspondent is one chafes—not unnaturally—at finding its privileges curtailed on account of the transference of Formosa from Chinese to Japanese rule, enjoys hearing news to the discredit of the latter people, and that there are easy means for getting such news manufactured to meet the demand, a Chinese being, as a rule, only too ready to furnish the kind of tales that he finds his listeners relish. Such expressions as "the Japanese . . ." are enough, without comment, to show the spirit in which your correspondent writes, and to throw discredit on anything

that he writes, in the mind of any fair-minded reader, of whatever nationality.

Your correspondent states that the Japanese have not contradicted reports of the "atrocities." If he means that they have not actually contradicted what he was written, I cannot say him nay, because I do not know that any Japanese correspondent has noticed his effusions. On the other hand, the Japanese newspapers print daily, or nearly so, matter from their own correspondents in Formosa which give a very different description of affairs from that of your Tainanfoo correspondent. I travelled for about a hundred miles with one of these correspondents and found him a particularly bright and intelligent man, who had had a very thorough education in England.

I am driven to suppose that your correspondent expects official contradiction of what appears in your columns from him concerning affairs in Formosa! but you I am sure are aware that it is not the custom of Japanese officials to deny irresponsible reports that appear in foreign papers. Imagine, indeed, in any country, an official denial being given to such stuff as comes from your Tainanfoo correspondent!

This whole affair of the rebellion and its suppression is sad enough at the best, and it really seems to me a pity that you should lend your columns to make it appear more than it is by publishing reports so horribly exaggerated and distorted as those of your Tainanfoo correspondent.—I remain, sir, yours, &c., W. K. BURTON.

Tai-hoku, Tai-wan, 5th September, 1896.

THE REBELLION IN THE PHILIPPINES.

Many people, says the *Daily Press* of the 30th ult., are now of opinion that the rebellion in the Philippines is slowly dying, but, perhaps, dying to be born again at a more favourable opportunity. From the latest advices we learn that the Spaniards are watchful and the insurgents quiescent. The prompt and severe punishment meted out to the leaders in the rebellion seems to have dealt a death-blow to the courage and organisation of the natives, and it is thought that the whole movement will in a short time dissolve. Three thousand Spanish troops were expected to arrive in Manila last Monday, and it is almost certain that if the natives did not make a bold bid for supremacy before that date and also succeed in winning over the native soldiers they would, as they are meagrely armed and wretchedly organised, fall hopelessly in a pitched battle before the trained Spanish soldiers. In Manila, business is still at a standstill, most of the godowns being completely full of unwanted merchandise. The town is surrounded by a strong guard of sentinels, and in the old town of Manila the draw-bridges are hauled up throughout the night. The approaches to the suburbs are also carefully watched by soldiers, and residents, Britishers, Americans, and Spaniards, sleep with loaded revolvers under their pillows. The volunteers also act as sentries and every precaution possible is taken against a sudden attack. Some thousands of insurgents are encamped on the hills about eight to ten miles away from Manila, but they do not seem inclined to make an attack on the town.

Cavite still continues to be the stronghold of the insurgents, and it is said that twelve hundred of them are masters of the fort near the town and that they have enough provisions to last them for two years. Some days ago several guns, of rather an ancient and small pattern, were despatched from Manila on lighters to Cavite, together with a number of troops to assist in the bombardment of this fort, but as yet the Spaniards have not ventured into the interior to wage war with the rebels.

Most awful stories are circulated of the shocking atrocities committed on both sides. The woman who confessed the plot to the priest is now under the protection of the Government, while the priest who divulged the secret was amongst those caught in the convent at Inus, and he was flayed to death and then roasted. Arrests of rich natives continue to be made and no one knows what their fate will be. Pedro Roxas, or "Captain Lewis" as he was commonly called, is still in gaol. A curious story is told concerning his connection with the revolutionary movement. When the rebellion first broke out he offered to transport Spanish troops to Cavite in one of his boats, but the offer was refused. It is thought that the Spanish Government knew of the active part he was secretly taking to stir up the rebellion and, perhaps, not without good cause, concluded that he had an object in getting the troops away from the capital. "Captain Lewis" formerly let small boats out for hire and after a time he was able to have several cargo boats built for his own trading purposes. He is said to be now worth \$2,000,000.

There is no doubt that there is a good deal of truth in the rumour that the Philippines endeavoured to get the assistance of the Japanese as one of the active participants in the attempt, a well known doctor, has been arrested and thrown into prison. There is also a firm belief that certain people in Hongkong have been assisting in organising the rebellion, and it is a well known fact that about a month ago one of the leading and richest of the insurgents came here from Manila to confer with some friends in the colony about the details of the plot.

The Manila papers to hand continue to record numerous arrests and dismissals from office of convicted or suspected individuals. The names of thirty-eight schoolmasters of various parishes in the province of Cavite are given, whose whereabouts are unknown, and who, being suspected of having joined the rebels, are suspended from office. In Cavite the position appears to remain as last reported, the rebels being in possession of the province with the exception of the town and arsenal.

In the *Comercio* of the 22nd September we find references which seem to indicate that on the previous day the rebels had appeared a Malabon and been driven off by the Government forces, but the paper of the 21st, which would contain the account of the affair, has not come to hand. In a subsequent issue it is recorded that there had been another alarm in the same district, but on investigation it was found to have arisen from nothing more serious than a noisy quarrel between a buyer and a seller in the market. That such a trifling affair should give rise to uneasiness is indicative of the state of panic that prevails.

Some persons connected with the insurrectionary movement have made their submission to the government and claimed the clemency offered to those who voluntarily surrender.

From the province of Batangas it was reported that on the 21st September there had been a sedition rising in the parish of Tuy, in which it was estimated that a thousand persons took part. The seventy men of the Government forces stationed there defended themselves heroically and in the evening were reinforced with two hundred soldiers, and the next day further large reinforcements arrived, bringing the number up to twelve hundred, when the rebels were dispersed with great loss. It was stated that the force in the provincial capital was sufficient for all contingencies. The convent was fortified and twenty-three priests from the surrounding parishes had taken refuge there. A volunteer force had been formed.

LATEST TELEGRAMS.

(REUTER'S "JAPAN MAIL" SPECIAL SERVICE.)

London, October 3.

The autumn political campaign has been opened with speeches by Mr. Asquith and Mr. Bryce, both urging the deposition of the Sultan, which there was reason to believe would prove a beneficial action to Great Britain and was possible without imperilling the peace of Europe.

London, October 6.

His Majesty the Czar arrived in Paris to-day where upwards of a million visitors had assembled. The weather was favourable and everything passed off without a hitch, extraordinary enthusiasm being shown. His Majesty expressed gratification with his reception. President Faure, in toasting the Czar, referred to the union of the powerful Empire and the Republic as having a good effect for the general peace of Europe and as a union that will continue to extend good influence. In his reply, the Czar said that he was deeply touched by the welcome accorded him in Paris, and the tie between France and Russia will continue to have good influence.

The French press in welcoming the visit of his Majesty as a guarantee of peace, hinted that Alsace-Lorraine was not forgotten.

("SPECIAL" TELEGRAM TO "JAPAN MAIL.")

Hakodate, Oct. 4.

A strong and prolonged earthquake occurred at this port this morning at half-past three.

Hakodate, Oct. 5.

The following men-of-war have arrived here:—*Grafton*, *Undaunted*, *Pamiat Asova*, *Admiral Nakhimoff*, *Zabiaka*, and *Dimitri Donskoi*.

Hakodate, Oct. 9.

A fire broke out here last night, and 27 houses were burned down before the flames were ex-

tinguished. There were no casualties, and good assistance was rendered by parties promptly landed from Her Majesty's ships *Grafton*, *Undaunted*, and *Eolus*.

Hakodate, Oct. 10.

The *Pamiat Asova* and the *Zabiaka* left this port on the 8th, and the *Admiral Nakhimoff* and *Dimitri Donskoi* took their departure this morning.

(Reuter's Service of Telegrams supplied to the "Japan Herald," the "Japan Gazette," and other Subscribers in Tokyo and Yokohama.)

London, October 2.

France and Italy have concluded a settlement of their differences relating to Tunis. This agreement removes a grave cause of discord between the two countries.

A severe hurricane has swept along the Atlantic coast of America, causing immense damage, especially in the states of Georgia and Florida. Upwards of one hundred persons are reported to have been killed.

London, October 3.

Their Imperial Majesties the Czar and Czarina have left Balmoral for France. Great preparations have been made in Paris to give them a splendid reception.

Said Khalid, who escaped to the German Consulate after the bombardment of the Sultan's Palace, has been conveyed on board a German warship at Zanzibar. The British Consul has protested against the action of the German officials.

A band of insurgents in Macedonia have annihilated a Turkish detachment of fifty men.

(FROM "LE COURIER D'HAIPHONG.")

Paris, September 14.

The programme of the fêtes that will be given in honour of the Czar and Czarina is now published. Their Imperial Highnesses will arrive at Cherbourg on the 5th October, and will remain three days in Paris.

M. Faure will take part in army manoeuvres which are to take place near Angoulême. In a toast, M. Faure attributed to the concord which existed throughout France since the foundation of the Republic and to the creation of a powerful army, the visit of the Czar of Russia, a visit which would prove to the world the union of the two great Powers (Russia and France) in the desire to maintain peace.

Paris, September 17.

The President of the Republic held a brilliant review of the troops near Angoulême.

It is rumoured that the Czarevitch is seriously ill.

(FROM "HONGKONG TELEGRAPH.")

Saigon, September 25.

A Havas message dated Paris 23rd September states that there have been more engagements between the rebels and Spanish forces resulting in the rebels being twice defeated, leaving 17 killed on the field.

(FROM THE "SEMAINE COLONIALE.")

Paris, Sept. 18.

At the close of a brilliant review which terminated the Angoulême manoeuvres, M. Faure

lavished high praise on the Commanders and the men; he proposed a toast to the army, which, he said, is the heart, the soul, and the bond of the nation.

(FROM THE "N.C. DAILY NEWS.")

London, October 2.

The result of the Jockey Club Stakes is as follows:—

The Prince of Wales's Persimmon 1
Lord Rosebery's Sir Visto 2
Mr. J. H. Houldsworth's Laveno 3

A boat belonging to H.M.S. *Satellite* has capsized on the Alaskan coast. The first lieutenant and six men were drowned.

[The first lieutenant of the *Satellite* was Gerald A. Heyman.—Ed.]

(FROM THE JAPANESE PAPERS.)

Bakan, Oct. 4.

Mr. Takeshita, Secretary of Tainan Prefecture (Formosa), has passed here on his way to Formosa.

Fukui, Oct. 5.

Marquis Matsudaira will start for Tokyo to-day.

Kumamoto, Oct. 4.

The Kiushu No-San-Cha-Chiku Shogyo Dai-kai was opened to-day in this city. Nine hundred and thirty-five persons were present.

Sōul, Oct. 4.

Mr. Hara, Minister to Korea, left for Japan to-day.

Hiroshima, Oct. 5.

The Japanese man-of-war *Tsukushi* will carry out target practice at Kabutojima, for four days from to-morrow.

Morioka, Oct. 5.

The *Jiyu-to Konwakai* was held yesterday. Messrs. Hayashi Ikuzo and Nakano Torajiro, from the Tokyo Head-Office, delivered speeches. One hundred and twenty persons were present.

Hiroshima, October 6.

Baron Ozawa left for Tokyo to-day.

Nemuro, October 6.

Seven fishermen who were reported missing the other day have returned safely.

Nagano, October 6.

The Government license was issued to the Nagano Electric Light Company to-day.

Okayama, October 6.

Three strong earthquakes were felt to-day at 4 a.m.

Hiroshima, October 6.

An earthquake was felt here at 4 a.m. to-day.

Marugame, October 6.

A strong earthquake was felt here to-day at 3:35 a.m.

Tokushima, Oct. 6.

A strong earthquake was felt to-day at 3:36 a.m.

Tottori, Oct. 6.

A slight earthquake was felt here to-day at 3:40 a.m.

Matsuyama, Oct. 6.

The military manoeuvres of the 5th Army Division being fixed for the 9th inst. in the Iyo and Sanuki Provinces, the first and third battalions of the 22nd Regiment start for the rendezvous to-day.

Hiroshima, October 8.

Mr. Oku, Commandant of the Fifth Army Division, is to leave here for Tokyo to-day.

Sapporo, October 8.

Major-General Nagayama, Commandant of the Seventh Army Division, leaves here for Tokyo to-day.

Matsuyama, October 8.

An emergency meeting of the Prefectural Assembly is to be held to-day to pass votes for necessary repairs.

Kumamoto, October 8.

Mr. Sasaki, a member of the House of Representatives, returned here yesterday evening.

Nagoya, October 8.

Two members of the Prefectural Assembly are to leave for Tokyo on the 11th instant to petition for grants-in-aid, wherewith to effect necessary repairs.

Hiroshima, October 8.

Twenty-four invalids from Formosa arrived here by the *Otaru Maru*.

Sapporo, October 8.

Snow fell in this neighbourhood to-day.

Hiroshima, Oct. 9.

The Second Brigade of the Formosa Troops leave on the 13th inst. for Formosa by the *Kyoto Maru*, *Fusan Maru* and *Gaisen Maru*; and the remainder of the Seventh Brigade on the 10th instant by the *Tairen Maru* and the *Hokoku Maru*.

Bakan, Oct. 9.

Mr. Hara, Minister to Korea, arrived here this morning by the *Toyoshima Maru*.

Osaka, Oct. 9.

Mr. Otani, Head-Councillor of War of the Fourth Army Division has arrived here. Mr. Haraguchi, President of the Toyama Gakko, is leaving here to take up his new appointment.

Sapporo, October 9.

Snow fell in this neighbourhood on the 8th instant.

CHESS.

(All Communications to be addressed to the Chess Editor.)

The Yokohama Chess Club meets on Monday and Thursday in each week, at the Club Hotel, No. 5, Bund, from 5 p.m. to 11 p.m. Visitors to Yokohama, and Officers of ships (whether Navy or Merchant service) who are Chess-players, are welcome to use the Club during their stay in this port.

The Tokyo Chess Club meets at the Tokyo Hotel, every Friday, from 1 p.m. to 7 p.m.

SOLUTION OF PROBLEM No. 250.

WHITE.

1—Kt to K B 6

2—Q to K 4, mate

2—Q to Kt 5, mate

2—B to Q 6, mate

2—Q to Kt 8, mate.

BLACK.

1—K takes Kt

1—Q takes Kt

1—Kt takes Kt

1—Q to B 4

Correct answers from J.D., W.D.C., W.H.S., W.d.H., Shogi, and Omega.

W.d.H.—No. 250.—"Dormitator Homerus." No. 229 is null and void.

PROBLEM No. 252.

By S. LOYD.

BLACK.

White to play and mate in two moves.

PROBLEM No. 253.

By A. ARNELL, Stockholm.

BLACK.

White to play and mate in two moves.

TOKIO CHESS CLUB.

The Annual Meeting was held on Friday, 2nd inst. Sad to relate, there is a reduction in the membership, and small prospect of good recruits.

The officers for the present season are as under: President—Hon. Edwin Dunn. Secretary and Treasurer—Mr. W. B. Mason. Committee—Messrs. Cox, Jaudon, and White.

NEW ZEALAND.

A cheery letter reaches us from Mr. O. Balk who is flourishing in the southern hemisphere. We reprint one of his games "to keep his memory green."

GAME No. 581.

(From the *Otago Witness*, of July 30th, 1896.)

Played in the Otago Chess Club Championship Tourney.

EVANS GAMBIT.

WHITE.

McDonald.

8—B takes B
9—P to Q 3
10—Kt to R 3
11—Castles
12—K to R sq.
13—P to K B 4
14—P takes P
15—B takes K R P (c)
16—B takes Kt P (!)
17—R takes Kt
18—Kt takes Q P
19—K Kt to B 4
20—R takes Kt
21—Q to K Kt 4 ch.
22—R takes P ch.
23—R to K B sq. ch.
24—Kt to B 6 ch.
25—Q to Q 7 ch.

and White resigned as Black must win speedily.

NOTES.

(a) White should have played 7—Castles, but not having done so he should have proceeded 8—K to B sq.

(b) 14—P to K 5, and (if P takes P) 15—P to Q 5 with 16—Kt takes K P would have still left White some chance.

(c) The end-game is well played by Black.

(d) There seems to be nothing better.

(e) Obviously, to take the Rook would lose the Queen.

GAME No. 582.

KING'S GAMBIT EVASDED.

WHITE.

Winaver.

1—P to K 4
2—P to Q 4
3—Q takes P
4—Q to K 3
5—Kt to Q B 3
6—B to Q 2
7—Castles
8—B to B 4 (a)
9—B takes B
10—Q to B 4
11—Kt to B 3
12—Kt to Kt 5
13—B to Q 3
14—P to K R 4
15—B to R 7 ch.
16—R takes Kt
17—B to K 4
18—B takes B
19—P takes P
20—P to Kt 6 and White wins.

BLACK.

Steinitz.

1—P to K 4
2—P takes P
3—Kt to Q B 3
4—Kt to B 3
5—B to Kt 5
6—Castles
7—R to K sq.
8—B takes Kt
9—Kt takes P
10—Kt to K B 3 (b)
11—P to Q 3
12—B to K 3
13—P to K R 3
14—Kt to Q 4
15—K to R sq.
16—B takes R
17—P to K B 3
18—B P takes Kt
19—Kt to K 4

(a) 8—P to K B 3 is generally considered a stronger move.

(b) Kt to Kt 4 would have been better. Then 11—Kt to B 3, Kt to K 3; 12—Q to Kt 3, P to B 3; 13—Kt to R 4 and Black's game is preferable.

GUNSBURG SUMS UP RE NUREMBERG.

Lasker first, Steinitz sixth. The king is dead, long live the king! The final result of the Nuremberg Tournament was in accordance with public expectations. Lasker wears the crown of chess sovereignty for the time being. The old king will make one more effort to gain his lost kingdom, but alas! we all know how such contests end between old and young. We therefore do not look forward to the projected match between Lasker and Steinitz at Moscow to bring about a change. If Lasker is to be displaced, it will be by one of the young men who have shown in the tournament that they have advanced to the very front rank. We do not despair of Pillsbury recovering the grand form which he showed at Hastings, particularly as he succeeded in defeating the champion at Nuremberg in magnificent style. Janowski likewise defeated Lasker, and he too is one of the young men who have played exceedingly good chess in the late tournament. As far as chess talent is concerned, we think Janowski stands at the head; but for correct theoretical defence, good judgment of position, and sound views, the play

of Schlechter and Walbrodt stands out prominently. Maroczy, who achieved such a high position among the prize-winners, will mature into an exceedingly powerful player in the course of two or three years, provided he has opportunity for practice. These are the coming men who might become dangerous to the champion. Last, but not least, there is Dr. Tarrasch. We think that the doctor would play better against Lasker in a match than he did in the tournament. Considering what a powerful game Walbrodt plays, the result of the match between Tarrasch and Walbrodt, which was 7 to 0 in favour of Tarrasch, must certainly be looked upon as a wonderful performance, and leads us to the belief that Tarrasch under favourable circumstances might be a very dangerous opponent to Lasker. It will be interesting to compare the score of the two players. Lasker lost three games in the tournament; Tarrasch also lost three, but owing to a safer style of play Tarrasch drew three more games than Lasker. This result may serve as a useful illustration of the difference between tournament and match play. In this tournament Tarrasch has come out much below Lasker through having drawn three more games. But in a match where draws do not count he would have stood level with Lasker. Maroczy's score presents still more striking figures. He only lost one game out of the eighteen played. This was to Steinitz; but he drew nine. Schlechter lost two games only. Maroczy drew against Lasker. The presumption is that a player who can play eighteen games and only lose one is stronger than a player who loses three, particularly in a match where a player can adopt a safe style and produce any number of draws which do not count.

In thus speaking of the fine play of the young men of the tournament, we are only speaking in the sporting sense of some future contingency, which may be possible but not probable. In the meantime, we wish the champion prosperity and success in his future enterprises, particularly when he plays such good chess as he did at Nuremberg.

GAME No. 583.

FOUR KNIGHTS GAME.

WHITE. Maroczy.	BLACK. Pillsbury.
1—P to K 4	1—P to K 4
2—Kt to K B 3	2—Kt to K B 3
3—Kt to Q B 3	3—Kt to Q B 3
4—B to Kt 5	4—B to B 4
5—Castles	5—Castles
6—Kt takes K P (a)	6—R to K sq.
7—Kt to K B 3	7—Kt takes P
8—P to Q 4	8—Kt takes Kt
9—P takes Kt	9—B to K 2
10—P to Q 5	10—Kt to Q Kt sq.
11—B to R B 4	11—P to Q R 3
12—B to R 4	12—B to B 3
13—P to Q 6	13—P to Q B 3
14—B to Q Kt 3	14—P to Q Kt 4
15—Q to Q 2	15—B to Kt 2
16—Kt to Kt 5	16—R to K B sq.
17—Kt to K 4	17—P to Q R 4
18—P to Q R 3	18—Kt to Q R 3
19—Q R to K sq.	19—P to Q B 4
20—B to Q 5	20—B takes B
21—Q takes B	21—P to Kt 5
22—R to K 3	22—B takes P
23—R takes B!	23—P takes R
24—B to Kt 5	24—Kt to B 2
25—Q to B 4 (b)	25—Q to K sq.
26—P takes Kt	26—Q to K 4 (c)
27—R to Q sq.	27—K R to K sq.
28—R takes P	28—K to R sq.
29—Q takes K B P	29—Q takes B (d)
30—P to B 4	30—Q to Kt 5
31—P to K R 2	31—Q takes R
32—Q takes Q and wins.	

(a) Perfectly sound. If Kt takes Kt, 7—P to Q 4 regaining the piece.
(b) White refuses to relieve Black by taking the piece at once.
(c) White threatens to sacrifice on the King's side.
(d) A fine position. White cannot play 30—Kt takes Q on account of R to K 8 mate. See diagram below:
Position after Black's 31th move.

GAME No. 584.

A BRILLIANT GAME.

The following game (with more elaborate notes than we have space for) appeared in Mr. W. H. K. Pollock's chess column in the *Baltimore Evening News* some years ago. The players' names are not given, and the game has more the appearance of a manufactured one than one actually occurring, but it is remarkably interesting.

EVANS GAMBIT.

WHITE.	BLACK.
1—P to K 4	1—P to K 4
2—Kt to K B 3	2—Kt to Q B 3
3—B to B 4	3—B to B 4
4—P to Q Kt 4	4—B takes Kt P
5—P to B 3	5—B to R 4
6—P to Q 4	6—P takes P
7—Castles	7—B to Kt 3
8—P takes P	8—P to Q 3 (a)
9—P to Q 5	9—Kt to K 4 (b)
10—Kt takes Kt	10—P takes Kt
11—B to R 3 (c)	11—B to Q 5 (d)
12—Kt to Q 2	12—B takes R
13—Q takes B	13—P to K B 3
14—P to B 4	14—P takes P
15—P to K 5	15—P to B 3 (e)
16—Kt to K 4	16—P takes Q P
17—Kt to Q 6 ch.	17—K to Q 2
18—B to Kt 5 ch.	18—K to K 3
19—P takes P	19—Kt takes P (f)
20—R to K sq. ch.	20—Kt to K 5
21—Q takes P	21—Q to Kt 3 ch.
22—K to R sq.	22—Q to R 4

And White mates in six moves as follows:—
23—R takes Kt ch. 23—P takes R
24—B to B 4 ch. 24—Q to Q 4
25—Q to K B 7 ch. 25—R to R 4
26—Q takes Q ch. 26—K to B 3
27—Kt takes K P ch. 27—K to Kt 2 or 3
28—Q to K Kt 5 mate.

(a) This is the normal position. White has now three continuations, viz., 9—Kt to B 3; 9—P to Q 5; and 9—B to Kt 5, all of which are good.
(b) This and Kt to K 3 are sometimes played, but Kt to R 4 is superior to either.
(c) An attacking move. White may also play 12—Kt to Q 2, or 12—B to Kt 3, followed by 13—K to R sq. and 13—P to B 4.
(d) Black rarely succeeds by this manoeuvre in defending the Evans Gambit. Time is all-important both in attack and defence. The present game is an excellent illustration.
(e) Weak play, allowing the White Kt to get planted at Q 6 with a result disastrous for Black.
(f) Any other move loses at once by 20—R to K sq. ch.

GAME No. 585.

A BRILLIANT SKIRMISH.

The following off-hand game, recently played at the Brisbane Chess Club, shows that our young men are capable of evolving pretty sparks, remarks the *Queenslander*:—

CENTRE GAMBIT.

WHITE. Mr. H. W. Apperly.	BLACK. Mr. A. C. Palmer (champ.).
1—P to K 4	1—P to K 4
2—P to Q 4	2—P takes P
3—Q takes P	3—Kt to Q B 3
4—Q to K 3	4—P to Q Kt 3 (a)
5—Kt to Q B 3	5—B to B 4
6—Q to Kt 3 (b)	6—Q to B 3
7—Kt to Q 5	7—Q to Q 5 (c)
8—Kt takes P ch.	8—K to Q sq.
9—Kt takes R	9—Q takes K P ch.
10—B to K 3	10—Kt to Q 5 (d)
11—B to Q 3!	11—Kt takes P ch.
12—B takes Kt	12—Q takes B
13—R to B sq. (e)	13—B to Kt 5 ch.
14—K to B sq.	14—B to R 3 ch.
15—Kt to K 2	15—B takes Kt ch.
16—K to Kt sq.	16—Q to Kt 3 (f)
17—R to B 8 ch.!!	17—K to K 2
18—B to Kt 5 ch.	18—Q takes B (g)
19—Q takes Q ch.	19—Resigns.

NOTES.

(a) A subtle preparation, but Kt to B 3 is better to get that piece into action.
(b) Threatening Kt P plus Rook.
(c) An attacking reply, but unwise in face of the slashing rejoinder and loss of Q Rook.
(d) A good move making things look critical.
(e) Initiating a beautiful coup.
(f) The only available move.
(g) The only move to avert mate by Kt to B 7.

MR. M. WOLLHEIM.

His Excellency the Mexican Minister left yesterday by the *Empress of Japan* for a short visit to the other side. Genial, kind, and jovial Mr. Wollheim has made himself a general favourite with Chess-players in Japan; he was the "Bird" of the Yokohama Chess Club, and his absence will be a misfortune not easily remedied. A few of his more intimate Chess friends entertained Mr. Wollheim at dinner on Monday the 5th: when the wishes for a *bon voyage* and speedy return were heartily expressed. We join in wishing Mr. Wollheim a pleasant trip: and hope to see him with us again next year.

Olympia, U.S. flagship, Captain J. G. Read, 30th September,—Yokosuka 30th September.

LATEST COMMERCIAL.

IMPORTS.

Generally dull and unprofitable. It seems that buyers or dealers are feeling the financial pinch, which is reported from Tokyo. Yarn—Nothing doing; Shirts the same. Fancies—A sale of something "extra-super" in Blue Cambrics; and a few thousand pieces of Turkey Reds have been moved. Woollens—A blank, with the exception of a sale in Blankets at quotations.

COTTON PIECE GOODS.

	PER YARD.	PER PIECE.
Grey Shirtings—8 1/2, 38 yds, 39 inches	\$2.40	to 2.80
Grey Shirtings—9 1/2, 38 yds, 45 inches	2.75	to 3.20

METALS.

At last the welcome change has come and Importers feel better than they have done for months past. Prices all round have improved materially, and there is a good general demand for everything except Plates. If monetary stringency among the native dealers does not supervene the improvement should continue.

Flat Bars, 1 inch	PER POUND.
Flat Bars, 1 inch	\$3.50 to 3.55
Round and square up to 1 inch	3.60 to 3.65
Iron Plates, assorted	3.40 to 3.60

Galvanized Iron sheets	9.20 to 10.00
Wire Nails, assorted	5.00 to 6.00
Tin Plates, per box	5.00 to 5.30
Pig Iron, No. 3	1.70 to 1.72

KEROSENE.

Plenty of business at last, with higher prices. Dealers in the interior are evidently laying in their stock for the winter.

American	\$2.25 to 2.27
Russian	2.27 to 2.28
Langkat	—

SUGAR.

Brown—Quite a boom, and prices have advanced rapidly. Heavy sales all round, in every class. White—Moderate business at quotations.

Brown Takao	PER POUND.
Brown Manila	\$4.70 to 4.75
Brown Daiteng	5.50 to 5.60
Brown Canton	3.95 to 4.00
White Java and Penang	3.85 to 4.75
White Refined	7.10 to 7.15
	7.00 to 9.05

EXPORTS.

RAW SILK.

Another strong upward movement. It seems that the New York folks have at last got confidence in their Presidential and financial future, and they are displaying that confidence by operating extensively in Silk at comparatively high prices. Meantime, Europe is quiet and will not follow the market up, consequently quotations for fine-sizes are nominal.

THE GREATEST WONDERS OF MODERN TIME

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN.
HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Mr. J. T. COOPER, in his account of his extraordinary travels in China, published in 1891, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas and the demand became so great that I was obliged to lock up the small remaining stock."

Sold by all Chemists and Medicine Vendors the throughout World. May 1st, 1890.

FOR SALE,

Strongly bound in Leather and Cloth, with a Full Index,

HALF-YEARLY VOLUMES OF
THE "JAPAN WEEKLY MAIL."

These Volumes contain Leading Articles dealing mainly with subjects affecting Japan and the Far East, besides numerous Miscellaneous Articles embracing a variety of topics; also Letters by Special Correspondents in Europe and America and other Countries, Commercial Trade Reports, Reviews of New Books, Government Notifications, Translations from Japanese Journals, Editorial Correspondence, Verbatim Reports of Public Meetings and the Law Courts, Theatrical, Sporting, &c., and a large number of Editorial Notes on a great variety of subjects of local and general interest, the whole forming a record not to be found in any other existing publication.

An extended Summary of the Proceedings of the Imperial Diet is given during the sittings of Parliament.

"FAIS CE QUE DOIS: ADVIENNE QUE POURRA!"

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, OCT. 17TH, 1896.

BIRTH.

On the 15th October, at No. 255, Bluff, the wife of S. DEBRABANT of a son.

SUMMARY OF NEWS.

JAPAN will not despatch a war-ship to Manila.

MR. HARA, Minister to Korea, returned to Tokyo on Monday.

THE autumn regatta of the Yokohama Amateur

Rowing Club was held on Saturday in a heavy downpour of rain.

CHOLERA has claimed one or two victims in Yokohama this week.

HIS MAJESTY the Czar has left France on a visit to Darmstadt.

THE Premier's Speech has not given much satisfaction to the press at large.

LIEUT.-GENERAL BARON NOGI is the new Governor-General of Formosa.

MR. WAKAO IKUZO, aged 68, a capitalist of Yokohama, died on the 10th inst.

MR. HOSHI TORU, Minister to Washington, will, it is said, continue in the position.

THE recent bank failures have put a stop to a good deal of speculative stock-jobbing.

DYSENTERY is prevalent in Tokyo, more particularly in the suburbs recently flooded.

A PROPOSAL is under way to rebuild the Club Hotel at Yokohama, and to redeem the debentures.

THE four Prefectures of Formosa will in future go by the names of Giron, Shinchiku, Daito, and Shoka.

SIR WILLIAM VERNON-HARCOURT is generally designated Lord Rosebery's successor as leader of the Liberal Party.

THE English crew won the International Fours at the Yokohama Regatta, the first time for several years.

MR. GOSCHEN, First Lord of the Admiralty, has given orders for the building of four new cruisers of 11,000 tons.

THE Shanghai Cricket Club have beaten the Japan Team, in the second interport match at Shanghai, by six wickets.

THE Prime Minister, Count Matsukata, outlined the Government's policy in a speech delivered to the Local Prefects on Monday.

THE financial disasters that have overtaken several banks in the Osaka district will not eventuate so seriously as was at first expected.

OWING to the rain, none of the Yacht races were sailed on Saturday, and a proposal to sail them on Sunday was most decidedly opposed.

AMERICAN residents of Yokohama are said to be freely purchasing Japanese Public Loan Bonds. Nearly yen 300,000 are now held by them.

THE wife of Mr. Riko-hei, the Korean Minister to Japan, being in a low state of health, left Shimbashi Station on Friday, en route to her native land.

THE city of Guayaquil, the principal sea-port of Ecuador, has been almost wholly destroyed by an incendiary fire. The damage is estimated at two millions sterling.

GREAT BRITAIN, RUSSIA, and FRANCE have agreed to immediately despatch a vigorous note to the Porte demanding the adoption of reforms for securing the safety of the Armenians.

ON Monday morning, a fire broke out in the Iroha beef shop, No. 12, Shichome, Hongo, Tokyo. Five houses were destroyed. The cause of the outbreak is not yet ascertained.

THE charter of the First National Bank having expired on the 25th September, the Bank con-

tinued business on the 26th September in the name of the First National Joint-stock Bank. To celebrate the occasion, Mr. Shibusawa, the President, gave an entertainment to-day, 17th instant at his villa at Oji.

MR. CONSUL McIVOR has found for the defendant in the action recently heard in the U.S. Consular-General Court at Yokohama—China and Japan Trading Company *versus* Weston.

THE Archbishop of Canterbury was seized with a fit of apoplexy on Sunday whilst at divine service in Hawarden Church. He was carried to the Rectory where he expired in a few minutes.

A MOST serious storm occurred all over East and Central Japan on Monday, the rain-fall being unprecedented in severity. Some rivers overflowed, and a little damage was done to railway tracks.

THE British cruiser *Gibraltar* has been detached from the Mediterranean Squadron for service at Zanzibar, where, it is understood, the position is regarded as serious owing to the hostile attitude of Germany.

MESSRS. W. M. STRACHAN & Co. have erected a model cotton spinning mill at the rear of their offices in Yokohama. On Saturday the firm entertained a large company of Japanese merchants and buyers at lunch.

THE Secretary of State for the Colonies proposes to substitute modern guns for the defences of Singapore, costing the Colony thirty thousand pounds sterling (£30,000) and the Imperial Treasury forty-two thousand pounds (£42,000).

AT noon on Sunday a fire broke out at the Fukuokaro, Mukojima, and the famous Kototoi Dango the Chomeiji, and several tea-houses were destroyed. It is said that blame attaches to some students of the Daiichi Kotogakko.

A SEMI-OFFICIAL German note attributes the naval reinforcements to Zanzibar to the fear of Said Khalid's intrigues, and adds that if Khalid abuses the asylum Germany has extended to him he will be expelled from German territory.

LORD ROSEBERRY, addressing a meeting at Edinburgh, said he felt unable to sacrifice the interests of the country to his own personal ambition and he had therefore resigned his leadership of the Liberal Party. He would fight tooth and nail against the isolated intervention of Great Britain in Turkey, which he was convinced would involve an European war.

THERE is very little to be said about the Import trade. Textiles remaining in the same dull condition. In other departments, the good business last reported was but of short duration, the money market having affected the Metal trade and the Kerosene business to such an extent that there is but little or nothing doing in the former, and not a great deal in the latter. In Sugar, a fair business in China and Manila sorts continues, Formosa being neglected; but Whites are active at hardening prices. The tightness of money has also affected the Silk business, and there is much less doing, though prices are somewhat easier, holders being anxious to go on. There is little enquiry for Waste Silk, and less business. The Tea trade continues brisk, and prices go up as the stock decreases. Settlements have pulled up wonderfully during the last few weeks, the total now being only 27,000 piculs behind those of same date last year. Rates of exchange declined for a couple of days, but had recovered by yesterday, and close at the same figures as those of a week ago.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

Everybody expected that the *Shimpo-to* would support the new Ministry, and no one is surprised that they have now decided to do so. The Standing Committees of the Party met on the 14th instant, to discuss the attitude that the Party should assume towards the Government. They came to the conclusion that the policy announced by the Prime Minister on Monday coincided in the main with the platform of the Party, and that they should therefore endeavour to make the Cabinet act up to its declarations. Should the Government fail to do so, the Party would have no choice but to oppose it. The above is the decision of the Standing Committees only. A definite resolution in the name of the whole Party is to be arrived at by convoking extraordinary and ordinary meetings on the 1st and 2nd proximo.

Count Kabayama's speech to the Local Governors, reproduced in yesterday's issue of this journal, has naturally caused some surprise. Anybody comparing the utterances ascribed to the Count on the occasion of the Cabinet's deliberations over the draft of the Premier's speech with those that he is alleged to have made the very next day before the Local Governors, must have been struck with the glaring discrepancy between the two. On the former occasion, he is represented as having endorsed Count Okuma's views and accepted the principle of party Cabinets; and on the later, he is made to adhere to his old idea that the Cabinet should hold itself responsible to the Sovereign alone. The perplexity engendered by this important contradiction is intensified by perusing the authorized version of the Home Minister's speech, issued by the Department a few days after the *Nichi Nichi* had given the alleged substance of the speech. For the authorized version contains not one word relating to the Minister's opinions about Cabinet responsibility. This has elicited a strong criticism from the *Nichi Nichi*, which maintains that the speech was listened to by not a few persons who all agree about its import. In fact, the *Nichi Nichi* pledges its honour that the words contained in its report did actually come from the Count's lips, so far, at any rate, as their meaning is concerned. If, adds the *Nichi Nichi*, declarations unquestionably made by the Minister are expunged totally from the authorized version of his speech, it is to be feared that his credit will be seriously impaired in the eyes of the Local Governors.

When epitomising, in a recent issue, the views expressed by the vernacular press about the Premier's speech, we omitted the opinions of the *Mainichi Shinbun*, since they were contained in a series of articles not concluded at the time we wrote. We may now note that the *Mainichi's* views do not materially differ from those of its confrères. Though compelled to reserve its approval, it inclines to believe that the new Ministry will not fail to act up to their declarations with regard to granting complete freedom of speech, pen, and public meeting; remodelling the empire's foreign policy, and adjusting the finances. The *Tokyo Asahi* also observes that the Ministry have given indications of not being averse to adopting the majority of the reforms desired by the people.

The nomination of Lieut.-General Baron Nogi to be Governor-General of Formosa affords a theme for discussion to several Tokyo papers. The Baron's record shows him to be an officer of much ability. His promotion has been very rapid. Though only a Major-General when he distinguished himself under Lieut.-General Viscount Yamaji at the assault of Port Arthur, he was gazetted Commandant of the Second Division while he was still in the Peninsula, and is now promoted to be Governor-General of Formosa. The *Fiji Shimpō* writing about him, says that he is understood to be a soldier of great decision and strict integrity, few being comparable with him in those respects. That he has resolved to undertake the arduous task of ad-

ministering Formosa shows that he entertains certain definite views on the subject. The thing most needed in Formosa is a bold and resolute programme, pursued in defiance of every obstacle. To push forward with too much intentness might involve some blunders, but would certainly be better than to lie idle and waste time doing nothing.

The *Tokyo Asahi* infers that the mere fact of the Viscount's having agreed to undertake the functions of such a difficult office instead of remaining at his present easy post, may be taken as an earnest of his success in Formosa. The experience that he garnered in Formosa when commanding the Second Division there must be of use to him as Governor-General, and many of his acts show that he is not less of a statesman than a soldier. For example, he caused his troops to construct excellent roads in the island, a proceeding that displayed no mean consideration for civil interests.

The appointment of a new Governor-General after the outlines of next year's Budget have been definitely fixed, says the *Nichi Nichi Shinbun*, seems a somewhat belated measure. It is plain, however, that the Baron has accepted the post in full agreement with the programme mapped out by the Minister of Colonization.

The *Kokumin* suggests the advisability of having a fixed regular channel of communications between the Government and its supporters, the *Shimpo-to*. It advises both sides to appoint statesmen of first-class calibre as deputies for purposes of conference, so that all questions arising between the Ministry and the *Shimpo-to* may be dealt with by the deputies.

The same journal declares that since the corruptibility of Japanese experts and their negligence are mainly chargeable with the failure of public works to avert the disasters of inundations, the Government should engage foreign experts and make up its mind to construct really well-designed and permanent works.

The *Nippon* wishes to warn the public once more against sentimental ideas about the expansion of the national armaments. According to estimates made by trustworthy authorities, the repeated calamities that have overtaken various localities during the year, have inflicted a loss of 100 million yen at least on the country. If that unexpected loss be added to the sums spent in prosecuting the War, the indemnity of 300 million yen may be considered as practically exhausted already. Whence then, are to be obtained the large sums needed for purposes of military expansion? Both the late Cabinet and the present have committed a serious blunder in this respect, for although they found that the expenditures were likely to exceed the revenue, they refrained from altering the programme of armament expansion, and set themselves to effect retrenchment in other directions. For instance, they reduced, or totally expunged, appropriations for the improvement of railways, harbours, navigation, and so forth, thus sacrificing the current needs of the nation on the altar of military armaments which can serve no useful end except in the event of war, a contingency not to be apprehended once in a decade. They do not seem to discern clearly that military preparations must go hand-in-hand with the improvement of administrative measures with questions of sanitation, education, and public morality, and with the development of the country's resources. Even though the Army be augmented to 13 divisions and the Fleet to a displacement of 200,000 tons, how can the ranks of the former or the ships of the latter be efficiently manned while the spirit of officials is corrupt and discipline totally lax. The *Nippon* concludes that as armaments can be really potential only when administrative capacity is on a level with them, therefore is expenditures in connection with the latter be retrenched, a similar step should be taken in the case of the former.

The *Yomiuri* publishes a sort of corollary to

the comments already made by it on the Premier's speech. Our contemporary thinks that the reason why the speech was couched in such general terms was because the Cabinet, through clear enough in its political views, was deterred by certain circumstances from speaking plainly. Assuming that explanation to be not far wide of the mark, then the people must form two resolutions at this juncture; namely to let the Cabinet put its policy into practice, and should it fail to do so satisfactorily, then to oppose it resolutely and uncompromisingly.

The *Nichi Nichi* offers a practical suggestion for the consideration of the Telephone Authorities. It publishes, in the first place, a table showing how many applicants have been vainly awaiting facilities to join telephone exchanges since 1890.

At the end of the fiscal year.	No. of applications.	No. of licenses.
1889-90.....	327	275
1890-91.....	476	372
1891-92.....	756	385
1892-93.....	1,316	657
1893-94.....	658	50
1894-95.....	611	13
1895-96 (1st half).....	853	32
	4,997	1,784

The number of persons desirous of obtaining telephone facilities is far larger than that given in the above table, for many regard it as a pure waste of time and labour to forward applications to the Telephone Authorities, knowing how little hope there is of obtaining what they want. This insufficiency of telephone accommodation is doubly regrettable, for while the public are precluded from enjoying the great benefits conferred by this particular kind of communication, the Authorities are similarly prevented from reaping the profit that would accrue were the business expanded. The root of the trouble is want of funds. The *Nichi Nichi* thinks, however, that the Authorities are not without resources to meet the occasion. For example, they may, as in foreign countries, temporarily employ deposits kept in the Saving Banks, or may cause the applicants themselves to defray the expenses required for constructing new telephones. In fact, the applicants would be very glad to pay the expense, since that would be far cheaper than to purchase the service already enjoyed by another. To construct a telephonic service does not cost more, on the average, than 160 yen, whereas to purchase the transfer of a service involves an outlay of from 400 to 500 yen in Tokyo, and as much as 800 yen in Osaka. Other points to which the *Nichi Nichi* invites the attention of the Authorities in connection with this matter are that a greater number of exchanges be established, with due care in the selection of sites; that measures be organized for distributing telephone messages to addressee by postmen; and lastly, that, in order to bring telephonic facilities within the reach of the middle and lower classes, the charges for using the telephones at an exchange be reduced. The *Nichi Nichi* thinks that a charge of 5 sen per using a telephone at an exchange is proportionally higher than the rate imposed upon a regular subscriber.

The *Fiji* advises the Railway Authorities to have no hesitation about granting charters to railway companies, no matter how petty the scope of the contemplated enterprise. The total mileage of Japanese railways being as yet only 2,000 miles, this is no time to exercise nice discrimination about the nature of the projected roads or the scope of the projects. When railways have been constructed on such a scale as to satisfy the requirements of the country, then these small companies will coalesce of their own accord into big corporations.

The *Chuo* holds the Bank of Japan more or less responsible for the trouble that has overtaken a section of the mercantile and banking community. Immediately after the conclusion of the war, the Bank persistently declared in favour of a positive financial policy. It condemned as timid and over-conservative any one inclining to caution, and by thus adding fuel to

the already-kindled fire of enthusiasm, it contributed to the mania for starting new enterprises. All the smaller banks, which look up to the Nippon Ginko as a guide, imitated its open-handed action, and did not hesitate to extend whatever facilities they could afford to men of enterprise. This state of affairs did not last long, for after a short time, the Bank of Japan and its imitators began to assume a guarded attitude and to betray signs of reluctance to give accommodation. The change was at once felt in the market, and already in Osaka and Tokyo a number of banks and business men have collapsed. So long as this trouble is of limited extent, no special suffering may be felt by the public at large, but should the evil assume more serious dimensions, then the Bank of Japan must hold itself accountable, and its President and other important officials must resign. The Department of Finance, as superintending the business of the Bank, must also share the blame.

An article on the "Educational Policy of the Country," that appeared in the *Tokyo Asahi* under the signature of Mr. Sugiyama, ex-M.P., is worthy of notice, the writer being a prominent educationalist. The change in the holder of the portfolio of Education, he observes, need not cause any particular alarm. The fact is that matters relating to education, commerce, and agriculture being from their nature of direct interest to the people, and the latter's tendency being to arrange such matters in conformity with their own requirements, it is desirable that official interference should stand as little as possible in the way of that tendency. Consequently, the progress of education does not necessarily depend upon the ability of the Minister of Education, as may be inferred from the fact that no particular progress was noticeable even when the Department was under the direction of Ministers regarded as specially competent for the post. The business to be discharged by the Department is resolvable into two categories, namely, business connected with the control of higher institutions, and business connected with general educational affairs. Mr. Sugiyama is of opinion that if it be impossible to separate education and politics, then the office charged with educational responsibilities should be made subordinate to another Department of State, and fuller powers should be given to the higher institutions under the direct control of the Central Government. This change would be attended with more practical benefit.

EDITORIAL NOTES.

SERIOUS AFFRAY AT NAGASAKI.

A GUNNER's mate, named Barnes, on the U.S.S. *Yorktown*, is under arrest at Nagasaki for committing an assault on Mrs. Conan, wife of the proprietor of the Central Hotel there. He had been ejected from the house by Mr. Conan and some visitors, but returned with another American and two British men-of-war-men. Barnes, armed with a billiard cue, struck Mrs. Conan on the head, inflicting a terrible gash across the forehead. Mr. Conan rushed out to her assistance and was struck by some of the ruffians. He accordingly went into his room, took out a revolver, and fired five shots among the men. Barnes got a bullet in the thigh, the other American, Lynch, lost the middle finger of his right hand, and one of the British sailors got shot also in the hand and had his forehead grazed by a bullet. Some visitors who were with Mr. Conan in the room came out and the police shortly afterwards put in an appearance. In the confusion, however, the man Lynch managed to effect an escape over a wall at the back, a tell-tale track of blood showing the course he took, while the two British sailors also went out. The man Barnes was taken to the police station but is now, in company with Lynch, under arrest on board his vessel.

NAVAL NEWS.

SAYS the *China Mail*:—The torpedo-boat destroyers *Handy* and *Hart*, which we have already

notified are commissioned for the China station, are due at Colombo in the last week of October. A cruiser is to go to Singapore on the 20th October to meet the destroyers, and convey them to Singapore. These vessels will act as tenders to the *Centurion*. H.M.S. *Firebrand* is to meet the flagship at Nagasaki. She will then proceed to Tientsin, to replace the *Peacock* which will depart for Nagasaki.—Fleet Paymaster Bremner, of the *Centurion*, has died at Hongkong.—H.M.S. *Rainbow* will leave Hongkong in about a week to convey Sir Charles Mitchell, G.C.M.G., and suite, High Commissioner of British North Borneo, from Singapore to Labuan. Three temporary cabins will be fitted up on board for the accommodation of the Commissioner and his party.

ARREST OF JAPANESE IN MANILA.

THE *Jiji* says that Mr. Tomioka Uchichiro, a Japanese merchant in Manila, has been arrested by the Spanish Authorities and thrown into prison. Commenting on the news, the same paper observes that as the Japanese residents in Manila must be considerably alarmed at the continuance of the disturbances, the Japanese Government should despatch some men-of-war there at once. Some publicists might object to the step, on the ground that it would strengthen the suspicion that the Spanish Authorities are believed to entertain regarding Japan and the islands. The *Jiji* dismisses the suggestion, arguing that, as it is incumbent on men-of-war in times of peace to secure the lives and property of Japanese abroad, so in times of trouble should they be promptly despatched to the scene of disturbance.

A TALE FROM SHANGHAI.

SHANGHAI is famous for its "bundlers." Here is the latest from the *Temperance Union*:—"Last Monday week a Russian soldier was hanged outside Nagasaki by order of a court-martial. He had been on board a transport and had threatened to shoot the captain. When the transport arrived at Nagasaki he was handed over to the man-of-war and tried. The war-vessel then got up steam, proceeded outside, hanged the culprit and returned to her anchorage." This story bears a strong family resemblance to one that circulated in the Far East about three years ago: in that case a sailor was alleged to have been hanged from the yard-arm of a Russian cruiser just outside Hongkong. But it turned out to be bunkum.

THE ASSAULT ON A FOREIGN CAPTAIN AT MOJI. Some particulars of the assault on the ship's captain at Moji, briefly reported in a telegram in these columns the other day, are furnished by the *Osaka Mainichi*. It is stated that a Shimonoseki man, named Fujii Hirokichi, went to the steamer *Shafesbury* with several girls in a boat. The Captain did not allow the girls on board, and threw coals into the boat to drive them away. Fujii was highly indignant at the action of the Captain, but went back without saying a word. About 5 p.m. on the 6th inst., the Captain was ashore, and while walking near the Kaneyama shrine, Fujii saw him, took up a piece of fire-wood lying near and struck the Captain on the head, inflicting a bad wound. Policemen and gendarmes were called and they arrested Fujii, who was handed over to the Procurators' office. The Captain was attended to by the President of the hospital and went back to his ship after the wound was dressed.—*Chronicle*.

THE REBELLION IN THE PHILIPPINES.

ADVICES from Manila, says the *China Mail* of October 5th, continue to improve, and the improvement has been emphasized by the arrival of the first installment of a thousand troops from Spain. Business was reviving as a consequence of the increased confidence. By this time other two thousand men will have arrived at Manila from Home; and when these troops begin work in earnest, it is feared much bloodshed must result. The rebels, judging from the unusually plucky manner in which they meet death on the Luneta, are exceedingly unlikely to surrender, and there must be great slaughter. Tales of

the death of rebels, who are shot in public, continue to each us, and one has been mentioned where a native in connection with the rope works coolly signed a document without a shake, and then stood up to receive the fatal bullet. It is generally believed a few of the ring-leaders will soon follow these poor natives to public execution. As they are well-known men in the capital, considerable interest is felt in the coming event. The rebellion may now be said to be on its last legs. So soon as the insurrectionists are driven from Cavite and Imus, the movement may be declared to be at an end.

AN "OLD RESIDENT" ON HIS TRIP HOME.

AN "Old Resident," now touring it in London, writes:—"Do you want to know how one visits the theatres from the suburbs? Here is an extract from a London journal that will enlighten you:—

The good citizen being bored to death of an evening, determines to take his wife to the theatre, hurries the good lady to catch the 6.15 up, gets to Victoria in a downpour, has to take a cab, quarrels with the driver, gorges himself on a bad 3s. 6d. dinner, has to take another cab, pays a guinea for the two worst stalls in the house at the end of the row whence he can only see the other side of the stage, is fleeced for his hat and coat, fleeced for his wife's bonnet, fleeced for a programme, fleeced for book of the words, fleeced for his whisky and soda, bored and irritated by a play in which an author who knows nothing of the world says so in language entirely unfit for publication, fights his way out of the theatre, finds the cabmen have gone on strike, has to walk to the station, misses his train, waits thirty-five minutes for another which only runs to the station before his, is crowded with thirteen blaspheming savages in one compartment, and gets home to find that his wife has forgotten to have supper left out.

SILK IMPORTS TO UNITED STATES.

THE following are the imports of Raw Silk at the ports of New York and San Francisco:—

	Aug.	Bl.	Lbs.	Value.
New York	168	36,728	134,029	
San Francisco.....	126	13,018	28,348	
	294	49,746	162,377	

The Imports of Waste, etc., in the same period were:—

New York	76	22,800	14,378
----------------	----	--------	--------

The Imports of Japanese Piece-goods and Handkerchiefs from July 1st, to July 20th, 1896, were:—

Silk Piece Goods	3,322	pcs.
Handkerchiefs	96,164	doz.

DEATH OF AN ITALIAN MINISTER.

MR. E. GHISI, Italian Consul at Shanghai, has received the news of the death at Peking on Thursday night, Oct. 8th, from dysentery, of the Italian Minister, Commendatore Alessandro Bardi. Commander Bardi was only a little over fifty, Peking being his first post as Minister. He spent the summer at Chefoo, where he was a very popular addition to the society of that fashionable watering-place; he left it for Peking on the 25th ult., and it was not even known at Shanghai that he was ill.

MR. STEPHEN HART.

MR. STEPHEN HART, who has had a very varied experience in the Far East—journalist, globe-trotter, telegraph agent, commercial traveller, war-correspondent, and alleged artillerist to the Chinese forces at Port Arthur—is now in gaol at Shanghai awaiting further examination on a charge of arson preferred against him by the police. He could find no one to help him out with bail.

RETURNING RESIDENTS.

MRS. H. STEELE and two children, and Mrs. Alfred Carter Read and son, have booked their return passages by the P. & O. steamer *Shanghai*, leaving London on Nov. 29. Mr. and Mrs. R. Home Cook leave London by the *Himalaya* on Nov. 6.

TERRIBLE ACCIDENT AT KOBE STATION.

AN employé at Kobe station on Saturday afternoon attempted to get on an engine, when he fell on the rails and was run over by the train and killed. His body was cut in two.

THE PREMIER'S SPEECH.

The "policy" of the new Ministry was announced on Monday by the Minister President of State. From 8 a.m. Mr. Takahashi, Chief Secretary of the Cabinet, the private secretaries, and other officials of the Cabinet attended at the official residence of the Premier, to make arrangements for the meeting of the day. From half-past 9 a.m. the Local Governors, with the sole exception of the Governor of Okinawa, began to arrive, and at 11.30 a.m. all the Ministers of State, as well as various high officials of the Department of Home Affairs, drove up. Count Kuroda, the President of the Privy Council, was prevented by illness from attending. At 40 minutes past 11 the Minister President addressed the assembly as follows:—

GENTLEMEN,—In obedience to the gracious commands of His Majesty, I have undertaken the grave responsibility of directing the Administration. Various important undertakings, necessary in the sequel of the war, having been barely initiated, and everything being still at the stage of inception, the time is one of extraordinary difficulty. Under the circumstances, proper courses have to be chosen, with due consideration for domestic conditions and the trend of public opinion, on the one hand, and with careful attention to the affairs of the outside world, on the other. Assuming, as I do, the discharge of these onerous functions without any special ability on my own part, I am not without fear lest I prove myself unequal to the occasion. But I am at least determined to endeavour to perform my duties with all sincerity, and, by exerting myself to the utmost of my ability, to fulfill, on the one hand, the grave office of advising and assisting the Emperor, and, on the other, to secure the hearty support of the Imperial Diet, to the end that, by bringing about cordial unity between rulers and ruled, the weighty responsibility that my position involves towards the Sovereign in the administration of the affairs of His Majesty's realm, may be successfully discharged.

The country's relations with foreign Powers are as friendly as ever, and the Government, while striving to promote still further those relations of cordiality, will endeavour to take steps calculated to assert the rights of the Empire and to expand its commerce, to which end all diligence will be used to speedily revise such of the Treaties as have not yet undergone that process. At the same time, the utmost care will be exercised in completing the arrangements for the enforcement of the revised Treaties, so that the fruits justly accruing under the new system may be fully gathered.

Armaments essential to the defence of the country must be expanded as far as the national resources warrant without producing disorder in the finances of the State, while, with the object of promoting permanently the prosperity and power of the realm, steps must be taken to develop education, industry, and commerce, these being the sources and foundations of national greatness. Hence the Government intends to direct its policy along the routes of encouraging education and business enterprise, simultaneously with the expansion of the national armaments.

The rights of freedom of speech, of the pen, and of public meeting, which the people are entitled to enjoy in virtue of the Constitution, will be treated with profound respect by the Government, and efforts will be made to safeguard their enjoyment.

An important desideratum in conducting administrative affairs is to abolish profusion of documents, so as to promote simplicity and promptitude; and, by fostering a spirit of co-operation among functionaries, to maintain smooth relations among the respective Departments. No less important is it, if practical benefit is to result from the administration of affairs, that the greatest discretion be exercised in appointing and promoting officials; that merits and demerits be publicly recognized, and that the gates of officialdom be thrown open to men of ability without distinction of person. The Government will pay close attention to those points, and will endeavour to improve the conduct of administrative business.

The character and conduct of Government functionaries bear no small relation to the moral condition of the public at large, and the Government perceives a special necessity at the present time to maintain official discipline with all strictness.

The adjustment of the national finances is a matter that demands the Government's most careful attention. The Government will, therefore, formulate, in strict conformity with available resources, measures adapted to the requirements of the time, and will aim at preserving equilibrium between receipts and expenditures. On the other

hand, every effort will be made to ensure that the progress and expansion of affairs pertaining to national economy shall not lag behind the general development of the nation's resources.

The consummation of various post-bellum measures is still far distant; the balance of trade is steadily against the country, and calamity has followed calamity in such rapid sequence that the lives and property of the people have suffered to an extent unprecedented for several decades. At such a juncture, to strive after the attainment of national greatness is a task of exceptional difficulty, and it is evident that unless the work be undertaken by rulers and ruled in firm and cordial union, by Government and people in the heartiest co-operation, success can not be anticipated.

Gentlemen, I earnestly hope that you will always keep these points in view, and will energetically endeavour, in accordance with the policy I have now unfolded, to satisfactorily conduct local administrative affairs, so that the structure of national greatness may be firmly erected on extended foundations.

THE VERNACULAR PRESS AND THE PREMIER'S SPEECH.

The speech delivered by Count Matsukata on Monday, before the Local Governors, embodying the platform of the new Cabinet, has failed to evoke hearty approval from the pro-Government papers. It gratifies them to some extent, but disappoints them also, and truly we find difficulty in determining which sentiment predominates.

The *Nippon* is disappointed to find that the Speech contains comparatively few allusions to the great abuse of the day. Only a very vague announcement is given about Cabinet responsibility, in the form of a promise that endeavours will be made "to secure the approval of the Diet." That may, perhaps, be construed in the sense that should the new Ministry fail to obtain the Diet's approval, they will hold themselves responsible for the failure and resign their posts. Moreover, a scarcely more satisfactory solution is offered of the problem about freedom of speech and public meeting, though it must be admitted that the engagement to treat those rights with profound respect distinguishes the attitude of the new Cabinet from that of any of its predecessors, none of whom ever made any such profession. The statement about the maintenance of official discipline gives more satisfaction to the *Nippon*, but it regrets that on other important points, such as foreign policy, national armaments, administrative reform, financial adjustment, and so forth, the Speech does not convey any definite information.

The *Yomiuri* writes in a more contented strain. The speech, it says, though partly open to the charge of vagueness, is on the whole commendable. One statement decidedly difficult to interpret is that relating to securing the support of the Diet. Yet the *Yomiuri* professes to be persuaded that the intention is to give an indirect promise of recognising and acting upon the Cabinet's responsibility to the Diet. Unless the support of the Diet be secured, the Ministry can not hope to discharge their duties towards the Sovereign. The Matsukata Cabinet is neither black nor white: it presents the intermediate hue of gray. For a Cabinet of such ambiguous complexion the platform announced in the speech can not be considered a very able achievement. However, any announcement is utterly worthless unless it be acted up to in practice. So the *Yomiuri* places itself in the attitude of a watcher.

While admitting that the Speech fails to fully satisfy the eager expectations of the people, the *Kokumin* considers that the policy enunciated has the advantage of lucidity, courage, and outspokenness when compared with any previous Ministerial utterance. What particularly gratified the *Kokumin* are passages promising that proper courses will be chosen, with due consideration for domestic conditions and the trend of public opinion, and with careful attention to the affairs of the outside world, and that the Cabinet will seek to discharge its grave responsibilities to the Emperor by securing cordial co-operation between rulers and ruled. In short, the *Kokumin* takes an optimistic view, and is confident that the

conduct of the Ministry will not fail to satisfy public expectation.

The *Chuo* (National Unionist) criticises the Speech as merely a formal utterance, like the orations delivered at banquets, and as containing not so much as one reference to the various views held by the *Shimpo-to*. Regarding the speech in that light, the *Chuo* is curious to see what attitude the *Shimpo-to* will assume towards it.

Count Matsukata's Speech, observes the *Nichi Nichi Shimbu*, is simply an *exposé* of the routine ordinarily adopted by any Administration, and is entirely free from any trace of originality or exceptional frankness. It must have strongly disappointed those that had attached such importance to it, especially the *Shimpo-to*. In fact, the Premier has furnished a plain indication that he repudiates the notions of the *Shimpo-to*. His declaration that the Cabinet will endeavour to discharge the grave responsibilities that it owes to the Emperor is specially significant of the Ministry's real attitude. Judging from the Speech, the new Ministry's methods of dealing with important questions of national defence and finance will not differ conspicuously from those mapped out by their predecessors. When the Premier speaks of efforts being made to safeguard the enjoyment of personal rights and freedom, he evidently means that the exercise of those rights and of that freedom will be permitted within limits prescribed by the laws and the Constitution. In short, he indicated in his Speech an ordinary routine of Administration, and did not in any sense propound a new platform. That he and his colleagues intend to pursue the path already entered by the last Cabinet proves them to be statesmen of conscientious views.

The *Yiji* finds that the Speech has proved to be a merely formal utterance, containing nothing that definitely commits the Cabinet. Still some indications, faintly outlined, furnish a clue to the subjects that the Cabinet intends to treat as weighty; namely freedom of the press, and of public meeting; curtailment of documentary profusion; maintenance of official discipline, and administrative reform. With regard to the responsibility of the Cabinet the Speech apparently disappoints those that assert the principle of party Cabinets, but some critics infer that since the declared responsibility to the Sovereign cannot be fully discharged without securing the support of the Diet, the Matsukata Cabinet must be held to have opened the path to the inauguration of party Cabinets. What is certain is that the Speech is not sufficiently explicit to furnish materials for any definite analysis of the Ministry's policy.

THE CABINET AND THE "PLATFORM."

The *Mainichi* publishes some particulars that it alleges are based on information it has gathered in regard to the Cabinet Council held on Saturday last. The article is very lengthy. This Cabinet Council, says the *Mainichi*, lasted for seven hours—from 5 p.m. to midnight—and it is conceivable that much discussion must have arisen. With respect to the phrases in the draft of the Premier's Speech that deal with public opinion, Viscount Nomura, Minister of Communications, and Mr. Kiyoura, Minister of Justice, wished to have an explanation of the sentence, "to take into consideration the trend of public opinion." They observed that such an expression would amount in practice to a declaration that the Administration should be conducted in conformity with the spirit of the ruling party; in other words, to the adoption of party cabinets dominated by party politics. If they were not mistaken in these ideas, the Government ought to declare themselves openly in favour of *Seito Nashaku* (party cabinets). For their own part, they were doubtful whether the adoption of such a principle would be well-timed. Marquis Hachisuka, Minister of Education, and Viscount Enomoto, Minister of Agriculture and Commerce, also put some questions on this point. Count Okuma, Minister of Foreign Affairs, took part in the discussion,

and observed that so long as the Diet existed and constitutional Government was carried on by seeking the approval of the Diet for Government measures, it was impossible to conduct the Administration in total disregard of the views advanced by the majority in the Diet. In the 1st session of the Diet, the *Taiseikai* supported the Government; in the 2nd session, the National Unionists played this rôle. They were political bodies that moved with the Government towards the same goal. When the Government could not command a majority, Parliament was dissolved, and a new election followed. In the long run, however, a Cabinet that enjoyed the confidence of the majority of the people could live, while one that failed to command public support must fall. The Ito Cabinet furnished a strange precedent, for when it was beaten in the Diet, without taking steps indicative of its readiness to hold itself responsible for its actions, it advised the Emperor to issue a Rescript. Then, after announcing that the situation had undergone a sudden change, it appeared once more before the Diet. Such procedure was calculated to set at naught the principles of Constitutional Government, and should not be imitated by the present Ministry. The Cabinet must move with the majority in the Diet, and in the event of failing to obtain the endorsement of the majority, the Ministers should either resign on the ground that they had lost the confidence of His Majesty's subjects, and so were unable to discharge the trust reposed in them by the Emperor; or, if they held that public opinion was not faithfully represented in the House, they should dissolve the latter and appeal once more to the people. In short, the Government ought to make up their mind that only when they enjoyed the confidence of the people could they discharge the responsibilities of office; for by no other process was it possible to realize the benefits accruing from cordial union between rulers and ruled. As to the *Seito Naikaku*, that was merely a term used by publicists to describe the nature of a Cabinet, and no Cabinet would of itself pronounce itself a *Seito Naikaku*. Of course, when a Cabinet moved along a groove approved by public opinion, and was called, by outsiders, a *Seito Naikaku*, then no objection could be raised to the appellation. Count Kabayama then rose and in an impressive tone observed that his views did not materially differ from those just enunciated by the Foreign Minister. How were affairs to-day? continued the Home Minister. There were post-bellum measures of paramount importance to be dealt with. In the interior, national finance is in a state of emergency, while abroad the relations of foreign Powers are becoming more and more serious. It was on this account that the last Cabinet felt the necessity of having an able Foreign, and an able Finance, Minister; it was on this account that matters came to such a sudden crisis, a crisis that resulted in the formation of the present Cabinet. Consequently, discerning well the general tendency of the time, the new Ministry should endeavour to bring about cordial union between rulers and ruled, and should establish amicable co-operation among all classes. Till a few years ago, he himself did not clearly discern the progress that the people had made, and thought that until the nation advanced a little farther, no means were available for conducting the affairs of State other than those used by the Sat-Cho statesmen. He stood by that conviction when first brought face to face with the Diet. But affairs had undergone a great change since that time. He had been especially struck by the mighty force that resulted from the amicable unity of rulers and ruled during the late War. When he witnessed such an ardent ebullition of loyalty and patriotism, he became convinced that his former views were fallacious. He was now of opinion that the time had arrived for conducting the Administration in conformity with the desires of the people; and that unless this course were adopted, it would be impossible to discharge the duties that the Cabinet owed to the Emperor. The main thing required to-day was to go resolutely forward; to establish cordial union between rulers and ruled; and this with a firm faith in the principles of sincerity and candour.

Thus the question of public opinion was determined, and the question of individual rights and freedom was next discussed. The Ministers of Justice and of Communications observed that the provision relating to the suspension of newspapers might be continued in so far as concerned the guarding of military and diplomatic secrets. The Foreign Minister replied that suspension as enforced to-day was only enforced after a secret had been divulged; the provisions were therefore entirely inefficacious to provide against official secrets being disclosed. The only thing to be done was to exercise a conscientious control of the Government Departments, so that nothing of any great importance might leak out. Viscount Takashima, Minister of War and of Colonization, observed that the remarks of the Foreign Minister were also applicable to military secrets. There was no use in suspending a paper after it had actually divulged a military secret. Moreover, special provisions existed with regard to guarding military secrets, and he saw no necessity to preserve the suspension clauses of the Press Law. This opinion was endorsed by Count Kabayama, who observed that suspension was prone to abuse. During the recent War, for instance, when the patriotic indignation of the people was warmly aroused, any secret the disclosure of which was calculated to impair the interest of the Empire was guarded with jealous care by the people. When, however, the same people vented their indignation at the retrocession of the Liaotung Peninsula that was occasioned by a diplomatic blunder of the Cabinet of the day, the suspension clause was so far availed of by the Government that the people's mouth was unduly gagged. A Cabinet that aimed to conduct the administration within the limits marked out by the Constitution, must not to-day take any such thoughtless and arbitrary steps. Even if the Press Law were not amended but preserved in its original entirety, the evil would not be allowed to rear its head so long as he held the portfolio of the Department of Home Affairs. The abolition of the suspension clause, being supported by the three Ministers, the question of individual rights and freedom was carried without amendment. Nor was objection raised to the contention that hitherto, in appointing officials, those who excelled in professional knowledge were preferred to others, so that men of ability were liable to be left out, and that in this respect the system should be amended. Thus the discussion closed without any particular disagreement. How far these assertions of the *Mainichi Shimbun* are accurate, we (*Japan Mail*) do not undertake to say.

COUNT KABAYAMA'S SPEECH.

Admiral Count Kabayama addressed the Local Governors on Tuesday morning at his official residence, in the presence of several officials of the Department of Home Affairs. He alluded to the exceptional difficulties now encountered in administering the two principal affairs of State, diplomacy and finance; to the abortive attempt of the last Cabinet to call in Counts Okuma and Matsukata to assist in the conduct of those affairs; and to the sudden crisis that led to the downfall of the Ito Cabinet. The public, continued the new Home Minister, regarded the entry of Count Itagaki into the last Cabinet as prefatory to the inauguration of a system of party Cabinets. They also regard the entry of Count Okuma into the present Cabinet in the same light. Nothing could be more erroneous. The present Cabinet does not intend to disregard the wishes of the Imperial Diet; but at the same time it will not necessarily regulate its movements by, or bring them into conformity with, the attitude assumed by the Legislative Body. In other words, the Government will deem itself very fortunate if its policy commands the support of a majority in the House, but even should its policy fail to win the approval of the Diet, the Government will take all such steps as it considers expedient and important. Placed in the position of giving assistance to the Sovereign, the Cabinet must be ready to discharge to the utmost its responsibility towards

His Majesty. The Count was determined to perform all his duties with sincerity, and expected that the Local Governors would keep the same principle in view and exert themselves strenuously to further the welfare of the State. With respect to administrative affairs falling under the control of the Department of Home Affairs, the Count observed that the rights and privileges that the people should enjoy in virtue of the Constitution would be regarded with profound respect, and that these matters should be dealt with in a magnanimous spirit. [Here several Governors interposed, and asked the Home Minister whether they might interpret such magnanimous dealing in the sense of actually allowing the professed rights and privileges. The Minister replied that the point belonged to the domain of practice, and that he would issue special instructions on the matter.] The civil service should also be amended so as to open the gates to all men of ability.

Dinner was then served, and at its close, the new Home Minister alluded to the question of the urgent public works necessitated by the recent inundations. It was inevitable, he observed, as a result of these repeated calamities, that grants-in-aid should be made from the Central Treasury. He feared that this would impair the spirit of local self-government and possibly induce a spirit of reliance upon the Central Government. The Governors must take these points into consideration and should strive to strengthen the bases of local self-government. Lately a practice had become fashionable in devastated districts to despatch deputies to Tokyo to agitate for aid from the Central Government. Such procedure tended to aggravate the distress of the suffering districts, as the expenses incurred by these deputies had to be borne by the people of the locality. The Governors should therefore consult with the people in all cases of the kind, and endeavour to discharge their duties in a manner that would win the approval of the Government and the people.

WHAT MIGHT HAVE BEEN.

What might have been had this or that been differently contrived, is a reflection that bulks largely in the minds of all human beings overtaken by defeat or discomfiture. It is a voice standing high in the gamut that a great poetess has called "earth's lamentable sounds." We find it expressed very sadly in this paragraph from an article in the *Kobe Herald*:—

The situation would to-day have been different had a Lowder, or a Brooke, or a W. B. Walter, or an Evers, stepped out and said: "Enough to this insensate rivalry in a field which does not command the situation; squash the *Gazette*, or even the *Herald*, if you will, and engage a Brooke or a Tennant, or some one else if you prefer, so long as you reserve a competent hand and brain to stand aside to work like a demon one week and idle or seem to idle the next, in order to meet and answer, with the irrefutable logic of facts, the sentimental and oft-misleading poison ably and shrewdly dropped from time to time in the columns of the *Mail*. That mellifluous matter reaches centres of thought and eventual action abroad, and the foreign field is the only field for which our friends the Japanese care a straw." But the day has gone by.

Well now, reading this in all seriousness, does it not betray brevity of memory? It seems to us that, not many years have passed since one of the persons mentioned did "step out" and did make precisely the kind of proposition outlined above. True, he did not say "squash the *Herald*." On the contrary, his original action appeared to foreshadow a very different fate for that tough old journal. But, in the end, he induced a feather-brained, full-pursed section of the community to put up a liberal, a most liberal, sum of money for the purpose of rejuvenating the *Japan Gazette*, hastening the death by inanition of the senile *Herald*, and slaughtering the poisonous *Japan Mail* outright. If the programme hatched, was that the fault of the "stepper-out"? What more could he have done? Did he not contrive for his emotional followers a brief ride on a rickety hobby at a cost of some forty or fifty thousand dollars? Nothing was "squashed" but the hobby, and as it rose again from its cheap ruins, the guilt of blood lies not upon the

"stepper-out" nor yet upon his disciples. There was, indeed, a laughable fiasco; there was a humiliating exposure; and there was also a cruel act of injustice. But the proverbial "seventy-five days" have reduced the recollection of these ugly things to fragmentary outlines. We have lived and learned. Nothing remains but to note the inwardness of that September lesson. It appears to be still hidden from our Kobe contemporary. For none must any longer imagine that the true purpose of the god that stepped out of the machine on the 11th of September, 1890, was to save the situation in the sense of those now mourning the imminent demise of Consular jurisdiction. His real though, perhaps, unwitting object was to demonstrate the hopelessness of the situation. He rough-hewed his ends differently, indeed, but the providence that shapes interferred, and that attempt to obscure the truth and to impede the course of justice, helped ultimately to elucidate the one and to promote the other. *Et prevalebit!* A hackneyed aphorism, indeed, but never once contradicted by events since history began to be written. The fruitless struggle would surely have lasted longer but for that sharp experience, commencing amid sensational tumult in the Public Hall on the 11th of September, 1890, and ending among shattered contracts and startling disclosures in Her Britannic Majesty's Court on June 30th, 1891. The fact is that public opinion has an invariable, if sometimes inconvenient, knack of righting itself in the long run: its aberrations never last long.

CURRENT TOPICS.

The Foreign Department, it is said, has determined to establish next year a number of Legations and Consulates abroad, the former in Hawaii, Mexico, Brazil, and one other place, and the latter in Antwerp, Sydney, Chicago, and Newchwang. Consulates-General already exist in Hawaii and Mexico, and officials combining diplomatic functions are appointed there. This arrangement not working satisfactorily in consequence of the gradually developing relations with those two countries, the Foreign Office has decided to establish Legations and to appoint *Chargés d'Affaires*. The establishment of a Legation in Brazil is with the view of encouraging the emigration of Japanese thither and facilitating commercial transactions with that country. A treaty must, of course, be concluded in advance. Japan will be represented by a *Chargé d'Affaires* in Brazil.

The Japanese police are said to be in a pitiable condition, owing to the extraordinary rise in the market prices of commodities. Their emoluments are divided into three grades, namely, 10, 9, and 8 *yen* per mensem. Thus they receive a smaller income than mechanics and master-coolies. Under such circumstances, it is not surprising to learn that much inconvenience is experienced by the Authorities owing to the resignation of constables who feel compelled to seek more remunerative occupations. A serious deficiency has been caused in the force, and repeated calls for applicants have evoked no response. The Authorities have at last determined to raise the emoluments by one *yen*, but it remains to be seen whether so small a change will produce the desired effect.

JAPANESE BANKS.

According to investigations conducted by the Department of Finance, writes the *Tokyo Asahi*, the number of banks of all kinds in Japan at the end of September was 1,258, and their capitals aggregated 228,706,044 *yen*. Compared with the figures for the last day of August, there was an increase of 9 banks and 5,206,000 capital.

Zumoni Saito and others have a project on foot to organize the Tohoku Kairyo Kaisha with a capital of *yen* 3,000,000. Their object is to promote Japanese seeling.—*Nippon*.

FINANCIAL TOPICS.

The *Tokyo Economist* publishes an interesting note in connection with the Public Undertakings Fund. News recently given in some Tokyo papers, writes this journal, to the effect that the Government intends to float an Undertakings Loan among the public at large, is delusive. In point of fact, the Government never intended to float the loan in such a way. Of the total amount required—130 million *yen*—80 million *yen* is to be appropriated for the purpose of expanding the national armament, so that though the Loan bears the qualifying epithet, "Public Undertakings," it is essentially a National Defence Loan. When the Budget for the current year was first compiled, it was intended to take the 130 million *yen* from the Indemnity and not to raise a Loan. But it subsequently transpired that the whole of the first installment of the Indemnity was wanted for adjusting the War Expenses and for the purposes of the Budget for the 29th fiscal year. Therefore, if any sum was to be taken from the Indemnity, the second installment alone was available for the purpose—a step that was considered hardly good statesmanship, seeing that the second installment at that time existed only on paper. The original intention of the Cabinet being changed, it was decided to temporarily insert an item—National Defence Loan—in the section of Extraordinary Revenue. An objection subsequently appeared as to the name of the loan. Some persons said that the Powers were narrowly watching the action of Japan, suspecting that she might be entertaining ambitious projects in the Orient, and that, therefore, unless the reason for the sudden expansion of the National Defence was properly explained and shown to be really of a most peaceful character, unexpected obstacles might present themselves in the payment of the Indemnity. It was therefore determined to change the original designation to the name that the Loan now bears. At the same time, no one endorsed the measure of raising a loan bearing 5 per cent. interest, while the second installment of the Indemnity was lying idle. The excess of 43 million *yen* in favour of imports in Japan's foreign trade during the eight months ending August, must have brought into Japan at least 20 to 30 million *yen* out of the Indemnity, and the portion thus drawn must now be in the strong-boxes of the Treasury. Now the Law of Special Finance relating to the Indemnity provides that it may be availed of in purchasing Bonds, and this shows that the original idea of the Government regarding the Public Undertakings Loan was to employ the Indemnity and not to raise the money in the open market. If that project is to be adhered to by the present Government, the installment of this year's Undertakings Loan—8,370,000 *yen*—will be taken entirely from the Indemnity. But the Treasury, contrary to public expectation, does not hold more than 5,900,000 *yen*. What has become of the 20 to 30 million *yen* that the Government must have obtained by taking advantage of the striking disproportion between imports and exports? It is thought by the *Oriental Economist* that the Treasury must have lent it to the Bank of Japan with the view of enabling it to tranquillize the domestic money market. If this conjecture is well founded, the Government, when the necessity arises to raise the Undertakings Loan, will cause the Bank to issue convertible notes to the extent of the accommodation afforded to the Bank, and will purchase the Bonds that it will float. The Undertakings Loan will never be floated in the open market. The *Economist* says that this information is likely to be well founded.

Nothing can be more contradictory than the news furnished by the Tokyo papers in regard to the Budget now in course of compilation. One day we are told that the retrenchment that the Cabinet has decided to effect in the administrative expenses is only 30 million *yen*, while next day we find that sum doubled. The latest news that the *Fiji* gives is worthy of notice. It says that the demands made by the respective Departments while the last Cabinet was in power exceeded the revenue by more than 60

millions; that the new Premier and Financial Minister have succeeded in cutting them down by 40 millions; and that the remaining 20 millions will be raised either by floating a loan or by having recourse to further taxation. The claim of the Navy, for the second-period-expansion programme, has been allowed to stand, and the only noteworthy retrenchment in the Budget for the War Department is the striking out of the item relating to the establishment of independent garrisons in Formosa. According to these amendments, the garrisons of the island will be furnished by drafts from the Divisions at home, as at present. The Department of Colonization has increased its demands by seven millions or so. The retrenchment effected in the demands of the Department of Communications will be sensibly felt by the public at large. They amount to as much as four million *yen*. Not only will it be impossible to take up the work of establishing the telephone service between Tokyo and Osaka, but the establishment of the same service in such large cities as Nagoya, Hiroshima, Nagasaki, and so forth, must be deferred for another year. The projected improvements in Government Railways must also suffer, to a certain extent. The telegraphic service between Tokyo and Osaka being so liable to interruption by storm or floods, the Authorities had intended to lay submarine cables between the two places, but this work must also be postponed. Again, it was the intention of the Postal Authorities to establish parcel service facilities at 1,400 places, and postal order offices in 400 places. This programme must be considerably reduced. The Home Office's budget was also reduced to the extent of 4,300,000 *yen*, the chief items struck out being additional allowances for clerks the erection of new Parliament buildings, and an Office for the Department of Colonization.

ECONOMIC TOPICS.

The amount in which the 13 embarrassed wholesale cloth-dealers of Tokyo are indebted to Banks and other creditors, appears to be much smaller than was originally stated by the *Yoroku Choho*. Their debt to the Banks, their chief creditors, is now estimated at half a million *yen*, but so much of their paper is endorsed by wealthy men that the unsecured portion may not exceed 200,000 *yen*. The position of the Sawa Firm in Kiryu is believed to be more serious. Mr. Sawa Kichiyemon, the proprietor of the firm, was not only the most influential merchant in Kiryu, but his name had also become widely known throughout the Kwanto districts, being connected with many enterprises. The Nippon Weaving Company in Kiryu may be said to have been established by him alone, and he had monetary transactions with more than 30 banks in Tokyo, Yokohama, and the Ryomo districts. Bills bearing the firm's signature are estimated to represent about 1,000,000 *yen*, but it is said that the assets will not exceed a tenth of that total. The direct cause of the firm's collapse was the depressed condition of the American and European markets, and losses consequently incurred in export business. In Kiryu and Ashikaga not a few other merchants also are on the verge of ruin, so that business in the two famous weaving centres of the Kwanto region is at a standstill. Mr. Sawa being connected by ties of matrimony or intimate friendship with such large mercers of Tokyo as Matsuzakaya Daimaru, and so forth, will probably be helped to tide over the crisis without his firm being reduced to ruin. It is rumoured that a similar trouble impends in the case of several wholesale silk and cotton-yarn merchants in Tokyo.

A reaction is apparent in the stock market also. "Potential shares," which at one time were quoted at an extraordinary figure, have undergone a marked fall. For instance, a "potential share" of the Tobu Railway Company quoted formerly at about 20 *yen*, will not now fetch over 8 *yen*, and a share of the Bu-so Central Railway Company that could easily find a purchaser a short time ago at 17 or 18

yen, has fallen to 7 yen, and even at that figure is not easily saleable. In fact the rise in the market price of commodities has greatly embarrassed the work of railway construction. The cost of building a road is at least two-thirds higher than it was a few years ago. A sleeper that used to be procurable for 25 *sen*, now commands about the double that figure. Under the circumstances, a newly projected railway company can not expect to make profits such as were obtained by similar enterprises in former times.

The *Oriental Economist*, according to its custom, gives the total capital invested in various enterprises, from January, 1895, to the end of last month. The following are the figures:—

	Jan., 1895 to Aug., 1896. Yen.	Sept., 1896. Yen.	Total. Yen.
Railways..	590,435,290	79,105,000	669,540,290
Banks	149,030,000	2,920,000	151,950,000
Others.....	278,304,500	20,128,000	298,432,500

Total... 1,017,769,790 102,153,000 1,119,922,790

According to researches conducted by the Department of Agriculture and Commerce, the total installments to be paid from July last to June next by shareholders of mercantile corporations coming under the control of that Department (excluding Railways and Banks) amount to 15,750,000 *yen*.

JAPANESE CONSOLS ON THE LONDON MARKET.

Our readers are aware that Mr. Yamamoto, Manager of the Bank of Japan, and Mr. Sonoda Kokichi, President of the Yokohama Specie Bank, proceeded to England a few months ago with the object of making arrangements for having Japanese Public Loan Bonds included among the stocks that are regularly dealt in on the London Exchange. After the arrival of the two commissioners in London, sundry telegraphic inquiries were addressed to the Finance Department in Tokyo, for in money matters English scrutiny is apt to be very close. Full information was furnished on all the points queried, and it would seem that a satisfactory understanding was at length reached, for, on the 14th inst., a telegram was received by the Bank of Japan, saying that it had been agreed to allow transactions in Public Loan Bonds of 1892, 1893, and 1895. Nothing was added as to whether any transactions in these Bonds had actually taken place, and of course nothing can be known of the price they are likely to command. It is plain enough, however, that the choice made by London financiers was based on the periods at which the various kinds of Japanese Bonds become redeemable. What the British investor wants is a security that will "hold" his money for a good spell of years, and that is not liable to throw it back upon his hands at some moment when the difficulty of finding safe re-employment for it may happen to be particularly embarrassing. From that point of view, neither the War Loans Bonds nor the Bonds issued prior to 1892 are inviting, the former, as a special loan, being not unlikely to be redeemed at any time, and the period of the latter's redemption being inconveniently near. The *Yiji Shimpō*, from which we take these details, adds that the amounts of the Bonds in question are:—

	Yen.
1892	40,850,350
1893	17,987,090
1895	2,000,000

Total..... 60,837,440

No Bonds of this character (Consols) were issued in 1894, the war with China being then in progress. We need scarcely add, perhaps, that the news of the receipt of the above telegram by the Bank of Japan has set rumour's tongue wagging, and that stories are in circulation about immense transactions in the selected Bonds being on the verge of conclusion. There is not room for anything very big where only six millions sterling worth of Consols are in question, not will British capitalists be greatly affected by such an addition to their chances of investment.

THE "TOKYO ECONOMIST" ON INDUSTRIAL TOPICS.

The *Tokyo Economist* wants to know whether Mr. Mayeda Masana and the Liberals have been disillusionized on the subject of the Silk Conditioning House affair. The *Tokyo* periodical was from the first opposed to the measure, which was promoted so earnestly by Mr. Mayeda Masana and the Liberals. The subject was taken up by Mr. Taguchi, the editor of the journal, when the Bill was laid before the 8th session of the Diet. He contended that an institution of the kind should be established at weaving centres such as Lyons, in France, or Patterson, in America. It would be entirely a mistake to establish silk conditioning houses at such places as Kobe and Yokohama. Even where no charge is imposed, which, however, must be impossible, experts at the conditioning houses would have nothing to do. This advice of Mr. Taguchi was disregarded, and a conditioning house was opened in April last both at Yokohama and Kobe, at a cost of over 60,000 *yen* in each case. No charges are to be imposed. Do the results thus far obtained at either place justify the action taken by Mr. Mayeda and the Liberals? Here is the table giving the results of the work at the Yokohama and Kobe offices:—

YOKOHAMA.	
One week ended Aug. 13th.....	42 samples.
One week ended Aug. 22nd	25 samples.
One week ended Aug. 29th.....	30 samples.
One week ended Sept. 5th.....	23 samples.
One week ended Sept. 12th.....	44 samples.
KOBÉ.	
During July	9 samples.
During August	21 samples.

Are the supporters of this measure satisfied? Some Yokohama merchants have told the editor of the magazine that they apply merely for amusement, and because no charges are imposed for the inspection of their silk, and that they apply when they have leisure, but that no one would do so when business is brisk. The *Keisai* observes satirically that it regrets to see its prediction unfortunately realized.

Since the memorable intervention of Russia, France, and Germany, in the Liaotung affair writers the same journal, in an article headed "Schemes to promote commercial relations between Japan and Italy," the friendship existing between Japan and Italy has grown more and more cordial, and signs of forming a triple alliance between Japan, England, and Italy were thought to be visible at the time against the alliance of the other three. The Japanese Honorary Consul at Genoa reports that, taking advantage of this opportunity, schemes are afoot in Italy for promoting commercial relations between the two countries. He says that a number of prominent business men of Italy met together to discuss how to attain that purpose, and that, to facilitate the realization of the scheme, he has himself opened correspondence with certain merchants in Yokohama and Hyogo. He intends to compile Italian statistics giving some idea of the commerce, industry, and other matters concerning Japan. The *Tokyo Economist* next points, as another sign showing that Italians are now paying attention to Japan, to the wealthy Italian capitalist who lately came to this country and proposed to Marquis Ito, the Premier of the day, to undertake the opening up of the resources of Formosa, in the manner of the East India Company. The plan was, however, rejected by Japanese capitalists, to whom the matter was referred, they being of opinion that they themselves could raise the necessary capital if the establishment of such a company was advisable. Turning to the commercial relation hitherto subsisting between the two Powers, the *Keisai* finds it entirely unsatisfactory, the average exports during the last five years being two million *yen* or so, while the imports from Italy have averaged less than 200,000 *yen*. This is chiefly due to the fact that the people of the two countries are mutually ignorant of each other's conditions.

ECONOMIC TROUBLES.

The failure of Mr. Daimon Shimbei, of Osaka, has dragged into the mire of insolvency not merely the Union Savings Bank, of which he was President, but other banks also. The Shimanouchi Bank (capital 100,000 *yen*) has suspended payment, and has been sued by the Kawachi Spinning Mill for a sum of 4,000 *yen* deposited with it. The President of the Bank was at the same time a Manager of the Mill, and when, in consequence of the insolvency of Mr. Daimon, the Bank experienced a run (Mr. Daimon having been one of its Directors), the President begged Mr. Yano, another Director of the Mill, to draw out a sum of 4,000 *yen* deposited in two other banks, and to entrust it to the Shimanouchi Bank. Mr. Yano complied with the request of his colleague, and transferred the money. When news of this transaction reached the ears of Mr. Hyozu, President of the Mill, he became greatly alarmed, and after a hurried discussion with the Directors of the Mill, he applied to the Shimanouchi Bank to refund the sum deposited by the Mill, namely 20,000 *yen*. The Bank refunded 16,000 *yen*, but failing to pay the remaining 4,000 was sued by the Mill, and had no recourse but to close its doors. The case of the Kotohira Bank, Sanuki, is more serious. Its capital is 300,000 *yen*, of which 75,000 *yen* was paid up when it commenced operations in June of last year. It has branch offices in Tokyo and Osaka, and the latter was under the control of the unfortunate Mr. Daimon. His insolvency caused a run on the Osaka Branch, and it was obliged to put up its shutters. The Kansai Steamship Company had a deposit of 40,000 *yen* in the Bank, and apprehensive of a similar failure on the part of the Central Office, a Director of the Company, accompanied by a bailiff, proceeded to Kotohira on the 9th inst., and distrained the property of the Bank. On the same day, the Local Court declared Mr. Takehara, President of the Bank, insolvent, and sealed the movable property of the concern. It is said that the business of the Bank being in a very precarious state, there had already been talk among its principal shareholders about the advisability of dissolving it, but disaster overtook it before any preparations could be made. The shareholders were to hold an extraordinary meeting on the 13th inst. The insolvency of this Bank has thrown Kotohira and its vicinity into a condition of panic, and fears are entertained that a similar disaster may overtake other concerns with which Mr. Takehara is connected.

A panic on a small scale has occurred in Nagoya, as a result of speculation in the shares of its Stock Exchange. Such fluctuations lately occurred there that a share of only 50 *yen* face value was pushed up to 690 *yen* about the beginning of last month. A reaction followed, of course, and a few weeks later the quotation fell to 400 *yen*, whereupon the local banks, which had previously been ready to advance 200 to 300 *yen* upon the shares, declined to take them even at their face value. Similarly wild transactions in the shares of the Nagoya Electric Railway involved stock-jobbers and others in such disasters that many are now reported to be on the verge of ruin. What troubles them most at this juncture is the refusal of the Banks to advance any money on shares, or to assist stock-brokers even when the latter apply for loans on the security of immovable property.

With regard to Tokyo and its vicinity, the insolvency of Mr. Sawa Kichiyemon is likely to be satisfactorily arranged, owing to the magnanimous help that the principal mercers in Tokyo have consented to extend to their distressed fellow-dealer. The case of the wholesale cotton-cloth dealers and woollen-goods dealers is still under negotiation with their creditors. Meanwhile, the disturbance has greatly impeded transactions in cotton cloth in Tokyo, everybody refusing to give credit to merchants engaged in that trade. No business is done on the market, and quotations have fallen by 5 to 6 per cent.

SPECIAL OPEN PORTS.

Of the six ports lately announced by Imperial Ordinance as special ports for foreign commerce, Hakata had previously been opened for commercial transactions with Korea. At present there are two kinds of special open ports, one for commerce with certain special countries; the other entitled to carry on commercial transactions with all the Treaty Powers. The six ports of Bakan, Hakata, Izuhara (Tsushima), Sasuna (Tsushima), and Shikami were selected as special out-lets for commerce with Korea prior to the opening of the Imperial Diet, while subsequently the three ports of Miyazu, Fushiki, and Otaru were opened, with the approval of the Diet, for commerce with China, Korea, and Russia. The six ports of Hakata, Karatsu, Kuchinotsu, Tsuruga, Sakai (Hoki), and Hamada (Iwami), announced as special open ports by Imperial Ordinance, have been made so, in virtue of Law No. XVIII., promulgated in March last, for special commerce with the rest of the world. The only difference between open ports of this description and Treaty Ports, says the *Yiji*, consists in this, that, whereas the mercantile marine of any nationality is free to enter or leave the latter and to import or export any kind of commodities, ships owned by Japanese subjects alone are entitled to enter special open ports. Though differing widely in significance, the *Yiji* does not think that any particular difference exists between special open ports of older date and those announced only a few days ago, it being plain, for example, that the three ports of Tsuruga, Sakai and Hamada were opened with the view of promoting commercial transaction with Korea and Russian Siberia. Then there is a certain important distinction between ports for special export and ports for special import and export. Fushiki, Otaru, and Bakan are ports of the first description; Sakai, Hamada, and Tsuruga belong to the second type, while Hakata, Karatsu, and Kuchinotsu combine both qualifications. Now in ports for the special export of cereals, flour, coal, and sulphur, a foreign chartered vessel is free to enter or leave, while at ports for special export and import, as Sakai, Hamada and Tsuruga, no vessel owned by a foreigner is allowed to enter. Out of the six new special open ports, branch offices of the Nagasaki Custom Office are already established for Hakata, Karatsu, and Kuchinotsu, but such provision has not yet been made for the remaining three. Consequently, branches of the Kobe Customs will be established during the current month at Sakai and Hamada, while Tsuruga will be placed under the control of the Niigata Customs Office. Five or six officials are to be despatched to each branch customs house.

THE JAPANESE MINT.

The report of the Director of the Imperial Japanese Mint for the year ending March 31st, 1896, shows that, in the matter of coinage, the Mint did not do as much work as in the preceding year, but that a considerable access of business was caused by the manufacture of medals to commemorate the war with China. Of these medals 226,029 were struck; 5 being of gold, 70,385 of silver, and 155,639 of copper. The guns captured in the war were used as material, for the copper medals, and of course the composition of a suitable alloy and the process of colouring gave considerable trouble. As for the coins struck, they are shown in the following table:—

Denomination.	Pieces.	Value. Yen.
Gold—Five-yen	282,000	1,410,000
Silver—One-yen	16,500,000	16,500,000
Twenty-sen	5,003,010	1,000,602
Ten-sen	15,008,270	1,504,827
Total	36,511,280	19,001,429
Nickel—Five-sen	1,030,120	51,506
Grand Total	37,541,400	20,462,935

These figures, as compared with those for the previous year, show decreases of 270,000 yen in gold, 10,800,290 yen in silver, and 298,530 yen in nickel. It should be noted, how-

ever, that the fiscal year ending March 31st, 1895, was quite exceptional in the matter of coinage. The average annual value of the coins struck during the preceding 8 years was 12 million yen approximately, but in 1894-5 the figure suddenly rose to nearly 32 millions. Hence a coinage of 20½ millions in 1895-6, though less than the coinage of the previous year, was far above the normal figure. The expenditures for the year exceeded the estimates, owing to the coinage of an unexpected quantity of subsidiary coins and the striking of war medals, but a net profit of 426,868 yen was nevertheless realized. Altogether, the Mint has been a source of very considerable gain to the State, the net profits since its establishment in 1870 having aggregated 11,379,856 yen. The quantities of gold, silver, copper and nickel coins struck during the 25½ years of the Mint's existence (i.e. from December, 1870, to March 31st, 1896) are represented by the following values:—gold, 69,350,083 yen; silver, 187,909,059 yen; copper, 12,418,056 yen, and nickel, 5,090,103 yen; the grand total being, omitting fractions, 275,567,302 yen. It would be interesting to know how much of that amount now remains in Japan, but the calculation would involve many factors very difficult to determine.

Several years have now elapsed since the services of the remarkably competent foreign experts employed at the Mint were dispensed with, and it will be remembered that the step evoked considerable criticism at the time. A specially doubtful point was the competence of Japanese assayers, and it was predicted that without foreign aid the quality of the coins issuing from the Mint would not command public credit. It appears now that those fears had no valid foundation. The Japanese have worked the Mint long enough, without any alien assistance, to thoroughly establish their ability, and it is certainly not premature to compliment them on the fact.

MR. SUYENOBU ON GOVERNMENT FINANCE.

Mr. Suyenobu, in the course of a recent interview with a representative of the *Yiji Shimpō*, criticized the financial policy of the late Cabinet in a very outspoken manner. He said that it was utterly at variance with the rudimentary principles of political economy. For instance, he could not understand why, after withdrawing an immense sum of money from the people and converting it into funds for non-productive purposes, the Government should have neglected to refund this money as quickly as possible after the war. On the contrary, the Government had proceeded to further withdraw capital from the productive market by floating loans and adding to the burden of the people. Be the issue of a war what it may, it is important that steps be taken to hand back any sum that has been forced from the people during the war's continuance. What did the Japanese Government do? It simply laid idly aside in England—the wealthiest country in the world—the indemnity received from China. Nothing could be more irrational. The economy of Japan developed steadily from about 1887, and it is conceivable that had there been no war, the surplus in the treasury must have reached over 100 million yen to-day. A loan of even 100 million yen might, in that case, have been procurable at 4 per cent., and industries and manufactures would, without much outside encouragement, have made striking development. But the diminution, or rather the exhaustion, of the surplus cannot be helped. The fault lies in the post-bellum financial measures that the Government adopted. China is far wiser in this respect. She has succeeded in procuring abroad all the money required for the indemnity, and nothing has been done to withdraw capital from the people. This contrast is most striking. While the markets of China, the vanquished party, present no troubles, but are carrying on transactions as if nothing has happened, Japan, the victorious party, presents a very miserable appearance. The attempt to raise a loan of 10 million yen resulted in a fiasco, while Government bonds bearing interest of 5 per cent. are quoted below their face value. The fact is, the

Government has been too ready to repose confidence in its bankers, labouring under the fallacious idea that financial affairs are best known to these men. Bankers may have a better knowledge than the Government; but they also know how best to promote their own interests, and that at the expense of the Government or the public at large. They told the Government that the inflow of a large quantity of specie into Japan would inflate the volume of the currency and consequently derange the market. They did not like to have the land flooded with capital, for that would result in lowering the market rate of interest, and therefore would affect the banks. The treasury honestly believed in this advice and let the indemnity lie in England, while all the time the people were suffering from lack of ready money. The Government did not know that inflation meant only a temporary excess of inconvertible notes, and that, however abundant might be the amount of specie that a country holds in its vaults, such specie does not inflate the volume of the currency at all. The treasury was entirely deluded by its bankers. While bringing about a rise in the bank rate, the Government tried to encourage industries, giving subsidies to steamship companies or special allowances to technical schools. The Government acted on a wrong principle, for if it took steps to reduce the rate of interest, industry and manufactures would flourish without any encouragement. Exports would increase over imports, and all would go on splendidly. The Government is now alarmed at the rise in the market price of commodities and the excess of imports over exports. Another thing that Mr. Suyenobu can not understand is the Government's attempt to sell its bonds in Europe, by expressly sending delegates to England. Such a practice amounts to an attempt to parade in England the benefit supposed to accrue to the purchasers of these bonds. It will, however, rather detract from the value of the bonds. Even without such a parade, the bonds can be sold with ease, so soon as the world begins to know that Japan has plenty of specie reserves in her treasury. Mr. Suyenobu wonders in conclusion why, while the Government scrupulously endeavours to let the public know of the condition of its finance by publishing weekly returns of currency in circulation, should keep secret the facts relating to its public business department. He hopes that the new Finance Minister may not fall into a similar error as that into which his predecessor was led.

CHARITY CONCERT IN TOKYO.

A charity concert is to be given in the Central Tabernacle, Hongo, Tokyo, at half-past one on the afternoon of the 17th instant. The cost of admission varies from 20 sen to 1 yen, and a reduction of 50 per cent. is made in the case of students. The programme is as follows:—

Overture.	The Nippon Music Club.
"Yoshino-ochi" ("Escape")	Mr. Yamashita.
of Yoshitane to Yoshino, <i>Saizuma Bwa</i>	Mr. Gauntlett, Mr. Hart.
Pianoforte Duet	Members of the
Asuma-jishi	Chinese Music Club.
Nagahara Club.	
Vocal Duet	Mr. Coates, Mr. Alcorn (?)
Solo on the <i>Shakuhachi</i>	Mr. Araki Kodō.
Violin Solo	Mr. Gring (?)
Pianoforte Solo	Miss Moulton.
Kasumisan-kyoku—Japanese Vocal and Instrumental Music.	
Singers	Mr. Tokiwazu Wasatayu, Mr. Tokiwazu Sakitayu.
Musicians	Mr. Shikiwasa Shikisa, Mr. Shikiwasa Kowasa.
Concerted Piece	The Nippon Music Club.
Solo	Organ
Godan Kinuta	Japanese Music
	Koto players, Messrs.
	Yamase and Imari
	Semizu, Mr. Chifu.
Vocal Solo	Miss Moulton.
Solo	<i>Saizuma Bwa</i>
Concerted Piece	Mr. Yamashita.
	The Nippon Music Club.

We must explain that the above is translated from a Japanese programme, so that, in some cases, we have been unable to identify with certainty the originals of the transliterated names. The Japanese performers are all celebrated in their respective lines.

At noon on Tuesday, a conflagration broke out at Minami Sakuma-cho, Shiba. It was not till three o'clock that the flames were extinguished.

The Japanese man-of-war *Naniwa*, that came up to Yokohama the other day from Yokosuka, is to go to Tateyama for target practice.

TENURE OF LAND IN JAPAN.

WE are constrained to revert to this subject because its paramount importance for foreigners forbids us to pass unnoticed certain criticisms recently published with the object of proving that the new Civil Code of Japan and the Revised Treaties will not enable foreigners to obtain security of land-tenure outside the Settlements in the capacity of superficiaries. It is certainly strange that the office of endeavouring to construe the provisions of the Code in a sense highly disadvantageous to the foreign residents should be so readily undertaken by a journal professing to be edited in the interests of this community. The unanimous desire of all publicists should be to interpret the Code in a manner conducive to the benefit of foreign enterprise, and calculated to promote Japan's material development by offering inducements for the investment of foreign capital. But that broad and plainly reasonable view appears to have been prostituted to the petty and contemptible desire of perpetuating the prejudice against Treaty Revision by showing that all the hacknied objections to it are unalterable.

The Civil Code, according to the interpretation of a thoroughly competent German expert, who has himself translated it from the original Japanese, creates a right called "superficies," which right foreigners will enjoy after the abolition of Consular Jurisdiction. A "superficiary" is a person who has acquired a title to occupy and use the land of another, for the purpose of erecting buildings or planting trees on it, such buildings and trees becoming the actual property of the superficiary. As to the time of occupation, it may either be indefinite or fixed. If indefinite, the occupant may surrender his title whenever he pleases, subject to certain provisions concerning rent; moreover, either the occupant or owner, should the conditions of tenure prove practically irksome to either, may apply to a law court to have the period of occupation limited, and the court, on receipt of such application, is competent to fix the period at not less than twenty years and not more than fifty. If, on the other hand, the owner and the superficiary agree at the outset to fix a period of occupation, they are perfectly free, so far as the Civil Code is concerned, to put that period at any number of years they please.

Such are the provisions of the Code. We shall now enumerate the criticisms that have been advanced to prove that the Code contains "next to nothing to satisfy the legitimate requirements of the foreigner," and that "the objections which were originally expressed, in great part have not been met in such ways as would have proved satisfactory."

The first criticism is that "leases for a

term not exceeding thirty years are understood to be the general custom of the country," and that "no person would be willing to erect substantial buildings on land having such a limited tenure." This appears to be founded on a misconception. There is no "custom of the country" in the matter of leases. Until the abolition of feudalism in 1871, no such things as leases, in the modern sense of the term, were legally recognised in Japan, and since that time nothing that can be regarded as a recognised custom has been established. When the question of tenure of land by foreigners outside the Settlements constituted a subject of common discussion, an idea gained prevalence that thirty years would be the maximum period fixed by the Civil Code, but there is nothing whatever either in the traditions or in the customs of the Japanese to indicate such a limit.

The second criticism is that those who assert the competence of a land-owner to grant to a superficiary the right of occupying land for any fixed period, have no basis for their contention except the fact that the Code refrains from imposing any restriction as to time. That, indeed, would be an amply sufficient basis, for when the law of the land authorizes a certain transaction unconditionally, the absence of any intention to impose conditions is constructively established. But there is more to be said in this case. If the framers of the Code had confined themselves to a vague statement that the right of occupying land might be conveyed by an owner to a superficiary, it is conceivable that a law court, interpreting such a provision, would, under certain circumstances, be disposed to set local custom or some unwritten principle of equity above the right of freedom of contract implicitly created by the Code. But the Code is not disfigured by any such vagueness. It distinctly formulates two kinds of contract: one for a fixed term, concerning the duration of which no limit is textually imposed; the other for an indefinite term, to which courts of law are competent to set a limit of from 20 to 50 years in the event of an application from either the owner or the superficiary. In the presence of such provisions no room for doubt exists. The law courts are not invested with competence to interfere except in cases where no period has been fixed by a contract, and even in such cases their interference is limited to a minimum of 20 years and a maximum of 50. We have thus two facts combining to establish a perfectly clear situation: first, the fact that no restriction is textually imposed on the contracting parties' right to choose and fix their own period; secondly, the fact that appeal to a court of law is contemplated only where that right has not been exercised.

The third criticism is that "the ancient custom of the country may possibly be

pleaded in explanation" of the Code, and that "we know by a recent case at Kobe that Japanese Courts exercise the power of altering conditions in leases." To this the reply is that, in the first place, there is no "ancient custom of the country," leases, in the sense under consideration, having been unknown in pre-Restoration days; and, in the second place, the Kobe case could never have come up for hearing under the new Code. The facts of that case were that a land-owner, finding himself obliged to pay an annual land-tax greater than the rent received from his tenant, under a lease of indefinite duration, applied to a law court to have the rent raised, and the court granted the application. But the new Civil Code does not invest the courts of law with any competence as regards rent. Their powers are strictly limited to fixing the duration of tenure where no definite period has already been agreed upon by the contracting parties, and where one or other of those parties applies for legal intervention. If, after the new Code goes into operation, a land-owner finds himself suffering from such a hardship as that experienced by the Kobe suitor, the utmost help he could obtain from a law court would be a judgment limiting the continuance of the hardship to twenty years. If a fixed term of tenure were inscribed in the lease, the court would possess no competence whatever: whether the land-owner or the superficiary were the sufferer, he must endure the situation until the termination of the fixed period. It may be noted in this context that the mere fact of a court's competence to extend for fifty years the term of an indefinite lease, despite the protests of the land-owner, completely disposes of the hallucination that an appeal by the latter to a thirty years' custom could ever be recognised by a court administering the new Code.

The fourth criticism is that, "apart from this question of leasing, the main objection, on the subject of land, urged by the opponents of Treaty Revision, was with regard to the ownership of land—a right which the Revised Treaties do not confer, so that the original complaint exists in as full force as before." Now, this same critic has already told us—as quoted above—that what foreigners chiefly apprehended was inability to obtain leases of land for periods sufficiently long to warrant the erection of substantial buildings. In truth the mere fact of ownership has little practical importance. If a foreigner can secure the right to occupy land for a hundred or two hundred years, the question whether he is registered as owner or as superficiary is almost indifferent to him. It was supposed that he would not be competent to secure the right for more than thirty years, and, on that supposition, considerable discontent was naturally expressed. But to pretend that, despite the unlimited extension granted by the new

Code, "the original complaint exists in full force as before," is a misstatement too gross to be attributed to mere stupidity.

The fifth and last criticism is that "to throw open the country without giving aliens the same right to acquire the ownership of land which Japanese possess in other countries, was and is felt to be both farcical and illiberal." We must assume this criticism to be the outcome of flagrant ignorance. In the great majority of the countries with which Japan has treaties, the ownership of land by aliens is interdicted, and even in England itself the privilege is of very modern enactment. At all events, long tenure of land is what foreigners want. Ownership in perpetuity is not at all necessary for purposes of business enterprise.

THE CABINET.

THE dubious tone adopted by the vernacular press with reference to the prospects of the MATSUKATA Cabinet is singular. We can not recall a similarly universal expression of journalistic perplexity on any occasion of a change of Ministry in the past. Perhaps the explanation is to be sought in the fact that the politicians to whose support the Cabinet might reasonably look are hampered by their own traditions. For when the Liberals formed an alliance with the ITO Cabinet, their opponents, the *Shimpo-to*, vehemently denounced the proceeding, called it an unconditional surrender of all the Constitutional principles for which the Liberals had fought for eighteen years, and declared that it amounted to deliberate suicide. If now, at this juncture, the *Shimpo-to* proclaim themselves supporters of a Cabinet consisting almost entirely of Satsuma men, men, moreover, whose names have been hitherto prominently associated with the system of Clan Ministries, they will expose themselves to a crushing "tu quoque" from the Liberals, and will stand before the nation as politicians who condemn in others the very course that they are themselves prepared to take should circumstances make it convenient. Hence the *Shimpo-to* must be very cautious in their demeanour. That their inclination is to stand by the MATSUKATA-OKUMA Cabinet can not be questioned, but since they are constrained to maintain the appearance of supporting principles not persons, they have to wait for some *exposé* of the Ministry's policy before publicly committing themselves. As for the Liberals, though some journals refer with apparent surprise to their silence, in other words, to their abstinence from issuing a manifesto, we really fail to see how they can reasonably be expected to do anything of the kind. If there were any question of appealing to the constituencies, different considerations would come into play. But a general election is not within sight, and, in the meanwhile, no one may pretend to doubt

that the Liberals are opposed to a Cabinet which owes its genesis to the fact that Count ITAGAKI refused to serve in company with Count OKUMA. In truth, that the Liberals are enemies of the new Cabinet just as surely as the *Shimpo-to* are its friends, needs no announcement from either body of politicians. The attitude of the National Unionists alone is doubtful, and even in their case the general impression is that, by an inevitable division of their forces, they will cease to hold the balance of power, and may therefore be neglected from the calculation. Hence, on the whole, we see no warrant for drawing sinister inferences from the apparent uncertainty of the press. There is no real uncertainty, but only a judicious reluctance to speak definitely.

One of the vernacular newspapers, however, betrays towards Count OKUMA a degree of hostility that distorts its criticisms out of all reasonable form. We allude to the *Chuo*, the supposed organ of the National Unionists. It has certainly shown considerable ingenuity in aggravating the difficulties of the Count's position, but when we find it driven to the extremely silly and thoughtless pretence that his inability to speak a foreign language disqualifies him for the post of Foreign Minister, we are forced to conclude that all rational arguments are wanting. The *Chuo* introduced that comment in a somewhat amusing fashion. It said that the condition of the Foreign Representatives at Chiussenji, as described by the *Japan Mail*, when, by the intervention of the weather clerk, they were cut off from all communication with the Foreign Office, was not more embarrassing than their present position when, owing to the Foreign Minister's inability to converse with them, they are equally isolated. A jesting allusion of that kind might have been pardonable. But the *Chuo* has harped upon the subject to a degree altogether silly and unreflecting. How many holders of the portfolio of Foreign Affairs during the Meiji era have possessed a sufficient knowledge of any European language to enable them to carry on an important discussion without the aid of an interpreter? Moreover, it appears somewhat late to discuss Count OKUMA's linguistic attainments after he has already proved himself one of the ablest and most successful Foreign Ministers Japan has ever had. We do not think that blind and peevish criticism like that of the *Chuo* serves any end except to discredit the critic.

Grand Lodge having on June 3rd passed an address to the Prince of Wales congratulating him on the completion of twenty-one years of his Grand Mastership, the following acknowledgment was read at the Quarterly Communication of United Grand Lodge of English Freemasons, held on 2nd Sept.:—"Sir Francis Knollys is desired by his Royal Highness the Grand Master to thank Grand Lodge for their address of congratulation and for the expression of their good wishes on the occasion of the twenty-first anniversary of his installation as Grand Master of Freemasons of England."

MARQUIS SAIONJI.

THERE seems to be a consensus of opinion among the Japanese as to the exceptionally high qualities displayed by Marquis SAIONJI during his administration at the Department of Education. He shares with the late Viscount INOUE the credit of having shown greater aptitude for the office than any of its preceding occupants. Yet, from the point of view of real progress, we fail to see how any comparison can be set up. Viscount INOUE was essentially a conservative. Believing thoroughly in education as a means of developing national competence, he nevertheless held that one of the chief objects of education in Japan should be to keep the people in touch with the classical lore of bygone centuries, and with the ancient philosophical systems to which he himself attributed the genesis of many excellent national qualities, but which, according to more progressive views, serve only as a medium for preserving the mummies of an effete civilization. It did not occur to him, apparently, that an attempt to hold fast by the old and to reach out after the new, simultaneously, must strain the energies of students to breaking point. It may seem singular that such an error should have been committed by a man exceptionally gifted, and distinguished by a receptive gentleness of intellect seldom found in combination with conservative tendencies. Yet the explanation is simple enough. Viscount INOUE was swayed partly by his own special attainments; partly by the trend of the time in which he lived. A Chinese scholar of eminent reputation, his mind was saturated with the classical erudition of the Middle Kingdom, and it is more than probable that the official uses served by his learning betrayed him into forming an exaggerated estimate of its value. To his lot it fell to draft many documents that will find permanent places in Japanese history, and from the admiration that the classical elegance of their diction evoked, he doubtless inferred that laws and proclamations could be rendered palatable to the people only by imparting to them a strong flavour of ideographic grace. Even more influential in swaying his judgment must have been the coincidence between such views and the spirit of the day. Just as he attained a prominent official position, the nation began to turn towards a temporary conservatism, of which were born the *Kokusui Hoson-to* (National Eclectic party), the strict-treaty-enforcement outcry and the strong-foreign-policy agitation. These things were not in truth signs of a public reaction. They were primarily an indication of impatience under the continued obstinacy of foreign Powers to recognise Japan's progressive efforts, and secondarily, an evidence of revulsion against the egotism underlying Western civilization—especially as displayed in the treatment extended to Japan—and of con-

sequent reversion to the altruistic ethics of former times. Viscount INOUE received the portfolio of Education just as these impulses were in full sway, and his sympathy with them soon showed itself in the changes he inaugurated. Under his control the study of foreign languages at the schools was in great part supplanted by the chaunting of ideographs or the memorizing of Confucian analects, and collections of philosophic tenets took the place of practical primers. Viscount INOUE was far too intelligent to lead his nationals into a really backward path, but that his systems, reflecting, as they did, the exaggerated spirit of the time, would have impaired the nation's progress had they remained in operation, we can not doubt. The achievement of Treaty Revision, the war with China, and the international recognition that Japan's successes secured, worked a speedy change in the people's spirit, and had Viscount INOUE lived to exercise continued power, his methods would certainly have become unpopular before long. On the other hand, Marquis SAIONJI brought to the discharge of his functions convictions as much opposed to the reactionary sentiment of ante-bellum days as his predecessor's policy had been in sympathy with it. Without displaying anything of the somewhat perilous radicalism that gave notoriety to his political *début* after his return from Europe, he restored the study of foreign languages, and quietly but resolutely discountenanced any undue tendency to set the Chinese classics above instruction adapted to the uses of modern life. The cause of female education, also, he openly championed, thus setting himself to stem a tide that might have overwhelmed even a man of his courage and position, for women's education, judged by the light not only of the extravagant position now accorded to her in Occidental Society, but also of the claims that she has been betrayed into asserting, does not commend itself in any large degree to Japanese minds. Marquis SAIONJI's reasons for declining to serve in the present Cabinet, have not been published. But into a retirement that can not be lasting, he has evidently carried a full measure of popular appreciation and applause.

BIRTH-RATE.

THE latest theory propounded by anthropologists is that a low birth-rate is a sign of high civilization. In France, where the upper classes have unquestionably attained the highest plane of civilization reached by any people within the range of authenticated history—though, if ZOLA'S pictures have any fidelity, the lower orders are very close to the brutes—there are only 225 children born annually to every ten thousand inhabitants. Further, it appears that in the six States constituting New England in America—the six

States shown by statistics to have the best educational record and to enjoy the most favourable conditions for developing the refined aspects of life and character—only 199 children are born among every ten thousands of the people. If this connexion between "hypo-natality" and civilization be correct, it follows inevitably that human progress begets the germ of its own destruction: civilization, in short, the nearer it approaches perfection, provides the more inexorably for the annihilation of its followers, and to the doctrine of the survival of the fittest must be added the corollary that fitness varies in the direct ratio of the brute instinct. The propounder of the idea that hypo-natality is an evidence of civilization writes an interesting article on the subject in the *Revue Scientifique*, of which we find an epitome in the *Literary Digest*. His prominent notion is this:—

As for us, we believe that the multiple influences that unite to produce this sad phenomenon of insufficient birth-rate may be summed up in a tendency of the woman toward *virilization*. By this word 'virilization' is meant the efforts that woman is making nowadays to make her life like that of men, in seeking to adopt men's occupations and pleasures, and to assume men's costume—in a word, to do all things in which she believes that she will find the emancipation that is preached to her, and some vague kind of happiness or other that she believes to be inseparable from the male sex. In these conditions maternity becomes a sign of weakness, a vexation from which freedom must at once be gained. It is the stigma of sex with which some women are nowadays, it may be said, humiliated, as it were; and that is above all the thing to be avoided, for it interferes with professional duties, as it does with the new pleasures. To enter the lists with man, who thus becomes the enemy in this new arena of the struggle of existence upon which certain moralists and numerous politicians have so inconsiderately caused women to enter, it is necessary in the first place to discard femininity, and we are beginning to perceive that a certain number of women have done this with a measure of success.

Repugnant to us as are the new woman and her nebulous fantasies, we find it impossible to lay to her charge the virilization and consequent sterilization that the writer in the *Revue Scientifique* sets forth. One fact alone seems sufficient to overthrow such a theory: it is that in France, where hypo-natality has been preëminently a source of national anxiety for decades back, the "new-woman" delirium has never assumed anything like the dimensions of an epidemic. The art instincts of the French woman have saved her from the solecism of engaging in an unseemly struggle with nature. She appreciates that the chief charms and potentialities of her sex are primarily derived from differentiation, and that the more thoroughly feminine she can be, the more commanding and enslaving is her position in the world. To efface her own rich and special endowments for the sake of attempting a poor imitation of masculine qualities, is a blunder too shocking to commend itself to the most womanly of all women, the French woman. "*Ne forçons pas nos talents, nous ne ferions rien avec grâce.*" How, then, can it be truly pretended that virilization is responsible for hypo-natality in France, since among the peoples of the earth none

are so likely to enjoy immunity from the contagion of that man-aping insanity as the artistic French? An explanation, the very opposite of that advanced by the writer in the *Revue Scientifique*, commends itself to our intelligence. It is that the birth-rate is low in France, not because women aim at being virile, but because they have developed to an exceptional degree the qualities that make for their social apotheosis as women. The deity that claims and receives such extravagant homage from the stern sex, under the canons of modern "civilization," stands at the very opposite pole of ethics from the matron whose happiness is in maternity and her home in the nursery. Need we set down here the thousand and one brightnesses that fade from the life of a woman whose existence has been invaded by the cares of a large family? Is it strange that she should strive to remain as long as possible in the paradise where the extravagance of nineteenth century civilization has set her to be worshipped by the sex that she was born to obey? The "set grey life" of child-bearing and child-rearing looks so dreadfully dull and sombre in comparison with the career offered in that other realm of sensational sovereignty that choice has no freedom. None the less, if that be the bourne of *fin-de-siècle* civilization, then by a different route of reasoning we arrive at the same goal to which virilization points, namely, that human progress engenders the elements of its disciples' extermination. Where is the fault? With the civilization, surely.

MONTHLY SUMMARY OF JAPANESE CURRENT LITERATURE.

The *Waseda Bungaku* publishes an article entitled "Romance and Prostitutes," in which the writer draws attention to the undue prominence given to prostitutes in the modern novel. A list of over a dozen recent works is furnished, in all of which a prostitute is the heroine of the tale. The *Waseda Bungaku* thus proceeds to discuss the causes of this phenomenon. One of the effects of the prevalence of Confucianism in Japan is the restraint put on innocent friendly intercourse between the sexes. Interference with the gratification derived from conversation with the opposite sex is responsible for the eagerness with which young men seek the company of prostitutes. When natural feelings are suppressed, they find some irregular method of obtaining what they desire. The life which a prostitute is forced to lead prevents her from becoming a suitable companion to any one man. But the troubles through which she has passed often teach her how to sympathise and to soothe. Yet she always has the feeling that she has sacrificed her chastity for the sake of money, and that she can not possibly devote herself to the ordinary duties of woman. The fact remains, however, that her society is sought after, but the prominence she assumes in the modern novel is now greater than that given to her in real life. The novels of the *Genroku* era [1688-1703] seem to have furnished a model to our modern romance writers. Love tales in which the upper-class domestics of rich houses figure as the heroines are felt to be too commonplace. The life of a prostitute is often full of striking incidents, and her experiences furnish the contrasts and the variety of which the novel reader is so fond. Moreover, there is no

denying, as is pointed out by the *Mezomashi-gusa*, that the Japanese prostitute has never fallen to the depth of degradation reached by her Western sisters. She does not feel that she is banished for ever from the pale of decent society. In addition to numerous personal attractions, many of the *semi-monde* class and even public prostitutes are women with a certain amount of character. And yet we cannot but feel with the *Meiji-hyōron* that to make this class of woman the central figure of modern works of fiction is most undesirable. It is not by any means true that most of the facts of actual life will bear transcribing. To give to the abnormal things of life an eminence which they cannot claim, is open to grave objection. The idealizing of persons and situations which the world is agreed to regard as polluted, is the course followed by the modern panders to public taste. That which it is universally considered best to hide, the modern novelist drags forth to the light and presents in the most attractive colours. There are writers who maintain that the practice is defensible when considered from a purely æsthetic point of view; that there is much of the really beautiful in the lives of the prostitutes described by modern novelists. But, as the *Hakkō* asks, is it because there is no interest attached to other professions and no thrilling incidents connected with the lives of ordinary human beings, that the modern writer of fiction finds it necessary to draw his material so exclusively from questionable sources? We cannot but deeply regret, concludes the *Waseda Bungaku*, that the modern novel should treat of one kind of life only and be written in a style injurious to morals.

Mr. Kaneko Kentarō's views on Japanese Fine Art appear in the literary organ from which we have just quoted. Art, says Mr. Kaneko, usually reflects the spirit of the age in which it flourishes. The Egyptian pyramids, and Greek and Roman sculpture and painting all expressed the thoughts of leading minds in ancient times. Our lot is cast in a mechanical and industrial age. In Western countries there is a movement on foot to combine art and industry, and not a few people are sanguine that the attempt will be successful. Japanese Fine Art in ancient times owed its existence to Buddhism. During the Minamoto, Taira, and Hōjō eras Chinese philosophy was introduced into this country and paintings of those and subsequent times furnish many evidences of this fact. In the Tokugawa era, pictures representing war scenes or philosophical ideas gave place to the *Ukiyo-ye* or popular sketches of real life. During the Meiji era, it cannot be said that the progress of art has been commensurate with that of other things. There is as yet no new school of art worthy of mention. The only works distinctively Japanese and worthy to take their place in the world's picture gallery—works of the Tosa, Kanō and Maruyama schools—could never be imitated with success in modern times. Nor do the Sesshū and Utamarō pictures furnish suitable models for modern artists. It is imperative that we should strike out in a new line. We need to create some great stimulus to art, such as was furnished by the building of St. Peter's in Rome or the erection of the Nikkō Temples in Iyemitsu's time. Existing talent lacks occasions for its display, and it is the duty of all well-wishers of Japanese art to provide these. To furnish facilities for the application of art to modern uses is to prepare the way for the appearance of a Michael Angelo in Japan.

An address delivered by Mayejima Mitsun, who may be said to be the father of the Japanese Postal System, at the graduation ceremony of the Waseda Semmon Gakkō, is published in the *Waseda Bungaku*. The subject of Mr. Mayejima's address was the desirability of representing on canvas the subtle powers of electricity. The properties and influence of the force bearing this name, says Mr. Mayejima, are so marvellous and so diverse that one is surprised that no attempt has been made to give them shape in

form. Electricity pervades all space and affects all things. It reveals the opposite qualities, such as mildness and terror-striking violence. Of its merits it is impossible to speak too highly. There are those who maintain that it is beyond the artist's power to combine in one picture the various workings of such a subtle power. But when one thinks of the idealization effected by Michael Angelo, it seems no impossible task to design and to execute a picture that shall typify the leading qualities of the greatest of all modern forces.

The organ quoted above asks why it is that so few lengthy works are published in modern times. This subject has been discussed by various magazines within the past few months. The *Seinen-bungaku*, the *Teikoku-bungaku*, and the *Tai-yō* have all assigned various causes for the phenomenon. It seems to be the general opinion, says the *Waseda Bungaku*, that a widespread inferiority in modern, as compared with ancient, authors is one great cause of the limited nature of the works published. Some there are who affirm that the age in which we live is characterised by artificiality and flippancy; that this shows itself even in literature, and that nothing solid and thorough would be appreciated if written. The knowledge of this, according to these authorities, deters authors from undertaking the production of great works. Our own opinion on this subject, continues the *Waseda Bungaku*, we may state as follows. (1) Modern authors are mostly men of slender means, who depend on their pens for a living and who cannot afford to wait long for their money. They live very much from hand to mouth. To wait two or three years while a lengthy work is being written and published means starvation to such men. (2) The world is getting more and more absorbed in business. The struggle for existence every year becomes more intense, so that there are few people who have the leisure to wade through books a thousand pages in length. Those that do read such works take so long over the task that they lose the sequence of thought long before they reach the end. (3) The works for which there is a ready sale in modern days range in price between 20 and 40 *sen*, and consist of stage plays or short stories. For books whose price exceeds this sum the sale is very limited and publishers are wary about accepting them. (4) The only hope of a change in this matter rests on the progress that the community is making in purchasing capacity. It is to be anticipated that with a rise in the price of labour, with the increased facilities for turning an honest penny by engaging in some of the many new occupations now presenting themselves, ability and willingness to pay for high class literature will be forthcoming. It is vain to hope that the time will ever arrive when book-sellers will be so impelled by literary motives as to forego their business profits. (5) There is no doubt much truth in the statement that the majority of modern Japanese authors are not qualified to write really valuable works of great length. The demand for simple and short works, which divert and amuse rather than instruct, has a demoralising effect on the men that make a living by writing. The thoughts expressed by these writers would not bear expansion so as to fill several volumes. It is our opinion that with most of the writers of the present day an attempt to write a long treatise would end in insufferable prolixity.

Various ardent admirers of the late Ernst Curtius have furnished the magazines with obituary notices of the great archaeologist and historian. Dr. Mitsukuri Genpachi relates that he once succeeded in impressing the learned professor with the beauty of Japanese scenery; when, with a beaming face, he remarked, "If what you say is correct the scenery of your country must resemble that of Greece," as though the idea that there could be another country in the world like Greece was a revelation. By him, continues Dr. Mitsukuri, Greece was regarded as a very paradise which no words could adequately describe. The enthusiasm with which he pursued his researches knew no bounds, and furnishes to

Japanese historians a magnificent model of painstaking investigation extending over a lifetime. The *Teikoku-bungaku* observes that, in recent times, the tendency to abandon ancient history in favour of modern, has displayed itself in various educational quarters, but that no one who has read such a work as Curtius' "History of Greece" can deny that in the hands of a thoroughly competent historian ancient history may be made as profitable a study as anything relating to modern times that has been written. There was no grander sight, concludes the *Teikoku-bungaku*, than to behold Ernst Curtius and his brother George, who died 12 years ago, working shoulder to shoulder, respecting and loving each other in a manner peculiar to brothers whose souls are on fire with zeal for learning.

The *Tōyō Gatugai Zasshi* has of late years been almost exclusively devoted to the discussion of technical scientific subjects. The articles published are mostly contributed by professors of the University or of other high class educational establishments. Recent numbers, contain, among other subjects, articles on "The Eclipse of the Sun," by Professor Hirayama Nobu (written before the August eclipse). "The Connection of Mental Science and Economic Science," by Dr. Mōtōrō Yūjirō. "The Ainu Language," by Professor Jimbo Kōtōrō. A writer signing himself I.K. comments on the statistics of crime and invites attention to the fact that there are more criminals proportionately among *shisoku* (gentry, descendants of *samurai*) than among *heimin* (pelebeians). The inference drawn from this fact by several writers is that, since the *shisoku* are better educated than the *heimin*, education is conducive to crime. To prove that this inference is entirely unwarranted, I.K. furnishes tables of statistics showing the nature of the crimes committed by *shisoku*. These figures show that, in the case of grave offences, the number of criminals of the *heimin* class is more than fifteen times the number of those of the *shisoku* class. The offences for which *shisoku* suffer imprisonment are political disturbances with violence, the forgery of documents, the unlawful use of official seals, or petty thefts. Crimes against parents and other relations, which are very common among the lower classes, are almost unknown among *shisoku*. In opposition to the notion that education is conducive to crime, I.K. alludes to the fact that, corresponding with the spread of education, there has been a steady decrease in the amount of crime committed.

Professor Nakajima Rikizō contributes to the July and August numbers of the magazine quoted above, a long essay on "Ethics, Ancient and Modern," which contains little that is new, being a *résumé* of the views held by Western writers on the subject. The great questions of ethics, says Professor Nakajima, are what is the chief object of man's life, what is the *summum bonum*, what is virtue, what is duty? No theory that leaves these questions unanswered, or that answers them in an unsatisfactory manner, can be regarded as adequate. In ancient times ethics was a branch of philosophy. In the middle ages it became a branch of theology; and in modern times, especially in England, it has become a branch of science. In order to be properly understood, ethics must be studied as a branch of knowledge which treats of certain mental phenomena. All explanations that divorce ethical ideas from their mental surroundings are imperfect and misleading.

The *Seikai-no-Nihon* draws a contrast between Japanese and Western novels. The writer is of opinion that European and American novels are usually written with some moral purpose in view; that many of the writers are impelled by deep convictions on various social, political, or religious subjects, and aim at effecting reforms, whereas the majority of Japanese modern novelists seem to aim only at creating a sensation. It was not so with Bakin, or with the novelists of the *Genroku* period [A.D. 1688-1703], who all endeavoured to make virtue look attractive and vice repulsive. Among modern novelists

that approach to the standard of Bakin, as regards moral purpose, Gensai is undoubtedly the best. It is evident that he wishes to instruct and educate rather than tickle the fancy of his readers. It is said that no novels sell better than those of Gensai, which is a proof that there is something about him that people like. It can hardly be his style, for there is nothing very captivating about it. In considering this subject, it must never be forgotten that the mass of general readers in Japan, when compared with Occidentals, are poorly educated, and that it is questionable whether they could appreciate a higher class of literature than that with which they are now supplied. The majority of foreign readers are sufficiently acquainted with modern inventions and scientific apparatus to be able to understand the constant allusions to such subjects made by foreign novelists. Modern readers of Japanese fiction are in a different stage of progress to people in the West, and the same rules do not apply. To attempt to enforce uniformity would be like expecting a cat to dance because we happen to have seen a monkey dancing. We are not of opinion, concludes the *Sekai-no-Nihon*, that it is desirable to demand that every novel should be written with some special moral object in view. If a novel describes the intricate working of human emotions, the beauties and wonders of nature, it can never be said that it contains no instruction. Though it may teach little to certain individuals, it may impart much knowledge to others. There is something in the modern novel that recommends it to the masses. It fills a place in their lives. To us it seems that its dissimilarity from the foreign type of romance constitutes no drawback to its usefulness.

The *Tetsugaku Zasshi* observes that, corresponding with the increased number of articles published on religion and philosophy, there is a marked tendency to discuss at useless length questions of little general interest, and many of the authors of long essays are pedantic in the extreme. Two causes of this practice are assigned by the *Tetsugaku Zasshi*: one being that many magazine writers are dependent for a livelihood on their pens; the other, that not a few young scribes are actuated by personal vanity.

Among scraps of literary news published by the above named organ we find the following: The number of literary students that have just entered the University is 84: they are graduates from various Higher Schools, namely 36 from the First, 14 from the Second, 11 from the Fourth, 13 from the Fifth, 7 from the Yamaguchi Higher School, and 3 from the Kagoshima Zōshikan. The special subjects taken up by these students were as follow:—Philosophy, 21; Japanese History, 9; General History, 14; Japanese Literature, 6; Chinese Literature, 7; Foreign Languages, 8; English Literature, 11; German Literature, 3; French Literature, 4. The increase in the number of Foreign Language students is most noticeable.

Mr. A. J. Balfour's "Foundations of Belief" has been translated into Japanese by Mr. Yoshimura Daijirō, under the title of *Tetsugaku Shinron*, "A new Philosophical Theory." Whereas the original work costs over 6 yen, the translation is to be procured for 90 sen. The book has been issued by that ever busy publishing company, the Tetsugaku Shoin. Various criticisms of Mr. Balfour's book have appeared in Japanese periodicals; one of the best was from the pen of Mr. Nakajima Rikio, published in the *Kokumin-no-Tomo*. The translator asserts that he has taken great pains with the work and that he has in every case endeavoured to give due weight in the translation to the author's modes of expression.

The Buddhists are about to issue a book that ought to prove of considerable value to students of Japanese Buddhism. It bears the title of *Tsūzoku (通俗) Bukkyō Gimon Kaitō Shū* (A Collection of Answers to Questions respecting popular Buddhism). The work has been com-

plied by the editor of the *Tsūsoku Bukkyō Shinbun*, Mr. Takami Dōken. It covers some 600 pages and contains an account of Buddhist doctrines, ceremonies, and sacred utensils. The difficulties encountered by students of Buddhism in endeavouring to understand some of its abstruse theories receive special attention. Nearly a hundred perplexing questions are discussed and explained. The work will be issued on the 30th inst. and will be sold at 80 sen per copy. The office of the above-named magazine is printing and publishing the work.

The translation of Professor Alfred Marshall's work on Economic Science by Mr. Inouye Tatsukurō, of the Tōkyō Semmon Gakkō, which was published last July, has sold sufficiently well to reach a second edition. The new edition will be published by the Tōkyō Semmon Gakkō and will be sold at 1 yen 20 sen per copy.

Dr. Shigeno Anyeki, the eminent historian, has just published a work consisting of two volumes entitled *Teikoku Shidan* (Discourses on the History of the Empire). The history of the various eras is classified under five heads as follow:—(1) Morals. (2) Government. (3) Literature. (4) Arts. (5) The position of Woman. The work is written in the classical style of which the author is so perfect a master, and will, it is considered, prove to be of great use as a text book in Middle Schools. The learned author has reached a great age for a Japanese, and some anxiety is naturally felt whether the results of the special researches on which he has been engaged for many years can be given to the world before he is "gathered unto his ancestors."

The *Sekai-no-Nihon* contains a notice of Mr. Yoneyama Umekichi's new work on Commodore Perry, published by the Hakubun Kan. It contains a biography and an account of Perry's visit to Japan. The style of the writer is perhaps the only attraction the new volume possesses, as the facts recorded are familiar to everybody. The word painting of the author in some passages resembles that of Sir Edwin Arnold.

In *Tōyōtetsugaku*, in giving an account of the annual opening ceremony of the Tetsugakkan (Philosophical Institute) held on the 16th ult., reports that the Tōyō Zushokan (The Oriental Library) has lately been enriched by a large number of Buddhist books. It may not be known to many of our readers that this library contains a magnificent collection of Buddhist books. Dr. Inouye announced that, in addition to the professors hitherto employed, Messrs. Anezaki Masaharu, Matsumoto Kōjirō, and Kuwabara Shitauō have been engaged, the first to lecture on Comparative Religion, the second on Aesthetics, the third on Oriental History.

Dr. Mishima Ki, a well known Chinese Scholar, read a learned paper before the Gakushikai-in, a short time ago, on the teaching of Itō Jinsai (died A.D. 1706), which is known among the Japanese as *Jinsai-gaku*. An epitome of this paper appears in the *Dai Nippon Kyōikukai Zasshi*. Learning in China, says Dr. Mishima, has been divided into three branches namely 氣學, *Kigaku*, 人學, *Jinsōgaku*, and 理學, *Rigaku*. The first deals with the vital and mechanical energy displayed in nature; the second, with things of human manufacture, material and mental; and the third, with abstract principles. The relative importance of these three branches of learning has been subject of dispute for ages. In China 王陽明 Wang Yang-ming (died A.D. 1529) was the great exponent of the *Kigaku*, and Jinsai was his follower in Japan. By scholars of this school, the *Kigaku* alone is considered trustworthy as a method of study and basis of philosophy. The *Jinsōgaku* school, of which 荀子, Xunzi, was the leading spirit, taught that the authority to which men bow is for the most part human and not divine; that even moral standards are all of human invention. Their great saying

was *Michi wa sennō no tsukuru tokoro nite tenchi shisen no michi ni arasu*. "That which among men passes for the right way is not nature's way, but was constructed by ancient sages." In Japan, Sorai was the representative of this school of thinkers. The champions of the more abstract form of philosophy were 老子, Laotz and 莊子, Chwangtze. According to this school, all things in heaven and earth are controlled by abstract principles, and those that would understand nature must study these principles. O-yōmei attempted to show that the *Kigaku* and the *Rigaku* were only two forms of one class of knowledge, and his Japanese follower Jinsai argued on the same lines, and caused no small stir among contemporary scholars in the peaceful days of the Tokugawa era.

The *Uchū Shinkyō* has some very sensible and discerning observations on the subject of degrees. Degrees being comparatively new in Japan, there is a tendency to make far too much of them. The possession of a degree shows only that the holder has succeeded in fulfilling the conditions necessary for the obtaining of this distinction, and is no indication whatever that a man having M.A. or LL.D. affixed to his name is intellectually abler than the scholar possessing no title whatever. Our study of foreign authors has led us to the conclusion that, taking literature as a whole, finer things have been written by men with no degree or possessing the modest M.A. degree only, than by the so-called learned Doctors. Not a few Doctors in the learned world are quite objects of pity: they have no title to distinction except the degrees they have obtained. Some writers are agitating for the publication of the essays that won for their authors literary degrees. We also should welcome their appearance, as we think they would certainly show one of two things; either the true genius of the writers, or that, for the obtaining of a degree in certain places, no genius is required. Among possessors of degrees in this country, literary men doubtless make the worst show. There are persons called rhetoricians whose discourses are fragmentary and disconnected, a mere string of words with no special point and no order. There are literary men of whom it would be true to say that the service rendered to the public by a hundred of them would not be equal to that rendered by one good dictionary.

The *Nihon Shimbun* writes regretfully of the low status of Japanese newspapers as regards their general get-up and contents, when compared with foreign dailies. The low price at which they have to be sold is, our contemporary thinks, to a great extent the cause of this. American rather than English papers, according to the *Nihon*, furnish the Japanese daily sheets with models. The practice of publishing papers in the evening as well as the morning has been tried in Japan, but without success. Perhaps no improvement in the character of newspapers is possible till education has become more general and the nation has grown richer. Of all newspapers in the world, *The Times* furnishes the best model of what a newspaper can be made. Though its size is nothing wonderful, its ability and thoroughness are beyond praise. Our *Fiji Shimpō* has taken the London *Times* as its model, and has greatly improved of late, but shows no signs of attaining the standard of the great London daily.

As items of literary news, the *Yomiuri Shimbun* states that two literary men of great promise have just accepted appointments in the Sendai Second Higher School. One of these is Mr. Takayama Binjirō, who has been a constant contributor to the *Teikoku Bungaku*, and who has written for other magazines also. He is to deliver lectures on Philosophy at the Sendai School. The other is Mr. Sasa Seisetsu, also a brilliant writer, who is to lecture on Japanese Literature. While the literary world is so thinly populated that even in great cities the feeling of solitariness often creeps over one, the banishment of

two literary magnates to the country, concludes the *Yomiuri*, tends to augment the feeling of desolation.

A writer in the *Teikoku Bungaku* maintains that there is a great difference between the East and the West as regards the hold that abstract ideas have on the minds of leaders of thought. In Europe almost all great movements have originated with purely abstract notions. Men have started with theories and have proceeded to find facts corroborating them, or have made them the bases of certain lines of action, and most of their philosophy is of a highly metaphysical type. They view the world as from a distance. Though this tendency of the Western mind is responsible for numerous fallacies, on the other hand it has resulted in a vast knowledge of general principles and led to the discovery of processes of nature too complicated to be understood by men unaccustomed to carry on a long train of reasoning. Science in the West professes to deal only with facts, yet there can be no question that it has always started with certain theories, certain abstract ideas. Science never has been and never can be divorced from philosophy and metaphysics. In China all theory is based on practice and thought proceeds only as far as practical necessities require. Hence the ideas of the Celestials are sadly cramped. There is little or no scientific progress because there is little philosophical thought of the highest class. Philosophy may be regarded as the father of science. There are those who maintain that philosophy has been superseded by science, but it is evident that, instead of the one rendering the other superfluous, they have always been and always will be interdependent. Among Europeans the English are noted for the practical turn of their minds. Their philosophy is less abstract than that of the Germans, for instance. But even their great leaders of thought, men like Locke and Hume, are found to have been permeated with metaphysical ideas. Some have cast doubt on the trustworthiness of the abstract ideas to which philosophers attach so much importance, but men whose reason, imagination, and reflective power have been properly developed can never question the truth of the great abstractions of philosophy.

The organ from which we have been quoting fires a shot at an already bullet-riddled practice, the *Yobun no-het*, or preface abuse, to use the term it employs. It is well known to our readers that for many years it has been the custom in Japan to obtain prefaces from men of influence or literary reputation, in order to attract attention to the work to be published, and to make it appear as though the author of the preface had guaranteed the worthiness of the book by allowing his name to appear in it. This practice, says the *Teikoku Bungaku*, cannot be too strongly condemned. It is a mere make-believe, and a device showing how low are the notions of certain authors. The natural thing for a writer to do is to pen his own preface, or at any rate ask a friend to do so, but, in obedience to mere mercenary motives, to engage the services of a man who is a perfect stranger to him is altogether unbecoming in any one aspiring to the title of an author.

THE NIPPON YUSEN KAISHA'S HAND-BOOK.

Following the example of the great steamship companies of Europe and America, among which it now ranks high, the Nippon Yusen Kaisha has compiled and issued a "Hand-book of Information for Passengers and Shippers." Commencing with a brief but succinct account of the origin, growth, and development of the company, the book next gives lists of the *personnel* and fleet, and then passes on to a series of brief notices of the various celebrated places in Japan visited by the steamers of the Kaisha. This part of the work is beautifully illustrated with collotypes by Mr. Ogawa, and the text is com-

pleted with spirit and discrimination. The writer is evidently not impressed by the aspect of the foreign settlements, which, he says, "are distinguished by the plainness, inelegance, and unpretentious character of their structures," but for the Yokohama Bluff he has unlimited praise:—"An ideal site, it soon became dotted with villas, generally unpretentious and plainly constructed, but standing in trim little gardens, completely segregated from the tradal atmosphere of the settlement below, and revelling in prospects of supreme beauty on every side. This 'Bluff,' as it is called, where the jaded business man of Yokohama has his home, may fairly claim to be loveliest place of residence in the whole East. The Settlement itself can boast only three attractions: its Bund, its Public Garden, and the broad straight road, laid out with almost ironical magnificence of side-walk and marginal greenery, that separates it from the Japanese town." Particulars of the company's services follow this section of the volume. They are accompanied by maps, showing routes, regular and occasional, of the steamers, and after these we find conditions of passage, general information for travellers, and details as to the currency, weights, and measures, postal services, and so forth, the whole forming a volume useful for general purposes, quite apart from the immediate object of its compilation. It is printed on Japanese paper, and the technical part of the work is thoroughly well done, with the exception of the dimensions of the margins, which are so scamped as to give the book a somewhat insignificant appearance. We may mention that the Company has a capital of ~~twenty-two million yen~~; that its steamers number ~~sixty-two~~, ranging from 5,789 tons to 228 tons; and that it has twelve steamers of from 5,000 to 6,000 tons now building, to be followed by ~~six more~~.

A CHRISTIAN MISSIONARY ON JAPANESE NATIVE VIRTUES.

The Rev. Henry Scott Jeffreys, of Sendai, contributes to "The Japan Evangelist" a paper entitled "Some of the Native Virtues of the Japanese People." We make the following extracts:—

"Let another man praise thee, and not thine own mouth; a stranger, and not thine own lips." "After seven years' residence among this people, I wish to place on record my humble testimony to their *native* virtues. I refer to virtues that belong to the Japanese people without reference to their faith. In this connection it may be said that perhaps their most remarkable part is their devotion to ethics alone, utterly divorced from religion. They love virtue for its own sake and not from fear of punishment or hope of reward.

"In some of our Christian lore there is the story told of a sage who saw in a vision an angel with a torch in one hand and a bowl of water in the other, who, when asked his mission, replied that with the torch he would burn up heaven and with the water he would quench the flames of Gehenna that men might no longer follow virtue from the fear of pain or the hope of pleasure, but from the pure love of God alone. This story would have but little effect upon the Japanese, from the fact that they are far beyond it; for they have eliminated from their system of ethics not only heaven and hell, but God also. Neither Mr. Herbert Spencer's theories in his "Data of Ethics," nor Mr. W. H. Mallock's opinions concerning the dependent relation of ethics to religion help us to account for the fact that we have here a people, speaking roughly, who have a system of ethics in practical operation whose motive force is not to be found in either love of self or fear of any higher power, but which seems to be the spontaneous creation of the native instinct. To be sure there are religions (so called), both native and foreign, but they have little effect upon the popular conscience.

"In Confucian ethics as taught in China there may be a theistic element, but it is wanting in Japanese ethics. And yet, strange to

say, the idea of conscience is very strong. In some popular books of ethical instruction some very interesting stories are told of the power of the *honshin*, the true or original heart, and of conversion marked by tears and sighs and groans of penitence and remorse. But the conversion is not the gift from God of a new heart, but the return of the man to his original or true heart of natural righteousness; it has no idea of "repentance toward God" in it at all.

"Perhaps the most prominent virtue of the Japanese is their patriotism, their loyalty to and love of country. They have family feeling, clan feeling, local partisan feeling, strongly developed, but they are willing to devote all to the love of their country.

"The Japanese are the least sordid, the most unworldly, the most entirely devoted to the ideal of any people in the world. . . . In some places, Satsuma for example, it is impolite even to mention the word money, and to display coin in the presence of gentlemen is an insult. The admonition contained in the fifth chapter of the Epistle to the Ephesians, in the last part of the fifth verse, is superfluous—"covetousness, let it not be once named among you as becometh saints." In instructing catechumens for baptism, I generally omit the tenth commandment, conscious that a foreigner needs to sit at the feet of a Japanese to learn how to forsake the sin of covetousness.

"The Japanese are very keen in their judgment and discrimination of character. If a man in authority has an idea that a certain policy should be followed and is unable to bring it about, he resigns and retires from office. His honesty and integrity of purpose are apparent, and his plans are adopted. The way to get power in Japan is to give it up.

The conversion of this people to the Christian faith is a most complex and perplexing problem, not because they are so bad, but because they are so good. Their virtues are obstacles in the way of contrition."

A MARVELLOUS MACHINE.

Mr. E. Charquette, of Bridgeport, in Connecticut, claims to have invented a machine which defies all the laws hitherto laid down by physicists, inasmuch as the power applied to set it in motion is only a small fraction of the power that it develops. Many devices already exist for multiplying power, but none operates without some corresponding loss in another direction, whereas Mr. Charquette insists that he can obtain a return of 2,500 units of horse-power out a machine upon which only 140 units are expended. Here is a description of the machine, reproduced by the *Literary Digest* from *The Railway Age*:—

The machine is an immense horizontal wheel, a little over 82 feet in diameter, composed of ten spokes or arms and the periphery made of latticed steel girders. By revolving this great wheel by means of two 70-horse-power steam-engines, located on a platform in the hub, 2,500 horse-power is to be developed in the shape of air under a pressure of 100 pounds per square inch. To attain this great power by the use of so little, at the end of each spoke a set of three vertical wheels 9 feet in diameter, and each weighing 41 tons, are to be journaled. The middle wheel of the three is to run upon a circular track, and the outside and inside wheels are to act upon the rocker levers of 100 air compressors, which in turn are to work the pistons in the air cylinders. The cylinders are 12 and 16 inches in diameter, and all have a stroke of 12 inches. An air tank carrying a working pressure of 100 pounds to the square inch is provided, and the air is led by pipes to this tank from the compressors. The large wheel is revolved at the rate of ten revolutions per minute by the two 70-horse-power steam-engines, and the solid 41 ton wheels engaging the rocker arms, do the rest. Naturally something must happen, and it is seriously anticipated that 2,500 horse-power will be developed by this mechanism.

The criticism of *The Railway Age* is this:—

Under these circumstances, it seems natural to suggest that the use of the 70-horse-power steam-engines does not seem apparent. After the 2,500 horse-power has been developed 41 per cent. of it can be borrowed to keep the thing moving and the balance is clear gain. In fact, after it is started everything is clear gain, and it must run on forever or break down. As an off-hand suggestion it would seem that it might be as well to save the expense of the two steam-engines, and start the revolutions by means of a crank and pinion.

LETTERS FROM JAPANESE IN MANILA.

The *Nippon* publishes two letters from Japanese in Manila, one addressed to the Japanese Consul in Hongkong, and the other to a writer on the staff of that paper. We reproduce here the substance of the letters.

On the forenoon of August 24th, four Spanish officers came to the Manila Branch Office of the Kwaigai Boyeki Kwaisha (Foreign Commerce Firm), and asked the shopmen the reason why they had not closed the store that day. These replied that it was not customary to suspend business except on Sunday. Being told that the rebels might invade the city at any time and might loot the shops, the shopmen deemed it prudent to obey the injunction of the officers, and forthwith put up the shutters. They learned, afterwards, that with the exception of Chinese shops, all stores kept by foreigners were closed that day. Since then business has been almost entirely suspended. This is especially felt by the Japanese merchants. On the evening of Sept. 2nd, an officer, accompanied by four gendarmes carrying unsheathed swords, visited the "Osaka Bazaar" and the "Nippon Bazaar" (the Branch Office above referred to), and commenced a search, lasting from 8 till 11 p.m. The search was conducted with such strictness that even ceilings, floors, walls, and so forth were broken open. Nothing suspicious appearing, the officer produced a short document in Spanish, and required the shopkeepers to affix their seals to it. Not fully understanding the import of the note, but believing it to be a certificate that nothing suspicious had been found, the shopmen did as was required of them. Nevertheless, being naturally uneasy about the incident, and about the state of affairs in general, the Japanese residents of the Philippines appointed four of their number as representatives, and these, repairing to the German Consulate the next morning, stated the facts connected with the search and requested that the Japanese residents might receive the protection of the Consul in the event of any emergency. This request they preferred to the German Consul in particular, because that official had been in the habit of endorsing the passports of the Japanese. The Consul did not give any definite answer at the moment, but promised, a few hours afterwards, that he would do everything in his power to ensure the safety of Japanese life and property in the islands. It is further stated that when the four Japanese representatives visited the German Consul, he told them that he had heard of the arrest of one of their countrymen, an event of which no intimation had reached them previously.

A letter sent from a clerk in the Nippon Bazaar to a member of the staff of the *Nippon*, says that the writer, with one other Japanese, started from Kobe for Manila on August 19th, by a Spanish steamer, and reached the latter place on September 1st. For 12 days the passengers were not permitted to land, on the pretext that the ship had to be quarantined. When they were suffered to go ashore on the 13th day, the two Japanese were subjected to a search of the strictest description though passengers of other nationalities were at once allowed to go about their business. The trunks and bundles of the Japanese were emptied and the contents carefully scrutinized, the search extending even to their boots and hats. The Customs Officials and non-commissioned officers that conducted this search detecting nothing suspicious, at last permitted the two Japanese to proceed to their destination, though they seized documents and old newspapers found among their effects. Since the incidents related above the Japanese residents in Manila have not suffered any special indignity, but a strict watch has been kept over their movements. Wherever they go they are shadowed by detectives, so that they feel decidedly uneasy, more particularly in view of the fact that the Spanish Authorities do not scruple to resort to acts of great cruelty. At present, a telegram in the Japanese language can not be

transmitted, and letters from or to the Japanese residents are freely opened at the Post Office. The number of natives thus far arrested is almost countless. Among them are included every person with whom the Japanese residents were on terms of intimacy.

Commenting on the above, the *Nippon* says that the preparations to despatch a warship to Manila were completed at the close of last month, and that the officers on board the ship are only awaiting orders to set out. The Foreign Department, however, does not yet see any imperative necessity for despatching a man-of-war. The *Nippon*, of course, censures this attitude of the Foreign Office as extremely lukewarm and negligent.

DEVASTATED DISTRICTS.

The full list of damages wrought by floods on Aug. 30th and Sept. 7th and 10th in Kyoto Prefecture has been tabulated by the Local Office. From that table we learn that persons killed numbered 341; those injured, 330; cattle killed, 120; cattle wounded, 11; persons missing, 18; houses totally destroyed, 2,442; those practically destroyed, 2,200; those damaged, 23,438; those carried away, 1,083, in all 29,166 houses. Besides these about 30,000 houses were flooded. Embankments were breached at 14,442 places, to an extent of 569,612 yards; roads were destroyed in 10,432 places, aggregating 512,728 yards; 3,338 bridges were carried away and 11,277 others were damaged. Land, arable and residential, that was either buried under debris or washed away, totaled 3,355 *cho* and some fragments (8,387 acres), and land flooded, 13,400 *cho*, approximately (33,500 acres). Besides the above, a large number of irrigation ponds, stone walls, ships and boats, were partially or totally destroyed.

It is estimated that the Central Treasury will have, in consequence of the disasters since July, to spend on account of public works nine million *yen*, of which a third is for works of urgent moment, and the rest for works of a permanent nature. This money will be taken from surplus revenue as a measure requiring immediate attention, and will be put before the coming session of the Diet for *de facto* approval. It is said that a surplus of some 15 million *yen* is expected to accrue from the previous year's finance, so that this appropriation may be easily met. In Gifu alone a sum of 230,000 *yen* in grants-in-aid has been applied for.

The *Shogyo* gives some statistics as to the expected result of this year's rice crop in various localities, the statistics being based on reports from Local Offices and private sources.

Locality.	Average yield.	Expected yield.	Decrease or increase compared with last year's.	Rate of increase or decrease compared with the average yield.
Chiba ...	2,416,674	2,345,723	-70,951	-2.9%
Miyagi ...	1,509,015	769,910	-739,105	-49.0%
Wakayama ...	499,691	273,130	-226,561	-45.3%
Oita ...	608,143	608,957	814	+0.1%
Ehime ...	645,300	710,000	64,700	+10.0%
Shiwan ...	617,700	723,891	106,191	+17.2%
Nara ...	640,000	643,972	3,972	+0.6%
Niigata ...	2,338,619	2,695,499	356,880	+15.3%
Nagano ...	2,101,222	2,099,865	-1,357	-0.06%
Myazaki ...	2,238,512	1,100,000	-1,138,512	-50.9%
Yamagata ...	2,200,756	1,400,716	-800,040	-36.4%
Tottori ...	465,000	475,000	10,000	+2.2%
Saga ...	810,280	975,400	165,120	+20.4%
Kumamoto ...	2,285,000	2,471,050	186,050	+8.1%
Fukuoka ...	2,069,927	4,111,174	2,041,247	+98.7%
Shiga ...	2,130,564	978,338	-1,152,226	-54.1%
Hiroshima ...	841,363	921,895	80,532	+9.6%
Yamaguchi ...	2,250,300	2,260,000	9,700	+0.4%
Kagoshima ...	536,800	786,000	249,200	+46.4%
Shizuoka ...	1,110,000	1,000,000	-110,000	-9.9%
Ishikawa ...	936,398	710,000	-226,398	-24.2%

In the figures arranged in the third column those marked with the minus sign total 2,422,907, and those with the plus sign 935,510, a difference of 2,487,390 *roku*, which, at the ruling market price, amounts to about 15 million *yen*. There yet remain returns from 25 other localities, and supposing that the above ratio holds good, we may conclude that the damages inflicted on the crop by the floods and so forth comes as high as 30 million *yen*.

A TRANS-JAPAN CANAL.

The long-talked-of idea of cutting a Canal across the main island, to connect the Japan Sea with the Bay of Osaka, has been recently brought within the field of practicability. The originator of the project is Mr. Sakurada Snkesaku, who elaborated the design from the systems in vogue in France and Belgium. His main idea is to cut a canal from Tsuruga to Lake Biwa on the one hand, and, on the other, to excavate a canal from Otsu to Rokujijo-mura *via* Yamashima. The scheme having obtained support in the Keihin and Kei-Han Districts and in Echizen, Mr. Sakurada and his fellow-projectors have forwarded an application for a charter to the proper Authorities, and have already established an office at Takiyama-cho, Tokyo. The name of the canal will be the Central Canal of Japan. The capital is to be 2,750,000 *yen*, divided as below:—First Canal between Tsuruga and Otsu, distance of 13½ miles approximately, twelve yards wide, *yen* 1,500,000; second canal between Otsu and Rokujijo, situated on the bank of the river Uji, distance about 9 miles, 12 yards wide, *yen* 1,250,000. The projectors think that a dividend of over 10 per cent. may be easily earned when the canal is in working order.

HARBOUR CONSTRUCTION IN JAPAN.

Though the reconstruction of Shimonoseki Harbour is eagerly advocated by local folks, their wish is not likely to be satisfied, the military authorities objecting to that harbour's being opened to foreign commerce. That explains why, in the recently published list of new special export ports, Shimonoseki does not appear. It is estimated that Shimonoseki could be converted into an excellent anchorage at a cost of 3,600,000 *yen*. A similar scheme is afoot for Moji, an anchorage just opposite Shimonoseki. But this is on a smaller scale, and the funds required are estimated at half a million *yen*. If, however, the military authorities object to Shimonoseki being opened, the same objection applies to Moji.

The construction of the harbour of Wakamatsu, Chikuzen, is more hopeful. In fact, it has already been undertaken, on a small scale. The prosperity of Wakamatsu dates from the opening of the Chikuhō Railway, which terminates there. Formerly it was a little known fishing village, but since the completion of the railroad Wakamatsu has grown to be a town next in prosperity to Moji and Hakata. When the Chikuhō Railway Company determined to have a terminus at Wakamatsu, a special company was organized to reconstruct the harbour, with a capital of 300,000 *yen*. The harbour was dredged and a breakwater projected. The capital was subsequently increased to 400,000 *yen*, so that the basin could be deepened to a depth of 14 ft. at low tide, and so admit ordinary junks and small vessels of mixed style. The Company, encouraged by good results, is now contemplating further dredging of the basin, deepening it to 20 feet at low tide. That would admit the approach of steamers close in to the shore. The reconstruction of Wakamatsu would be attended by immense advantages. At present, owing to the shallowness of the basin, coal brought by the Chikuhō Railway to Wakamatsu has to be carried by junks to Moji, at the cost of about 40 *sen* per ton. The railway carries some two million tons of coal. When, therefore, steamers can take in coal direct at Wakamatsu, a sum of 800,000 *yen* would be saved in transportation alone. Hence the future of Wakamatsu is very bright. A similar enterprise is on foot in Hokkaido, for the harbours of Otaru and Akkeshi. Both are Government schemes. The main difficulties in the way of Otaru are the silt deposited during the continuance of south-westerly breezes, and the accumulation of sand brought down by the rivers that empty into the harbour. The Government estimates the expense of getting rid of these troubles at about one million *yen*. The Administration Board of Hokkaido is understood to have inserted a clause

providing for this scheme in the Budget for next year; but very probably it has been struck out by the Treasury. At any rate, as Otaru is coming more and more into prominence, owing to its increased commercial relations with Russian Siberia, the matter must be taken up sooner or later. Akkeshi is situated on the coast of Kushiro. It is naturally a good harbour, being sheltered on the north-east and west by hills, and from the south and south-east by two islands. The only trouble with Akkeshi is its spaciousness, the bay measuring more than 30 miles in circumference, while the entrance has a width of over 10,000 ft. The result is that high waves often visit the harbour during southerly gales. The Hokkaido authorities estimate the cost at 1,400,000 yen.

PHOTOGRAPHY AND PHOTOGRAPHERS IN JAPAN.

Professor W. K. Burton has been the moving spirit in contriving that a number of *The Practical Photographer* should be devoted to the subject of photography and photographers in Japan. How much Professor Burton has contributed to the progress of his favourite pursuit—we cannot call it "pastime," for although, in the routine of his life duties, it presumably stands second to sanitary engineering, he has nevertheless obtained world-wide celebrity as a photographic expert and artist—how much he has contributed to its progress in Japan, we should find difficulty in estimating. But it seems to us now, as we look back over the record of the past half dozen years, that in almost every movement for encouraging the development of the art and making known the successful efforts of its votaries, Professor Burton has been the central figure. It was he that suggested and organized that memorable exhibition in Ueno Park, three years ago, when Japanese photographers obtained an opportunity of examining the work done in Europe and comparing it with their own, and it was he that founded the Photographic Society, now a flourishing and useful institution. Like all really earnest workers, he is modest. In introducing to the public this Japanese number of *The Practical Photographer*, he might with all propriety, have devoted a considerable space to descriptive work of his own. But his writing occupies only one page. He is contented to let the Japanese tell their own story in words and by specimen photographs. That they have done so very successfully seems to us beyond question, but we confess that we turn with special interest to Professor Burton's brief remarks, for it is there that we look to find a general, discerning, and trustworthy verdict as to the present condition and future prospects of photography in Japan. Nor are we disappointed. "The great question now," writes Professor Burton, "to those who are at all interested in photography in this country, is its future. It is not too much to say that, till about eight years ago, the technical difficulties that the Japanese photographer had to contend against were so great, that his attention was taken up with these alone, and that he had no superfluous mind or energy to grapple with the artistic side of the subject. Since, however, dry plates came into general use, and the supply became fairly reliable, things have changed, and the advance in photography in the country, from an artistic point of view, during the past eight years or so, has been most remarkable. It will probably not be generally granted that the photography of the Japanese of the present day is up to the level of the best Occidental photography, so far as artistic merit is concerned, but if the present rate of improvement be maintained, what is to be looked for twenty years hence, or it may be fifty, or even a hundred? I, for one, should not be at all surprised to see Japan excel all other countries in the matter of photography as an art. To begin with a small detail, the Japanese are infinitely deft with their hands, so that the mere manipulative part of the work presents far less difficulty than it does to the average Occidental. Far more important is,

however, the inherent artistic taste of the people. With the Occidental, artistic taste is a thing that has, as a rule, to be acquired; with the Japanese, it is inborn. The coolie who trundles his fare along in a *jinrikisha* has probably a more refined taste in what is beautiful than the average University man in England, who has not had any special art training. * * * There will be a Japanese school that will be characteristic and inimitable. It may be, at any rate, but time only will show." We ourselves are disposed to endorse Professor Burton's forecast, for certainly the Japanese have inexhaustible patience, fine art instinct, and great industry. It is most interesting to read, in this beautifully illustrated number of *The Practical Photographer*, the story told by themselves of their early struggles. Mr. Esaki, now a leading photographer, describes how painfully scarce were all photographic supplies in the early days. "I never dreamed," he writes, "that there could be such a thing as a pound bottle of nitrate of silver, believing an ounce bottle to be the limit." Often customers had to be turned away because the materials for taking a picture were unobtainable. But customers were marvellously long-suffering folk in those times. "They came to the studio in the morning and after enduring some dozen sittings, if the photographer still could not do a picture by noon, they went out for lunch and came back again for further sittings." One instance is mentioned of a customer who devoted two whole days to a fruitless endeavour of that kind. After innumerable failures, the photographer at last retired into the dark room, on the afternoon of the second day, and the customer waited quietly until night-fall. Then, getting a little weary, he peeped into the dark room, only to find that the artist, ashamed to own a fresh failure, had made his exit from the window! Many other curious facts bearing on the history of the development of photography in Japan are related in the memoirs that this volume contains. They fully bear out Professor Burton's comment that the successful acquisition of knowledge in the face of obstacles such as Japanese photographers had to encounter indicates much earnestness of purpose and determination. As for the specimens of photography that illustrate the book, they are really admirable. They include a crinkled cover, printed in colours by Mr. Hasegawa. Most of our readers are now familiar with this kind of work, but they will probably be surprised to learn that many of the pictures so profusely employed to illustrate books brought out in Tokyo of late years required no less than twenty printings. Ten thousand covers in crinkled crape were made by Mr. Hasegawa for the Japanese number of *The Practical Photographer*, and the work occupied between four and five months.

ACCIDENTS ON JAPANESE RAILWAYS.

During 1895, says the *Nichi Nichi Shimbun*, the number of injuries to life and limb upon the State Railways of Japan aggregated 258, the killed being 169 and the wounded 89. Neglecting cases of suicide and accidents due to the carelessness of the persons injured, it appears that one railway employé was killed for every 2,700,000 miles traversed, and one wounded for every 318,000 miles. With regard to passengers, there was one person wounded for every 47,500,000 miles. We gather from this record that no passenger was killed throughout the year on State lines. As compared with the figures for the preceding year, there was an increase of 36 deaths and 52 injuries. On private lines the total of killed and injured was 646, namely, 290 deaths and 356 injuries; being an increase of 60 deaths and 49 injuries as compared with 1894. The ratio of casualties to miles traversed is not given in the case of private lines. Our readers are of course aware that by far the larger part of Japan's railways belong to the category of private lines.

COLONEL CONNELLY ON LABOUR IN JAPAN.

The United States Consul in Kobe has compiled a very interesting and useful report—already reproduced in these columns—on the trade of Osaka and Hyogo for 1895, devoting special attention to the question of competition between Japanese productions and the productions of Europe and America. With Colonel Connelly's conclusions we do not purpose to deal at present, but it is difficult to pass unnoticed an interview reported in the *Kobe Herald* between the Colonel and a representative of that journal. Here is the particular part of the interview that attracts our attention:—

"You personally then, Col. Connelly, think that there is no reason to apprehend grave consequences from the sudden rise of Japan as an industrial and manufacturing nation in the estimation of the outside world?"

"I think so, and I also sincerely believe that there is not and never can be serious competition between labour of all classes in Japan and that of the western nations."

"And may I ask what is your ground for this belief?"

"Certainly. In the western nations the economic question of the relationship of capital and labour has been considered in every phase, not only by individuals but by legislative bodies representative in character. Questions regarding organized capital and organized labour have become of supreme importance. They affect not only the welfare of peoples but the stability of governments, and a state of things is presented to our gaze such as has not been seen since the organization of constitutional government. Labour is considered the wealth producer, and the wealth produced, jointly with the producer, forms the economic basis on which is built the prosperity of the Government and the happiness of the people. In Japan these potential questions are in their infancy and by the time experience will have necessitated governmental action, the law of supply and demand will, in my opinion, have placed Japanese labour beyond the scope of competition with that of the Western nations."

We can not pretend to be certain about Colonel Connelly's exact meaning, for either he or his interviewer has managed to construct an exceedingly ambiguous statement. One fact, however, seems to admit of no doubt, namely that Colonel Connelly considers the competitive capacities of Japanese labour to be handicapped by absence of official regulation. He further holds that, before official regulation, or "governmental action," can be inaugurated "the law of supply and demand will have placed Japanese labour beyond the scope of competition with that of the Western nations." This latter thesis is totally beyond our comprehension, but the former appears intelligible. In what respect, however, can "governmental action" add to the potentialities of labour? Does it not, on the contrary, restrict them? Its effect is to set limits to the daily working hours of the factory hand or the miner, which is simply a method of enhancing the cost of labour by diminishing the supply. The longer that Japanese employers remain unhampered by governmental action of that kind, the more accessible will labour be, and the greater, in consequence, will be their potentialities for competing with the products of foreign labour. It is scarcely possible to imagine that Colonel Connelly errs about such a rudimentary proposition of political economy, but if his words bear any other construction we should like to know what it is.

RAILWAY PECULIARITIES.

The complaint urged by our correspondent, "Constant Traveller," is evidently due to the difficulty under which all foreigners labour of obtaining accurate information about railway affairs in Japan. We are not so unreasonable as to suggest that the railway authorities are under any kind of obligation to publish notices in such a form as to be intelligible to the foreign community. That kind of thing is not done in any Western country. But assuredly it is not too much to expect that railway officials at Shimbashi should not give to travellers information entirely at variance with facts. "Constant Traveller" may well complain of the inconvenience to which he was subjected in consequence of the misleading answers given to his questions at Shimbashi. For the rest, if the 10.25 p.m. train, though calling at Yokohama, may no longer be boarded by passengers there, it is well that the fact should be circulated so as to prevent further disappointment.

KOREAN NEWS.

The brief announcement recently telegraphed from Korea that the Cabinet had been abolished, and a body called *Gissido* (according to Japanese pronunciation) established in its stead, conveyed very little information to the general public. We now learn, however, that the new body is a Council of State, and that the Korean term for it is *Eui-chung-bu*. The Edict establishing the Council declares that the object is to secure the absolute control of the Government by the King. That sounds retrogressive, but the *Soul Independent* would assuredly not approve anything of a mischievously conservative tendency, and it has nothing but praise for the new measure. Our contemporary has undertaken to publish, by degrees, an English translation of the edict. Here is the portion thus far published:—

Edict No. 1.—**Laws governing the National Council.** In order to secure absolute control of the Government by His Majesty, the National Council is established. (1) The National Council will be composed of one President, and five Councilors, one Assistant Councilor, also the Ministers of the different Departments become members of the Council by virtue of the office they hold; and the Minister of the Home Department, becomes the Vice-President of the Council. In case the President is absent the Vice-President will act in his place. Acting Ministers of Departments will have the same privileges at the Council as the regular Ministers, while acting as such. (2) (a) When the Council is in session His Majesty may be present to preside at the meeting, and in case His Majesty is not able to be present, H.R.H. the Crown Prince may act in place of His Majesty. (b) Only the members of the Council are allowed to vote. (3) Opening and closing of the sessions will be announced by the President.

(4) The following matters will be discussed and decided by the Council. (a) Laws, rules, and regulations relating to the Government and national affairs in general. (b) Abolition, revision, and interpretation of the present laws, rules, and regulations governing the whole of the national affairs. (c) Declaration of war or making of treaties with foreign countries. (d) In case of insurrection or any other disturbance in the country the Council will make plans and devices to pacify such troubles. (e) Matters relating to telegraphs, railroads and mining. (f) The Government budget will be made by the Council. (g) Special appropriations can be made by the Council. (h) Matters relating to establishment, or abolition, increase or decrease of Government revenue or customs tariff. (i) The Council can make changes in the salaries of officials and other items in the budget for this year. (j) In case of using private lands or timbers for internal improvements, the proper price is to be decided by the Council and paid to the owner or owners. (k) His Majesty may send special messages to the Council for its deliberation. (l) Laws that are approved by His Majesty will be announced to the people by the Council.

The *Independent's* criticism on the whole law, of which the above is a fragment, runs as follows:—

According to the new law, all matters of national importance will be discussed in the open Council by the members of the body, and the Ministers of State who have become ex-officio members of it. The questions that come up before the Council will be debated by any member, and each will tell the world his own idea in the matter by his vote. The trouble we have found with the Korean statesmen was that one could not tell where they stood in the important questions of the nation. They all kept a diplomatic silence in all things, hence the world had no opportunity to judge them. But under the new law everybody will have a chance to express his opinion by speech and vote. Another important point in the law is that His Majesty will attend the Council meetings and will hear the debates of the members. The difficulty which has hitherto existed in the Government was that whenever His Majesty consulted his Ministers the meeting was always a private one. Hence one Minister made one representation of a case to him, and another told another story of the same case when his turn for audience came. On account of this arrangement there has been much confusion to His Majesty. But when the new law goes into effect, His Majesty will be present at the sessions of the Council and will hear the open debate of different Councilors. From these debates he will know the facts of the case and with that knowledge he will form his opinion. On the whole the new law is similar to the laws governing the Go-

vernments of Europe and America, and it will minimize the possible corruption of the official class. The *personnel* of the new Council seems to meet the approval of the people. The President, Kim Pyeng Shi, is an old type of statesman with a clean record, and is said to be very honest and fair in his dealings. He may not be familiar with Western civilization, but a conservative man with an honest heart is far preferable to a corrupt *kaiwhaitte*. The next person among the new Councilors is Mr. Min Yung Whan, who is now on his way home from Russia. Mr. Min is known to most of the foreigners in Seoul. He is considered by the natives as well as foreigners as one of the best member of the Min family. He always conducts himself as a gentleman, and his past record is better than any other of the influential Mins of the days gone by. He was sent to Russia to represent his Government at the Coronation of the Russian Czar, where he saw the wonders of a civilized Western nation, which will be a fine education to him. We expect great things of him when he reaches home and takes a seat in the National Council. With a few exceptions the rest of the Councilors are loyal to His Majesty, and, when properly guided, will do whatever is good for Korea and her people.

The *personnel* of the Council is as follows:—

President of the National Council, Kim Pyeng Shi; Councilors, Min Yung Whan, Yun Yong Ku, Kim Yong Su, Nam Chung Chul, Yun Yong Sun; President of the Privy Council, Min Yung Chun; Privy Councilors, Yun Wu Sun, Yi Kyo Hun, Shin Hun Ku, Kim Sé Ki, Yi Keun Su, Yun Sung Chin, Yi Sang Chai, Yi Bong No, Yi Keun Hong, Sin Tai Kinn.

Almost immediately after the announcement of the above appointments, the President of the Council, the Minister of Finance, Sim Sang Hun, and the President of the Privy Council, Min Yung Chun, sent in their resignations, but the King declined to accept them. It is very conceivable that the President of the Privy Council and the Minister of Finance, seeing their functions seriously affected by the creation of the new body, should have desired to resign, but the action of Kim Pyeng Shi needs explanation. Of course he was not consulted before being gazetted President of the Council of State (or National Council). No one is consulted in Korea by way of preliminary to being appointed to a high office.

We take the following items from the *Soul Independent*; some of them are very quaint:—

Magistrate of Chung Pyeng, Yi Ké Hun reports that 150 rebels entered his district and threatened his life, so he prepared a banquet and other entertainments for the rebels and treated them very hospitably. The rebels praised him and went away. The War Office charged the Magistrate with cowardice and recommended his dismissal to the Home Department.

Military Director Kim Chai Hun reports that Capt. Im Pyeng Il captured four leaders of rebels in Yang-Yang district and obtained several pieces of arms. He further reports that Kang-Wha Militia captured forty-rebels in Song-Wha district and shot them before a crowd of people.

Edict.—The relatives of the Royal family lost their offices and pay from the Government for the last three years. At this time when we are changing the form of the Government, we must remember Our relatives. Therefore, all those who are related to the Royal family shall be given titles and proper emoluments.

A few days ago the Department of Law announced a new regulation concerning the *Soul Court* in which it states that no private letter is allowed to be sent to the Judges of the Court during the office hours. Two days later a Judge of the Supreme Court wanted to send a private letter to a Judge in the *Soul Court*, but the policeman at the gate of the latter Court did not admit the epistle. The Judge in the Supreme Court devised a scheme to send the letter to his fellow jurist. The scheme was not altogether legal as far as we can judge, and certainly not a dignified action for a judge of the highest tribunal of the land. He went to the *Soul Court* and stood outside of the building where he could see a boy in the window. He tied a stone to his letter and threw it into the window. Evidently the boy understood the meaning of it and picked up the letter and delivered it to the Judge. It is true that the regulation does not say anything about delivering private letters through the windows, so the Supreme Judge may not be guilty of breaking the rule on a technicality, but he deserves a sound thrashing on general principles.

On the night of Sept. 18th, a Japanese named Kimura came to the South-gate with two pack

horses after the gate was closed. He demanded the policeman at the gate to open the gate for him, but the policeman refused on the ground that he received an order from Headquarters to the effect that under no circumstances the gate shall be opened without permission from the Department. The Japanese climbed over the city wall and went to the Chin-Ko-Kwai and brought with him a Japanese policeman named Okawa. They came to the gate and again demanded the Korean policeman to open the gate, but the latter refused. They became very much enraged and beat the policeman with their swords. They forced the gate open and let in the pack horses and two drivers. Such a high-handed action on the part of the Japanese always brings about ill-feeling between Koreans and Japanese.

CHINESE ITEMS.

A case of cholera terminating with shocking suddenness occurred at Wuchang on the 21st of September. Dr. MacKay, who had been working for five years in connexion with the London Missionary Society, was struck by the disease in the early morning, and before 24 hours had passed, life was extinct. Mr. MacKay's work among the Chinese is spoken of in terms of the highest praise.

Action recently taken by the Chékiang authorities with reference to cotton grown in that province, of which the Hsiao-shan and Anch'ang districts are said to be the most fertile in China for purposes of cotton growing, shows that there is good ground for the apprehensions expressed by us many months ago, namely, that in order to obstruct the cotton-spinning industry, as carried on by foreigners, the Chinese would probably tax the raw material on its way to the mills. It is alleged that the proximity of the above-named districts to the coast, has hitherto enabled cotton-growers to get their cotton shipped without paying *likin* or other taxes on it. Four-fifths of the annual production are said to have escaped all impost. A *likin* bureau has now been established to prevent these evasions. It is presided over by a Mr. Wang, under whom are thirty-six excisemen and assistants, and a scale of taxes has been fixed. Unginned cotton and ginned cotton transported to Ningpo by river routes, are to pay 30 dollar cents and sixty dollar cents per bale, respectively, and unginned cotton transported to the same place by sea will have to pay 20 dollar cents a bale. Similar imposts are determined for cotton going in other directions. There is nothing at present, so far as we can see, to prevent the Chinese Authorities from raising these taxes to prohibitive rates, if they see reason to do so.

The following despatch is published by the *North China Daily News*:—

Legation of the United States.

Pekin, 24th September, 1896.

SIR,—I have the honour to inform you that the port of Shashih, in the province of Hupeh, will be opened, under the provisions of the Shimonoseki treaty, to foreign commerce on the 1st day of October next, corresponding with the first day of the 145th Customs quarter. You are directed to notify American merchants of this announcement.

The Yamen informs me that the date of the opening of Chungking will be fixed by the Customs later.

I am, Sir, your obedient servant,

CHARLES DENBY.

THOS. R. JERNIGAN, Esq.,
United States Consul-General, Shanghai.

"Mr. Jernigan, Consul-General for the United States," writes the *N.-C. Daily News*, of the 6th instant, "has left for Soochow to attend the trial before the criminal judge of the prisoner Tsiang Hioh-so, who is believed by all Americans acquainted with the Kiangyin riot last May to be innocent. He was the first to lease property to the American Mission, suffered imprisonment for a year, and was released in 1895 by order of the Rev. J. E. Bear, Deputy Consul. It was Tsiang's sister who divulged the plot of burying the child, on the chapel premises, and in revenge, both on the part of the perpetrators and the magistrate, Tsiang was arrested and tortured. Before the Chinkiang Taotai, it is said, he was put to the rack three times on the 'Tiger's Bench,'

fainted away, and at last confessed. The Kiangyin missionaries were not permitted to be present as witnesses and the Government representative did not withhold his approval of the sentence of death. For five months the innocent man has languished heavily ironed in the most horrible places in the prison, and was forbidden all communication with his friends. His real offence was that he has been the 'Friend of the Americans.' He is now brought for final trial before H.E. Loh Ch'in-kiang, who holds the triple office of Grain Commissioner, Customs' Taotai, and Acting Criminal Judge. Now Mongolian and Anglo-Saxon sit on the same bench. The results of the trial are looked forward to with great interest and we wish Mr. Jernigan a pleasant journey to the newly-opened port."

THE ACTION OF JAPANESE GUILDS TOWARD FOREIGNERS.

The various Japanese Guilds formed during recent years by merchants having dealings with foreigners at the open ports, have generally laid down for themselves the ostensible programme of promoting everything good and correcting everything bad, their avowed purpose being to assist the development, on honest lines, of the particular branch of trade in which they are interested. But it must be frankly confessed that their combinations seem to have had no practical object but to assist their individual members, rightly or wrongly, to force the foreigner's hand. The power of applying a boycott whenever temptation offers is, perhaps, too convenient to fail of abuse, and thoroughly well abused it appears to have been by the guilds in question. Recently the Secretary of the Hyogo Prefectural Government, Mr. Akiyama, acting, of course, under the direction of the Governor, addressed to the Kobe Chamber of Commerce the following note, which, together with a statement of its immediate result, we reproduce from the *Kobe Chronicle*:

Hyogo, Sept. 24th, 1896.

YAMAMOTO KAMETARO, Esq., Chairman of the Kobe Chamber of Commerce.

I have repeatedly heard of late that the guilds of our traders at open ports, who sell goods to foreign firms, have resorted jointly to a practice of boycotting the foreign merchants, in case of disagreement arising over business transactions between them. The object of the practice may be to correct evils attending the business transactions between our merchants and foreigners, but I hear of extreme injustice resulting, for instance, in one case in which a certain Japanese trader had trouble in business with a foreign firm and adopted the proper course for testing right and wrong, namely the Japanese law courts; the decision of the law court was given in favour of the foreign firm, proving that the Japanese was in the wrong, and yet the guild determined on boycotting the foreign firm. Such action on the part of Japanese merchants will be regarded by foreigners as interfering with the commercial rights of foreigners, and cause dislike and distrust of the Japanese among foreign countries, and it will place a serious impediment in the way of the development of the trade of our country. This is specially communicated to you for your consideration.

The Chairman of the Chamber of Commerce, on the 31st ult., distributed copies of the Prefectural communication to each member of the Chamber as well as to the trade guilds of Kobe, with the following covering-note:

The enclosed in a copy of a note from the head of the Internal Affairs Department in the Hyogo Prefectural Government, addressed to this Chamber, in reference to the boycotting of foreign merchants by Japanese traders. do not know in which port occurred the trouble referred to in the note of the Secretary of Hyogo. I beg to forward you a copy of his note for your consideration.

If need scarcely be added that the trouble in question was the Kimura-Cornes case.

CHINA'S TEA TRADE.

Eight of the leading British tea merchants in northern China have addressed to the Shanghai Chamber of Commerce the following interesting letter:

As the Tariff question is now being re-opened, the occasion seems fitting that we, the undersigned, buyers of tea in North China, should ask your particular attention to the disastrous condition into which the Chinese tea trade has fallen; which is, in our opinion, largely due to the heavy taxation under which it has laboured for many years, a taxation far in excess of the Treaty tariff of 5 per cent. *ad valorem*.

During last season, 1895 x 1896, the export of black tea from China to Great Britain has amounted to only

37½ million pounds, as against 117 millions in season 1887 x 1888, and 160 millions in season 1880 x 1881, a decrease of 13¼ million pounds in fifteen years. This enormous decrease in the volume of the trade, one of the main foundations of our commercial existence in China, has, needless to say, been attended in its course with terrible loss and distress to a large number of foreigners and to hundreds of thousands of Chinese.

The taxation consists of the export duty, Haikuan Tael 2½ per picul, and the *likin* taxes which average about 1 taels 2½ per picul.—In all, say Tls. 5 per picul, which as the average cost of black tea in North China is about Tls. 20 per picul duty paid, means a tax of over 30 per cent. on the cost of tea purchased at the Treaty Ports. On sound common tea, which costs about Tls. 11 per picul duty paid, the taxation thus amounts to over 80 per cent. on the cost. Now the Treaties of Nanking and Tientsin (1842 and 1858) fixed the duty on tea at Haikuan Tael 2½ per picul, which was to represent an *ad valorem* rate of 5 per cent. At the present time, however, an *ad valorem* rate of 5 per cent. would be only about ¼ of the Tael per picul and foreigners were entitled every ten years to have the Tariff revised in this sense, under Article 27 of the Treaty of Tientsin, 26th June, 1858. As to the *likin* exactions, which go to make up the Tael 5 per picul, these were of course never contemplated by the Treaties.

It is only natural that Chinese tea penalised as it is by this crushing taxation, has been quite unable to compete with the untaxed produce of India and Ceylon. Not only in England but also in the smaller markets of Australia and America, do we see the working of this inevitable law.

To Australia, China will ship this season only about 7 million pounds of Black Tea, as against 21 millions in 1880 and 1881; there the untaxed British grown teas have begun to be taken of late years with the usual result, so that the Australian is now almost on all fours with the English trade.

To North America China ships the bulk of her green teas, and there again the taxation tells, as in that market these teas have to face the competition of comparatively untaxed Japan teas (the duty in Japan being only \$1 per picul) with the usual result of a declining export from China.

The decay of the China Tea Trade is going on so persistently that it will soon become a lost trade, unless its burdens are removed. To restore it to a healthy state, we would recommend further steps being taken towards improved quality, and as the producers seem unable or unwilling to effect reforms in this direction, it would be well if the government were to appoint a board of enquiry, to carry out such reforms as might suggest themselves, from a study of what is done elsewhere.

The same subject occupies the attention of foreign merchants in Amoy, where the proximity of Formosa and consequent familiarity with Japanese rates of taxation, bring into marked salience the crippling weight of the Chinese impost. Tea grown in Formosa under Japanese rule pays no *likin* or other local tax, the only impost levied being an export duty of \$1.10 per picul. On the other hand, tea exported from Amoy pays an export duty of \$3.85 per picul, together with about \$3 *likin*. Thus the difference of taxation is no less than \$5.75, or, in other words, tea exported from China is taxed more than five times as heavily as tea exported from Formosa. A great difficulty against which Formosa has to contend is the want of harbour facilities: there is no harbour within easy reach of the tea districts where large steamers can load safely throughout the year. Hence Formosan tea has hitherto been carried to Amoy for final shipment, and the merchants of Amoy are naturally apprehensive lest, under Japanese rule in Formosa, the course of trade may be altered. Mr. Consul Gardner, in his last trade report for Amoy, says:—

The loss of the Formosa tea business to Amoy would be a very serious blow to the prosperity of the port, would seriously effect the Customs revenue in the matter of tonnage dues, would throw out of employment many hundreds of labourers, and, by reducing the circulation of money in the city by some millions of dollars, materially affect its already rapidly-declining prosperity. It is impossible to over-estimate the value in indirect ways which the Formosa tea trade is to Amoy, and all interested in the welfare of our port, officials and merchants alike, should do their utmost to retain it.

We do not, for our own part, believe that the want of harbour facilities will long be suffered to injure Formosa. Harbour improvement is among the projects seriously contemplated by the Japanese. Meanwhile, it is possible that the vivid object lesson furnished by Japan's methods in Formosa may help to teach wisdom to Chinese officialdom. Mr. Gardner says that, were it not for excessive taxation, the Amoy tea districts could compete with Formosa in growing Oolong. Twenty-five years ago, three million dollars was the annual income derived

by Fokien from the business of growing tea for foreign markets; to-day, the income is little more than one-tenth of that sum.

This question of the duties levied by China upon tea has much interest for Japan, apart from the Formosan phase of the problem. There is no doubt that the cheaper grades of Japanese tea would find a considerable market in the north of China were not the duties prohibitive. In the early days of China's tea trade, the tea had to be carried to Canton for firing and packing, with the result that its original price was doubled, approximately. Moreover, the producer obtained a comparatively high price in those times, so that, on the whole, the specific export duty of 2½ Tls. per picul was not very onerous. But when the tea came to be shipped direct from Hankow and other producing centres, the manufacturing charges were largely reduced, and, at the same time, the producer's price fell in response to the European markets. The average cost of black tea in northern China being now 15 Tls. per picul, approximately, it is evident that an export duty of 2½ Tls. (S) and *likin* of 2½ Tls. (S) represent taxes aggregating 33 per cent. Now Japanese tea sent to China has to pay an import duty of 2½ Tls. (S) per picul, together with 1½ Tls. *likin*, or 4½ Tls. in all, and as the average cost of the tea at the port of shipment is 7 Tls., it results that the taxes levied in China aggregate nearly 50 per cent. If, despite this crushing impost, nearly a hundred thousand *yen* worth of Japanese tea found its way to China last year, we may reasonably assume that were the import duty and other taxes reduced to 5 or 10 per cent., the Japanese leaf would find a considerable market in the neighbouring empire.

JAPANESE SUBJECTS AT THE BROOKLYN INSTITUTE OF ARTS AND SCIENCES.

Japan and her affairs receive a considerable amount of attention at the very fine and well organized Institute of Arts and Sciences which, when the buildings now in progress are completed, will be one of the most imposing and beautiful structures of its kind in the world. In the prospectus for the current year we observe that there appear six illustrated lectures on Oriental Art, by Professor Ernest Fenollosa, L.L.D., Curator of Japanese Art at the Boston Museum of Arts; and also six lectures on "Political, Social and Literary Japan," by the Rev. W. E. Griffis, D.D. Dr. Griffis divides his subject thus:—(1) "Early Political History; Monarchy, Duarchy and Feudalism (A.D. 400-1868);" (2) "Imperial and Constitutional Japan (A.D. 1868-95);" (3) "Social Institutions in the Early and Middle Ages;" (4) "Modern Japanese Social Life;" (5) "Literary Japan, to age of Iyeyasu (A.D. 700-1600);" and (6) "Books and Writers of the Tokugawa and Meiji era (A.D. 1100-1894.)"

RUSSIA AND CHINA.

The *N.-C. Daily News* has been informed by Mr. G. D. Scott, Reuter's agent, that he has received a telegram from Peking dated the 2nd instant, stating that Count Cassini, Russian Minister, left for home on leave on the 30th ult. He had waited a month, having refused to proceed until the Manchuria Railway Convention between Russia and China was signed. The native report, says the Shanghai paper, is that the Emperor tried to postpone the signature of this Convention until after Li Hung-chang's arrival at Peking, but to this Count Cassini would not submit. On the 6th Oct., *N.-C. Daily News* said:—We learn from Reuter's Agent that he has received another telegram from Peking stating that the Siberian Railway agreement only refers to Northern Manchuria, the railway across which is redeemable by China within thirty years. The railway across Southern Manchuria is refused. Sheng Taotai is likely to obtain the Hankow-Peking railway. His purchase of the Hanyang ironworks is confirmed, and he is appointed Director of Railways.

THE LATE ARCHBISHOP OF CANTERBURY.

By the sudden death of the Archbishop of Canterbury the Church of England loses its chief ecclesiastic. The late Archbishop Benson was never a very strong Churchman in the sense that Archbishop Tait, his predecessor, was; but he managed to steer clear of many rocks that lay in the path of such a high dignitary. A schoolmaster, perhaps, more than a parish priest, his selection by Mr. Gladstone came somewhat as a surprise, until the facts of the possession of a considerable private fortune and high favour at Court, were found to have been behind him. *Men and Women of the Times* says: The Most Rev. Edward White Benson, D.D., Archbishop of Canterbury, Primate of all England, and Metropolitan, son of Edward White Benson, Esq., of Birmingham Heath, and formerly of York, was born near Birmingham in 1829. He was educated at King Edward's School, Birmingham, and at Trinity College, Cambridge, of which he was successively Scholar and Fellow, and where he graduated B.A. in 1852, as a First Class in classical honours, and Senior Chancellor's Medallist, obtaining also the place of a Senior Optime in the Mathematical Tripos. He graduated M.A. in 1855, B.D. in 1862, and D.D. in 1867, Hon. D.C.L. (Oxford), 1884. He was for some years one of the masters in Rugby School, and he held the head-mastership of Wellington College from its first opening in 1858 down to 1872. For several years he was Examining Chaplain to the late Bishop of Lincoln, by whom he was appointed Chancellor and Canon Residentiary of Lincoln, having been a Prebendary of the same cathedral for three years previous. He was Select Preacher to the University of Cambridge (1864, 1871, 1875, 1876, 1879, and 1882), and to the University of Oxford (1875-76), Hon. Chaplain to the Queen, 1873, and Chaplain in Ordinary, 1875-77. In Dec., 1876, he was nominated by the Crown, on the recommendation of the Earl of Beaconsfield, to the newly-restored Bishopric of Truro, and was consecrated in St. Paul's Cathedral, April 25, 1877. The diocese, which was taken out of the diocese of Exeter, consists of the county of Cornwall, the Isles of Scilly, and five parishes of Devonshire, constituting the old Archdeaconry of Cornwall, with the church of St. Mary, Truro, as a Cathedral. During his occupation of the See he began the building of a new Cathedral at Truro (with Mr. J. L. Pearson as architect), of which the outward shell has cost over £100,000, much of that sum having been gathered through the energy of the Bishop. In Dec., 1882, Dr. Benson was appointed by the Crown, on Mr. Gladstone's recommendation, to the Archbishopric of Canterbury, in succession to Dr. Tait.

CURIO SALE IN TOKYO.

We observe that printed cards, widely circulated by a Mr. Mikata Ichiro, on behalf of the *Seikado*, give notice of a great sale of pictures and objects of vertu, to be held at the well-known Nakamura-ro, Ryogoku Bridge, Tokyo, on the 17th and 18th instant. The articles profess to come from private collectors, and for aught we know to the contrary, they may do so. But our readers should be told, if they do not already know, that all the sales hitherto announced in the manner now resorted to, were contrived by associations of dealers in bric-à-brac, and that nine-tenths of the goods exposed there were not at all what they were represented to be. Of Mr. Mikata Ichiro, or the *Seikado*, we have nothing to say, either favourable or unfavourable, but the receipt of the circular inevitably recalls experiences which our readers are entitled to share.

Earthquakes were reported from Gifu and Kumamoto (twice) on the 14th inst. at 2.17 a.m., 10.52 a.m., and 11.7 a.m. respectively.

The Japanese man-of-war *Yoshino* put into Tsu on the 13th inst.; the *Seiven* left Mororan on the 14th. The *Kuso* and *Chiyoda* left Fusan for Chemulpo the same day.—*Official Gazette*.

CORRESPONDENCE.

(Our readers must distinctly understand that we are in no sense responsible for that sentiment or opinion of our correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.)

THE U.S. PRESIDENTIAL CAMPAIGN.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Having indulged about a month ago in some gossip concerning the political campaign in progress across the Pacific, I beg leave now to offer a few more items.

The "gold Democrats" have assumed the name "National Democratic Party," and emblem consisting of a gray ribbon, around the "Stars and Stripes." This badge was suggested by the fact that their candidates represent both the blue and the gray, as the Hon. John M. Palmer, their Presidential candidate, was a brave Union soldier who attained to the rank of Major-General; and Ex-Gov. Senior Bolivar Buckner, of Kentucky, their candidate for Vice-President, was a Confederate who also reached a General's grade. It was Buckner, by-the-way, who surrendered Fort Donelson to Gen. U. S. Grant on "no terms other than unconditional surrender"—the phrase which gave rise to the name, "Unconditional surrender Grant."

It is evident, from the results of the Vermont and Maine elections, that the "gold Democrats" will not cut much figure in the Northern States, except to make most of them safe for McKinley; and will probably not be able to draw away many Southern States from Bryan. The main contest is in the Mississippi Valley, especially in Illinois, Minnesota, Kentucky, Tennessee; and West Virginia, Delaware, and Maryland and New Jersey are also doubtful. Senator Palmer is very popular in Illinois, as Buckner is in Kentucky.

On the other hand, the fusion of the Democrats, Silver Republicans, and Populists has been quite successfully accomplished in most States; and, if Sewall should be withdrawn in consequence of the Maine election, Bryan's chances would be greatly improved. The general situation is this; the gold forces are divided, while the silver forces are practically united. And yet the increased Republican majority in Maine would seem to indicate that large numbers of Democrats are either staying at home or supporting the Republican ticket. Evidently McKinley has the best chance, but—

September 12th, 1896.

UNCAS.

RAILWAY PECULIARITIES.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—It may not be without interest to your Tokyo readers to know that the Railway authorities sometimes decline to receive passengers for Tokyo by the 10.25 p.m. train from Yokohama. Last night, after having previously enquired at the Shimabashi Station whether I could take the 10.25 p.m. return train from Yokohama, and having been answered in the affirmative, I arrived at the Yokohama Station at 10.15. The train came in immediately, remained to minutes, and left almost empty. Although I was on the platform with my return ticket, I was prevented by force from entering the train by an official who represented himself to be the station-master and seven other officials. The station-master stated that that train never look passengers from Yokohama, whereas some of my friends had travelled by it on the previous evening.

The absurdity of sending off an almost empty train after ten minutes stop with passengers desirous of joining it waiting on the platform and the officials declining to receive them, requires no comment, but the fact appeared to give cause for much merriment at my expense among the station officials during the hour I had to wait for the last train.

A note of this peculiarity in the list of trains given in the English papers would be very desirable. I am Sir, yours truly,

A CONSTANT TRAVELLER.

October 14th, 1896.

COTTON-SPINNING IN YOKOHAMA.

MESSRS. W. M. STRACHAN & Co.'s MODEL MILL.

On Saturday morning some hundred members of the Japanese commercial bodies of Tokyo and Yokohama had an opportunity of inspecting the model cotton-spinning mill that Messrs. W. M. Strachan and Co., have recently erected at the rear of their Yokohama head office. The day was anything but pleasant climatically, but the warmth of the reception accorded and the attention shown the visitors by Mr. J. P. Reid, the resident mem-

ber of the firm, and his staff, fully made up for any discomfort undergone in journeying to the function. Messrs. Strachan & Co., have taken the agency of Messrs. Howard and Bullough, Ltd., the well-known manufacturers of cotton-spinning machinery of Accrington, England, and the model mill that was in operation on Saturday, is a splendid example of the high class machines that this firm turns out. To many visitors on Saturday the ingenuity displayed in the construction of such intricate machinery came as a revelation. Mr. T. Davenport, a representative of Messrs. Howard and Bullough, who superintended the erection of the mill, very courteously gave an outline of the process of cleaning, combing, and spinning raw cotton, from the time it leaves the pod till it reaches the bobbins as yarn-thread. The raw material is first placed on a machine having a wide bed. This bed is put in a motion and passes the cotton on to a cylinder in which a beater revolves. The beater helps to clean away all superfluous substances, and then the cotton is forced by a fan between two cylinders of perforated zinc that pass it out in layers on to four rollers. The cotton now looks like a beautiful white fleece. So nicely are the machines adjusted that each roll is about the same weight. The cotton is next passed through a carding engine by which it is combed out ready for the next process. The carding engine has all the latest improvements, electrical and otherwise. The cotton passes from the carding engine in long, soft coils, and is passed on to the drawing frame, from thence to the slubbing frame, that draws it out still finer and puts sufficient "twist" into it to carry it on to the "intermediary." Finally it reaches the ring spinning frame on which it is wound on to bobbins as the finished yarn of commerce. Crossley's oil and gas engines drive all these machines, and the noise that is created when all are at work can more easily be imagined than described. But the Japanese work-girls have already grown accustomed to the whir and rattle, and on Saturday were talking at ease with each other, while the possessors of untrained ears could hardly hear one another speak.

After the mill had been thoroughly inspected, the large company adjourned to the offices, where a sumptuous luncheon—provided by Mr. W. N. Wright, of Wright's Hotel—was spread. Mr. J. P. Reid presided at one table; Mr. F. H. Bull at the other, and Mr. E. T. Nicholas and Mr. Gibson were in the Vice-chairs respectively. Among those present were Messrs. Endo Shogoro, of the Fuji Spinning Mill; Tamura Rishichi and Kajima Unokichi, officials of the Tokyo Spinning Mill; Wada Toyoharu and Otani Takekichi, of the Kanagafuchi Spinning Mill; four officers of the Shimotsuke Spinning Mill; Representatives of the *Boyeiki Shimbun*, *Shogyo Shimpō*, and *Fiji Shimpō*; Hiramura Senzo, Kimura Riyemon, and numerous other representative merchants of Yokohama; Messrs. Horikoshi Kakujio, Kakinuma Tanizo, Sugimura Jimbei, Kajima Minosuke, Mayekawa Tarobei, Satsuma Jijiei, Hibiya Heizemon, and many others from Tokyo.

Mr. J. P. Reid welcomed his guests in a short speech. He said:—I thank you all very much for coming to the opening of our mill to-day. I see around me many whom I have known since my arrival in Japan, and some whose acquaintance I have made since. To all I extend a very hearty welcome. Encouraged by the orders that you have already so kindly given us for machinery, we have erected a little mill so that intending purchasers can see exactly what our machines can do; and I think I am correct in saying that wherever Howard and Bullough's machines have been introduced they have taken the front rank. Although we are somewhat late in the field, I think we shall give as much satisfaction in supplying you with cotton-spinning machinery as in other branches of business.—(Applause.) For our success we are very much indebted to you, and I trust that in years to come our business may always be accompanied by that friendship which has always existed between us in the past.—(Applause.)

A representative of the Shimotsuke Boseki Kaisha responded on behalf of the guests.

After luncheon, Mr. J. P. Reid proposed the toast of His Majesty, the Emperor. He said:—I ask you now to drink to the health of the Emperor of Japan, under whose beneficent rule we live. Long may he live to guide this country with wisdom.—(Loud applause.)

The toast having been enthusiastically received, one of the visitors, in a flowing speech containing many grandiloquent phrases, proposed the health and prosperity of Messrs. W. M. Strachan & Co., and success to Messrs. Howard and Bullough. This was also received with enthusiasm. During the proceedings the Town Band gave a stirring selection of music, playing the *Kimigayo* after the toast of the Emperor.

CONCERT AT THE PUBLIC HALL.

A most enjoyable concert was given in the Public Hall on Monday evening in aid of the fund for the widows and orphans of those who perished on S.M.S. *Iltis*, and the funds of Christ Church, Yokohama, the band of the flagship *Kaiser* taking the principal part. There was a very large audience, few seats remaining unoccupied by nine o'clock, and late comers had to be content with standing room. The band of the S.M.S. *Kaiser* is composed of clever musicians, and seldom has finer music been discoursed within the walls of the Public Hall, or been more thoroughly appreciated and enjoyed. If the bandmaster had acceded to the desires of the audience every piece must have been followed by an encore, but very wisely he restricted himself to two, the first in response to a most enthusiastic recall to "Die Mühle," and the other to Macbeth's delightful "Forget-me-not," when an entirely pizzicato selection was given. In the first half of the pro-

THE AUTUMN REGATTA.

Many an unkind "dry-bob" has expressed the opinion in times past that a regatta is the slowest form of spectacular amusement ever invented, the few minutes of excitement that crop up at intervals not compensating for the exasperatingly slow "waits" that intervene. This opinion relates principally to regattas held in dry weather; the "dry-bob's" opinion of a regatta held in a steady downpour of rain is said to be too deep for words. We quite believe it. Saturday's regatta of the Yokohama Amateur Rowing Club was absolutely the dearest performance on record in the annals of the settlement. Rain had been falling the better part of the night; during the early morning it gathered force and by the time the first race was timed to start the downpour was torrential; the rain absolutely coming down in sheets. It was impossible to postpone the function, so with a determination to make the best of things, the committee and competitors set to work to carry the programme through. But it was dreary, chilling work, and by the time the Clerk of the Weather had begun to relent a little—about 4 o'clock—the stock of Mark Tapleyan philosophy had run very, very low in the hearts of everyone. One thing the rain did effect for good—it kept the surface of the sea delightfully smooth. The Committee of Management were:—Messrs. J. T. Boag, Captain; H. R. Mair, Hon. Secretary; M. Schellenberg, Hon. Treas.; F. J. Hall, Judge; W. Sutter, Starter and Umpire; H. Tennant, Time keeper; W. W. Campbell; J. B. Rentiers, C. K. M. Martin, J. Walter, P. S. Bent, G. C. Murray, and R. Schmid. The International Fours turned out somewhat of a surprise to the "prophets," the English crew winning as they liked. Another good race was the Junior Pairs, the winners only succeeding in achieving victory at the post. At the close of the proceedings, Miss Lay presented the prizes. The band of the *Olympia* was in attendance, but very little dancing was indulged in, the dreary weather keeping away the majority of the ladies who usually grace these functions. Details:—

INTERNATIONAL FOURS.—1 Mile.

ENGLISH, "DARTER."		lb.
Bow.	H. Hayward	138
2.	W. Young	146
3.	J. B. Rentiers	156
Stroke.	W. Goddard	128
Cox.	A. H. Lay	130
SWISS, "FLAMINGO."		lb.
Bow.	E. Baumgartner	144
2.	A. Krayer	145
3.	M. Schellenberg	154
Stroke.	A. L. Mottu	146
Cox.	E. Bosshart	142
ABORIGINES, "SEA MEW."		lb.
Bow.	H. Goddard	135
2.	M. Stephens	140
3.	A. B. Smith	170
Stroke.	D. Marshall	153
Cox.	W. Carst	85

A good start was effected. The Aborigines went away at a great pace and lead for a short distance, but at the Niche the Englishmen drew level and from there lead the procession home, Goddard's long, even stroke getting all the work possible out of his men. The Swiss finished about three-quarters of a length in front of the Aborigines. Time, 9m. 40½ secs.

The Dinghy race for scudows was won by the Captain-sendo of the Boat Club, No. 1 of the Bathing Barge only getting second position.

JUNIOR DOUBLE SCULLS.—1 Mile.

"TERN."		lb.
Bow.	H. E. Irwine	135
Stroke.	John MacArthur	172
"PEARL."		lb.
Bow.	H. Goldman	189
Stroke.	L. Salabelle	192

MacArthur took Stephens' place in the *Tern* at the last moment. A good start, Salabelle, if anything, getting the best of it. At the Pacific Mail Wharf the *Pearl* was leading, though both boats were pulling easy. At the breakwater MacArthur pulled out and passed Salabelle, and going up the Bund increased the lead with every stroke, eventually winning easily. Time, 8m. 1½ secs.

CLUB FOURS.—1 Mile.

"DARTER."		lb.
Bow.	E. J. Libeadd	133
2.	H. D. Curtius	159
3.	L. Salabelle	192
Stroke.	H. E. Hayward	138
Cox.	K. Wilson	115
"FELICAN."		lb.
Bow.	H. Poole	150
2.	H. E. Allcock	138
3.	J. B. Rentiers	156
Stroke.	D. Marshall	153
Cox.	W. W. Campbell	130
"FLAMINGO."		lb.
Bow.	J. F. Drummond	117
2.	H. Goddard	129
3.	J. J. M. Carst	160
Stroke.	H. R. Mair	130
Cox.	W. Carst	85
"SEA MEW."		lb.
Bow.	M. Sakamoto	115
2.	E. Baumgartner	144
3.	R. Böhlke	151
Stroke.	A. L. Mottu	145
Cox.	A. H. Lay	130
"SWAN."		lb.
Bow.	E. H. Irwine	155
2.	F. J. Nutter	156
3.	F. Kluss	145
Stroke.	W. Goddard	128
Cox.	K. Kingdom	125

A very pretty start. Hayward lead out, with Mair next. At the Pacific Mail Wharf Hayward spurred and obtained a long lead; Marshall's boat came next, making a good race with Mair's, Mottu's and Goddard's boats bringing up the tail of the procession. On entering the harbour Marshall spurred, passing Mair, and then he called on his crew to pull down Hayward's lead. The distance was not long enough, however, Hayward getting his gun by half-a-length; good third. Time, 9m. 30½ secs.

SENIOR DOUBLE SCULLS.—1 Mile.

"TERN."		lb.
Bow.	G. Hood	152
Stroke.	M. Schellenberg	154
"PEARL."		lb.
Bow.	W. Young	146
Stroke.	C. Kalkhof	183

Schellenberg took the lead soon after the start, and rowing in better form than the other boat won much as he liked. Time, 7m. 5½ secs.

JUNIOR PAIRS.—1 Mile.

"WIDGEON."		lb.
Bow.	E. J. Libeadd	133
Stroke.	H. E. Hayward	138
Cox.	A. H. Lay	130
"MALLARD."		lb.
Bow.	E. H. Irwine	135
Stroke.	F. Kluss	145
Cox.	W. Goddard	128

Another even start, and until the P.M. Wharf was reached neither boat was ahead of the other. Then Hayward took the lead, though the Mallards held on gamely. Up the Bund a fine struggle ensued, and the winners only succeeded in getting home by a bare quarter of a length. Time, 8m. 10½ secs.

SCRATCH FOURS (From Inside of Breakwater).

"DARTER."		lb.
Bow.	Budge	133
2.	Williams	138
3.	Salabelle	192
Stroke.	W. Goddard	128
Cox.	Bouffier	128
"SWAN."		lb.
Bow.	Drummond	117
2.	Poole	129
3.	Carst	160
Stroke.	Hayward	130
Cox.	Carst	85

Five boats started, and all made the pace hot from the very beginning. Hayward succeeded in getting his crew out of the tuck first, but Goddard followed hard after him, and just as the Boat-house was reached, succeeded in lifting her nose just in front of Hayward's. Such a finish caused huge excitement among the spectators.

IN SWITZERLAND.

The following letter from a friend whose family are now in Japan, will probably interest many of our readers:—

May 19th, 1896.

I have a long story to tell, but there is so much to say of the last few days that I shall do well if I get in any introduction at all. Suffice for this sheet to say that within a week S— and I decided to quit Montreux, and yesterday forenoon mounted our bicycles, which we had hired by the week, and started up the Rhone valley in search of adventures and cheap living. We have found both, and I think the two days have been—of their kind—the most delightful of my life. The main thing has been that we have been so completely independent. Our heavy luggage is stored in Montreux, and a little valise contains all that is necessary for our easy-going, unconventional existence. This we send by train from place to place at the enormous expense of about ten cents a day.

Travelling as we were over a highway that was used by the Romans and bordered by castles in the Middle Ages, we felt quite like knights errant with our trusty steeds, riding out in search of adventure. We had not at the start, nor have we even now, a definite idea of how long our trip will be or where we shall go. Our plans are made only one day ahead.

We left Montreux at eleven in the morning, rode past Chillon and Villeneuve, where the army of Cassius went under the yoke (B.C. 107), passed Roche, a little village on our left, and stopped at Aigle for lunch, after an easy ride of about nine miles. After lunch, as the sun was beating down very hot, we went into the hotel garden and read together Howell's "Swiss Sojourn," which was written of Villeneuve, Aigle, and the country thereabouts. There is an old chateau at Aigle which we visited. A part of it dates back nearly a thousand years, we were told. From Aigle to Bex was a pretty hot ride, which we broke with one long rest under a tree by the roadside. You can hardly imagine a more contented and happy individual than I was as I lay on my back in the grass and looked up through the tree at the clear blue sky, the fluffy white clouds and the snow-capped Alps on all sides. * * * * * We ordered dinner at the Hotel des Alpes soon after reaching Bex and ate it out under the trees. A short spin of half an hour after dinner brought us to the ancient town of St. Maurice, where we obtained a room for the night at the Hotel Groscon. Just before we reached the town we entered a narrow and strongly fortified defile through which the Rhone flows with a very swift current. The road crossed the river over a wide-arched bridge and brought us past the Chateau of St. Maurice, then down along the base of a lofty cliff into the town. We took a little walk through the town in the cool of the evening and went into the church attached to the ancient monastery of St. Maurice.

The entire population of the village was at the evening service, and we watched the people come out with the greatest interest. Both S— and I were tired and went to bed at nine o'clock. After breakfast the next morning we visited the monastery and were conducted through the cloisters by one of the brotherhood—that of St. Augustine. The Abbey was founded in the fourth century, but the present building dates only from 1600, the old one having been burned. From the Abbey we went to another monastery—of Capuchin monks—where we were shown all over the place by the Father Guardian. It was as medieval as could be. Here and there we saw a brother who was quite willing to interrupt his religious meditations and greet us, or another who appeared in the corridor and then vanished into his cell. They all wore long, brown, hooded gowns with a cord around the waist. They refused to let us give them anything for their courtesy, but finally consented to our putting a couple of francs in the poor box. After we had seen the monastery, we went to the Grotto aux Fées, an underground passage nearly a quarter of a mile long, which went into the side of the lofty cliff I mentioned above.

[May 21st.—I take up my account in a guest chamber of the famous Hospice of St. Bernard, at the top of the Grand St. Bernard Pass from Switzerland into Italy. How we got here and the reception we received, I shall tell later. It is certainly the most interesting adventure of my life.]

The grotto ended in a good-sized subterranean lake into which a cascade poured. It was all quite suggestive of Jules Verne. After leaving the grotto we went back to the hotel for lunch; and then started out again on our wheels for Martigny, about fifteen kilometers away. On the road, we passed a lovely cascade three hundred feet high at Evionnaz and a magnificent narrow cañon, the Gorge de Torient at Vevey. We stopped at the latter place and walked a quarter of a mile up the gorge. It was a magnificent spectacle. We passed along a little wooden gallery which was suspended from the rock, some thirty feet above the torrent, and were soon shut in by the huge crags on either side. A narrow blue strip above us was all we could see of the sky. A ride of a few minutes more brought us to Martigny where we put up for the night. We decided before we went to bed that our next expedition would be to the Hospice of the Grand St. Bernard and we set out accordingly the following morning with our bicycles loaded—with S— on a stout mountain wagon. I preferred to walk all the way, but would not have done so, had I known of the hard pull we were to have at the end. We stopped for lunch at a little village called Orsines and arrived at the end of the carriage road at half-past four—in the little village at Bourg St. Pierre.

I had got far ahead of the carriage, and when it came up, I found that S— had picked up one of the Hospice brothers who was returning from a little vacation. We stopped to rest at the Dejeuner de Napoleon, and then started up the mountain, leaving our bicycles at the hotel. S— took a mountain wagon as far as the first stop, a little house called the "Cantine," and then rode horseback as far as the road was passable. We were then all provided with Alpine-stocks and started up across the snow. When about half-way up the last stretch, a thick snow storm began, and we should certainly have had to turn back if it had not been for our guides, the monk and a pupil of his at the monastery. S—'s strength began to give out early, and I had to help him a good deal. When we were about half an hour from the Hospice, the monk and the guide began to halloo, as it had been telephoned from the "Cantine" that we were coming and we expected a monk to come out to meet us.

After a good deal of hard, slippery climbing over ten feet of snow, we were cheered by the answering shout of a monk who now appeared in the darkness ahead. He brought with him a leather flask of wine and some bread and cheese. We all took some and were much refreshed. If it had not been for this help, I do not know what we should have done. The new monk and I pulled and pushed S— along, until my place was taken by the other brother. The relief of having only my own weight to carry enabled me to push ahead easily for a few rods and then suddenly my strength gave out. You see I had walked nearly forty miles, and during the last five had had to pull S—, who was very weak; but fortunately we had not much farther to go. I climbed the last bit almost on my hands and knees. All of a sudden, I heard the monastery bell ring, and the Hospice loomed up close at hand. I followed the young student into a dark hall and from that into the kitchen. The sight there was one which I shall never forget. A huge range covered with pots and kettles gave out a cheerful light and heat, and by it was standing one of the monks, the cook of the brotherhood.

The kitchen was a low, vaulted room, with the walls covered with cupboards and various utensils, all in apple-pie order. The cook came forward cordially and shook hands with me, and then poured out some hot water into a bowl, which he told me to drink with a little wine. It warmed me up considerably, but I was still ready to drop with cold and fatigue. S— came in with the monks a minute or two afterwards, apparently less used up than I was. He said they had practically carried him part of the way. We were presently shown to our room and given a hot foot bath and a change of shoes and stockings. Then a hot dinner of beef and omelette was served us in the guests' dining-room, after which we went to bed. It was frightfully cold in spite of the abundance of bed clothing, at first, but I managed to get warm in time and slept pretty well all night.

It is still stormy to-day. I went down to the kitchen to get warm and then we had breakfast. The hall outside of the kitchen was occupied by the fine old St. Bernard dogs, who greeted me kindly as I passed. The man who came to meet us last night said he would have brought the dogs, only he hurried so on account of the storm that he did not have time to get ready. Imagine our being rescued by the Hospice dogs like the little boy in "Reading Without Tears!" That we were rescued from a fearful exposure, I have no doubt, as S— could not have gone on alone.

Hasn't this all been an interesting experience? Perhaps a little more so than you would like me to repeat.

Martigny, May 22nd.—The snow storm increased in fury all yesterday and continued through the night. We thought we should have to start out sometime, however, so we came down with a good sized party of working-men this morning. It was very easy for me, but S— gave out, when about half-way down, and we had to support him most of the time. Though he came out all right when he had had an omelette and some wine at the "Cantine." The rest of the way we had a carriage. The roads were so bad that we kept our bicycles in the carriage until within three or four miles from here and then I rode the rest of the way on my wheel.

So this adventure is over. What we owe to the Brothers Antoine and Lugin, it is hard to express. I thanked them as well as I could and told them they would have your gratitude as well as mine.

The Brothers are a noble set of men. Starting in at eighteen, the high mountain air ruins their health before they are forty. At all times of the day and night they have to be ready to go out at the risk of their lives to save lost travellers. Father Lugin who came to meet us told me that he once carried a man on his back for an hour through the snow. They never ask money for their services, but give gratuitous shelter and food to forty or fifty thousand travellers a year, including the working-men who are constantly going over the pass. Their lives are laid down for their love to God and their fellow-men.

They are such a calm, serious, yet thoroughly cheerful and agreeable set of men, that one cannot but be touched just to see them, especially when one has tasted their hospitality as we have done.

We are going back to Montreux to-morrow, stopping one night at Bex. From Montreux we shall probably go in a day or two to Geneva where I shall mail my next letter. * * *

LETTER FROM NEW YORK.

(BY AN OCCASIONAL CORRESPONDENT.)

September 1st.

During the week of the solar eclipse on your side of the globe, part of last month, we on this side were sweltering under the most terrific and protracted torrid wave experienced in the history of this city or country.

Nine days continuous temperature at 99 to 102 in the shade produced over a thousand fatalities and several thousand prostrations in the metropolis. This is equal to an epidemic. The whole of July recorded but 918 deaths in New York City. Fevers and various diseases followed in the wake of the torrid term—causing unprecedented mortality for August in this city. The municipal order for the demolition of several blocks of rear tenement houses (which Jacob Riis terms the "cave-dwellings of civilized (?) New York") had been now too soon promulgated. Every citizen approved the wisdom of this act.

Reports from all over the country concerning the excessive heat those nine days were of similar nature. One place out west reported fifteen days at 101 in the shade.

Every American citizen, interested in the progress of science—and many there are—rejoices in the successful observation, though not completely

so, of the Solar Eclipse by the American Expeditions to Japan. Miss Proctor, daughter of the late astronomer, Richard Proctor, who has just returned from Norway, was the most successful of all scientists sent out from this continent. She is preparing already to go to India in 1898 for the next eclipse.

The official reports on the eclipse last month are awaited with deep anxiety.

The political contest is already monopolizing the attention of the people as never before. The campaign really began six weeks prior to the usual time, i.e., before September 1st, because the interest had become so intense. Even the women have become more deeply absorbed in the issues than ever before in the history of the nation. "Women's Auxiliary Leagues" are being organized here and there similar to those connected with Grand Army of Republic, Law and Order League, &c.

Four years ago some 12,000,000 votes were polled, in the last Presidential Election, out of 15,000,000 eligible voters. It seems already assured that next November will witness the largest proportion of ballots cast ever known in the United States. The entire 16,000,000 eligible citizens will doubtless exercise their sovereign right of suffrage—as the contest is so close.

The Presidential Candidate Bryan has a unique attraction in Mrs. Bryan's accompanying him everywhere over the country. She has power herself, a "power untold" in the canvass thus far, winning the highest encomiums from the adherents of all parties. Her husband's helpmeet politically also she claimed to be. It is questioned, however, by not a few whether Mrs. Bryan can be commended for such a course in the public campaign. All business is at a stand-still. The suspense of these coming two months is seriously apprehended by all classes. It is acknowledged by every citizen that there never has been such a crisis, politically and financially, since 1860,—issues preceding the late Civil War.

In the marriage last Thursday, Aug. 25th, of Miss Gertrude Vanderbilt, elder daughter of Cornelius Vanderbilt, to Hon. Payne Whitney, son of ex-Sec. Whitney, some fifty millions of dollars were linked together. Bride and groom represent two of the wealthiest families of America. Each is expected to receive, as his or her portion, some twenty-five millions. Sufficient to begin life with comfortably! Playmates as children together in their homes, opposite each other on Fifth Avenue, this it is considered a true love match extending through years past. The wedding ceremony and all appointments thereto, at the palatial summer residence of the bride's father at Newport, were of the most refined and unostentatious yet regal character.

Severely in contrast was this wedding was that of her cousin, the Duchess of Marlborough—née Consuela Vanderbilt—some months ago, where the vulgar display of wealth and extravagance was so unpleasantly prominent as to shock the refined and cultured, especially in the United States.

The "Diary of a Japanese Convert"—Kanozo Uchimura—brought out this year by the Keiseisha, Kyobashi-ku, Tokyo, and by a Chicago publisher, is attracting marked attention in this country. Formerly a student at the Agricultural College, Sapporo, and then spending five years in the United States, Mr. Uchimura is led to write his experience and impressions. He is a keen observer of men, and principles underlying action, and wields a trenchant pen. He is a philosopher evidencing a judicial mind. Although not "to the manner born," in the English tongue, yet his style is most fascinating and his mastery of the English language marvellous.

He presents clearly the distinction between the false and the true in both nations, in religion and civilization of both Japan and America; between the principles and truths of Christianity and the inconsistent exponents of the followers, both as labourers in the Mission field and citizens in this country. His facile pen portrays vividly the excrescences of Christianity, and with scathing irony, but sadly true to life, describes the idols worshipped by Christians at home and abroad.

The publisher's note in truth says:—"So far as we know, it is the only book of this kind ever written in any language." This work from the pen of Mr. Uchimura will doubtless have a wide circulation on both sides of the Pacific Ocean, attracting readers from all classes.

Six weeks ago the National Capital was besieged by some 36,000 young people from every State and Territory, and a few representatives from every country on the globe. This cosmopolitan gathering was not political: It was the Christian Endeavour Convention—the fifteenth international.

For six days the "Endeavours" captured Washington, predominating at, if not controlling, hotels, public buildings, streets, trolleys, parks, &c.

The three tents, each accommodating 12,000 persons, were filled morning and evening, and the programme was unusually good. Next year the convention goes across the continent to San Francisco, and in '08 to Nashville, Tennessee, the first time in the South. Dr. Francis E. Clark, the founder of the organisation, and his wife, have just embarked for a year's tour in Africa and Europe in the interest of the movement.

At this writing all New York is astir. The Viceroy Li Hung-chang has just arrived from Europe, *en route* home. His official designation as registered at the Hotel is:—"His Excellency Li Hung-chang, Special Envoy of China, Senior Guardian of His Apartment, Earl of First Rank, Prime Minister of State, with title of Su-yi." For ten days His Excellency is to be the Nation's guest. Elaborate preparations were made weeks previous for receiving this honourable visitor. Some fifty-two rooms have been assigned the Viceroy and his suite at the Waldorf Hotel, the famous hostelry for entertaining Royal and Princely visitors. A special kitchen for His Excellency's Chinese Chief and Aides was set apart. Civic, Military, National, Municipal and Diplomatic—all vying with one another in their eagerness to do honour to the Oriental statesman, before delivering him over to the Canadian authorities at Montreal. Thence direct to Vancouver, where he is to embark for his home-land via Japan. It has been reported the "hoodlum" classes in California are so bitter in their antipathy that it was not safe for the Earl to pass through the Golden State or embark from our American Pacific coast.

A few months ago Marquis Yamagata was our honourable guest, likewise attracting attention and receiving unbounded hospitality, as a highly distinguished visitor. But in marked contrast there was not the least antipathy or ill-feeling lurking anywhere in the whole United States towards the noble Japanese warrior and statesman, as has been unfortunately bruited in relation to our eminent Chinese Envoy. Individual liberty in America, as elsewhere, has been too frequently prostituted into unbridled license.

The eminent jurist and publicist Lord Chief Justice Russell will carry back to England the very warmest admiration and deepest appreciation from the American people. His timely visit this summer and his able papers on International Arbitration before our National Bar Association can but more closely bind in fruitful harmony the two great Anglo-Saxon speaking nations. Mr. Secretary Chamberlain is expected soon to visit Mrs. Chamberlain's home in Massachusetts. While not on any official business, yet the British Secretary expects to meet Secretary Olney for a conference, before he returns to London, which may have important bearing on the Venezuela and Permanent Arbitration questions.

As I close this for the mail, Vermont sounds the first gun of the campaign, her gubernatorial election occurring to-day. Republican majority 35,000. This is nearly twice as large as has been given at any previous choice for Governor in the history of the State. McKinley's hosts are unbounded in their enthusiasm to-night from Maine to California.

THE U.S. CONSULATE-GENERAL COURT.

Before N. W. McIVOR Esq., Consul-General
and Judge.—MONDAY, October 12th.

CHINA AND JAPAN TRADING COMPANY V.
A. WESTON.

Judgment was delivered in this case on Monday afternoon. Mr. Lowder was present on behalf of the plaintiffs, Mr. Seidmore representing defendant, Captain A. Weston.

His Honour said—This is an action brought to recover yen 106.62, the amount of damage alleged to have been caused by water, between the evening of the 28th June and the morning of the 29th June, 1896, to a shipment of 200 bags of Nitrate of Soda, ex steamer *Glamorganshire*, against the defendant, A. Weston, landing agent, the damage claimed being charged to the negligence of the defendant in not sufficiently protecting the goods after they were landed on the Customs jetty at Yokohama. The pleading and arguments present several issues both of law and fact, and are supported by Counsel to call for a decision of this Court defining, to a large extent, the duties and responsibilities of a landing agent, under the customs and conditions existing in the port of Yokohama, or, to speak more exactly, the main point upon which a decision is sought, is as to the extent of the duty and liability of a landing agent in the course of his business as a carrier and handler of

general cargo—whether or not his liability as a common carrier (the existence of which is, I think, properly admitted) ceases upon the deposit by him of the goods entrusted to his care in the place designated in his contract of carriage; whether or not, if such farther liability exists, it is that of a common carrier, a warehouseman, or what it is, and what duties it imposes. I cannot reach the conclusion that the scope of the decision called for by the evidence is necessarily or properly so wide as stated; the laws of the United States, in common with those of other systems, permit the making of contracts by individuals without governmental interference. Since this permission is accorded, the will of the individual parties as it appears in the contract, whether express or implied, is "the law of the case" when it comes before a Court of Law. It is the province and the duty of the Court first to determine, on the evidence offered, what the terms of the contract are (generally a question of fact); then to determine what laws apply, and what the result or effect of their application shall be. The case at bar is one which is based upon a contract (admitted) between the plaintiff and defendant. It is to be regretted that this contract is not one expressed wholly, or in part, in written or spoken words, but is one which is implied and seems to rest solely on the custom ruling, in a mercantile or business sense, in the Port of Yokohama. The laws governing judicial procedure permit the introduction of evidence as to custom to explain or even to extend the terms or provisions of a contract, upon the theory that where doubt exists as to the intention at the time the contract is entered into, terms which are proved to be in accord with established local custom where the parties reside and do business, will be supposed to have been within their knowledge, and an intention to incorporate such terms in the contract will be presumed; but it is most unusual to find a contract resting entirely on implied terms based wholly on custom. The existence of a contract between the parties is alleged in the plaintiff's petition and admitted in the defendant's answer, and the Court does not discuss the matter except to call attention to the fact that the conditions referred to have greatly increased the labour of determining what the terms of this contract were, it being necessary to depend entirely on evidence of general custom in reaching a conclusion as to the terms and extent of the contract set up. It is a fact to be noticed that the evidence offered as to custom was most conflicting, and was, most of it, furnished by witnesses of little technical experience, in the employment and interest of the plaintiff, and of the defendant in the handling of this shipment, each of whom must have felt that if the omission of duty which caused the damage were held to be that of his employer, the moral responsibility must necessarily fall upon him and his associates. But one expert witness (Mr. Paul Helm) was called, having no interest whatever in the adjudication of this case, or in the judgment rendered as affecting matters arising in the future; a witness, whom it appears, from the evidence, had been, for some years, the principal, in fact the only, competitor of the defendant at Yokohama in the landing business, but who had sold out and retired from the business some two months before the occurrences on which this action is based. Now what was this contract? It seems that it consisted of an undertaking on the part of the defendant to convey 200 bags of nitrate of soda from the S. S. *Glamorganshire* to the Customs compound in Yokohama, upon the understanding that the plaintiff was to pay the customary charge for such landing. This contract is clearly, I think, distinguishable from that which formed the basis of the action in *Mitchell v. Lancashire and Yorkshire Railway Company*, principally relied upon by the learned counsel for the plaintiff, and other cases cited on the same point. In the case cited it is supposed that the contract sued on was based upon an undertaking on the part of the defendant Railway Company, to transport certain merchandise from one station to another, and a knowledge of the universal custom of railway corporations, justified both consignor and consignee in supposing that a further duty would be performed beyond the carriage, viz., the depositing of the merchandise in the warehouse of the railway corporation until it could reasonably be received by the consignee: in other words, the undertaking was more than one of carriage, it was an undertaking to transfer certain goods from one warehouse to another, both of which were under the control of the defendant, and there to protect them until notice of readiness to deliver could be given to the consignee. Upon the arrival of the goods they were not housed but were piled in the open air, and exposed to rain which damaged them, and the court held that the railway corporation had not performed its contract fully and was liable to the damage resulting from such failure, even though the plaintiff was

most dilatory in taking delivery, the learned judge who decided the case, making use of the following words:—"These were goods which could be taken care of and remain at the defendant's (Railway Company's) station." In the case at bar the undertaking seems to have been a very different one. The evidence shows that Mr. Weston (the defendant) undertook to transfer certain perishable or easily damaged goods from a ship to the compound of a third party (the Imperial Customs at Yokohama). It also shows that, though he, to some extent, controlled a warehouse on this compound and used it for the storing of goods brought on shore by him, it was the property of and ultimately controlled by the third party, the Yokohama Imperial Customs officers. It also appears that this third party had, some time ago, promulgated and has since acted upon a regulation prohibiting the storing of nitrate of soda in any sheds or warehouses on its compound, and that this regulation was known to both plaintiffs and defendant; that the arrival of this cargo in the harbour was known to the plaintiffs on or about June 22nd, 1896; that it was actually landed about the middle of the afternoon of the 26th June; that one or more agents of the plaintiffs were charged with inspecting cargo delivered from ships, and, so far as I can judge from the evidence, should have known of the landing of these 200 bags of nitrate of soda; that it was not the general custom, nor was it expected, that the landing agent should secure the passage of goods landed by him through the Customs, but that it was the business of the consignee (in this case, the plaintiffs) to take delivery within the Customs compound, and attend to all the details required for freeing them from duty charge, that there was little free space in the Customs compound on the 26th of June, and that defendant's agents at the time of landing the goods piled them up outside of the warehouses and sheds on the ground, without placing "skids" or dunnage under them, at a point near the stone-faced edge of the jetty, and afterwards covered them with tarpaulin; that they so remained with the plaintiff's knowledge until the night of the 28th or the early morning of the 29th June, when a heavy fall of rain more or less flooded the compound and damaged the goods from below, the damage being noticed by the plaintiff's agents the next morning. It is unnecessary for the court at this time to announce an opinion as to the duty of a landing agent after the deposit of goods on the public compound, in the case of general cargo, which the regulations of the compound permit to be stored in a place of safety, attention being directed, in this case to goods of a particular and peculiar class, perishable or easily damaged goods, which are excluded by regulations, having the force of law, from the sheds and warehouses of the public compound, on which the defendant was required by the terms of his contract to deposit them. On these facts, since the plaintiffs had knowledge of the perishable nature of the shipment consigned to them, and of the regulations governing its bestowal upon land, it was incumbent upon plaintiffs to use more than ordinary diligence in taking delivery and transferring to a place of safety. I am of the opinion that the plaintiffs failed to take delivery of and remove these goods within a time after their landing, which might, on the evidence in this case, be considered a reasonable time, since they could have removed them on the afternoon of the 26th, on the 27th, or the 28th, and that the failure to do so contributed directly to the damage complained of. Judgment will be entered for the defendant. Costs will be taxed to the plaintiffs.

H.B.M. COURT FOR JAPAN.

Before R. A. MOWAT, Esq., Judge.—TUESDAY,
October 13th, 1896.

ELIZABETH DIACK V. JOHN DIACK.

In this case, Mr. J. F. Lowder represented the plaintiff, Mrs. Elizabeth Diack, of Aberdeen, Scotland, and Mr. H. C. Litchfield, the defendant, Mr. John Diack, builder and contractor, of No. 111, Bluff, Yokohama.

Plaintiff's petition showed:—

1. That defendant is the husband of the plaintiff.
2. In the month of January, 1888, an agreement was made between the plaintiff and the defendant, by which, in consideration of the immediate payment by the defendant to the plaintiff of the sum of £60 as an allowance towards the maintenance of the plaintiff for the year 1887, and of the undertaking of the defendant that he would thereafter make the plaintiff an annual allowance of £60 to be paid in two equal instalments of £30 in the months of January and July in every year, the

first of the said installments to be paid in the month of January, 1888, the plaintiff promised that so long as the defendant should continue to make the said payments as aforesaid, he should live free from claim, demand, or molestation, by or on behalf of the plaintiff his wife.

3. In pursuance of the said agreement the defendant on the 22nd day of January, 1888, caused to be delivered to the attorney of the plaintiff in Yokohama, a bill of exchange on London made payable to the order of the said attorney for £90, the same being in payment of the aforesaid allowance of £60 for the year 1887 and of £30 for the first six months of the year 1888, and the defendant thereafter continued to deliver to the attorney of the plaintiff in Yokohama in the months of January and July of each year, a bill of exchange on London for the sum of £30, for which the defendant on each occasion demanded and was furnished with the receipt of the said attorney. But in the month of July last, an installment of £30 falling due to be remitted, the defendant refused to pay or remit the same, first, unless and until he should be furnished with what he might consider to be a valid acquittance showing that the remittance immediately preceding that which fell due to be remitted on the 20th day of July, 1896, had been applied to the purpose; secondly, unless and until he should be furnished with such a certificate as in his opinion would be valid showing that at the latest reasonable date, the plaintiff was still alive.

4.—Prior to the making of the agreement in paragraph 3, hereof, the defendant by his Counsel had demanded and had been granted inspection of the power of attorney given by the plaintiff to her attorney in Yokohama, by which it is provided that the receipt of the said attorney shall be a good and valid discharge for all monies paid to him on behalf of the plaintiff.

The plaintiff therefore prays:—

1. That the defendant may be ordered specifically to perform the agreement made as aforesaid on the 27th day of January, 1888.
2. That the defendant be ordered to pay the costs of this action.
3. That the plaintiff may have such further and other relief as the nature of the case may require, or as the Court may see fit.

The defendant's answer was as follows:—

1. The defendant admits the agreement mentioned in paragraph 2 of the petition, and says he has always been willing to pay the sums of £30 in the month of January and £30 in the month of July in each year, during the life of the said Elizabeth Diack, upon having sent to him evidence that the said Elizabeth Diack is still alive, or was alive at a time approximately near to the date of each of the said payment coming due.

2. On the 12th July, 1893, the defendant wrote to the plaintiff's Counsel as follows:—"J. F. Lowder, Esq.,—Dear Sir,—Please find herewith first and second of exchange for £30 sterling (thirty pounds) on Hongkong and Shanghai Bank in your favour in payment of the allowance to my wife up to the 31st January, 1894, which please to be so good as to send me a receipt. To prevent irregularity, before making any further payments, I have to request that on each occasion your client may be called upon to furnish me with a certificate from a well known resident of standing in the locality where she lives showing that she is still alive.—Yours faithfully, J. Diack."

3. On or about the 22nd October, 1893, the defendant received the following certificate:—"J. Thomas Roberson Gillies, Advocate, Notary-Public, do hereby certify that Mrs. Eliza Diack, wife of John Diack, No. 11, Bluff, Yokohama, was alive on the 2nd day of September, 1893, and that I personally paid to her the half-year's allowance of £30, paid in terms of agreement, by her said husband, and I undertake personally to pay to the said Mrs. Eliza Diack, all further remittances from her said husband, or to account for any remittance that may be received by me on her behalf should she predecease the date when the same became due. Signed and sealed at Aberdeen, the 7th day of September, 1893. [Notarial Seal.] Signed, T. R. Gillies."

4. The said T. R. Gillies is the attorney in Scotland for the plaintiff who has instituted these proceedings.

5. Other letters have passed between the defendant and T. R. Gillies, in one of which dated 4th March, 1896, said T. R. Gillies stated that the defendant was "of course entitled to an acquittance and a satisfactory certificate of survival at the date when each instalment was paid." But the defendant has received no notice or certificate of any kind that the plaintiff is alive, or that she has been alive in 1896.

6. The defendant has offered to deliver to the plaintiff's Counsel in Japan, a draft dated 28th July, 1896, for £30 upon receiving evidence that

the plaintiff lives, and he now brings into Court the said draft.

7. The power mentioned in paragraph 4 of the said petition does not survive the said Eliza Diack.

8. The defendant does not consider a certificate of survival which is given by a relative or person interested in the case, or the attorney or agent of such person, to be a valid certificate of survival.

Mr. Lowder said—This case is based upon the terms of the agreement set out in the petition of the plaintiff and which has been admitted by the defendant.

His Honour—I think that was understood in advance.

Mr. Lowder—The evidence for proving my case rests entirely in the correspondence that has passed, and which has been admitted by both sides. I will read this correspondence, in its proper sequence, to the Court, for it will tell its own tale much better than I can. The agreement having been duly agreed to, I received the first letter that I now intend to put in. It was from my learned friend, Mr. Litchfield, and was addressed to me under date, January 27th, 1888. It ran:—

"I enclose sight draft for £90 payable to your order, this sum being the allowance agreed upon for Mrs. Diack for 1887, and the first half of 1888. Be good enough to sign the accompanying agreement on the part of Mrs. Diack.

I am, etc., Henry C. Litchfield."

To this I replied by giving the following receipt:—

"Yokohama, Japan, 28th January, 1888. Received from Mr. John Diack, Thirty Pounds (£30) half yearly allowance to Mrs. Diack for the six months ending 30th June, 1888—£30.0s.0d.—E. H. Diack, by her attorney, J. F. Lowder.—From this it will appear that the agreement was drawn up for the defendant by my learned friend and signed by me as attorney for the plaintiff. Thereafter, instead of receiving the £30 every half-year through Mr. Litchfield, I received them direct from defendant: that is on the 25th July, 1889, and twice every year in 1890, 1891, 1892, till 1893. I received payment of the money direct from the defendant, in this form:—

"111, Bluff, Yokohama, 25th July, 1889—J. F. Lowder, Esq., Dear Sir—Please find first and second of exchange enclosed for Thirty Pounds sterling (£30) in your favour in payment of the allowance to my wife up to January, 1890—for which please send me a receipt.—Yours faithfully, J. Diack."

But on the 19th July, 1893, a remittance then falling due, I received the letter from Mr. J. Diack that is set out in the plaintiff's petition. I acknowledged this letter the same day, and in the course of my reply said:—"I shall of course forward to her a copy of your letter, and of this reply; but in the meantime you must not understand me as acquiescing in your demand, or as in any way binding my client to enter into a new agreement with you. The condition you seek to impose would be impossible to fulfil, considering the distance between this and Scotland, on the occasion of each payment,—even although there should be no other objection thereto, as to which I am without instructions." After this date—July 19th, 1893—I continued to receive from Mr. Diack the same kind of letters that I had hitherto received. I will put in two such letters, which your Honour will see are in the same form of words as the one dated 25th July, 1889.

His Honour—Then the position he assumed in the letter of July 19th, 1893, he apparently abandoned—he abandoned apparently the intention there expressed?

Mr. Lowder—Yes; he had apparently abandoned the intention. He goes on making the payments as before notwithstanding the letter he had sent me in July, 1893, and I put in the letters covering drafts dated 22nd January 1894, 1st February 1895, and 31st July, 1895. All are in the same form, until we come to the 30th January, 1896. On that date he writes me:—"Please find enclosed first and second of exchange for thirty pounds (£30) sterling on the H.K. and S. Bank drawn in my name and endorsed by me in payment of the allowance to my wife up to the 31st July, 1896, for which be so good as to send a receipt to, Yours faithfully, J. Diack."

Appended to the draft is a press copy of a letter addressed to Thos. R. Gillies, Esq., Advocate, etc., Aberdeen. Defendant's letter to Mr. Gillies, of which a press-copy was forwarded by him to Mr. Lowder was then read by Counsel. The writer stated that he was advised that he was entitled not only to the certificate asked for before making a payment, but also for a legal acquittance showing that the money had been applied to the purpose for which it was sent; failing the same, he said that he would decline to remit further sums. Defendant added:—"And I here state,

once for all, that I decline to accept as valid any such certificate and acquittance from anyone through whose hands the money may pass in transit, or from my son William, or any of his or of your client's relatives." In the same letter defendant informed Mr. Gillies that, "should any drafts reach him after defendant's wife's death, he, Mr. Gillies, was in no way authorised to cash them, and that he, the defendant, would not be responsible for any debts incurred by his wife."—Mr. Gillies, I may mention, said Mr. Lowder, is the solicitor for plaintiff in Scotland. Prior to this letter, and in reply to a letter in 1893—I should have read it before—Mr. Gillies wrote on the 7th September, 1893, enclosing a certificate. Mr. Gillies' reply, dated 4th March, 1896, to defendant's letter was then read. In the course of the epistle, the writer said:—"You are, of course, entitled to an acquittance, and also to a satisfactory certificate of survival at the date when each installment is paid." He also said that he had been "in the way of giving certificates of survival in connection with annuities and pensions as a Notary Public and these were accepted by Government Departments." No farther correspondence on this particular subject took place until the 30th January, 1896, when the defendant wrote to Mr. Lowder the letter just quoted, and which contained the Post Scriptum, "appended to this is a press-copy of a letter sent to Mr. Gillies."

His Honour, interposing, inquired why the drafts were not made payable to the plaintiff; that would have been a most sensible course to pursue.

Mr. Lowder—If the suggestion your Honour has just made had been in mind when the agreement was drawn up, this case could never have been brought into Court at all.

His Honour—It seems to me that the course pursued was most undesirable. If Mrs. Diack had had the drafts made payable to her, she would have had to endorse them to obtain the money, and no bother would have resulted.

Mr. Lowder—There would then have been no occasion for bringing the case into court.

His Honour asked if the course suggested could not be pursued in future?

Mr. Lowder—What I ask in the petition is that the defendant be ordered to specifically discharge the terms of the contract, with the variation that the drafts be made out in plaintiff's name and that they be made payable to her in the month of January and July.

His Honour—With only a difference in the payee?

Mr. Lowder—Without going any further in the case, I am prepared to accept a decree of the Court in such terms, if the other side will agree.

His Honour—Mr. Litchfield, what have you to say to that?

Mr. Litchfield—At present we are not aware whether Mrs. Diack is alive or not.

His Honour—I just now threw out a suggestion, which, if it is agreeable to both parties to adopt, would dispose of the case. I take it that you are pretty well aware that Mrs. Diack is alive, or rather you do not doubt that she existed at the time when the last payment was made in July.

Mr. Litchfield—We want a certificate that she was alive at some time approximate to the date of the payment of the last £30.

His Honour—You want to know some date; that is what you want is it not?

Mr. Litchfield—Some date approximate to the time of payment.

His Honour, turning to Mr. Diack—Have you any doubts as to the existence of Mrs. Diack?

Mr. Diack—I don't know whether she is dead or not?

His Honour—There are many things we do not know. What I ask you is, have you any reasonable doubts as to her existence?

Mr. Diack—I have some doubts.

His Honour—Very well, then the case must go on. I only thought that if you had no doubts, reasonable doubts, we might have arrived at some arrangement and so close the case. You mentioned some relatives in one of your letters, would you not believe them on the point, supposing you applied for the information?

Mr. Diack—I would not believe anything that my son would write.

Mr. Lowder—I will put in a reply sent by Mr. Gillies, dated March 4th, 1896; and then we will come to a letter from defendant written to Mr. Gillies on the 28th May of this year.

Counsel proceeded to read the letter to Mr. Gillies from a press-copy-book belonging to Mr. Diack, and had not gone far when

His Honour asked what bearing it had on the case. He thought that it was merely fault-finding with the attorney in Scotland, Mr. Gillies.

Mr. Lowder thought the letter had better be read, he had not seen it before but would like to

introduce it in order that Mr. Gillies reply could be put in. Proceeding Mr. Lowder read:—"I (Diack) hold receipts from Mr. Lowder showing that the several drafts passed into his hands, but that is no security of what becomes of the money afterwards; besides Mr. Lowder is a man in whom I have no confidence. [Mr. Lowder at this point stopped his reading for a moment and remarked, with a smile, that although he had not read or seen the letter before, he had no fault to find with it. He then resumed reading.] "So much so, that some nine months ago, when waited upon by a valued client in connection with some proposed work, I chose to risk giving him serious offence, by distinctly and decidedly refusing to have anything to do with any business of any kind with which Mr. Lowder was connected. I have not changed my opinion of him since, and I certainly do not feel disposed to entrust him with money without security; nor am I disposed to hold any communication with him of any kind whatever." Continuing, Mr. Lowder said—"Mr. Gillies sent me the reply that he made to this note. In this letter, dated 10th July, Mr. Gillies wrote to the defendant suggesting that if his bankers or solicitors would make inquiries either at the agent of the Royal Bank of Scotland in Aberdeen, or of Mr. James Fraser, of the Chartered Bank of I. A. & C., London, he thought that they would receive information that would satisfy them. We now come to the 29th July of this year, when Mr. Diack, the defendant, wrote me the letter that appears in the petition. The next letter came from my learned friend on the 20th August, 1896, and then these proceedings were instituted. Having read the correspondence I have now laid before your Honour, you will better understand the pleadings, that I now intend to read.

His Honour—You need not read them unless you like.

Mr. Lowder—Very well, your Honour. I now submit that my client is entitled to the decree that is set forth in the prayer of the petition.

His Honour—All the letters and the agreement are put in by consent?

Mr. Lowder—Yes. Your Honour will perceive by the agreement that the defendant in the months of January and July agrees to pay the sum of £30 to the plaintiff, his wife; that in the beginning, as the first letter shows, Mr. Litchfield sent the draft to me. Then Mr. Diack sent the drafts to me direct, and I sent them on through the plaintiff's solicitor. There is no question in regard to that. Now the defendant comes in and claims that a certificate should be furnished him some six weeks before the date of the payment of the money, to show that his wife is still alive. Such a certificate, I cannot agree to give. I now ask that the agreement shall be carried out specifically by the defendant and that he procure a bank bill payable to Mrs. Diack, which she shall endorse and present to the bank, so that sufficient money reaches her hands. I ask the Court to make the decree prayed for.

His Honour—I understand that you ask that the agreement be varied to payment six weeks earlier than the dates mentioned here?

Mr. Lowder—So that payment may be made to her on the dates mentioned; that is but a specific performance of the agreement itself.

Mr. Litchfield—The agreement, now asked by plaintiff to be specifically carried out, is an agreement of non-disturbance, by which the plaintiff agrees, in return for regular payments of certain sums of money, to abstain from molesting her husband. That agreement must be carried out while this person is alive, or remains alive; therefore it continues for a period, an undefined period, during which defendant is bound to comply with it. Now when the plaintiff comes into court and asks that the agreement be specifically carried out, the first thing one expects and asks to find is some satisfactory evidence that the person is alive. Of such evidence there is none before the Court. The other side is absolutely silent on the point.

His Honour asked Counsel what he wished the Court to find?

Mr. Litchfield—To order evidence on the point whether the plaintiff is alive or was alive in July of this year.

His Honour—On what date?

Mr. Litchfield—Some approximate date in July.

His Honour—Will you fix a date?

Mr. Litchfield—Say the 28th July.

His Honour—You want evidence of her existence on the very date the draft was obtained. Such evidence would be difficult to get, except by telegraphing.

Mr. Litchfield—I submit that the Court can not deal with the matter of a person of whose existence it has no knowledge. I submit that, before payment can be made on the agreement, that evidence must be forthcoming of her existence at the date of the drawing of the draft.

His Honour—Would six weeks before the 15th June do?

Mr. Litchfield—Yes, but I submit that no such evidence has been produced.

His Honour—That is clear. The question is, are you, on the agreement, entitled to such evidence.

Mr. Litchfield—I submit that I am.

His Honour—Does the agreement entitle you to such right? Where does it state so?

Mr. Litchfield—The agreement is silent on the point. It does not appear on the agreement.

His Honour—Yet you say, standing on the agreement, you are entitled to such evidence. The thing must of necessity be mentioned if you wish to adduce that from it.

Mr. Litchfield—The contract says nothing about it; but we do not know whether she is alive or not, and I contend that it is only reasonable for us to have evidence produced to show that she is still in existence. On 7th Sept., 1893, Mr. Gillies gave a certificate under notarial seal, from which we gathered that plaintiff was still alive, but since then both Mr. Gillies and my learned friend have refused to furnish any such certificate of survival. A certificate of survival is the simplest thing imaginable. It may be given by the annuitant, be signed by her and then properly attested by a responsible party; it may emanate from her butcher or baker, and be attested by a person of standing. But when we find the other side refusing to furnish this simple form of evidence, I think that it is most reasonable for the defendant to be suspicious and for him to insist on evidence being produced to show that plaintiff is alive at the time of her making application to this Court for a decree ordering defendant to make specific performance of the terms of the agreement. This has not been done.

His Honour—That has been admitted.

Mr. Lowder—It was impossible to obtain.

His Honour—Well, we are in the month of October now.

Mr. Lowder—We did not undertake to furnish such information; although it might possibly have been got.

Mr. Litchfield—Until the existence of this person is proved the Court cannot make the decree. Letters have been put in showing that defendant is ready and willing to perform his part of the agreement if it can be shown that the annuitant exists. To me it seems not only logical, but also reasonable that the defendant should be assured of the annuitant's existence.

Mr. Lowder said that he was unable to explain why the draft of Sept. 13th had not been acknowledged. He had no evidence to lead upon it. He did not admit the right of the defendant to call for evidence of survival. The absence of such evidence was no excuse for not tendering payment of the money when it became due. To say that plaintiff may be dead was no excuse for non-payment. The presumption was that he was alive in the absence of evidence to the contrary. There was nothing in the agreement to show that the defendant was entitled to the evidence he asks for now demanded.

His Honour—Do you say that the defendant was bound to pay the £30 in January and July as the months came round?

Mr. Lowder—Yes.

His Honour—Unless he has evidence to prove that the plaintiff is no longer alive?

Mr. Lowder—It was for him to make the payments. Distance made no difference in the agreement.

His Honour—Your contention is that the burden of proof as to non-existence rests on him, not on you?

Mr. Lowder—Yes.

His Honour—The agreement is unconditional during life?

Mr. Lowder—Yes.

His Honour thought that it was rather the custom for lawyers to affix to such agreements a clause "upon proof of existence"; it would have saved much bother in this case.

Mr. Litchfield—There is no such condition in this agreement; but one naturally suggests that the relations of husband and wife cease with death.

His Honour—If such a clause had been put in this agreement it would have made it perfectly clear. Lawyers sometimes meet these cases by framing such a clause. But we are often wiser after the event.

Mr. Litchfield—Very often we are, sir. I submit that we should be furnished with knowledge of the existence of the annuitant.

Mr. Lowder did not accept the term annuitant.

His Honour—I do not doubt for a moment that Mrs. Diack was in existence in June; what do you say, Mr. Diack?

Mr. Diack—I have had no correspondence with those parts for eight years.

His Honour—But if you wanted to find out

about the case, surely there is somebody whom you could communicate with?

Mr. Diack—There's not.

His Honour—I have thrown out the suggestion that if you wish to know whether she is alive or not, the difficulty could be got over by getting a fresh draft from the bank and making it payable to her.

Mr. Litchfield thought this would obviate the difficulty.

His Honour—It seems to me that this would settle the matter. If there is no one who could furnish the proof of plaintiff being alive, then for the future it would be the best thing to make the drafts payable to Mrs. Diack herself.

Mr. Lowder—That would be perfectly satisfactory; but as for furnishing a certificate of existence, I submit that it would not be fair to put my client to that expense.

His Honour—It would be very little expense.

Mr. Litchfield—A postage stamp.

Mr. Diack—But I want a certificate; Mr. Lowder's receipts are no valid acquittance.

His Honour—But if you make out the drafts payable to Mrs. Diack she alone can cash them; if she is alive she can cash them; if she is not alive she cannot cash them, and they return to you.

Mr. Diack—But I want a more valid certificate than Mr. Lowder's receipt that I shall not have to pay the money twice.

His Honour—The draft is not money until it is cashed; if it is made out to Mrs. Diack, she alone can cash it; there is no question of money or of her solicitor or Mr. Lowder.

His Honour said that if the defendant agreed to the taking out of a fresh draft and making it payable to his wife there would be an end to the trumpery case. Otherwise somebody would be put to the expense of spending more money upon it.

Mr. Litchfield—I see no objection.

Mr. Diack—I think I am entitled to know whether my wife is alive.

His Honour—I pointed out the cheapest way of finishing the case and furnishing the information. If I have to adjourn the case to-day more money will have to be spent. If I have to decide the case, I shall have to take time to read the letters through and the other documents.

Mr. Diack signified that he wished the case to go on.

His Honour then took down the heads of the arguments and reserved judgment.

THE INTERPORT CRICKET MATCH.

The following account of the first day's play in the Interport cricket match between Japan and Shanghai—played on Monday, Oct. 5th—is taken from the *North China Daily News*—

At a quarter-past eleven White and Tate opened the batting for Japan, against the bowling of Jackson (pavilion end) and St. Croix. The first ball from Jackson, White nicked for a single, and then his partner, a left-hand bat, gave a difficult chance to point, which was not taken. St. Croix's first over had a single hit off it to leg by White, and then a 3 by Tate, a nice stroke which was loosely fielded at long leg. White followed with a single. By singles runs came at a reasonable pace, to being hoisted on the telegraph board in as many minutes from the start. After a maiden over by Jackson, Tate, in trying to run 4 off a good leg hit by White, was run-out, a smart piece of throwing-in securing his wicket before he could recover his ground—14-15. The vacant crease was taken by Lucas, but he stayed only a minute or two, as after his partner had added a single he was bowled by Jackson, the ball breaking tremendously and completely mastering the batsman—15-20. It now looked as if Japan's tide of misfortune had set in, as Jackson's next delivery bowled Wilkinson, who had joined White—15-30. Townsend coming in made a single off Jackson, closing an eventful over in which two wickets had fallen for the addition of only 2 runs. The score rose by singles, 20 being reached half an hour from the start. Jackson had sent down two maiden overs in succession, and seemed in a fair way to make another, when White hit the last ball square to leg for 4. A couple of singles resulted from St. Croix's over and then, off a somewhat risky hit over square-leg's head, White made a 2. Mann relieved St. Croix with the total at 30, Townsend making a single off the last ball of the new bowler's over. A maiden over by Jackson was followed by a very lively one. White scored three 2's off Mann in succession, the first by a leg hit and the others by nice cuts, which so far had been conspicuously absent from the batting. The total had reached 40, when Townsend was bowled by Mann, having made 5-40 4-5. Walford, captain of the Japan team, now joined White, who continued to force the pace with a 3,

off Mann, whilst the new batsman contributed a single. The score aggregated 44, just an hour after the commencement, when White, in playing back to Jackson, was caught by Mann who was fielding just behind the wicket-keeper. White had played capital cricket for 30-44-5-30. Smith filled the vacancy and 8 runs were put on, when he lost his partner, who was bowled by Mann, with the last ball of an over which had had a 3 and a 2 made off it—52-6-5. Kingdon became Smith's partner at this point and started scoring with a couple of singles. Smith then had a distinct let-off, a ball which he had "skied" in the direction of square-leg being dropped by Cox. The batsman followed this up by a cut, from which a 4 was made, with the assistance of an overthrow. Kingdon, too, was evidently in a scoring mood, first Jackson and then Mann being hit for 3. In a quarter of an hour 20 runs had been put on, and the lively scoring was obviously to the taste of the onlookers. The substitution of Firth for Mann at the top end immediately had effect, Smith being caught behind the wicket by St. Croix off a high-hit ball—71-7-14. When he had made 9 Kingdon, who had been joined by Goddard, was missed behind the wicket-keeper, off Firth, and almost immediately after his partner had an escape from being caught at long-on, before he had made a run. The score was carried to 84 when Kingdon was bowled by Jackson with 14 to his credit—84-8-14. Robinson had no sooner taken his place at the wicket than the tiffin bell rang, the score standing at 84, Goddard being not-out 4.

Play was resumed at twenty minutes past two, Jackson and Firth still having the bowling. Two maiden overs were sent down, and then Goddard opened with a single and his partner with a 2 off Firth. Again there was a lull in the scoring, three maidens being bowled, when Goddard made a 2 off Jackson, followed by a single, but he was then bowled by Firth, having put together 8—90-9-8. Pearson was the last man in, but the second ball he received from Firth found his wicket, the innings closing at thirty-five minutes past two for 90; Robinson not-out 2.

The Shanghai innings opened at five minutes to three o'clock, when Firth and Lanning were sent in, Lucas, at the pavilion end, and Townsend sharing the bowling. Each bowler having sent down a maiden over, Firth opened the scoring with a leg hit for 2, followed with a nice cut through the slips for 3, both off Lucas. From Townsend's succeeding over one run was made by Firth, the batsman following this up with another single off Lucas. Townsend's high delivery with a good deal of break appeared to puzzle the batsmen somewhat, Firth doing what scoring there was. He drove Townsend for 4, and then a single, whilst off Lucas he made a cut for 2. Lanning began scoring with a very pretty cut for 4, off Townsend, and in the same over he added one more to the score. Firth went on with a 2 off Townsend, and a single off Lucas, Lanning also scoring one, bringing the total to 23, when Goddard took up the bowling from Townsend. Twice Lanning hit Lucas for 2, behind the wicket, Firth cutting the other bowler for 4. But then the bowler had his revenge as, with his third delivery, he bowled Firth, the score standing at 33, of which Firth had made 23. Jackson joining Lanning the score was steadily added to. The newcomer, off a pair of singles and a 2, made a hard cut off Goddard, which reached the boundary. Another bowling change was tried at this point, White replacing Lucas. The first ball from the new bowler went perilously close to Lanning's wicket, and a smart piece of fielding by Lucas, at point, of a hard cut by Lanning evoked a well-deserved cheer. A bowling change was made at the other end, Tate being substituted for Goddard. A single was made by Jackson off the first over. With the score at 42, Jackson was well caught at the wicket, off White, having made 9—42-2-9. Mann coming in scored a 2, and a 4 by a fine leg hit off Tate. Then he lost his partner, who was bowled by White, after having been in over three-quarters of an hour for his 11. The next man in was St. Croix, who, before he had made a run was missed by Walford, off White, and 2 was made from it, the batsman following up his escape with a good drive for 4. Just an hour from the opening of the innings the 60 was reached. A characteristic hit square to leg by Mann, which resulted in 4, was the next noteworthy incident, St. Croix playing cautiously and scoring by singles. Lucas again took up the bowling at the pavilion end, the score aggregating 71. Off him St. Croix made a 4 by a straight drive, but he seldom had a chance of indulging his partiality for leg hits and, as a consequence, runs came rather slowly. When the total amounted to 84, Goddard took the ball from Lucas, and off the last ball of the over Mann was out l-b-w. He had been batting for fifty

minutes, and had compiled 21. His successor, Tyack, had a very short life, for the first ball he received from Tate he played on to his wicket—85-5-0. Farbridge joined St. Croix, and a few minutes later the Japan score was equalled. White again went on to bowl and his first over received summary treatment, St. Croix making a brace of 2's and a 4, the 100 being posted an hour and fifty-five minutes from the opening of the innings. The run-getting continued at a very respectable pace, St. Croix after a 3 off White, hitting Tate in the next for over a 4 and a single. Then St. Croix gave what looked very much like a chance to the wicket-keeper when he had made 35. Farbridge was evidently bent on hard hitting, but until Lucas resumed bowling he had not been able to get hold of the ball. A fine hit to leg for 4, followed by 3, showed, however, his old form. With the total at 126 time was called at a quarter past five, St. Croix being not-out 42 and Farbridge not-out 15. Present score and analysis:—

P. A. Cox, T. Wallace, A. J. McClure, R. Macgregor, to bat.

Barely an hour's play was possible on Oct. 6th, when the match was continued, the rain coming down with such force as to drive the players from the field, and literally flood the ground. The change from the conditions which prevailed on the previous day was the cause of intense disappointment. The rain that had fallen during the night had in no way damaged the wicket, and though the Shanghai team had obtained a considerable advantage, it by no means put the result beyond the range of all sorts of possibilities. Arrangement for the accommodation of a still larger attendance of spectators had been made as the Banks and several business establishments having agreed to close from noon, it was anticipated many more persons would be able to visit the ground in the afternoon. The ladies' tent, too, had undergone a most tasteful embellishment, being draped and decorated with the Shanghai colours. But hardly had the finishing touches been put, than the rain came on and in the course of an hour covered the ground so that cricket was out of the question, and with the weather prevailing at the time of writing, there is but faint hope of play to-day, although it has been agreed that, should circumstances admit, the game is to be continued at half-past ten this morning.

It will be recollected that when the game was suspended on Monday, Shanghai, with five wickets down, were 36 runs to the good, St. Croix and Farbridge being the two not-outs. When the play started again yesterday morning the runs came rather slowly, and Farbridge, after being in for twenty minutes could only add 2 to his overnight score before he was caught. Cox then came in, and after being let-off when he had made 6, set to work to infuse more spirit into the game. St. Croix, though he played with great steadiness, gave two more chances, so that it cannot be denied that he has had a full allowance of good fortune. With the exception of the missing of these catches, the Japan fielding was excellent, and the batsmen had all their work to get the ball through the field. As the game is now, Shanghai, with four wickets still to fall, is leading by 87 runs.

So far as the details of the play are concerned it has to be recorded that St. Croix (not-out 42) and Farbridge (not-out 15) resumed the Shanghai innings at twenty minutes past eleven, Lucas (pavilion end) and Townsend having the bowling. In Lucas's first over St. Croix made a single, and from the last ball of Townsend's over he made the same. In this way the score was taken to 130, ten minutes after the start. An appeal for a catch at the wicket against Farbridge, of Lucas, was given

in the batsman's favour, and off the next over from the other end, St. Croix hit a 2. So far St. Croix had had the bulk of the bowling, but Farbridge getting the opportunity drove Lucas to the off for 2, which was the only addition he made to his overnight score. Then, off Townsend's bowling, he was caught by Tate at long-on. He had been at the wickets altogether for nearly an hour—136-6-17. Cox coming in began with a single, followed by a 3, whilst his partner also assisted, but the rate of scoring was by no means rapid, mainly on account of the good fielding. Cox had made 6 when he had a fresh lease of life from an unexpected chance behind the wicket-keeper, off Lucas's bowling. Shortly after this he made a good leg hit for 4 off Lucas, following this up by a 3 on the off side from Townsend's bowling. The score had reached 157 when Tate took up the bowling from Townsend. In his first over Cox hit a 2, and his partner a pair of singles, the latter then having another escape behind the wicket off Lucas's bowling when he had 54 to his credit. At this point rain began to fall, whilst the light was anything but satisfactory. However, the score was added to by both batsmen, at an even rate. St. Croix gave another chance through slips, but the catch, if it had been secured, would have been a very good one. The rain coming down very heavily, play was suspended at a quarter past twelve. Present score and analysis:—

T. Wallace, A. J. McClure, R. Macgregor to bat.—N.C. Daily News.

The following telegrams have been kindly placed at our disposal for publication:—

Nagasaki, October 13, 8.20 p.m.
The Shanghai Cricket Club this morning began the match against the Japan Team in fine weather, on a wet but rapidly drying wicket. At the end of the day's play, the score stood, Shanghai 65 for four wickets, W. H. Moule not out 47.

Nagasaki, October 14, 50.5 p.m.
The Shanghai Cricket Club's innings closed at half-past twelve to-day. Japan then went in and made the following score:—

Mr. F. E. White	14
Mr. E. W. Tate	11
Mr. H. Lucas	0
Mr. F. E. Wilkinson	0
Mr. E. W. Townsend	10
Mr. A. B. Walford	6
Mr. Matt. Smith	10
Mr. A. Kingdon	0
Mr. A. L. Robinson	0
Mr. H. S. Goddard	0
Mr. B. H. Pearson	0
Byes 7, n.b. 4	11
115					

Shanghai's first innings closed for 130.

Nagasaki, October 14, 8.35 p.m.
The following is the scores of Japan's second innings:—

Mr. F. E. White	28
Mr. E. W. Tate	3
Mr. H. Lucas	21
Mr. F. E. Wilkinson	5
Mr. E. W. Townsend	9
Mr. A. B. Walford	0
Mr. Matt. Smith	3
Mr. A. Kingdon	0
Mr. A. L. Robinson	0
Mr. H. S. Goddard	4
Mr. B. H. Pearson	1
Extras	20
89					

Shanghai in its second innings made 170 for four wickets and thus won the match with six wickets to spare. Beautiful weather prevailed throughout the day and much enthusiasm was evoked.

A HAWARDEN ECLOGUE.

[The Chinese Envoy, who reached Hawarden half an hour before the advertised time, conversed freely on very varied topics with the ex-Premier through the happy medium of Mr. Lo Feng-lo. During the entire interview Li Hung-chang refrained from smoking.]

GRAND OLD MAN—LI HUNG-CHANG—LO FENG-LO
—MISS DOROTHY—MUTES AND SUPERS.

GRAND OLD MAN—
How does your excellency do?
Rude health, I trust? So good of you
To come a shade before the time!

INTERPRETER—
He prays that on your crest sublime
Old age and honour fall together;
He also likes the peacock feather.

LI HUNG-CHANG—
I thank you for your courteous word;
It is a rather fetching bird!
And you yourself? you age a bit?
But still you look extremely fit!
Your voice is rich, your eye is bright,
Your waistcoat, I observe, is white;
You ought, upon my word, to mix
A little more in politics.

INTERPRETER—
His Lordship hopes that Heaven will spread
Large bounties on your hoary head.
He also hears that you have spent
Some useful years in Parliament,
And wishes very much to know
If this is actually so.

GRAND OLD MAN—
As politician I have done
More time than almost any one;
But there are certain, I confess,
Who freely doubt my usefulness.

INTERPRETER—
He gives the praise where praise is due,
And says he took his line from you.

LI HUNG-CHANG—
I gather from a private source
That you possess a naval force.

INTERPRETER—
He says Britannia rules the waves,
And Britons never will be slaves.

GRAND OLD MAN—
I take it, through no fault of mine,
Our naval power is large and fine;
But, though a necessary evil,
It costs the land the very d—!

INTERPRETER—
He says that China has a fleet
Exceptionally hard to beat;
But should you wish in case of war
To do still better than before,
Then, if there's money in your chest,
The British article's the best.

LI HUNG-CHANG—
(Aside.) How strange! when I was on the
Sprees,
The best was "made in Germany."
(Aloud.) Pray, what is your opinion, sir,
About the present Premier?
[Host steals out of room unobserved,
And then, again, about Japan—
(Detects absence of Host.)
Wherever is the Grand Old Man?
[Pause, during which Miss Dorothy
draws furiously nearer with visitors'
book and paint-box. Re-enter G.O.M.
with large bundle of monumental
volumes.]

GRAND OLD MAN—
Of each effusion of my pen
Kindly accept a specimen.

LI HUNG-CHANG—
(Aside) Confucius! how does he suppose
That I can read his barbarous prose?

INTERPRETER—
(Aloud) His Lordship positively dotes
On your renowned Homeric notes;
And as for your remarks on Butler,
He really knows of nothing subtler.
At a signal Miss Dorothy advances.

GRAND OLD MAN—
Your mark, if you will condescend,
Would gratify our little friend,
[Li Hung-chang makes his mark in
indigo. G.O.M. continues:]
The signature has much impressed her.

INTERPRETER—
He says it's time to start for Chester.

LI HUNG-CHANG—
(To G.O.M.). Adieu, mine host! the hour
is ripe.
(To Interpreter.) Come on, I am dying for
a pipe.
[The Envoy is carried out.]

(FROM THE "N.C. DAILY NEWS.")

London, October 6.

Sir William Harcourt in a speech declared himself in favour of an *entente* with Russia on the whole Eastern Question, and the abrogation of the Cyprus Convention.

(The Cyprus Convention, signed at Constantinople on the 4th of June, 1878, engaged England to join the Sultan in defending his territories in Asia against Russia by force of arms. The Sultan undertook to introduce reforms; and for the protection of the Christian and other subjects of the Porte, and in order to enable England to execute her engagement the Sultan assigned Cyprus to England.—En. N.C. D. N.)

London, October 8.

Lord Rosebery, in a letter to the Liberal Whip, resigns the leadership of the Liberal party, as he

finds himself in apparent difference with the mass of the Liberals on the Eastern Question, and in some conflict of opinion with Mr. Gladstone, while scarcely anywhere does he receive implicit support.

(FROM "LE COURIER D'HAIPHONG.")

Paris, Sept. 24.

Bubonic plague is prevalent in Bombay.

The Czar will lay the first stone of the bridge to the Paris Exposition of 1900 which will be styled Alexander the III. Bridge. The Czar will review the French troops at Châlons on the 9th October, and will then leave for Darmstadt. Twenty-one warships will receive him at Cherbourg.

(FROM THE "EL COMERCIO.")

Motilla del Palancar, Sept. 24.

It is probable that the next direct mail steamer will leave Barcelona on the 30th instant, taking on board the guns for the artillery battery, the force of cavalry and four hundred cases of cart-ridges for Mauser rifles.

In Pinar del Rio, forty battalions will be collected shortly for the autumn campaign.

Sept. 25:

The battery of the mountain artillery being sent to the Philippines is composed of six Krupps of nine centimetres.

The Colonel of Cavalry, Leon Espian y Mora, has been ordered for the Philippines to organize a new cavalry regiment of natives.

The Minister of War, Sr. Axcarraga, holds in readiness ten battalions more to be sent to the Philippines the moment General Blanco asks for further reinforcements.

(FROM "EL COMERCIO.")

Votilla de Palancar (Madrid), Sept. 28.

The cruiser *Isla de Cuba* is ready to leave for the Philippines. Next month the direct steamer will carry two more battalions for the Philippines.

The Governor-General of Manila received the following telegram from the Minister of War on the afternoon of the 22nd September: "Besides the forces already despatched, two more battalions will follow, and next month other two battalions. If you have horses for cavalry and you wish men to be sent, one hundred and sixty will be despatched. Will send presently one battery of nine pounders, besides two howitzers, two mortars and, two cannon, fully equipped. The forces will carry Mauser rifles, and the cavalry will also carry lances.

(FROM THE "CHINA MAIL.")

Singapore, Thursday, Oct. 1.

The Estimates for the Straits Settlements for 1897 show an estimated revenue of four millions of dollars (\$4,000,000) and an expenditure of four and a-half millions (\$4,500,000).

The Secretary of State for the Colonies proposes to substitute modern guns for the defences of Singapore, costing the Colony thirty thousand pounds sterling (£30,000) and the Imperial Treasury forty-two thousand pounds (£42,000).

(FROM THE JAPANESE PAPERS.)

Bakan, October 11.

Mr. Murakami, Governor of Daichu Prefecture (Formosa), called here while en route to Formosa by the *Denshin Maru*.

Gifu, Oct. 12.

An extraordinary meeting of the Prefectural Assembly was held to-day, the subject under discussion being a petition to the Government for a State grant-in-aid.

Tomiyama, October 12.

Snow has fallen on Tate-yama.

Nagano, October 12.

Snow has fallen in this neighbourhood.

Utsunomiya, October 12.

Frost has visited this district.

Gifu, October 12.

The dysentery cases in this Prefecture now total 3,864 with 847 deaths.

Wakayama, October 12.

The Kii Ginko removed to its new building to-day.

Kobe, October 12.
Mr. Rikaei, the Korean Minister, is to leave here for Tokyo this morning.

Nagasaki, October 12.
The *Yamashiro Maru* of the N.Y.K. has left this port for Australia.

Fukushima, Oct. 12.
Mr. Hayashi Yuzo arrived here on Sunday evening to attend a political meeting.

Moji, Oct. 13.
Small-pox has now attacked twenty-eight persons.

Osaka, Oct. 13.
The Shimauchi Bank has been declared bankrupt.

Bakan, Oct. 13.
Mr. Sudzuki, an expert of the Department of Agriculture and Commerce, has arrived here to inspect the newly discovered anthracite vein.

Okayama, Oct. 13.
A special meeting of the Prefectural Assembly is to be held to-day.

Kyoto, Oct. 13.
General Kawakami arrived here yesterday. To-day he proceeds to Kobe.

Marquis Saionji arrived here on Monday.

Tsu, Oct. 13.
Mr. Kaneko, Vice-Minister of Agriculture and Commerce, has left for Tokyo.

Fukuoka, Oct. 13.
Two hundred of the Formosa relief troops leave here this morning.

Nagano, Oct. 13.
The line between Nagano station and Shinonoi is to be doubled.

Aomori, Oct. 13.
Some members of the Prefectural Assembly have left here for Tokyo to petition for a Government grant-in-aid.

Osaka, Oct. 13.
The Tennoji Bank is declared bankrupt. Several other Banks are in a precarious condition.

Okayama, Oct. 14.
The Kishibi Railway Company was given a license on the 13th inst.

Nagano, Oct. 14.
On the 13th inst. in consequence of a storm, the river Sai overflowed, and the railway is interrupted.

Later.
Though the temporary bridge over the river Sai was damaged, trains run from Karuizawa to Shinoi.

Kumamoto, Oct. 14.
The river Meteorha has overflowed. A part of the town is inundated.

Toiyama, Oct. 14.
The heavy rain of the 13th inst., caused the river Shinsu to overflow.

Kobe, Oct. 14.
The heavy fall of rain since the 12th inst. has caused the Buko-gawa to overflow. This morning the railway was restored to working order.

The French man-of-war *Bayard* arrived here this morning from Yokohama.

The United States man-of-war *Olympia* arrived here from Yokohama on Tuesday.

Kochi, Oct. 14.
By the storm of the 13th inst. twenty-three Japanese boats in this harbour were wrecked.

Nagasaki, Oct. 14.
Mr. Manrikoji, who had been travelling through Siberia, arrived at this port to-day.

Mr. Kuze, Consul of the first class, at Korsakof, has arrived here.

The *Tairen Maru*, that left Ujina with some Formosa reliefs, has put into this port, her engines being damaged.

Marugame, Oct. 14.
The Fifth Army Division is manœuvring in this district.

Fukuoka, Oct. 14.
Two hundred soldiers from the 24th Regiment are to leave for Formosa to-day.

Tsu, Oct. 14.
The Japanese cruiser *Yoshino* put into this port yesterday.

Gifu, Oct. 15.
The river Kiso has overflowed. In Nakajima district, four hundred houses were inundated

above the floor. The Southern part of Abachi district was also flooded.

Kobe, Oct. 15.
Mr. Miura, Consul at Manila, leaves here for Manila by the *Idsumi Maru* to-day.

Nagano, Oct. 15.
The heavy fall of rain caused the river Chikuma to overflow. In Kami Takai-gori, three hundred houses were inundated. In Shimo Takai-gori, three hundred *cho* of rice-fields were flooded.

Kobe, Oct. 15.
General Kawakami and suite leave here for Formosa by the *Otaru Maru* to-day; Mons. Pimodan, Attaché in the French Legation, will accompany them.

Takamatsu, Oct. 15.
On Wednesday, the Ninth and Tenth Brigades engaged in field manœuvres. H.I.H. Prince Nashimoto took part in the sham fight.

Kumamoto, Oct. 15.
An extraordinary meeting of the Prefectural Assembly was held on Thursday.

Hiroshima, Oct. 15.
Frost has visited the northern district of this prefecture.

Kobe, Oct. 15.
The general election of the Prefectural Assembly is to take place on Thursday.

Gifu, Oct. 15.
Snow fell on Norikuragatake, Hida, on the 11th inst.

Atami, Oct. 15.
H.I.H. Prince Fushimi has arrived here from Shimoda in command of six hundred soldiers.

Kyoto, October 15.
H.I.H. Prince Kikumaro left here for Nara on Thursday. He will return in a few days.

Nagasaki, October 15.
The *Tairen Maru*, that put into this port with her engines damaged, left here for Formosa on Thursday.

Nemuro, October 15.
The Japanese man-of-war *Saiyen* put into this port on Wednesday morning.

Takamatsu, Oct. 16.
The troops of the Fifth Army Division will arrive here tomorrow from Seisan, and will stay for two days.

Miyazaki, Oct. 16.
A meeting of the projected Railway company was held to-day, and Mr. Iwamoto was elected President.

Akita, Oct. 16.
A severe hurricane has swept over the devastated districts. Many houses are ruined and several scores of persons wounded.

Niigata, Oct. 16.
Kawanishi-mura, in Nishi Kambara-gori, has been inundated again.

Sakata, Oct. 16.
A slight earthquake was felt here to-day at 6 a.m.

Osaka, Oct. 16.
An extraordinary general meeting of the Osaka Shosen Kaisha was held on Thursday at which it was decided to increase the capital to yen 10,000,000.

Nagoya, Oct. 16.
On Wednesday night, a fire broke out in the engine-room of the Mikawa Taihei Boseki Kaisha. The building was destroyed.

Marugame, Oct. 16.
The autumn manœuvres of the Fifth Army Division ended to-day.

H.I.H. Prince Nashimoto arrived here on Thursday to take part in the sham fight.

Nagasaki, October 16.
The United States man-of-war *Olympia* left here for Chefoo on Thursday.

YOKOHAMA-SHIMBASHI RAILWAY.

YOKOHAMA—5.20, 6.15, 7.10, 8.08, 8.47, 9.20, 9.57, 10.45, 11.50 a.m.; 12.45, 1.35, 2.25, 2.50, 3.35, 4.15, 4.55, 5.25, 6.13, 7.15, 8, 8.50, 9.45, 10.25, 11.20 p.m.
SHIMBASHI—4.40, 6, 6.40, 7.25, 8.15, 9, 9.45, 10.25, 11.10, 11.50 a.m.; 12.30, 1, 1.40, 2.35, 3.25, 4.10, 4.55, 5.40, 6.20, 7.20, 8.20, 9.10, 10, 11.15 p.m.

CHESS.

(All Communications to be addressed to the CHESS EDITOR.)

The Yokohama Chess Club meets on Monday and Thursday in each week, at the Club Hotel, No. 5, Bund, from 5 p.m. to 11 p.m.

Visitors to Yokohama, and Officers of ships (whether Navy or Merchant service) who are Chess-players, are welcome to use the Club during their stay in this port.

The Tokyo Chess Club meets at the Tokyo Hotel, every Friday, from 1 p.m. to 7 p.m.

SOLUTION OF PROBLEM No. 251.

WHITE.	BLACK.

Correct answers from J.D., Shogi, W.H.S., W.d.H., and Omega.

PROBLEM No. 254.

By J. POSPISIL and J. KOTRE.

BLACK.

WHITE.

White to play and mate in three moves.

CHESS IN KOBE.

W.d.H. writes as follows:—"You will be pleased to hear that a Chess Club is being organised under the auspices of the K.R.A.C. More later on—at present nothing very definite."

We are indeed delighted at the good news, and wish the new venture every success. Our Nagasaki friends should follow the good example of Kobe; all chess-players will do better work if they meet in a Club, instead of playing hap-hazard games in private houses.

SPECIAL LETTER FROM NEW YORK.

We are glad to see that absent friends do not forget us. Last week we heard from Mr. Balk in New Zealand, to-day we have a contribution from our old friend "Digamma" (former Champion of the Tokio Chess Club), who has reached New York after his trip through Europe.

Digamma's letter reports some good chess with his fellow-passengers on board the steamer *Saale* while crossing the Atlantic, and sends us a specimen in the shape of a Consultation game which we print below. The leading players on both sides are well-known Amateurs in the Eastern States. "Mr. Adolph Hirsh is President of the Club of the Independent Order of B'nai B'rith in New York, where he plays excellent Chess, and Dr. Hoffman is a well-known physician at Ashland, Pa."

GAME No. 586.

Played August, 1896, on board the *Saale*.
NOTES BY "DIGAMMA."

WHITE.	BLACK.
Messrs. Adolph Hirsh, Henry D. Winans, and Henry W. Austin.	Dr. J. L. Hoffman and Mr. Clarence L. Graff.
1—P to K 4.	1—P to K 4
2—B to B 4	2—B to B 4
3—K Kt to B 3	3—P to Q 3
4—P to Q 3	4—Q Kt to B 3
5—K Kt to Kt 5	5—Kt to K R 3
6—Q to B 3	6—Q to K 2
7—P to Q B 3	7—B to K 3
8—Kt takes B	8—P takes Kt
9—Q B takes Kt	9—P takes B
10—Castles (K R)	10—Castles (Q R)

11—O to K R 3
12—P to Q Kt 4
13—Q takes P (R 3)
14—B to Q R 4
15—P to Q R 5
16—Kt to Q R 3
17—Kt to B 2
18—P to Q 4
19—Q R to K sq.
20—Q to K R 3
21—Q to K 3

To this move the Black allies chiefly ascribed their subsequent defeat. P takes P, the simplest way of undoubling their pawn, was decidedly preferable.

22—B to Q 3
23—Q to Kt 3
24—Q P takes K P

B takes P was far better, preventing the White allies from getting a superiority of pawns, besides removing the most dangerous pawn on the board. Some very fine play on both sides now follows.

25—K P takes Q P
26—Kt to K 3

A fine reply. Here the game becomes intensely interesting.

27—K to R sq.
28—Q to B 3
If Q takes P, then 29—Kt to Kt 4.

29—R takes B
30—P to Kt 3
31—Q to K 2
32—P to K 3

To prevent Q to K 3 supporting the Rook.

32—Kt to Kt sq.

The only move to save the Rook.

33—P to K B 4
34—B to B 5!
35—P to Kt 4
36—P to Kt 5

GAME No. 587.

A "SUMMER-LIKE" GAME IN LONDON.

NOTES BY I. GUNSBURG.

WHITE. Mr. X.	BLACK. Jas. Glass.
1—P to K 4	1—P to K 4
2—Kt to K B 3	2—Kt to Q B 3
3—B to B 4	3—B to B 4
4—P to B 3	4—Kt to B 3
5—P to Q 3	5—P to Q 4 (a)
6—P takes P	6—Kt takes P
7—Castles (b)	7—B to Kt 3
8—R to K sq.	8—Castles
9—Kt takes P	9—Kt takes Kt
10—R takes Kt	10—B takes P (ch.) (c)
11—K to R sq. (d)	11—Kt to B 3
12—P to Q 4 (e)	12—Kt to Kt 5
13—R to R 2	13—Q to R 5
14—P to K R 3	14—B to Kt 6
15—B to K 3	15—Kt takes B
16—R takes Kt	16—B takes P (f)
17—P takes B	17—Q takes P (ch.)
18—K to Kt sq.	18—Q to R 7 (ch.)
19—K to B sq.	19—Q to B 7, mate.

(a) It is not good to advance this pawn too early; it makes Black's centre rather weak.

(b) 7—P to Q Kt 4, B to Kt 3, 8—P to Kt 5, might be played. 7—B to Q Kt 5 would likewise make it rather awkward for Black to defend his K P.

(c) If this combination is the original invention of Mr. Glass, it is highly creditable to him, but it does not prove that White cannot take the pawn.

(d) If 11—K takes B, Q to B 3 (ch.), 12—Q to B 3, Q takes R, 13—B takes Kt, P to B 3, 14—B to Kt 3, Q takes R P, 15—B to K B 4, Q to R 5 (ch.), 16—B to Kt 3, Q to K 8, 17. Kt to Q 8 and we do not think that White has a very bad game; and are sure that he has a much better game than in the actual play following on K to R sq.

(e) B to Kt 5 afforded a better defence, as it prevented Kt to Kt 5, which is usually so fatal in similar positions with Q to R 5 to follow.

(f) White's demise now follows as a matter of course.

JAMES MASON'S SUMMING-UP RE NUREMBERG.

The *Field* has the following to say in reference to the Nuremberg tournament:—

Lasker lost three games—one with Pillsbury, a French defence; the second with Janowski (this game should have been won by Lasker, but he failed to avail himself of two opportunities to do so), and the third to Charousek. We will give Lasker the benefit of the doubt in the latter instance, for he had this game to spare, having won the first prize in the previous round. The three draws—against Maroczy without a fight and practically also with Schlechter and Walbrodt—were played to the score. So much for the debit side.

The twelve games on the credit side were won legitimately, except the one against Showalter, which he should have lost, and the one against Tschigorin, which should, perhaps, have been drawn. Lasker therefore takes his place at the head by reason of his undoubted superiority.

Maroczy—When the young Hungarian won the amateur championship last year at Hastings it was generally admitted that, had he played in the masters' tournament instead, he would have given a good account of himself. This opinion was proved to be correct on the present occasion. Unconscious of his strength, or perhaps overestimating his opponents at the beginning of the tournament, he gained confidence after having crossed swords with some of them, proving equal to the best and superior to many of the others. Of all the opponents, he told us, he feared Steinitz and Teichmann most. He could not explain why. That may account for the fact that he hardly made a fight against the former and was glad with a draw with the latter. All the others he met cheerfully and with confidence, predicting almost exactly the net result of his score of the last week's rounds. He only lost one game, and should have won at least three games that he gave up as drawn, notably one against Walbrodt.

Pillsbury—The element of chance favoured Pillsbury more than any of the other players. A case in point is the game with Janowski. It is to be assumed, however, that had he not been so severely handicapped at the very start and all through the tournament by a severe illness, he could have dispensed with the slightly compensating chances mentioned. The single fact of beating Lasker (brilliantly), Tarrasch, Tschigorin, and Steinitz speaks volumes in favour of the young American, and it is to be regretted that he could not do full justice to his talent on this occasion.

Tarrasch—With the exception of Steinitz, there is no player in the whole tournament who took such pains with his games as Dr. Tarrasch. We fear it must have been over anxiety to secure the much-coveted prize given by the Prince Regent of Bavaria. Dr. Tarrasch seems to make no distinction between his opponents. He plays only against Black or White, the individual opponent does not exist and he always tries "to make the best move." His games are perfectly correct, perfectly sound, but we fail to find any other leading idea in it beyond the general plan of trying to find the weak point in his opponent's arrangement of the forces. Thus it happened that his games lasted an inordinate time, and that he drew with Porges a heavy game, while Charousek bowled him (Porges) over with the greatest ease. A less classical style and more imagination would have served the doctor better.

Janowski—He and Charousek were the most enterprising players. Janowski is the opposite pole (no pun intended) of Tarrasch. Impatient at resistance, he sacrifices a piece for the attack, and not infrequently succeeds in thus baffling his opponent. Cases in point are his games against Lasker and Steinitz, and the failure against Tschigorin. Janowski is much improved since Hastings and should have taken deservedly a higher place, in two instances he drew an easily won game (against Pillsbury), and lost a drawn position—a draw offered by Charousek—and against Albin he should have won. Considering Janowski has no practice whatever in Paris, it is remarkable that he not only should keep up his strength, but have actually improved within the last twelvemonth.

Steinitz—He has still a wonderful power of endurance. He still grasps clearly most complicated situations (mostly created by himself), but there is an occasional break-down if one thread of the painfully woven fabric breaks. He still indulges in "fads," notably his defence to the Ruy Lopez, to which he added another freak, 3—P to K B 3 against Dr. Tarrasch and Schlechter. The one he lost and the other he won by a fluke. Still, in spite of age, he possesses power enough to do himself more justice, if we consider that, even if he loses, the victory must be wrested from him after a tremendous struggle, and all his games bear that stamp. It may, therefore, be assumed that, were he to abandon fads and bestow the same labour upon sound games which he devotes to a thankless task, he would be a more formidable opponent.

Schlechter—It is to be regretted that Schlechter graduated at the Vienna school. He plays fast with the greatest ease; he sees lucidly, but he is wanting in energy and concentration. Characteristic is the game with Tarrasch. In a most complicated position and under heavy fire in a king's side attack, Schlechter saw clearly through his opponent's plans, and quietly walked about from board to board observing the other games while his opponent was pondering over his move. Asked what he thought of his position, he replied: "The attack is not so dangerous as it looks. If he fails he must lose on the queen's side." He only drew,

but perhaps a little more concentration might have proved his estimation of the position to have been more correct. He only lost two games altogether. The one against Steinitz he should have won.

Walbrodt—His strength is passive; somewhat similar, but in a lesser degree, to Tarrasch's present form. Powerful in defence, but without initiative. He keeps his game together and shapes it safe and sound. An agreeable exception was his earlier performance. He showed a little more enterprise than formerly; but after the first reverse (at the hands of Charousek) he lapsed into his old apathetic style, and that he was still placed in spite of a splendid start he has to thank Tschigorin who made him a present of a game, and Tarrasch, who failed to see the right course to a win. The former should have been a draw and the latter a loss to Walbrodt. If Walbrodt were dependent upon chess he would no doubt be less careless than is the case at present.

Schiffers—Generally Schiffers considers a tournament an agreeable holiday, and makes the most of it accordingly. Indifferent to gain or loss, he plays *en artiste*; he is fond of chess and enjoys it as such, independent of the result. If he has played a good game he is satisfied.

Tschigorin—His motto seems to be *Aut Caesar aut nullus*. Impatient of temperance, he cannot bear resistance, and often sacrifices the whole position in order to force the game. He had a promising start for high honours, but broke down at the first reverse. Having endangered his position, he was quite reckless about the remainder. With Walbrodt he threw away a perpetual check, rather losing than drawing a game. One of the finest games he played was against Charousek. In a perfectly even position (not only to the casual observer, but Charousek included) he got up an attack which was irresistible in its impetuosity. But, as said on a former occasion, he has his own theories and he knows no middle course. He either wins or loses. Tschigorin's low position in this tournament is a surprise to everybody.

Blackburne—After the first week he stood as well as the favourites, but he played indifferently afterward. At the lowest computation he should have added at least two points to his score, namely, the games with Albin and Porges, and half a point with Janowski. As it is, he just managed to get the prize for the best score against the prize-winners.

Charousek—Maroczy's fellow-townsmen, who was substituted as reserve man for Burn, has justified the choice of the committee who admitted him—an unknown quantity—to compete among the masters without any record or credentials whatever. All the players (with only one exception) admit that Charousek is a genius. He has an exceptional knowledge of the theory—not routine knowledge—and plays the middle and end game well. Like Tschigorin and Janowski, he is averse to drawn games, and in more than one instance he lost by trying to win an even position, notably his game with Steinitz. He is full of confidence and pluck, and goes for his opponent, no matter who he is.

Marco, according to the score, is just a shade below the high prize winners, and level with the other competitors. He is strong enough to have done better.

Albin is an erratic player, most dangerous; he may win of the best and lose with the worst. He won a brilliant game of Charousek, one of the finest games of Steinitz and was within an ace of beating Tarrasch in the final round. For the lover of "chessy" games, Albin is the *bel idéal*.

Winawer is passé. Out of practice, he consumes his time in the opening, and has to hurry on anyhow afterward. With unlimited time he would still be dangerous. He played one brilliant game—a flash of former time—with Steinitz.

Showalter is stronger than his score indicates. It is the first time of his appearance in Europe, and the early hour (9 a.m.) is against his habits; he could not reconcile himself to it.

Porges, besides not having played for five years—since Dresden—was in indifferent health at the beginning and wanted to retire. Better counsel prevailed, and he made a better stand afterward. He drew with Tarrasch, Pillsbury, Schlechter and Schiffers, and his game with Steinitz was the longest in the tournament. But for Steinitz' extraordinary power of endurance he would have drawn it to.

Schallop played much below his strength. He, too, is out of practice, and threw away several games, notably one with Winawer, which was as good as won for him.

Teichmann started in bad health from London and has not recovered yet. He will remain a few weeks in Germany to recuperate.

The net result of the tournament is a number of first-class games for all tastes, sound and steady, and dashing and brilliant.

The theory has not gained much. Charousek has introduced a variation for White in the gambit declined (Falkbeer's variation), which is worthy of notice. Steinitz's defense of Ruy Lopez, 3—B to B 4, followed by Q to B 3, as well as the latest, 3—P to K B 3, have proved wanting, but that we suspected before. The Giuoco piano variation of the two knights defense (4—P to Q 3) has become fashionable, and that we knew before. And, finally, the queen's pawn openings and the Ruy Lopez remain the *pieces de resistance* as before.

Lasker won 4½, Pillsbury, 4½ in the match games as played between these experts. Lasker beat Pillsbury in the New York and Hastings tournament, and won 2½ points in St. Petersburg. Pillsbury beat Lasker in the Nuremberg, and won 3½ points in St. Petersburg.

Nos. 200, Gassed	120.00 to 127.00

METALS.

As we anticipated last week, the financial troubles seem to have touched this market and enquiry seems to have collapsed *pro tem*. Quotations unchanged but nominal.

	PER POUND.
Flat Bars, 1 inch	\$3.50 to 3.55
Flat Bars, 1 inch	3.60 to 3.65
Round and square up to 1 inch	3.50 to 3.65
Iron Plates, assorted	3.40 to 3.60
Sheet Iron	4.70 to 4.80
Galvanized Iron sheets	9.20 to 10.00
Wire Nails, assorted	5.00 to 6.00
Pin Plates, per box	5.00 to 5.30
Pig Iron, No. 1	1.70 to 1.75 1/2

KEROSENE.

No change, fair business at late rates.
American \$2.25 to 2.27 1/2
Russian 2.27 to 2.28
Langkat

SUGAR.

Brown—A fair business in China and Manila sorts at full rates. Formosa dull and no business. White active, and prices advancing.

	PER POUND.
Brown Takau	\$4.70 to 4.75
Brown Manila	5.50 to 5.60
Brown Daiteng	3.95 to 4.00
Brown Canton	3.85 to 4.75
White Java and Penang	7.10 to 7.15
White Refined	7.00 to 9.05

EXPORTS.

RAW SILK.

Much less doing and prices declining. It seems that the tightness in the money market makes sellers anxious to realise. At the same time, they will not accept much lower quotations at present. Quotations more or less nominal and weak, with very little business at closing.

QUOTATIONS.

REVIEW

OF THE CHAPTER ON PAINTING IN
"L'ART JAPONAIS," by L. GONSE.

By E. F. FENOLLOSA.

"JAPAN MAIL" Office, No. 51, Main Street, Yokohama.

THE GREATEST WONDERS OF MODERN TIME

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the druggist to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN.
HOLLOWAY'S OINTMENT

Is certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Mr. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock.'"

Sold by all Chemists and Medicine Vendors the throughout World. May 1st, 1896.

FOR SALE,

Strongly bound in Leather and Cloth, with a Full Index.

HALF-YEARLY VOLUMES OF
THE "JAPAN WEEKLY MAIL."

These Volumes contain Leading Articles dealing mainly with subjects affecting Japan and the Far East, besides numerous Miscellaneous Articles embracing a variety of topics; also Letters by Special Correspondents in Europe and America and other Countries, Commercial Trade Reports, Reviews of New Books, Government Notifications, Translations from Japanese Journals, Editorial Correspondence, Verbatim Reports of Public Meetings and the Law Courts, Theatrical, Sporting, &c., and a large number of Editorial Notes on a great variety of subjects of local and general interest, the whole forming a record not to be found in any other existing publication.

An extended Summary of the Proceedings of the Imperial Diet is given during the sittings of Parliament.

A special feature in the "JAPAN WEEKLY MAIL" is its Market Report, containing trustworthy statements of the course of trade in Imports and Exports. There is also a record of all Shipping entering and leaving Yokohama.

The following Volumes may now be obtained:—

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence, whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, OCT. 24TH, 1896.

BIRTHS.

On Oct. 23rd, 1896, at 70, Bluff, Yokohama, the wife of J. C. NICHOLSON, of the Hongkong Bank, of a Son.

On the 24th October, at No. 20, Bluff, the wife of VALDEMAR BLAD, of a Son.

SUMMARY OF NEWS.

It has been decided not to rebuild or reconstruct the Club Hotel at Yokohama.

ONLY one yacht race, out of the four started, was finished on Saturday afternoon.

EVERYTHING bids fair for a very successful autumn meeting of the Nippon Race Club, the

fine weather of the last few days drying the course, and much assisting training operations.

THE reported cession of Kassala by Italy to Great Britain is declared to be unfounded.

YOKOHAMA has been badly beaten this week at cricket and baseball by the Kobe Cricket Club.

MARQUIS ITO, who is now staying at Oiso, will, it is said, go to Kyoto in a few days to view the maples.

MR. STUART ELDRIDGE is appointed Hawaiian Consul at Yokohama, vice Mr. B. C. Howard, resigned.

THE trial of the Pyx at the Osaka Mint is to be held at the end of this month or beginning of November.

A VERY enjoyable Smoking Concert under Masonic auspices was given at the Public Hall on Friday evening.

MR. W. H. R. CAREW, Secretary of the Y.U. Club, died at the R.N. Hospital, Yokohama, on Thursday afternoon.

THE Salvation Army intends starting a seamen's reading, coffee, and recreation room in Honmura, Yokohama.

OWING to recent floods and storms, the damage done to Government railway lines is estimated at about yen 5,000,000.

MR. JOHN T. BOAG, exchange-broker, shot himself with a revolver on Tuesday night, as he lay in bed at his house on the Bluff.

THE Teikoku Beer Brewery Company, which has been experiencing difficulties ever since its establishment, was dissolved on Sunday.

MR. S. E. UNITE was duly installed W.M. of the Oentosama Lodge, No. 1263, E.C., on Saturday evening, at the Masonic Temple, Yokohama.

LAST Sunday at Kobe, Père Chaitron was installed as Roman Catholic Bishop of Osaka, with all the pomp and splendour of ritual appertaining to the Romish Church.

ANTHRACITE coal deposits have been discovered in Yamaguchi Ken. It is said that the bed extends for about ten miles and the quality of the coal is very good.

It is reported from Washington that President Cleveland, in his next message to Congress, will announce an amicable settlement of the Venezuelan question.

MR. R. S. MILLER, Interpreter in the United States Legation, having returned home, Mr. Ernest W. Clement has been appointed to fill the vacancy in the Legation.

TRAINS will begin to run between Naoyetsu and Kashimazaki on the Hokuyetsu Railway in the course of this year. The line between Nagaoka and Numadare will be completed by Feb. next.

It has been officially stated in Paris that China has entrusted Frenchmen with the reconstruction of the Foochow Dockyard, and that the contract was signed at Peking on the 14th inst.

THE race-meetings of the Ueyeno Race Club have been abandoned for some years. H.I.H. Prince Kanin being desirous of restarting the Club, races will shortly be held on the course.

THE French Minister of the Interior has announced that the Government's programme to be submitted to the Chamber of Deputies, will include proposals for the creation of a Colonial army.

THE Liberal Party do not wish to have Mr. Hoshi Toru, Minister at Washington, within

their immediate circle. He himself, it is said, has no intention of returning to Japan unless ordered home by the Foreign Office.

The Times, in an article referring to the increasing virulence of the German press, observes that it is gradually alienating Great Britain at a time when British support to the Triple Alliance is specially needful in view of the alliance between Russia and France.

THERE is a severe outbreak of bubonic plague at Bombay. It commenced on the 20th Sept., and by the 25th there were 300 deaths. Hundreds of rats, as in the Hongkong epidemic, died. The outbreak is attributed to the foul state of the sewers.

The Times states that owing to Lord Rosebery's suggestion that Mr. Asquith should be his successor as Leader of the Liberal Party, and to the certain opposition of Sir William V. Harcourt, the situation is complicated, and that Mr. Gladstone's return is seriously advocated.

THE Right Hon. G. N. Curzon, speaking at Glasgow, said that the Nile task would be incomplete until the Egyptian flag was hoisted again at Khartoum. Referring to Armenia, he said that he deprecated agitation as long as Great Britain did not intend to go to war on behalf of Armenia.

TRAFALGAR DAY was largely celebrated throughout London on Wednesday. The Nelson column was decorated with wreaths from top to bottom and great crowds assembled in the square, where patriotic speeches were delivered. The newspapers concur in the opinion that nothing hostile to foreigners was implied by the celebration, and that it was only awakening the nation to the importance of the Navy.

In a recent speech, Sir Michael Hicks-Beach, Chancellor of the Exchequer, denounced the connivance of the Sultan and of the Porte in the late massacres, but stated that Russia, Austria, and Germany were determined to uphold the *status quo* in Turkey, and that therefore the British policy consists in promoting concerted action by the Powers with a view to advising and, if necessary, compelling reforms. He stated that Dongola was the stepping stone to a further advance when the time was ripe.

THERE is little change in the Import trade, and no improvement is reported in any branch of the Textile business. The Metal trade is quiet and unchanged, but buyers shy at any increase in prices. The Kerosene market is quiet and prices are steady, buyers having about satisfied all requirements. "Langkat" Oil is reported as being produced now in such quantities that it is expected this Eastern Oil will shortly become an active competitor with the products of the States and Russia. The Sugar trade is quiet but healthy, and though not much has been done in Brown sorts, a fair quantity of White kinds has been taken at late rates. The Silk trade has passed through the usual phase during the week. In the beginning, when there was not a bid in the market, holders, anxious to be moving, made concessions that induced buyers to deal. This was followed by some orders from Europe which further stimulated purchases, and then succeeded the usual tactics of holders, who put prices up to the extent that buying was at once stopped. Holders are hoping for a similar splash in the Waste department as that just over in the Raw, but there is no sign of it at present. The Tea trade is brisk considering that we are now drawing towards the close of the year, and prices for the leaf purchased have been full. Small fluctuations only have taken place in rates of exchange.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The conclusion of the Commercial Treaty between Japan and China is regarded with much satisfaction by the public at large. The *Mainichi* argues that even with regard to the cotton-spinning industry, which appears to be the most profitable of all the enterprises that can be undertaken by Japanese in the interior of China, such a high authority as Mr. Masuda Takashi, of the Mitsui Bussan Kaisha, has arrived at a very unfavourable conclusion after thorough research into the subject. He has decided that it would be an extremely doubtful business for the comparatively poor capitalists of Japan to enter into competition with the far wealthier capitalists of Europe and America, and that the privilege of manufacturing goods in China would prove beneficial to the latter alone.

The *Nippon* gives some interesting information on this point, showing to what extent the manufacture of yarns in China is likely to impair the development of the same industry in Japan. The export of Japanese yarns to Shanghai yields about 9½ per cent. net profit. But when yarns can be made in the interior of China free of duty, the profit accruing will be 17.5 per cent. In other words, the Chinese yarns can be sold 8 per cent. cheaper than the Japanese.

The *Nichi Nichi*, the *Chuo*, and the *Tokyo Shimbun* join in attacking the Government and its supporters, the *Shimpo-to*, and in seeking to discredit them in the eyes of the nation.

The *Nichi Nichi* sneers at what it considers the absurd inconsistency of the resolution passed by the standing committee of the *Shimpo-to* on the subject of the declaration of policy made by the Premier in his speech to the Local Governors. The Committee resolved to approve the declaration, and in the same breath, decided to oppose the Government should it fail to act up to its promises. Does not that practically amount to a resolution that the committee can not repose faith in the Ministry's determination to make good their promises? In other words, does it not amount to a vote of want of confidence? The Committee's action can be compared only to that of the foolish thief in the old story, who afraid lest the bell that he wanted to carry off might make a noise, plugged his own ears with cotton.

The *Tokyo Shimbun* has a note in the same strain. It observes that if the Premier has even a small modicum of spirit, he must be indignant to see the *Shimpo-to* assuming the attitude of an overseer towards the Cabinet, just as though the latter were a bad child whose reformation could not be believed in without practical proof.

The *Chuo* devotes two articles to expounding its views of the *Shimpo-to*'s position, and the events leading up to it. The main obstacle to the formation of the present Cabinet was the struggle for supremacy between the military party of Satsuma and the party led by Count Okuma; between the conservative principles of the former and the progressive principles of the latter. The rivalry between the two commenced on the very threshold of the work of organization; lasted to the time of the announcement of the Government's policy, and terminated in the complete discomfiture of the civil party. Both parties had discovered that the sentiments they entertained towards the Ito Cabinet coincided; each aimed at pulling it down; Count Okuma's party because it was tired of being perpetually relegated to the rôle of Opposition, and the Satsuma party because it felt dissatisfied with the Ito section and had conceived the ambition of forming a Satsuma Ministry. The two made a league to attain their common purpose, each, however, being secretly desirous of making a cat's paw of the other. No sooner had they attained their aim of overthrowing the Ito Cabinet than the inevitable internal struggle began. It commenced on the occasion of the conference

of September 19th, when Count Okuma, though not yet gazetted a Minister, propounded certain views which he wished to have adopted before he finally determined to join the Cabinet. All those views of his were mercilessly rejected by Count Kabayama, the leader of the Satsuma Party. Thereat the consternation and despair of the *Shimpo-to* were beyond description. Count Okuma shut himself up on the plea of tooth-ache, and his wire-pullers engaged in a hot dispute as to the course that he ought to adopt under the circumstances. Mr. Shimada's section maintained that the Count must not join the Cabinet, but must wait till a more favourable opportunity presented itself, while the Inukai-Ozaki section held the opposite view. The latter won the day, and Count Okuma entered the Cabinet unconditionally. That was the first defeat that the *Shimpo-to* sustained at the hand of its rival, the Satsuma Party. The latter, however, entertained a secret hope, that at least a portion of its views would be adopted by the new Ministry, but even there it was doomed to disappointment, as witness the vague declaration of policy made by the Premier, and the diametrically contradictory view proclaimed by Count Kabayama the next day before the Local Governors. Even then the *Shimpo-to* were so invertebrate that they could not summon courage to revoke their original resolution. On the contrary, they once more surrendered unconditionally to the Matsukata Cabinet, pretending that they purposed overseeing its actions. That was the second discomfiture sustained by the Party. Politically inimical as the *Chuo* is to the *Shimpo-to*, it professes, with fine sarcasm, to be quite pained by the procedure of the latter.

As already mentioned in these columns, the speech of the Home Minister to the Local Governors continues to be a subject of dispute between the pro-Government and the Opposition papers.

The *Chuo* argues that the speech has considerably shaken the ranks of the *Shimpo-to*, and as evidence of its assertion points to the suddenly altered tone of the *Yomiuri*. On the 13th ult., the *Yomiuri* did not hesitate to interpret the announcement of the ministerial policy in the sense of a resolution on the part of the Government to conform to the principle of party cabinets. On the 15th, it took up quite another attitude, and averred that if the Ministry failed to satisfy public expectation they ought to be driven out of power and replaced by other statesmen. The *Chuo* also undertakes to show that the action of Count Kabayama in the matter of the speech will impair his prestige and credit. It is upon the Count above all others in the present Ministry that public attention is centred; not on account of his ability, but rather because of his fearlessness and straightforwardness, as witness his unceremonious opposition when Count Okuma exposed the conditions on which he was willing to enter the Cabinet. Can it be supposed that the people, and above all the Local Governors who are under Count Kabayama's immediate control, will continue to repose the same confidence in him after seeing that, intimidated by the threats of the *Shimpo-to*, he suffered the most important portion of his speech to be incontinently expunged? Such an action was entirely unworthy of his usual conduct.

The *Mainichi* undertakes to defend the action of the Government in this matter. The meeting held on the 13th ult. at the Home Minister's official residence had to do with the affairs of the Home Department alone, and its proceedings must consequently have been confined, for the most part, to stating and discussing the Home Minister's views about the affairs of his own Department. Questions relating to the Cabinet, as a whole, and to its responsibility, cannot have been propounded at such a conference. Hence, it is obviously extravagant to suppose that, in addressing the Local Governors, Count Kabayama transgressed the legitimate bounds of this subject so far as to refer to party cabinets. The meeting at the Premier's official residence held on the previous day would

have been the occasion for such an utterance. If Count Kabayama had really alluded to the question of Cabinet responsibility at the meeting of Local Governors held in his residence, his remarks would have been of a most exceptional character, and could not have failed to be carefully noted by all present. But as nothing of the kind appears in the authorized version of the speech issued by the Home Office, the *Mainichi* is persuaded that the Count did not refer to the point at all, and that the report given in the *Nichi Nichi* must have been erroneous.

The *Nichi Nichi* traverses the *Mainichi*'s contention, and observes that, as the authorized version was only an abridgment of the original speech, a fact that even the *Mainichi* must admit, it does not follow that because that version contained nothing about Count Kabayama's allusion to Cabinet responsibility, therefore he did not actually touch upon the subject at all. In short, the *Mainichi*'s argument is palpably lacking in cogency. The *Nichi Nichi* has devoted much energy to ascertaining the facts of the case and the truth of its own report. It has interviewed four of the Local Governors that heard the address of the Home Minister, and all four unhesitatingly declared that the language of the speech had been even stronger than that reported by the *Nichi Nichi*. Moreover, Messrs. Imai and Hayakawa, members of the Diet, identified with the National Unionists, personally learned from the Count himself that he did speak about Cabinet responsibility in the way reported by the *Nichi Nichi*, and that his opinions had not undergone any change whatever as compared with those formerly held by him. It is to be noted that only the *Mainichi* has questioned the authenticity of the *Nichi Nichi*'s version, other papers on the Government side remaining silent or alluding to the matter in a perfunctory way.

The *Kokumin* scoffs at the vast importance with which the difference between the systems of *Seito Naikaku* and *Kunshu Naikaku* (party-cabinets and Sovereign-cabinets) are regarded by a section of the people. Our contemporary considers that the question is only worthy of academical discussion. So long as a country is presided over by a monarch, and so long as it convenes a Diet, the Cabinet is naturally bound to be under the control of the Sovereign and to conduct its administration with the consent of the Diet. Either appellation would do, provided that the practical results be satisfactory. That such a problem causes a stir in political circles and tends in any degree, however small, to estrange the Government and its supporters, is because an exact understanding has not yet been arrived at between the two. What is wanted at this juncture is a clearer exposition of the Government's views about the conduct of State affairs.

Mr. Shimada, Vice-President of the House of Representatives, addresses an open letter to the columns of his paper, the *Mainichi*. The letter is somewhat disappointing, being merely intended to proclaim the virtues of Count Kabayama to the public at large. It does not refer at all to the interesting feature of the Home Minister's recent action. Mr. Shimada eulogises the Count on the authority, first, of Count Katsu, and subsequently from the writer's own personal observation. The Home Minister is declared to be man of rare integrity, sincerity, and straightforwardness, not afraid to carry out what he considers just, and to rectify what he considers erroneous even in himself. He did not shrink, for instance, from declaring boldly in the House the merit of the Sat-Cho clans in developing the prosperity of the country. But his opinion about the competence of the people is understood to have subsequently undergone a considerable change, and he is now disposed to place greater reliance upon their capacity. Mr. Shimada hopes that he will not fail to give practical effect to his new convictions.

The *Fiji* desires to make a suggestion to the new chief of the Metropolitan Police. It is

about the advisability of paying more attention to general police business, and of being less absorbed in political affairs, for in the *Fiji's* opinion, the latter are made to take undue precedence of the former. The abolition of personal guards for the Ministers of State augurs well for the point that the *Fiji* has in view, and is applauded as thoroughly suited to the time, for the tone of political discussion has become gradually elevated and no such horrible practice as assassination is likely to be resorted to even at the climax of excitement. While advising the new Police Chief to pay more attention to ordinary police business, there is another thing to which *Fiji* wishes to call his attention, namely, the propensity that constables display to attach too much importance to their office. The result is that they are often careless of inconveniencing persons of inferior rank, and exaggerating the gravity of offences committed by them—treating a drunkard's follies, for example, as "disrespect to Government officials."

The abolition of the Ministers' personal guards elicits two leading articles from the *Nippon*, which consider the change, small as it is, an indication of the radical difference between the present Government and its predecessors in their attitudes towards the people. It shows that the latter regarded the people with suspicion, whereas the former are determined to treat them with confidence. The change is an earnest of far larger reforms and improvements.

The *Fiji* writes sympathetically about the Manila people, recommending them specially to the protection of the Japanese who live among them. Judging from the attitude that the natives have assumed towards Spanish rule, they must be determined to oppose it to the death. But that is a very reckless idea on their part, for in view of the grave disadvantages under which they labour with respect to arms, stores, and so forth, it must be well-nigh hopeless for them to attain their object. Their outbreak will only involve bloodshed, and bring down upon them summary treatment from the Government. Japanese living among them should dissuade them from such rash undertakings, and urge them to remain peaceful subjects. Such a course, would earn the gratitude not only of the natives but also of the Spanish Government, which is now believed to entertain suspicions of the Japanese people's designs. Moreover, the Japanese should exert themselves to extend protection to orphans and widows that find themselves reduced to straights on account of the rebellion. Such an act of charity must commend itself to people related by blood to the natives of Manila, as the Japanese are.

The *Tokyo Asahi* offers a suggestion for the consideration of the Government in connection with the latter's avowed intention of making officialdom more accessible to young men of ability. The idea is that Directors of Ordinary Upper Schools, or educational institutions of similar standing, must be relieved from the disqualifications that at present obstruct their entry into Government service. The position of a school director is very onerous, for he has to control a number of teachers and hundreds of students. A director competent to discharge such a task efficiently must be fit to undertake administrative business. The innovation would prove of immense benefit to the cause of education, for the directors would apply themselves with greater assiduity to discharge of their functions, so as to recommend themselves to the Government's notice.

EDITORIAL NOTES.

"AS OTHERS SEE US."

THE Rev. G. M. Reith, after a long residence at Singapore, has gone back to the home-land via China, Japan, and America. He is contributing interesting notes on his passage, under the heading of "Partant Pour la Patrie," to the *Singapore Free Press*. This is what he has to say about Yokohama:—There is a strong Yankee flavour in the atmosphere of Yokohama.

The shrill nasal twang affected by our American cousins is heard above the hum of voices, and the newspapers seem to be entirely in American hands. I formed this opinion on reading some of them, whose articles combined the crow of the American eagle with effusive flattery of "the great Empire of Japan." . . . Yokohama is disappointing to the visitor in many ways. Chiefly, because knowing it to be the largest foreign settlement in the Mikado's Empire, he draws a mental picture of it in anticipation to which the actual town does not bear the remotest resemblance. . . . On the day of my arrival, I got into a jinrikisha, and told the coolie to take me on a "go-look-see" expedition. He did. I wondered what the real impression of the foreigner was on the Japanese mind, when I found the coolie taking it for granted that what I wanted to see was every vile haunt and low den in the place. He seemed surprised and ventured some unintelligible protests when I peremptorily ordered him to go on, as he stopped now and again at places which the European visitor is supposed to delight in. But this impression of European tastes is not confined to Japan. . . . I went one night to see the *Yoshiwara* in the native city. It is a sight to be seen—once; and to be remembered ever afterwards with mixed feelings. It is a scene infinitely touching, and inexpressibly sad to all who respect pure womanhood, but, according to modern notions of delicacy, not to be described in print. . . . "The Grand Hotel, the largest and I suppose the best in the town, is a centre where one meets persons whom he never expected to see again on this earth. During my first day there, I encountered two Americans whom I had last seen in the heart of Java, and an Englishman whose path crossed mine in Ceylon some years ago, like ships passing in the night. The usual comments were made of course—that the world after all is a very small place. These chance meetings are full of pleasure to both parties, though both are apt to become tediously reminiscent. They are like the finding of an old faded photograph of a place visited long ago; memory and imagination are called in to fill up the almost indistinguishable outline, and we live again through the experiences of the past in a friendly chat." The reverend traveller also ventures the opinion that Yokohama is a large and prosperous town—a city of wide streets and fine buildings, where the European element is more prominent than the Japanese, and where the hurry and bustle inseparable from the white man's activity strike the visitor who is fresh from the quieter scenes of native life.

THE SALVATION ARMY.

WE are informed by Brigadier Powell, meantime leader of the Salvation Army in Japan, that a house has been taken in Tokyo (Koishikawa) as a home for discharged prisoners. According to Japanese Police regulations, a prisoner is not released until he can find some one to become his guardian; there are numbers of men in Tokyo at the present moment, whose term of imprisonment has expired, but who are still detained on account of their having no such friend. These are mostly long service men, and to them the S.A. will in the first place open its doors, the Japanese officer in charge of the house becoming their guardian and making it his object to foster in them that spirit of independence and self-help which will enable them as soon as possible to stand alone and earn a livelihood. The Salvation Army hopes later on to open other homes of a similar character for all classes of discharged prisoners, their success in this class of work in Australia, India, South Africa, England, and other countries, encouraging them to hope for proportionate success here. In Australia this work has been so successful that it is supported by an annual grant from the Government. The building is situated in Otowa-machi, Koishikawa, and will be officially opened by Brigadier Powell and a detachment of Salvationists next Monday, the 26th, at 3 o'clock. Another new departure is a building in the Settlement, Yokohama, at No. 187, which is to be opened as a coffee house, reading-room, lodg-

ings, baths, and meeting-place for seamen. For the fitting up of the latter Captain (Miss) Hatcher is collecting in the Port, while any one able to send any good substantial pieces of furniture suitable for such a building can thereby greatly assist. A further detachment of officers is soon expected to arrive from England.

WORK OF A BICYCLIST.

EXPERIMENTS recently made as to the power consumed by riders on bicycles are thus epitomized in *The Electrical Engineer*:—"It is shown that there is no absolute dead point such as occurs with an ordinary connecting rod-and-crank motion, and, secondly, that there is always some pressure on the pedal during the rise, the negative work due to which has to be subtracted from that done during the down stroke to obtain the net amount used in propulsion. The experiments were made at speeds ranging from 10½ to 21½ miles per hour, the machine being run on a wooden racing-track. The results were as follow:—

Speed miles per hour.	Work done per semi-revolution. Ft. lb.
10	28.58
10½	30.06
11	31.08
12	35.90
13	47.30
14	53.73
15	63.63
16	66.08

It will be seen from the above figures that the average pressure of the foot required on the pedal increases rapidly with the speed, being at 20 miles an hour nearly 3½ times as much as at 10 miles per hour. Unfortunately the gear used is not noted by the experimenter, and so it is impossible to deduce from the above figures the average tractive resistance of the machine at the different speeds. Probably at the higher speeds named a large proportion of the total work done was expended in overcoming atmospheric resistance, and the run of the figures might be changed considerably if the trials were conducted on a rough road instead of on a smooth track.

CONSECRATION OF BISHOP CHATRON.

SUNDAY was a red-letter day in the history of Roman Catholicism in Kobe, says the *Chronicle*, the occasion being the consecration and investiture of Père Chatron, the Bishop-elect of Osaka, *vice* the late Bishop Vasselon. Never before, we believe, has an ecclesiastical function of this kind been solemnised in Kobe. It is not generally known that appointments of this kind are made by the Roman Catholics in Japan by election of the priests. The votes are sent to Paris where the result is ascertained and sent to Rome for the confirmation of the Pope. The nominee in this instance has spent upwards of a quarter of a century in Japan and the appointment has given general satisfaction amongst the Roman Catholic community here. Although the service occupied more than three hours, the Church was crowded to the doors the whole time, Japanese converts occupying the aisles, and foreigners the nave. At the entrance gate an arch of evergreens had been erected, the portals of the church were draped with flags, while the interior was artistically adorned with evergreens and artificial flowers. The consecrating prelate was His Grace the Archbishop of Tokyo, who was assisted by the Bishops of Nagasaki and Hakodate, and about a dozen priests. The ceremony consisted, first, of the Archbishop receiving the homage of the bishops and priests; secondly, the reading of the mandate from the Vatican authorising the appointment and consecration; then followed the anointment and the bestowal of the signet ring; next, High Mass was celebrated, in course of which bread blessed by the new bishop was distributed to the congregation. Then followed the investiture of the Bishop in full canonicals, and finally the Eucharist administered to the priests by the Archbishop assisted by Bishop Chatron, who afterwards pronounced the blessing. The fine band from the French flag-ship *Bayard* was esconced in the gallery and assisted in the musical portion of the service. The Admiral, Captain Fortin, and other officers of the ship accompanied the French Minister and Consul to Church, and among the congregation might have been noticed during

the earlier part of the service some of the pillars of the Anglican Church, including the chaplain, as well as one of the Nonconformist ministers.

THE CHINESE SCANDAL.

THE scandal among the Chinese residents of Yokohama, alluded to by us a few weeks ago, has entered a new phase. The Treasurer of the Chinese Guild, who is accused of misappropriating some \$1,731.36 of its funds, has laid a criminal charge of assault against nine of his compatriots. On the 3rd instant the case was called on in the Chiko Saibansho, when the thirteen-year-old nephew of Wong Kwai Kai, the Treasurer, applied for the case to be postponed until the 16th inst. He gave no reason for the request. This action roused the suspicions of the Chinese in Yokohama, and a search was made for Wong Kwai Kai. He was not to be found in Yokohama, and a rumour got abroad that he had left the country. After a few days these fears were allayed, the missing Treasurer being found in a Chinese official's house in Tokyo, where he has taken refuge. Wong steadily refuses to leave his shelter, notwithstanding all the letters he receives from his Yokohama friends, or enemies, as the case may be. And so matters remain at date.

THE H.K.V.C. "CAMP GAZETTE."

THE Hongkong Volunteers were lately sent into camp at Stonecutter's Island, and, to increase the gaiety of nations, some of the literary wits in the various detachments published a *Camp Gazette*, or to give the broadsheet its full title, *The H.K.V.C. Camp Gazette and Stonecutter's Island Chronicle*. Its pages are very lively, even the advertisers' announcements being "sub-edited." Many puns, good, bad and indifferent, on the names of well-known officers of the garrison, residents of local note, etc., are freely scattered about its columns, and of course poetry bulks largely. These fugitive verses are of the kind generically known as "local and topical." For instance, the recent prosecution of the Sanitary Authority for illegal removal of cock-lofts was hit off as follows:—

Da, da, Dauby,
Have you read the rules?
Any more cock-lofts
Pulled down by fools?
One in the Queen's Road
And one in the Strand,
Won't there be a rumpus
When Franky takes a hand!

Another jingle runs:—

To honours and war-medals we most of us aspire,
But all we got was a blowing up for setting the grass on fire;
So we limbered up the guns again and then we did retire—

Marching! Yes, marching, to Victoria.

In another poem entitled "The zealous Volunteer," we read:—

Then I sponged and I rammed,
And the Maxims I jammed,
Till my Captain showed signs of emotion;
And he said in distress
This is zeal in excess
So they gave me two stripes as promotion.

The Stonecutter's Distillery Co.'s advertisement of "Fine Punch," a T. Rose-coloured liqueur (samples supplied free in Mooris Tubes), is one of several happy bits. Artillery officers of the garrison should find the issue of special interest.

MARRIAGE.

ON Wednesday evening Miss Yei Sato and Mr. Y. Matsumoto were united in the bonds of holy matrimony by the Rev. R. Hosokawa, at the American Mission Home, No. 212, Bluff, Yokohama. The home was prettily decorated with evergreens and flowers, while the lawn was illuminated by many rows of Japanese lanterns. The bride was arrayed in a heavy, elaborately hand-painted black crêpe kimono, lined with white silk, and brightened by a brilliantly coloured obi. According to ancient custom, the bride appeared in three different kimono during the course of the evening. Over eighty persons sat down to the marriage feast, after which the happy couple left for their honeymoon. Miss Irving is the present principal of the school from which Miss Sato graduated; Mr.

Matsumoto, who is a graduate of the *Meiji Gakuin*, Tokyo, is a member of a ship-broking firm, and in charge of the Yokohama branch. Among those invited were Consul and Mrs. J. C. Hall, Mr. and Mrs. J. F. Lowder, Rev. and Mrs. H. Loomis, Miss Crosby, Miss Moulton, Miss Case, Rev. J. H. Ballagh and sister, Miss Webb, Dr. and Mrs. McCauley, Rev. and Mrs. Harris, Dr. Wyckoff, Professor and Mrs. J. C. Ballagh, and others.

THE CUBAN REBELLION.

A PRIVATE letter received from Cuba by the last American mail, says—"The war, or rebellion—call it what you like—still continues to ravage this fertile country; and it is likely to go on for some time, as Spain will not give up until the very last. I am sure, from observation on the spot, that the Cubans will gain their Independence this time. The Spanish troops are dying off wholesale by yellow fever and dysentery, and a good many of the poor fellows are deserting and going over to the Cuban side as they have not received a cent of their pay for over three months. I have seen numbers of them land in Havana from the Spanish troop-ships and never saw such a lot of wretched looking objects in my life. They looked as though they had just been caught in the ploughing-fields and shipped right away without any training. Poor fellows, they seem to have no heart for the work that lays before them."

YOKOHAMA LITERARY SOCIETY.

A LARGE attendance of members of the Yokohama Literary Society at the Public Hall on Friday evening was presided over by Mr. J. T. Griffin. The principal item was a lecture on "Some ways of explaining history," by Mr. John Carey Hall, H.B.M. Consul at Yokohama. The paper was most erudite and well considered and at its close the lecturer was most heartily thanked, on the motion of Mr. Griffin. The musical items of the programme were—Overture, "La Dame Blanche" (Boieldieu), Mr. and Miss Griffin; pianoforte duet, "Hausel and Gretchen" (Humperdunk), Mrs. Poole and Miss Wheeler; song, "Imperfection" (Sir W. Robinson), Miss Sale; Part-song, "Softly Fall" (Hatton), eight singers; song, "Come to me" (Bemberg), Miss Rice; song, "Trysting Time" (Scott Gatty), Mr. Lewis, Part-song, "O, who will o'er the downs" (Sir R. de Pearsall).

THE CUBAN REBELLION.

The Times has the following from its Havana correspondent:—

Careful study for the past four months convinces me that despite serious losses, the rebels are holding their own against the troops. The wealthy agricultural districts are completely under rebel control, and the whole sympathy of the islanders is with the rebels. Even Havana, which is more Spanish than any other town or district, is permeated with animosity toward Spanish rule, and is honeycombed with intrigues on behalf of the rebellion. It is quite false to call it a colour struggle. In the fighting ranks of the insurgents the proportion is 70 per cent. of whites to 30 per cent. of negroes. Another fallacy is the rebel contention that Spanish misrule originated the rebellion. The crisis in the sugar trade was much more formidable in fomenting the revolt. The struggle is prolonged by the facility with which the insurgents obtain ammunition and stores of all kinds from abroad and from every town in Cuba, under the noses of the Spanish officials, with impunity. The seizure of contraband is most rare. It is now too late to compromise by granting reforms. The Cuban insurgents would not now accept full autonomy as the price of yielding their arms. I say this advisedly after a careful examination of the situation from all points of view. Spain will be compelled to conquer or to abandon the island. This irreconcilable attitude of the rebels is largely due to the wholesale execution of rebels after summary trial. These drastic measures only increase the hatred of Spain without deterring recruits from joining the rebellion. Another reason is the hopeless prospect of any rehabilitation of Cuban credit while the island is under Spanish dominion. Taxation must be heavily increased to pay the burdens of the war. Hence people with vested interests prefer the risk and uncertainties of independence, coupled with the earnest hope that at no distant date Cuba will become a State in the American Union.

THE INUNDATIONS FUND.

WE have to acknowledge the following subscriptions to this fund:—

M. Boissonade de Fontarabie \$25
Yokohama Juvenile Tonic Sol-fa Choral Society 20

WINNING YACHTS.

MR. A. BARCLAY WALKER's cutter *Ailsa* heads the winning yacht list for 1896 with 60 starts,

21 wins, and 13 seconds. She took 34 prizes of a value of £2,020. The Prince of Wales' *Britannia*, with 57 starts, won 15 firsts, 10 seconds, and 27 prizes of a total value of £1,665. Mr. Howard Gould's 20 rater *Niagara*, with 43 starts, won 12 first prizes, 8 seconds, and 20 prizes worth £270; in addition to two cups.

THE REBELLION IN THE PHILIPPINES.

THE second transport, the *Montserrat*, arrived at Manila on the 6th October from Spain with over a thousand soldiers. The arrival of the troops has been made the occasion of great rejoicing. The rebels still hold their own in the province of Cavite, and the bombardment of their positions by the Spanish men-of-war is kept up continuously. No doubt is entertained that with the reinforcements arriving the Government will soon be able to place a sufficient force in the field to drive the rebels into the hills. Meanwhile, occasional conflicts occur, but with no decisive result.

SILK.

JULY, says the *American Silk Journal* for September, was a somewhat notable month in the Yokohama silk trade. The raw silk market was greatly depressed, the shipments being but 350 bales, as against 4,500 bales in July, 1895. But of *habutai* there were shipped 32,436 pieces, as against 18,854 in July, 1895; while the handkerchief shipment was 204,204 dozens, as against 133,903 dozens in July, 1895. Labour in the weaving department is fifty per cent. higher than in December last.

H.M.S. "CENTURION."

IT is curious to note the effect of the bilge keels upon H.M.S. *Centurion*, says the Nagasaki journal. When first launched her speed was, if we remember rightly, over 17 knots. Upon a recent four hours trial, however, she averaged 18.2 knots per hour, while for half an hour she managed to make a little over 19 knots, and it is confidently expected that upon her next trial she will make that speed for the whole of the four hours.

FUNERAL OF MR. J. T. BOAG.

THE funeral of Mr. J. T. Boag, that took place at Yokohama Cemetery on Thursday morning, was very largely attended by members of the banking and mercantile community. The Rev. E. C. Irwine conducted the service. The pallbearers were Dr. Wheeler, Messrs. Jas. Dodds, David Jackson, W. R. Bennett, F. S. James, W. W. Campbell, A. Babington, and J. C. Potts.

NEW BISHOP OF OSAKA.

ON Sunday L'Abbé Chattron was consecrated Roman Catholic Bishop of Osaka. Archbishop Osof, of Tokyo, Bishop Cousin, of Nagasaki, and Bishop Berlioz, of Hakodate, took part in the ceremony. Among those present was Mons. Harmand, the French Minister to Japan.

MRS. GREATHOUSE.

NEWS has reached Yokohama of the death in Soul, of Mrs. Greathouse, mother of Mr. Clarence Greathouse, who was Consul-General of the United States at Kanagawa, several years ago. The information comes in a private letter, and the news will undoubtedly cause sorrow to the many friends that the venerable lady made while resident in Yokohama.

MARINE MISHAP.

THE American bark *Sonoma*, bound to Vladivostok with a general cargo, got on shore near the entrance to Tsuruga Straits, but after discharging 700 tons of flour was got off and taken into Hakodate Harbour. Whether the vessel sustained any damage has not transpired.

THE SHOOTING AFFRAY AT NAGASAKI.

BARNES, the American man-of-warman, who was the principal actor in the recent affray at Nagasaki, has been sentenced to six months' imprisonment, and costs, by Dr. Abercrombie, the American Consul, and two Associates. Prisoner was defended by Lieut. Rose, U.S.A., a fully qualified barrister.

NEW HAWAIIAN CONSUL.

DR. STUART ELDRIDGE, of Yokohama, has been appointed Consul of the Hawaiian Republic at this port *vice* Mr. B. C. Howard, resigned.

COUNT KABAYAMA'S SPEECH.

What the Minister of State for Home Affairs has actually said about Cabinet responsibility and what he has not said, are questions that still provoke journalistic discussion. The reasons of the perplexity enveloping the affair were briefly stated in our last Weekly Summary of the Vernacular Press, but, for the sake of clearness, we may recapitulate them. Before the Minister President, addressing the assembly of Local Governors on the 12th instant, enunciated the policy of the new Ministry, conferences were naturally held by the Cabinet to discuss that policy. At one of these conferences Count Okuma, according to newspaper reports, is represented as having strongly advocated the principle of Cabinet responsibility to the Diet, and Count Kabayama as having endorsed the Foreign Minister's views in even stronger and plainer terms. It may be pointed out here that Cabinet meetings, especially Cabinet meetings convened for such a purpose, are not open to the public; nor are the views expressed by the Ministers of State on these occasions supposed to be published. Indeed, no methods are organized for recording those views, and it thus becomes evident that, unless notes are surreptitiously taken by some of the officials present, no accurate information of what has been said can be subsequently accessible. Under any circumstances, reports published by newspapers must be the outcome of mere hearsay, and can not receive explicit credence. Thus much premised, we return to the sequence of events. On the 13th instant, Count Kabayama, in his capacity of Minister of Home Affairs, addressed the Local Governors. Here, again, the meeting was not public, and any reports published by the press about the proceedings must be taken with due allowance for errors of casual transmission. The newspapers, of course, were keenly on the watch to obtain the drift of the Count's address, and the *Nichi Nichi Shimbun*, generally worthy of all trust in such matters, published a version in which the Minister of Home Affairs was made to say, most emphatically, that the Cabinet's tenure of office should not depend upon the Diet's attitude. Other journals, namely, those accredited with friendly sentiments towards the present Cabinet and known to be strongly in favour of Government by Party, did not ascribe any such declaration to Count Kabayama in their reports of his speech, and consequently the public remained uncertain as to what His Excellency had really said. Presently, an official version of the speech was published, and on examination it was found not to contain any allusion whatever to the subject of Cabinet responsibility. The *Nichi Nichi* thereupon stigmatised the official version as incorrect, and pledged its honour that Count Kabayama had actually declared himself opposed to party Cabinets. Even the *Fiji Shimo* entered the lists against the Government. It contended that, whether Count Kabayama's utterances had or had not been misinterpreted, there could be no doubt of his having made some allusion to the great question of the day, and that the omission of any allusion whatever from the official version of the speech, must be regarded as a pusillanimous act of excision on the Government's part. It is not altogether easy to follow that line of reasoning, but the *Fiji* must, of course, be credited with sincerity. The outcry is augmented by the *Chuo* (organ of the National Unionist), which says that some Unionist members of the House of Representatives called on Count Kabayama the day after the delivery of his speech, for the purpose of making inquiries about the aid to be extended to the districts ravaged by inundations. They availed themselves of the opportunity to ask what views the Minister had expressed the day previously about Cabinet responsibility, and received from him an assurance that he had pronounced emphatically against party government. Yet when the official version appeared the next day, it contained no allusion to the subject. Altogether, there is a great deal of perplexity and discussion. The theory advanced by the enemies of the Ministry is that Count

Kabayama did really declare himself radically opposed to party Cabinets in his address to the Local Governors on the 13th instant, but that in view of the danger of the *Shimpo*'s coöperation being alienated were such a declaration officially recorded, the Count's colleagues insisted on excising the mischievous paragraph from the authorized version of his speech, published on the 15th instant. As for the authorized version, here is a translation of it:—

"Gentlemen:—The laws relating to freedom of speech, of public meeting, and of publication have been repeatedly discussed by political parties and debated in each session of the Diet. Now, with regard to the exercise of popular rights, though it is necessary that more or less restraint should be imposed so long as education is imperfectly developed, it is equally true that when knowledge has become diffused and experience has been garnered to such a degree as to guarantee public tranquillity against disturbance through the free exercise of those rights, then steps should be taken to permit their exercise. Therefore, the Government intends to make its policy conform with the intellectual development of the people, and by sparing no effort to promote the educational progress of the nation and to spread the light of knowledge, will seek to give free exercise to individual rights.

"As politics can not be expected to reach a satisfactory stage until the people's knowledge is sufficiently advanced, and as diplomacy and finance can not be efficiently managed unless the nation has developed substantial strength, therefore to guide the people into the paths of moral and material progress is essentially necessary at the present epoch. What you should pay careful attention to in this context is the conduct of local police affairs, for the due enjoyment of popular rights is inseparably connected with the behaviour of the police. The system of appointment to posts in the civil service is open to criticism as being too much restricted, so that inconvenient difficulties are placed in the way of admitting able young men. Much more liberal methods should be adopted, with, of course, due reservations. The Government contemplates undertaking investigations in this matter.

"To dispense with profusion of documents on official business, is most essential to the improvement of administrative affairs. Local Governors must endeavour to simplify the processes of local administration and to provide against deadlocks and delays.

"The local administrative system must be conducted so as to ensure the prosperity of cities and villages. The hot contests now fashionable in many districts, on the occasion of electing urban or rural officials, must be discontinued, for they deter really competent candidates from coming forward, and convert cities and villages into arenas of party squabbles.

"Official discipline must be strictly maintained, for it is naturally regarded as a standard of public morality. There have of late been symptoms that discipline needs more careful enforcement, and the Government will cause inquiries to be conducted in this matter."

The Home Minister concluded by referring to the recent inundations, but his remarks, as officially reported, do not differ from the version already published in these columns.

LOOKING FOR A WEAK SPOT IN THE CABINET'S ARMOUR.

The Liberal Party, according to the *Yomiuri Shimbun*, have resolved to pursue for the present the policy of "lying low," and watching for a favourable opportunity to attack the Cabinet. Their idea is that, towards the middle of the tenth session of the Diet—that is to say, about next January—they will find themselves in a position to charge the Government with failing to put into practice the intentions outlined in the Premier's address to the Local Governors. That is a long-sighted prediction on the part of the *Yomiuri*, in whose columns we certainly would not look for very accurate knowledge of the Liberals' intentions.

THE BIRTHDAY REVIEW.

It is announced in the *Official Gazette* that, on the 3rd proximo, His Majesty the Emperor will leave the Palace at 8.30 a.m., and proceed to the Aoyama Parade Ground, where the usual Birthday Review of the troops in garrison will take place.

THE HIGH COUNCIL ON INDUSTRY AND COMMERCE.

The High Industrial and Commercial Council opened its first conference on Monday in the Noshomusho buildings, Count Sano, President of the Council, in the chair. Among the members present were Messrs. Ando and Fujita, Chiefs of the Commercial and Industrial Bureau and of the Agricultural Bureau, respectively Messrs. Shibusawa, Nakakamigawa, Fujita (Densaburo), and so forth, the only absentees being Messrs. Sonoda Kokichi and Inouye Kakugoro, now away from Japan. The Premier was to have honoured the meeting with his presence, but pressure of official duties detained him. The Ministers of Agriculture and Commerce, of Foreign Affairs, and of Communications, attended, and the two former delivered speeches.

The meeting was opened with a speech by Viscount Enomoto. He dwelt at first on the necessity of cordial coöperation between the Government and the people for promoting the development of the national resources, especially in consideration of the duties devolving on the country in the sequel of the war, and the near approach of the time when the Revised Treaties will go into operation. He further called the attention of the members of the Council to the necessity of expanding the markets for Japan's agricultural and industrial products abroad, and explained that the unsatisfactory state of affairs in that respect, and the desire to investigate the causes responsible for the comparatively slow progress of Japan's foreign commerce, and to devise measures for hastening it, had been the chief reasons for convening the Council.

Count Okuma's speech was less abstract. He carried his hearers back to the time when the Noshomusho was first established as a separate Department of State. Till 1881, affairs relating to Agriculture, Commerce, and Industry were separately controlled by the Departments of Home Affairs and of Finance. This arrangement ultimately proved unsatisfactory in view of the steady development of business, and because of the obvious advisability of still further promoting commerce. The Count's notions on this subject coinciding with those entertained by Marquis Ito, then a Minister of State, a representation was submitted to the then Cabinet over the joint signatures of the two Ministers (Count Okuma held the portfolio of Finance at the time). The document obtained the approval of the Cabinet, and the *Noshomusho* was organized that year on the model of the English Department of Agriculture. There was also a conviction at that time that as Industrial and Commercial affairs developed, committees should be appointed from among the people, in order to ascertain their opinions on these affairs, and thus by combined deliberation on the part of the Government and the public, to reach definite conclusions on important topics both at home and abroad. The establishment of the present Industrial and Commercial Council must be considered an embodiment of that original idea, and consequently indicative of the progress of industrial and commercial affairs in Japan. The Count then alluded to the importance that industry and commerce play in the economy of a nation, and showed how the expansion of each country's foreign commerce is absolutely necessary for maintaining the balance of power among nations and preserving peace in the world. Persuaded of the truth of these things, Count Okuma, so long as he continued to preside at the Foreign Office, would not fail to pay the closest attention to all matters bearing on the expansion of Japan's foreign trade, the balance between exports and imports, and the enforcement of the Revised Treaties. The Foreign Office, would resolutely pursue a fixed policy in the discharge of its functions, and the Count was desirous that his hearers should keep these various points in view, and apply themselves energetically to development of business.

Mr. Kaneko, Vice-Minister of Agriculture and Commerce, and Mr. Shibusawa also delivered speeches, and the following topics were an-

nounced for discussion, the first only being taken up that day :—

No. 1.—TO DESPATCH EXPERTS TO MAKE SURVEYS OF THE ROUTES LEADING INLAND FROM THE YANGTSÉ-KIANG, CHINA.

The Yangtsé-Kiang is a large river running through the most prosperous district of China. Shanghai is situated near its mouth, while five inland ports already opened for foreign commerce, and two others newly opened in virtue of the Shimosenki Treaty, lie along the banks. Between the mouth and Ichang several companies established by either natives or foreigners are engaged in various businesses, and steamers ply up and down the river. From Ichang to Chung-king, however, a steam service is not yet established, though, in virtue of the same Treaty, Japan is entitled to open a service. The business offering must prove very profitable, and though natural as well as artificial obstacles exist, they need not prove deterrent. It is conceivable, therefore, that the benefits to be secured from the Treaty concessions may not be fully obtained until thorough researches have been carried out by competent experts along this special route.

No. 2.—MONETARY MECHANISM ABROAD.

Foreign trade can not be satisfactorily developed unless proper monetary mechanism be established abroad. In view of this consideration the Government is urging the Specie Bank of Yokohama to extend the scope of its business and to increase the number of its branch offices or agencies in foreign countries. But that does not seem to satisfy public requirements, judging from representations repeatedly made to the Authorities on the subject of insufficient financial facilities for Japanese in the West. The opinions of the Council on the proper methods of satisfying this public need are requested.

No. 3.—TO ESTABLISH BONDED WAREHOUSES, SUBJECT TO THE CONTROL OF THE CUSTOMS.

The establishment of Warehouses of such a character that commodities stored there may be exempted temporarily from payment of import duties, and to arrange that these Warehouses may issue to owners of goods warehouse receipts which if necessary can be used for raising money, the Warehouses being under the control of the Customs, could not fail to prove highly beneficial to foreign trade. The opinion of the Council on this subject is requested.

No. 4.—TO EXPAND THE MARKETS FOR STAPLES OF EXPORT.

Though the export trade of Japan shows steady growth, it is not yet so far developed that Japanese goods are sent to all the important markets of the world. If, occasionally, access is obtained to a new market, it is, as a rule, soon closed against Japanese goods. This serious defect in the foreign trade of Japan is generally traceable to the sale of shoddy goods at high prices, or to the fact that consumers in foreign countries are not well informed about the real worth and cost of Japanese goods. To correct that defect, it seems desirable to exhibit samples of Japanese commodities free of charge at Japanese Consulates, public or private museums, chambers of commerce, and trustworthy stores kept by Japanese or aliens, and to make the places of exhibition serve for the direct purchase of Japanese goods by foreigners. The opinions of the Council as to the advisability of this plan, and if so, the methods of carrying it out, are requested.

No. 5.—ABOUT FOREIGN CORRESPONDENCE.

Japanese Consulates stationed abroad are required to report constantly on the condition of the markets and so forth, these reports affording no small benefit to Japanese merchants and producers. However, in view of the steady progress of Japan's foreign trade, more prompt and perfect means of providing intelligence are deemed necessary. What methods would be best adapted for the purpose?

No. 6.—MARINE INSURANCE.

In expanding foreign trade the three mechanisms of steam, marine insurance, and banking service must be properly provided. The Japanese Marine Insurance Companies chiefly confine themselves to insuring cargo and ships engaged in the coasting trade, and leave those connected with foreign trade to the care of foreign marine insurance companies, a fact that cannot fail to impede transactions of foreign trade to no small extent. What processes should be devised for developing Japanese marine insurance business with special reference to foreign trade?

No. 7.—CONTROL AND PROTECTION OF MECHANICS.

With the development of Japan's industry the old method of household manufacture must sooner or later give way to factory systems. It is therefore advisable at this juncture to devise means for

maintaining cordial relations between employers and employed and to preserve the proper balance between labour and capital, to the end that the interests of the two classes may be permanently preserved and the creation of troubles may be provided against. To what extent may contrivances of the kind be devised and by what processes?

BANKS.

The 15th National (Peer's) Bank held an extraordinary meeting a few days ago at the Young Men's Christian Association building, Mitoshicho, Tokyo, to discuss its future programme after the expiration of its charter on May 20th, 1897. A resolution was adopted to continue the Bank's business in the capacity of a joint-stock bank, in accordance with the provisions of the Law relating to Banks whose charters have expired. The capital is to be 18 million yen, of which 17,826,100 yen will be taken from the present capital, and the remaining 173,900 yen will be raised from among the shareholders by a competitive process. It was further resolved to dispose of a sum of 33,380,000 yen, consisting of reserves and other assets, in the following way: 31,195,675 yen to be refunded to the shareholders borne on the books of the Bank on the day of winding-up business; 360,000 yen to be distributed as rewards to officers who have rendered meritorious services since the founding of the Bank, and the remaining 367,800 to be carried forward to the account of the new Bank.

The speech delivered on the above occasion by the President of the Bank was to this effect:—In 1876, at the instance of the late Prince Iwakura, the Bank was started with a capital of over 17 million yen, its primary objects being to furnish funds for redeeming the foreign debts of the country and for constructing railways. Civil war broke out in Kyushu at that juncture, and the Bank was induced to furnish a sum of over 15 million yen to the Government, to meet the pressing need of the State. Consequently, ordinary banking business was not transacted till 1883, when the Government amended the National Bank Regulations, and at the same time refunded to the Bank a sum of 5 million yen, so that it found itself in a position to undertake ordinary business. The Bank also extended help to the Nippon Railway Company started about that time, and the profits that accrued to both the Bank and the Company contributed so materially to the prosperity of the former that its total assets are now estimated at the great sum of over 54 million yen, or more than treble the capital originally invested. The gradual approach of the period when the Bank's charter expires, caused much anxiety to the Directors as to what course should be adopted at that time. They were of opinion that the charters of the National Banks should be prolonged, and they agitated in favour of that view. But such a plan failed to secure the approval of the Authorities, who issued a Law dealing in another manner with the affairs of the expiring National Banks. To dissolve such a large concern as the Fifteenth Bank would not only disturb the money market, but would at the same time subject the shareholders to great inconvenience, a result that ought to be provided against as carefully as possible, seeing that about two-thirds of the Bank's shares are incorporated into the family property of the shareholders. After mature deliberation, the Directors resolved to formulate the policy briefly propounded above, namely, that about two-thirds of the Bank's assets be distributed among the shareholders in the shape of Government bonds or shares of the Nippon Railway Company, so that no difficulty might be experienced in substituting those stocks for the shares of the Bank that formed part of the family property of the shareholders; and that the remaining assets be applied to continuing the business of the Bank on a new footing. This arrangement will be of benefit to the money market in general and to the shareholders in particular.

The charter of the pioneer National Bank of Japan, the First, has expired, and it has been continuing its business since the beginning of

the month as a joint-stock concern. In memorandum of the defunct Bank, and by way of introducing the newly born institution to public notice, Mr. Shibusawa, the President of the Bank, invited, on Saturday last more than five hundred distinguished personages to a garden party at his villa in the Oji suburb of Tokyo. An address delivered by the host on that occasion was to the following effect:—

The First National Bank was started on July 30th, 1873, and carried on business during a period of 23 years and 2 months, for though the prescribed duration of a National Bank's charter is only 20 years, according to the existing Regulations, the Bank was enabled to continue operations for 3 years and 2 months longer, under the old Bank Regulations. The economic world of Japan was in a miserable state before the founding of the Bank. It fact it may even be said that economic science did not exist prior to the Restoration, merchants and manufacturers were looked down upon by *Samurai* and officials as not differing much from beggars. In truth, trade and manual labour were scarcely distinguished. It was at such a time that, with the support of the millionaires of the day, as the Mitsui, the Ono, and the Shimada, and with the encouragement of the Government, the First Bank was started. But though duly established, the Bank was without any definite programme as to the business to be pursued. Moreover, as the Bank's notes were convertible into gold yen, it was extremely difficult to expand its business. Everything was in a very primitive state. For example, advances were made on land and buildings only, and the cost of transferring money to Osaka was not less than 1 per cent. Fixed and current deposits, correspondence with other banks, and the discounting of bills did not exist at all. In addition to transacting business entirely novel in Japan, the Bank had to discharge another important function, namely, that of elevating the status of business men and of asserting their rights. In the meanwhile, the collapse of the Ono and the Shimada Firms, the depreciation of the *fiat* currency, and the gradual depression that subsequently ensued, were among the troubles that the Bank had to encounter during its long and eventful career. Nevertheless, though lacking totally in experience, it succeeded in steering through these difficulties and in opening the route for its successors, a retrospect that may be regarded with some pride by the President and his associates. Mr. Shibusawa concluded his speech by recommending the new joint-stock bank to the goodwill of the public.

Baron Suyematsu made a short speech appropriate to the occasion on behalf of the guests.

STRICT ENFORCEMENT OF THE TREATIES.

A few years ago, we used to hear a great deal about the strict enforcement of the Treaties. It was a subject that evoked much unfavourable criticism from foreigners, and certainly did not tend to smoothe the relations between the Japanese and the strangers within their gates. The *Yomiuri Shimbun* now writes as though Count Okuma were about to revive the strict-enforcement idea, and there is a tone of evident exultation running through our contemporary's paragraph. We venture to predict, however, that no step taken by Count Okuma will be open to condemnation by fair-minded men. It is conceivable that necessity may be considered to exist for undertaking investigations into the conditions under which land is held by foreigners, or trade carried on, outside the Settlements, and if any infractions of the Treaties be discovered in the course of the inquiry, Count Okuma is certainly not the man to condone them. But such action would be taken only by way of preface to the time when the Revised Treaties will go into force, and would assuredly not be prompted by any notion of causing embarrassment or inconvenience to foreigners.

CURRENT TOPICS.

The decision of the Cabinet Ministers to dispense with police escorts is said to have been prompted by Count Kabayama. It is certainly unpleasantly suggestive to see every Minister of State attended by armed constables wherever he goes, and many attempts have been made by individual Ministers, from time to time, to get rid of these followers. The assassination of Mr. Okubo, Minister of State for Home Affairs, who met his death at Kioi-zaka in Tokyo many years ago, was the original cause of the precaution. Probably had that unfortunate, and most distinguished statesman been attended by an escort of any strength, he might have escaped, for the weapons used by his assailants were swords, and they dragged him from his carriage to accomplish their sanguinary purpose. But in these days of pistols and bombs, a couple of constables riding behind a Minister's carriage can scarcely afford effective protection, and, on the whole, the impression conveyed to onlookers is scarcely compensated by the additional safety provided. Of course the Emperor's sanction had to be sought before this step was taken, and it seems that His Majesty was not disposed to assent too readily, but, after all, he had no choice save to conclude that the Ministers knew what they were about. Journals opposed to the Government will of course represent this change as a sensational attempt to demonstrate publicly that the present Cabinet believes itself justified in relying solely upon popular sympathy.

For the purpose of conducting investigations preliminary to Administrative and other reforms, as referred to in the speeches addressed by the Minister President and the Minister of Home Affairs to the Local Governors, a committee of investigation has been appointed under the presidency of Count Okuma and the Vice-Presidency of Mr. Kionra. Among the members are the Vice-Ministers of State, the Chief Secretary of the Cabinet, and the Chief of the Legislative Bureau. It is interesting to recall the fact that during his tenure of office in 1888 and 1889, Count Okuma preside over a Committee appointed to conduct investigations with a view to Departmental reorganization.

The rumour, referred to in a recent issue, that for the purpose of avoiding misunderstandings between the Government and the people, the Premier intended to invite prominent publicists and business men to tea *reunions* several times each month, has proved correct. The first meeting of the kind was held on Thursday last at Count Matsukata's official residence.

The rise in the market price of commodities and the scarcity of hands in almost every line of business have furnished an excellent pretext to mechanics and workmen to demand increased wages, and to organize strikes when their demands are refused. About 3,000 persons engaged in carting coal at Moji recently abandoned their work, but were induced to resume it the next day, their employers having assented to an increase of wages.

On the same day that the Moji coal-heavers struck work, that is to say, on the 7th instant, more than 1,000 male and female operatives of the Owari Spinning Mill adopted a similar course. Numbers of the girl hands planned to escape secretly to Osaka, and though their design was detected, the mill is said to have been thrown into a state of great confusion. The issue of the complication is not yet announced.

The porters and plate-layers in the employ of the Kōbu Railway Company's Office at Idamachi Tokyo, also decided to strike, but the news reaching the ears of the officers of the Company, they succeeded in persuading the men to refrain from such a form of demonstration. A promise was given that the Company would deal fairly with the case.

On the receipt of a message from the Acting Japanese Consul in Hongkong, who was ordered, a short time ago, to proceed to Manila to inspect the state of affairs in that island, the

Foreign Office has decided not to despatch a war vessel thither. The message was to the effect that nothing particular had happened to the Japanese in the Philippine group.

That the Spanish Authorities in Manila instituted a strict watch over the Japanese living there was not unjustifiable, in view of the remarkable confidence reposed by the rebels in Japan. For instance, the insurgents importuned the two Japanese shops in Manila for a supply of arms and ammunition, declaring with confidence that 3,000 rifles and a corresponding quantity of ammunition would be enough to drive the Spaniards from the island and make it independent. Whenever a steamer arrived from Japan, the rebels showed immoderate joy, expecting that she would prove to be laden with arms.

We read in the *Yomiuri* that the Government, though resolved to effect retrenchments in Administrative expenses, will also take into consideration the condition of junior officials. For instance, they will be relieved from contributing a tenth portion of their salary towards the War-vessel-construction Fund, and their travelling allowances will be increased. Moreover, the Cabinet does not intend to adopt any indiscriminate system of reducing establishments and salaries. On the contrary, additions may possibly be made to both the numbers and the emoluments of really important officials in the various Departments.

Buddhist circles are considerably agitated in consequence of a pending lawsuit. The cause of the trouble lies in the alleged suppression of the fundamental maxims of the Myōmanji Branch of the Nichiren Sect by the Compilation Committee of the Buddhist polity. The Chief Abbot of that Branch preferred a complaint against the Lord Abbot of the Nishi Hongwan Temple, the President of the Committee, and four Committee-men, before the Tokyo Local Court. The case began on the 10th prox. The maxims in question are four in number, but are all so strongly abusive of the other sects, that the Committee considered their suppression absolutely necessary. However, the complaining party hold these maxims as the very essence of the Nichiren Sect, and allege that their suppression will undermine the very foundation of the Sect. The Party are therefore resolved to oppose their suppression by any means.

Negotiations between Japan and China as to the imposition of duty on goods manufactured in the interior of China, have been definitely settled on the basis of mutual concession. Article VI. of the Shimonoseki Treaty secured to Japan the right of free manufacture in the interior, but this was subsequently considered as scarcely conducive to the real interest of Japan, inasmuch as foreign countries, in virtue of the most favoured nation clause, would participate in the same right, and their subjects or citizens would start industrial enterprises in China, to the detriment of Japan's industrial prosperity. It was therefore decided, making advantage of China's desire to impose duties on commodities manufactured within her territory, to concede the point to China, and in return, to ask from that country more convenient concessions in the new Japanese settlements at the open ports, and so forth. Acting on instruction from the home Government, the Japanese Representative in Peking reopened negotiations with the Tsung-li Yamen on the 30th ult., that is, on the day on which the ratified copy of the Japan China Commercial Treaty was despatched by the Foreign Office to Baron Hayashi. The Baron eventually succeeded in carrying the point.

The above statement is taken from the vernacular press of Wednesday, and is supplemented by a fuller explanation in the *Yūji Shimpō* of the 23rd inst. The fact is that from the outset the question of taxing goods manufactured in China proved a bone of contention, and finally the Japanese Government agreed to conclude the new Treaty, leaving out any reference to taxation of that nature, but, at the same time,

premising that the omission was not to be construed prejudicially to any of the privileges embodied in the Shimonoseki Treaty. In truth, the Shimonoseki Treaty was explicit enough for all practical purposes, since it provided that goods manufactured by Japanese subjects in China should be placed on the same basis as imported articles. Feeling, doubtless, that their hands were thus tied as effectually as though a clause had actually been inserted in the new Treaty of friendship and commerce, the Chinese apparently re-opened the subject, and the Japanese Representative in Peking finally received instructions to accede to China's desire provided that a full equivalent could be obtained. The counter-proposals advanced by Baron Hayashi were that sites for Japanese Settlements should be allotted in Shanghai, Tientsin, Hankow, and Amoy, and that the export duty on raw cotton should be done away with. China demurred stoutly. She insisted that no land could be found for the desired concessions, and that at present she could not possibly afford to take any step tending to reduce her customs revenue. This latter plea the Japanese considered reasonable, but they adhered resolutely to the other stipulation, and China finally yielded. Thus the case stands that Japan has waived her Shimonoseki Treaty right in respect of the taxation of articles manufactured in China, and has obtained, in lieu of it, a promise of land for Japanese Settlements at the above four places. The ratifications of the new Treaty of Commerce and Amity were exchanged in Peking at 1 p.m. on the 20th inst.

According to official returns, mail matter dealt with by the Postal authorities during last year totalled 446,384,710 packets, exclusive of those coming from foreign post offices. This means that the people of Japan sent letters and packages at the rate of 10 per head during 1895. Compared with 1894, the figures show an increase of 13.7 per cent.

The allegations concerning seal poaching—about which so much has been written by the chauvinist papers of Japan—have been signally contradicted by Captain Togo, Commander of the Japanese war-ship *Musashi*, who started early this year to investigate the actual condition of affairs on the sealing grounds. The Captain ascertained that the principal homes of seals—animals that are very regular in their habits—are a series of small islands lying east of Kamchatka. Thence, about February of each year, the animals come down into the warmer currents to a spot about 1,000 leagues east of Awa and Kazusa. As the weather grows warmer, they return, making their way leisurely along, reaching the coast of Nemuro in the latter part of June. As above observed, seals are very regular in their habits; and the routes they take southward and northward, and the seasons of their travels are generally uniform. The so-called "poachers" put in at Ogasawara-jima about the beginning of February, to ship supplies, and then follow the seals as far as the coast of Hokkaido. By the end of June the speed of the seals suddenly accelerates, and the sealers give up the chase, and call at Hakodate. Even when the seals approach nearest the coast of Japan, the distance between them and the shores ranges between 10 to 30 miles, and if the limit of territorial waters be accepted as eight miles, the sealers do not come within Japan's waters at all. They pursue their occupation on the high seas. Japan need therefore concern herself no longer about the alleged encroachment of "foreign poachers," but should rather apply herself to entering into fair competition with them on the high seas.

A coal bed recently discovered by Mr. Yoshiwara, a graduate of the Engineering College of the Imperial University, and others, at Miyagun, Yamaguchi Prefecture, is reported as being a very valuable addition to the coal measures of Japan. The vein extends for 10 miles and contains some 50 seams, varying in thickness from 3 to 14 feet. The coal is of a smokeless quality. The discoverers aver that one million tons can be extracted there within 30 years.

ECONOMIC TOPICS.

The depression from which the Japanese export trade has lately been suffering is gradually passing away. We have already referred to the revival in the silk market. This has since been followed by a spurt in the tea market, and is undoubtedly due to the improved prospects of Mr. McKinley in the Presidential election, as well as to certain tariff measures mooted by the Canadian Parliament. Be the cause what it may, the tea market has undergone a favourable turn, and all the leaf produced in Shizuoka, the largest tea centre in Japan, has been bought up by merchants of Yokohama and Kobe, so that Yokohama middle-men are now sending agents to Ise to obtain supplies there. However, tea of a superior quality is not in demand either at Yokohama or Kobe. It is said that the possibility of an additional tariff on tea being carried through the Canadian Parliament has accelerated the export of the staple to America. A general meeting of the Tea Guild of Japan was held on the 11th and 12th inst., at Tsu, Ise, the meeting being attended by more than 150 members. Mr. Otani Kahei, of Yokohama, was in the chair. It was proposed by certain members that an application should be forwarded to the Central Authorities for a grant of 700,000 yen, to be spread over 10 years. This amount was thought insufficient by others, it being urged that the most formidable rivals of Japanese tea, the Ceylon and Indian growers, spend 200,000 yen a year on pushing their production in the American market alone. An amendment was therefore proposed in the sense that subsidies of 1,750,000 yen be applied for. It was decided to leave the matter in the hands of a special committee.

The matting trade has revived somewhat. It is stated that all the inferior matting was cleared from Kobe by the end of last month, and that the demand for superior goods is now steadily advancing. The disposal of the shoddy goods is attributed by the Kobe correspondent of the *Nippon* to resident merchants attempting to open up new channels for Japanese mattings and to their having sent the goods as samples to those markets. A curious way of canvassing for custom, in truth?

The spinning mills of Osaka are suffering from scarcity of hands and a consequent rise in wages. Wages went up 7 per cent. during the first half of 1896, as compared with wages in the preceding half-year. This rise has apparently affected the profits of the mills, for in spite of the establishment of six or seven mills during the first half of the year, the total profits show a diminution of about 100,000 yen as compared with the result of the preceding half-year. The mill owners of Osaka are so perplexed at the insufficiency of hands that they are doing everything in their power to prevent their girls from leaving, while holding out special inducements to new hands. For instance, they now provide their mechanics with houses at cheap rentals, and reduce that rental according to the number of hands supplied by each family.

The Kobe Silk Exchange is in danger of being declared illegal. This is due to an accusation preferred by certain business men in Kobe, who say that the projectors, in applying for the issue of a charter, fraudulently represented their project; stating that they were dealers in silk goods, whereas they are dealers in waste silk only. The case is now before the Kobe District Court.

Two wholesale paper merchants of Tokyo have been declared insolvent by the Tokyo Local Court as a result of a petition of the Commercial Bank, one of their creditors. This is the first notable instance of the kind in Tokyo.

The *Zamashime Maru* (2,285 tons) belonging to Mr. Fukunaga, of Osaka, lately running between Osaka and Naoetsu, was cast on to the shore off Naoetsu during the late storm. All cargo was taken out safely, but the damage the vessel sustained is said to be beyond repair.

ECONOMIC SITUATION OF THE DAY.

It appears to be now generally concluded that the embarrassments by which several petty banks in Osaka and merchants in Kwanto were recently overtaken, will not involve any serious consequences, but may rather be regarded as auguring well for the future stability of economic affairs. The current Japanese saying, "after rain the soil grows firm" is appositely applied to the incident. For by putting the banks and traders generally on their guard, it has served to avert any crisis of a more serious nature. The collapse of the Banks in the Keihan districts was indeed a foregone conclusion. They were of the frailest description. They aimed at reaping profit by offering high interest to depositors and advancing the money thus obtained to untrustworthy creditors on easy terms. Not that they were ignorant of the real condition of the borrowers. They knew well that these were merely speculators and stock jobbers with whom Banks of old standing had refused to transact business. None the less they deliberately took the risk of advancing money to such persons on the security of "potential shares" and other equally questionable stock. A slight tightness of the money market and a fall in stocks and shares, especially "potential shares," at once dislocated the operations of these banks, and as their equilibrium had always been unstable, they speedily toppled over. The run that has naturally been caused by the alarm thus engendered may lead to the fall of other frail banks, but when all such speculative concerns have been swept out of existence, sound business will go on more prosperously than ever.

The cause or causes of these temporary ripples that have appeared upon the surface of the market are variously explained by leading economists and bankers, whom representatives of the *Fiji Shimpō* have interviewed very opportunely. Mr. Taguchi, a member of the Diet and Editor of the *Tokyo Economist*, ascribes the panic to an excessive issue of convertible notes by the Nippon Ginko. The volume of notes in circulation to-day, as compared with that for the corresponding period of 1887, shows an increase of more than 40 million yen. Meanwhile, the market prices of commodities have gone steadily upward, a very seductive state of affairs to business men, and the wholesale cotton-goods merchants of Tokyo, who are now in distress, unable to resist the temptation, proceeded to increase their stocks in trade, paying for them with promissory notes. Unfortunately, inundations repeatedly visited various districts, interrupting railway traffic and inflicting heavy losses on the people. Thus the goods laid in by these merchants failed to find purchasers. At the same time, the excessive issue of notes tended to disturb the money market and to raise the interest on money. The promissory notes that the merchants had issued beyond their means failed to circulate, and embarrassment at once overtook their issuers.

As to railway schemes, Mr. Taguchi is of opinion that only a portion of the countless projects now afoot will be carried into practice, and therefore no economic trouble need be apprehended from that direction. Probably no greater source of danger exists than the savings banks. In the eighth session of the Diet a change was effected in the Bank Regulations: they became empowered to invest the capital in stocks. Consequently, whenever stocks fall depositors at once feel uneasy about their money in the banks. Mr. Taguchi does not pretend to assert positively that the ruin of the Osaka Savings Bank was ascribable to the recent fall in all kinds of securities, but whatever many have been the real cause, the restoration of the Regulations to their original form is urgently needed.

The present trouble is traceable, according to certain bankers of high standing, to financial events immediately subsequent to the retrocession of the Liaotung Peninsula. Whether owing to the special request of the Government or acting on its own judgment, the Bank of Japan, while the public expected to find money

grow tight, suddenly lowered its rate of interest, as if to inform people that nothing need be apprehended about the future of the market, and as if to impress upon them that accommodation could be procured to any desired extent. Encouraged by this confident attitude of the Bank, enterprises began to be started at an alarming rate, and hence the reaction now felt.

Without reflecting so severely on the action of the Government or of the Bank of Japan, Mr. Shibuzawa also is inclined to attribute the economic trouble to an excessive spirit of enterprise. He caused the Tokyo Chamber of Commerce, of which he is President, to investigate the number of enterprises of all descriptions in June and December of last year, as well as in June of this year, and at the date when that investigation was carried out, namely the 17th of September. In June of last year the sums invested in banks, railways, and companies totalled 330 million yen; it increased to 410 millions at the end of the year; in June of the current year the figure rose to 537 millions; and at the date of the investigation it had reached 593 millions. These figures related to mercantile and manufacturing corporations actually carrying on business. Account must also be taken of enterprises for which temporary charters had been granted or for which charters had been solicited but not yet granted. Corporations of this tentative character counted 544, representing a total investment of 479 million yen. The two totals aggregated over 1,000 million yen. Mr. Shibuzawa is of opinion that these investments are in great part premature, and that a reaction of more or less gravity could not fail to follow such a state of affairs. As to whether a greater disturbance than the present will overtake economic circles, Mr. Shibuzawa does not pronounce any definite opinion, though he regards the present trouble as a very small affair, one not worthy to be considered in the light of a reaction. None the less, the embarrassments that has overtaken certain petty banks in Osaka are proximately due to the action of various companies in calling up installments on their shares. Railway companies alone have called in nearly 15 million yen since August. Petty Banks at once feel a pinch on such occasions. Mr. Shibuzawa concludes that large banks must not be too much on their guard, for that might have the effect of aggravating the evil.

THE CODES.

"For a reason that is not apparent much discussion is attempted to be forced on the question of the ownership of land under the new Codes. Seeing that these Codes have not yet, or only partially, been promulgated, and perhaps never will be in their present form, all controversy must be somewhat premature." Thus the *Japan Gazette*. What our contemporary means, we are unable to determine. The whole of the new Civil Code, with the exception of the sections on family law and succession, was passed by the Diet last session, after undergoing thorough revision at the hands of a Committee of experts appointed four years ago; received Imperial sanction almost immediately afterwards, and was duly promulgated on the 27th of last April. It has not yet gone into operation, but the power to put it into operation at any moment is explicitly vested in the Government. The *Gazette* appears to be labouring under a delusion. It may, perhaps, seek to justify its misstatement by pretexting that the parts of the Codes bearing on family law and succession have not yet been promulgated. But that would be a mere subterfuge, for the discussion that elicited the *Gazette's* criticism and is denounced by it as premature was, according to its own statement, a discussion about the ownership of land, and the 724 articles promulgated last April cover that whole subject. The only conceivable explanation of the *Gazette's* singular assertion is that it knows nothing about the history of the Civil Codes career, or about the fact that 724 articles were promulgated last April.

BUSINESS MEN AND POLITICAL PARTIES.

"If the full scope of constitutional systems is to be realized, political parties must be perfected, and to make political parties perfect, the only course is to bring them into closer touch with the people by making business men their foundation." Such is the view taken by the *Kokumin Shimbun*. It recalls the curious fact that business men in Japan have always stood, for the most part, outside the ranks of political parties. There are a few exceptions of course. Mr. Tanaka Shozo, for example, is a business man, and so was the genial, large-minded Mr. Awaya Shinazo, who did as much to bring credit on the House of Representatives as Mr. Tanaka has done to disgrace it. Besides, Mr. Awaya did not stand in the interests of any party, but was always an independent member. The agricultural class is, of course, pretty fully represented in the Lower House, and many of its representatives belong to the Liberal Party. But the genuine business men, the *Futsugyo-ka*, that entered the political field after the first dissolution of the Diet, have remained from the outset a separate group, not allying themselves with any party or voting uniformly for any Cabinet's measures. It must be fresh in the memory of our readers that the Opposition Journals used to make a habit of abusing these *Futsugyo-ka*, calling them "official traders," "sycophants," and other unpleasant names. A strange phase of political prejudice, in truth, worthy to be classed with the unreasoning antipathy that held up to public scorn and detestation everything official and made members of the Diet ashamed to own themselves Government supporters. Apparently a wiser mood is beginning to prevail to-day, and the change gathers significance from the fact that a journal like the *Kokumin* takes the lead in advocating it.

The same journal has another striking paragraph:—"A special species of government organized outside political parties and outside the people, is not good. The elders of Sat-cho and the Ministers of long standing must be brought into the ranks of political parties. Let Marquis Ito and Count Mutsu join the Liberals; Marquis Yamagata and Mr. Shirane, the National Unionists; Counts Matsukata, Okuma, and Kabayama and Viscount Takashima, the *Shimpo-to*. For the rest, they can ally themselves with whatever party suits them. That is the way to place governmental organization upon clear lines." Such a paragraph is interesting and suggestive. Interesting because it has long been apparent to every thoughtful person, and has over and over again been pointed out in these columns, that so long as the *Meiji* statesmen held together and stood entirely outside political parties, the latter could never develop competence to take over the Administration. An essential preliminary to the raising of political parties to a status such as should qualify them to destroy and construct Cabinets, was that they must absorb into their ranks the men whose record as administrators had taught the nation to trust them with the control of affairs. It was all very well to call those men "clan statesmen;" to pretend that they suffered themselves to be enslaved by personal considerations, and to gibbet them as corrupt administrators, misapplying the country's resources and obstructing the path of progress. But the very agitators who thus reviled them knew well that without their co-operation no efficient or tolerably stable Ministry could be formed, and apparently the time has now come for proclaiming that knowledge once so carefully hidden. The *Meiji* statesmen themselves, reading such paragraphs, ought to be reminded that union in their case meant absolute mastery of the situation. Had they stood together, they might have deferred the era of party Cabinets as long as they pleased, and if, suffering themselves to be torn apart by minor differences, they have dissipated their power to postpone such a radical innovation until the nation was fully prepared for it, history will hold them responsible.

THE CABINET.

The *Yomiuri Shimbun* hints very plainly that discord already threatens the Cabinet. One of the Ministers, we are told, is not such a man as the public would have indicated for a portfolio had choice been possible, and if he obtained admission, it was because matters distinct from mere competence or fitness had to be considered. His transfer to some other post is therefore a question of time merely. All this is very mysterious, but we presume that our contemporary has some reason for its assertions.

With respect to the above, the *Chuo* undertakes to name the Minister referred to, whom it declares to be Viscount Enomoto, who holds the portfolio of Agriculture and Commerce. But the same journal adds that if Viscount Enomoto retires, it will not be on account of any dissension in the Cabinet. From the outset the Viscount's agreement to serve in the new Ministry was not of a permanent character: it was understood that he would be ready to resign his portfolio at any time should such a course be found convenient by the Cabinet. The *Chuo* apparently thinks that the convenient time has now come, for it says that either Count Goto or Baron Yasuba will probably be appointed. We doubt the correctness of the *Chuo's* information if only for the reason that the state of Count Goto's health would certainly not permit him to re-enter public life at present. The Count has been suffering for some time from cardiac trouble that forbids any attempt to discharge active duties.

THE NATIONAL UNIONISTS.

The National Unionists are reported to have resolved that for the present, they will not adopt any decided attitude towards the policy announced by the new Cabinet, since the principles enunciated not only seem to accord with those hitherto professed by the Unionists themselves, but also do not differ perceptibly from the platform of the last Cabinet. The question turns, therefore, on the Cabinet's method of putting its professions into practice, and for that result the Unionists must wait. The fact is that the present Ministry, if they play their cards skilfully, may attain a very strong position. They are morally sure of the support of the *Shimpo-to*. Whatever disposition to coquet with the situation may be displayed by the leaders of that party, or however much they may hold back on the pretext of desiring to retain independence of criticism, they will assuredly be found in the Government's camp when the session of the Diet opens. On the other hand, if the Cabinet moulds its administrative and financial programmes on virtually the same lines as those chosen by the Ito Cabinet—and there is little room for it to do otherwise—the Liberals can hardly offer any serious opposition. Such appears to be the forecast of the best informed persons just now, but a very different view may prevail two months hence.

REDEMPTION OF BONDS.

The Department of Finance announces the redemption of the remaining portion—namely, 3,119,150 *yen*—of the New Four-per-cent Public Loan Bonds, the redemption to be effected on the 31st instant. These bonds are among the longest outstanding of Japan's public obligations. At the time of abolishing the fiefs (*han*) and establishing prefectures (*ken*) in their stead, the Central Government found itself compelled to take over all the debts contracted by the fiefs. Of these debts some dated from pre-*Meiji* days, and the rest from the period between the beginning of the *Meiji* era and the 7th month of its fourth year. The bonds issued to cover the former debts were called "Old," and those issued to cover the latter, "New." The New Bonds originally aggregated 12,418,175 *yen*, but they have been gradually redeemed with the exception of the remnant mentioned above, which will now disappear from the market.

WEAKNESS IN THE CABINET.

Public expectation that the present Cabinet can enjoy but a short tenure of office is not unlikely to be fulfilled, observes the *Yiji*, judging from the part thus far played by the Ministry. The entry of Count Okuma under ambiguous circumstances, the announcement of the "policy" by the Premier in highly abstract sentences, and the glaring discrepancy that exists between Count Kabayama's alleged speech before the Local Governors on the question of Cabinet responsibility and the speech officially published—these are points that induce the *Yiji* to form this adverse opinion regarding the new Ministry. Where lies the root of the trouble? The *Yiji* replies, through the medium of a certain anonymous publicist, that the want of an influential centre and the lack of perfect unanimity among the members of the Cabinet must be considered as the principal causes that obstruct resolute and prompt action. Who is the centre, the pivot, of the new Cabinet? Ostensibly Count Matsukata occupies that position, while practically Count Okuma or Count Kabayama or even Marquis Saigo and Viscount Takashima are the men of influence. The late Cabinet was open to the criticism of being deficient in men of ability and talent, but in one respect it was far better than its successor. The last Ministry moved harmoniously around the person of Marquis Ito. The new Ministry being, as it were, a heterogeneous group, different and sometimes quite contradictory opinions naturally rise whenever any question of importance is on the *tapis*, and a long time is wasted before a definite conclusion can be arrived at. The want of a pivot not being easily remediable under the circumstances, what the Ministry should strive to attain is cordial unity among themselves, and the elimination of any who interfere with their procedure. At least Counts Matsukata, Okuma, Kabayama, Marquis Saigo, and Viscount Takashima should strive for uniformity of view. If any of these statesmen cannot endorse the views of the rest, he should resolutely sever his connection with the Cabinet. As things stand, the Cabinet affords pretexts for attack.

INDUSTRIAL LOAN BONDS.

The Government's failure to float the last instalment of the War Loan naturally inspires anxiety about the fate of the Public Undertakings Bonds that have to be issued during the present fiscal year, to the amount of 8,370,000 *yen*. In the present state of the money market, it would obviously be unwise to attempt any issue of the Bonds. The *Nichi Nichi Shimbun*, referring to the subject, says that as the money to be raised is not immediately required, the Treasury may possibly defer any action until the close of this year or the beginning of next, since the law leaves the choice of time entirely to the discretion of the Minister of Finance within the limits of the fiscal period ending March 31st, 1897. It is also conceivable that the money accumulated with the object of redeeming loan bonds or consols already issued may be utilized in this difficulty, though as to the details of such a transaction our contemporary is not very explicit. To us it appears that the limited amount of capital at Japan's disposal has been turned over about as often as it will bear to be turned. How so much has already been done with it is an enigma. The total of the contemplated Public Undertakings loan is 130 million *yen*, and it will surprise us very much if such a sum can be spared by the people.

GOVERNMENT BILLS NEXT SESSION.

The *Chuo* professes to have information of the principal bills that will be submitted by the Government to the Diet next session. They will be the remaining part of the Revised Civil Code, the Registration Law, the Revised Criminal Code, and the Forestry Law. Many other drafts of law will be introduced by the Departments of State, but they will be of minor importance.

THE TOBACCO MONOPOLY.

AMONG the fiscal measures submitted by the Government to the Diet last session, and approved by that body, perhaps the most important and interesting was the scheme for establishing an official monopoly of the sale of leaf-tobacco. Similar means of raising a revenue are employed in other countries, as France, Turkey, Austria, and so forth, but the conditions existing in Japan are so different that the plan to be applied here must also vary, and in view of that fact, as well as of the magnitude of the financial issue involved—an addition of ten million *yen* annually to the Public Funds—the Government's proposals have undergone considerable scrutiny since they received the approval of the Legislature and the sanction of the SOVEREIGN. The result of the scrutiny appears to be distinctly unfavourable, for reasons so obvious that their public discussion presents no difficulty. Briefly stated, the programme is this:—All tobacco-leaf grown in the country is to be delivered to the Government at prices fixed by the latter, who will then store it and subsequently sell it at specified rates to manufacturers and others. Growers, or intending growers, are required to send in, by the end of April each year, notices of the area of land to be devoted to cultivation, and must obtain official permission; for the Government, in order to regulate the supply of leaf, reserves to itself competence to limit the area of cultivation. The delivery of the leaf into the Government's stores is to be effected by the end of March, every year. A grower is not permitted to keep back any part of his produce, whether for his own use or for sale, unless he intends to export the leaf, in which case he can obtain a permit exempting him from the obligation of selling the tobacco to the Government. It is further provided that the collection and purchase of the leaves will be effected by special offices established at convenient places throughout the country. The system will go into force from January 1st, 1898, and from the same date the existing Tobacco Tax Regulations will cease to be operative, so that the sale of manufactured tobacco will thenceforth be conducted without the use of stamps.

Such are the salient features of the programme. By it the Government becomes, in effect, a colossal trader in leaf-tobacco, and engages in the operations of buying and selling that staple to the full extent of its production throughout the whole empire. Obviously two things are indispensable to a merchant undertaking business on such a scale; the first is capital; the second expert knowledge. As to the former, the Government, having free access to the public funds, can command whatever amount is required. But there can be no question that the smaller the capital sum involved in the operation the better for the interests of the Treasury.

It is not difficult to estimate, with close approximation to the truth, the amount that must be expended at the outset, but before proceeding to arithmetic, there will be advantage in examining some other phases of the question. The expert knowledge available for the purposes of the buyers offers itself for consideration in the first place. Japanese tobacco, varies greatly in quality, no two years giving like results, and, moreover, presents an exceptional number of kinds. More than eighty different varieties are recognised by dealers, their values ranging from 4 *yen* to 40 *yen* per picul. Obviously the Government will require experts competent to judge and assess all these different kinds, and on the capability of the experts will virtually depend the success or failure of the scheme. The Government, it is alleged, does not command the services of such experts, and certainly it can not hope to train them, for, in the first place, tobacco is one of the most difficult of all articles to judge; and, in the second, competent experts will be required from the very outset, for, on January 1st, 1898, the Government will have to buy all the stock of tobacco leaf then found in the country. A huge transaction it will be. The annual produce of the leaf in Japan averages twelve hundred thousand piculs, and as there will certainly be one-third of the stock of 1897 remaining unmanufactured at the beginning of 1898, the total amount to be purchased will be sixteen hundred thousand piculs.

The next point of importance is that Japanese tobacco is eminently liable to deterioration. The damage may come at any time, but is most to be apprehended shortly after the leaf is baled. Loss from that source may be limited by careful attention, but can not be altogether prevented, and may be moderately estimated at from 20 to 25 per cent. That item must, of course, be included in any general statement of the enterprise's accounts. Moreover, on the Government will devolve the duty of preserving equilibrium between supply and demand, the natural law being supplanted by official control. A large surplus of stock in hand would mean certain loss, for Japanese tobacco does not improve by keeping, but deteriorates in colour and quality alike. The opinion of persons thoroughly competent to judge is that, under ordinary circumstances, the proposed system will result in a yearly accumulation of damaged and unsalable leaf, and the accumulation growing steadily, will at last eat up the capital originally invested. In this context it must be remembered that there is no export outlet of any consequence. England is the only market open to the Japanese product, and English manufacturers consume only some 7,000 bales (14,000 piculs) yearly, out of an estimated production of 1,200,000 piculs. To the radical defects of the system, must be added another of a

scarcely less serious character. It might naturally have been supposed that, in organizing a monopoly, every possible precaution would have been adopted to prevent leakage of revenue, already a source of considerable loss under the present stamp-tax system. But we find, on the contrary, that one of the most vital safeguards is neglected. For anybody is allowed to buy leaf-tobacco from the Government, and of course to re-sell it, a wide gate being thus opened for illicit dealing and smuggling. The only persons debarred from purchasing are the growers, but it is easy to foresee that combinations of the simplest character between growers and non-growers will provide a ready route for evading the law. A grower may keep back a large part of his produce, acting in collusion with a non-grower, and the latter, having purchased a small quantity of leaf from an official store, will be in a position to incorporate it with the former's illicitly retained produce. These dangers might have been avoided by providing that no leaf should leave the Government's hands unless its immediate destination was a factory, but no such precaution seems to have occurred to the drafters of the scheme. Moreover, by allowing transactions in leaf-tobacco, the Authorities have cut themselves off from the source whence they might have obtained a supply of expert advice, namely, tobacco merchants and middlemen with whom all the experience lies. These will be arrayed against the official monopolist, since it will naturally be their interest to buy all the best leaf from the Government's warehouses and leave the rubbish. Indeed, it is, we believe, precisely from the experts that the most unfavourable predictions come about the working of the scheme.

Referring now to the outlay that will be required to work the monopoly as planned by the Government, to raise a revenue of 10,000,000 *yen* annually the figures seem to stand thus:—

Cost of purchasing 1,600,000 piculs <i>YAN.</i> (being the stock remaining from 1897 together with the new crop of 1898), at 8 <i>yen</i> per picul.....	12,800,000
Cost of erecting store-houses.....	1,000,000
Total	13,800,000
Interest on working capital at 5 per cent.	690,000
Working expenses, calculated at 7½ per cent. of ten million <i>yen</i>	750,000
Annual loss by damage and dead stock, calculated at 25 per cent. on a yearly production of 1,200,000 piculs at 8 <i>yen</i> per picul	2,400,000
Total annual outlay	3,840,000

or nearly 40 % of the revenue.

This calculation is made on the hypotheses that capable experts are obtainable, and that the tobacco-leaves when sold have the same weight as when purchased by the Government. But, in practice, the latter supposition would prove untenable, for a loss in weight of at least 15 per cent., and sometimes as much as 30 per cent., must be anticipated.

It seems impossible to predict anything

but failure for such a plan as the above. The drafters of the measure do not appear to have paid sufficient attention to the experience of other countries, where tobacco is turned into a special source of State revenue. It is true that France has a *régie*, or monopoly, but she retains the leaf and undertakes the task of manufacturing it; and as she grows little herself, relying chiefly on outside sources, she has no difficulty in preserving equilibrium between supply and demand. The same is true of Austria and Italy, and as for Turkey, she farms her tobacco to a company, imports little, and has a large export to all parts of the world. In short, Japan's case is differentiated from the cases of all other States practising the monopoly system by the fact that, while they either obtain their supply from abroad or export their surplus, she is without any such safety-valve. There is still time to reconsider the subject, and possibly these comments may contribute something to its better understanding.

"THE DOLLAR OF THE FATHERS."

(COMMUNICATED.)

NO previous Presidential contest in the United States has commanded such profound interest throughout the civilized world as the extraordinary campaign now in progress. The result of the election, next month, is awaited by all nations with an anxiety which can be accounted for only by the general conviction that the young Republic may presently be exposed to perils greater than have ever before overshadowed its career, and more difficult to surmount than even the exhausting ordeals of the civil war. To what extent these extreme apprehensions are justified is a question which cautious observers hesitate to discuss. That the situation is grave, and in many respects ominous, few are disposed to deny; but the materials for forming a decisive judgment have yet to be collected, and most of the arguments thus far produced seem based rather upon unsupported assumptions than upon sound demonstrations. The crisis has been suddenly and unexpectedly precipitated by the party leaders in America, and the various circumstances which have contributed to hasten its development are by no means fully comprehended, except, perhaps, by financiers who have had opportunities of studying events at close range for the past twenty years. Not many persons, outside of the circles most directly concerned, can pretend to be familiar with all the complications through which the silver agitation has reached its latest acute stage, and the statistical data essential to a thorough investigation are almost entirely out of reach. Especially as regards recent occurrences, we are unable to apply satisfactory tests to the daring assertions in which the opposing politicians frequently indulge. It hap-

pens, however, that evidence bearing upon the earlier history of silver in America is more easily accessible; and, as the condition of affairs at the foundation of the country is referred to with apparently boundless confidence by both parties to the controversy, it may be useful to cite one of the most significant opinions proclaimed a century ago by the financial authorities to whom the duty of establishing the national currency was entrusted. From the speeches which the principal orators on both sides are now delivering, it appears that the Democrats and their allies claim to be sustained by the example and doctrine of "the fathers," whose fundamental theories they profess to revive in the scheme for enforcing a silver and gold ratio of "sixteen to one." The Republicans, on the other hand, and those who co-operate with them, strenuously deny that any such principle as that of a fixed and unalterable proportion was sanctioned by the framers of the Constitution. It is not our purpose to offer comments upon the testimony supplied by the documents of the past, but merely to extract from them certain passages the pertinence of which is obvious, and the authenticity of which, we believe, is nowhere disputed.

Long before the actual work of compiling the Constitution was taken in hand, eminent experts in economy were busy with preliminary studies. The writings of ALEXANDER HAMILTON, ROBERT MORRIS, THOMAS JEFFERSON, and their associates, show how carefully they weighed not only the necessities of the time, but also those of the years to come. In consequence of their recommendations, the minting of silver at the ratio of fifteen to one was ordered by Act of Congress in 1792. This measurement was then held to be accurate and just. But that it should be permanently and arbitrarily maintained, was not intended or contemplated. HAMILTON distinctly recognized the paramount advantages of the gold unit, though as the comparative values of the two metals had long been practically unvarying he believed that a double standard could be employed with safety. As Secretary of the Treasury, he officially declared that changes in the condition of silver were not unnaturally to be expected, and that these should be provided for by regulating the proportions between it and gold "with an eye to their average commercial value." These were his words:—"As long as gold, either from its intrinsic superiority as a metal, from its rarity, or from the prejudices of mankind, retains so considerable a preëminence in value over silver as it has hitherto had, a natural consequence of this seems to be that its condition will be more stationary. The revolutions, therefore, which may take place in the comparative value of gold and silver will be changes in the state of the latter rather than in that of the former."

"If, reasoning by analogy, it could be

affirmed that there is a physical probability of greater proportional increase in the quantity of silver than in that of gold, it would afford an additional reason for calculating on greater steadiness in the value of the latter."

"There can hardly be a better rule in any country for the legal, than the market, proportion. The presumption in such case is that each metal finds its true level according to its intrinsic utility in the general system of money operations."

JEFFERSON had already, in 1784, announced the same proposition, in still more emphatic terms. "The proportion between the values of gold and silver," he affirmed, "is a mercantile problem altogether." "Just principles will lead us to disregard legal proportion altogether; to inquire into the market price of gold in the several countries with which we shall principally be connected in commerce, and to take an average from them." In this spirit the laws governing the gradations of American currency were primarily laid down. The language of the men who prescribed these laws unmistakably indicates the intention that silver should first be coined at the rate of fifteen to one—that being its relationship to gold in 1792—and that the future proportion should be adjusted in accordance with the comparative commercial values ruling in the markets of the great body of nations. The necessity for such action was additionally illustrated by HAMILTON in the following statement:—"It is evident that, as often as a country which overrates either of the metals receives a payment in that metal, it gets a less actual quantity than it ought to do, or less than it would do if the rate was a just one." Furthermore, he held up a warning identical in purport with the principle of a well known and long accepted law:—"One consequence," he affirmed, "of overrating either metal, in respect to the other, is the banishment of the one that is undervalued."

The foresight of these masters of economic science was vindicated before the Republic had passed through its first half century. During JACKSON'S administration, a readjustment of proportions was imperatively demanded, and in the time of VAN BUREN the ratio established by Congress was a slight fraction less than sixteen to one. A few years later, the fluctuations of silver became the cause of such general inconvenience that the attempt to maintain its equality was given over, and in 1853 the white metal ceased to be a legal tender for more than five dollars. No legislative experiments in the direction of conferring upon it a definite value were thereafter undertaken until the period when the vast increase of production set in, about twenty-five years ago. The leading facts of what has happened since 1873 are in the remembrance of all who have occupied themselves with

the subject. Spasmodic efforts have been made to open the mints to silver on a gigantic scale, and laws have been enacted by which the inferior ore is made to stand on an absolute parity with gold, and to serve as a legal tender to any amount. The acceptance of silver dollars as the equivalent of gold dollars, notwithstanding a difference of nearly fifty per cent. in their true value, is compulsory upon the American people. The struggle of the silver advocates to secure unlimited free coinage has thus far failed, and the issue of the white dollars has been so restrained by law and by the prudent watchfulness of the Treasury officials that no violent derangement of the monetary system has yet manifested itself. But for the precautions observed by his Department, Secretary CARLISLE asserts that gold would already have been driven out of the country, and that public confidence in the ability of the Government to preserve the fictitious ratio would be completely overthrown. Now, however, the Democratic candidate for the Presidency calls upon the community to empower him to break down all barriers; to admit silver to the mints in unrestricted quantities, and to enforce the recognition of the manufactured tokens at an artificial valuation of double their true worth. In proposing these departures from usage and precedent, he and his companions profess to be inspired by the highest motives of integrity and morality. Startling as his premises are, and dizzy as the structures which he builds upon them appear to those who hold by the ancient safeguards, he undoubtedly carries with him numbers of voters who have been persuaded that their material interests will be advanced by the adoption of his "platform." That he should win their acquiescence on many points which they are unable to consider intelligently, need not excite surprise. When the masses lose their bearings altogether, adroit and ingenious leaders can often turn them whithersoever they choose. In this case, the Democrats are launched upon waters hitherto unknown and unexplored, without charts or soundings to help them in determining their course; and it is the way of the unreflecting to accept such pilotage as cheers them by lavish promises of speedy refuge in the pleasantest and most prosperous harbours. The vainest fallacies are sometimes difficult to refute, simply because they travel beyond the boundaries of human experience; and the multitude may be easily misled by audacious paradoxes against which no negative proof can be promptly brought. But the silver partisans attempt too much when they seek to gain adherents by representing that their policy is the same as that of the statesmen of 1792, and that the cherished object of their ambition is to restore the "dollar of the fathers" to a sure and lasting basis by carrying out the mandates of the Constitution. The express

avowals of the fathers themselves are too explicit to be thus distorted. It will not do to assume that popular credulity and ignorance have no limits whatever. That has been tried before, in American elections, with results not calculated to encourage repetitions of the experiment. The silver "dollar of the fathers" was regarded by the wisest of their own generation as a subsidiary piece of money, dependent in value upon the market price of the metal of which it was composed. If the dollar of the great-great-grand-children is to take a higher position, it must be through the employment of other methods than unchecked freedom of coinage and the fiat legislation of a single Government.

THE MARKET PRICE OF JAPANESE CONSOLS IN LONDON.

According to intelligence published by the vernacular press on the 16th instant and reproduced in these columns on the following day, arrangements had been completed for placing Japanese consols among the securities regularly quoted on the London market, but as to the price that they were likely to command, no news had yet been received. We now read in the *Yomiuri Shimbun* that a telegram reached the Specie Bank in Yokohama on the 17th instant, to the effect that a thousand-yen Consol was quoted at £105 15s., which, at the rate of exchange then ruling, meant 1,015.20 yen or a premium of 1.52 per cent. Seeing that the same Consols were quoted in Japan at a little below par, the London price is a decided improvement. But we entertain no doubt that if Japanese finance were better understood in England the quotation would be very different.

LADIES' VOLUNTEER SOCIETY.

A movement has been inaugurated by Viscountess Yagiu and others to form a Ladies' Volunteer Society for the purpose of raising a naval fund. It is believed that several millions of ladies will join, and that if each contributes not less than one *sen* monthly, a large total can soon be raised. Doubtless the spirit displayed by the promoters and their associates will prove very valuable, but when we observe that to get together the price of a second-class cruiser, every female in Japan, of whatever age or position, would have to join the association and contribute steadily for one year at the rate of a *sen* per month, it is difficult to be very sanguine about the practical results of the scheme. We wonder, too, whether the promoters have taken into account the heavy expenses involved in getting together these petty subscriptions. That factor has always proved fatal to the success of such programmes.

THE PROGRAMME OF NAVAL INCREASE.

We read in the *Shogyo Shimpō* that, owing to financial considerations, the original programme of naval expansion has undergone some modification. It had been planned that all the important portions of the expansion should be completed in five years, but after much consultation between the Departments of Finance and the Navy, that period has been extended to seven years. The *Shogyo* explains, however, that this change of time will not at all affect the dimensions of the programme or impair its efficiency. On the contrary, by judicious discrimination between the parts needing speedy attention and those that may be slightly postponed without disadvantage, the new scheme will prove practically better than that submitted to the Diet and passed by it last session.

THE LIBERALS.

Journals like the *Yomiuri Shimbun* take some pains to demonstrate that the Liberals are extremely perplexed what attitude to assume at this juncture, and are vainly seeking some pretext to attack the Cabinet. The public are even invited to believe that the big party is threatened with the mood of indecision so often preluding disruption. Such suggestions are not likely to receive much practical attention. The Liberals are certainly displaying self-restraint. Their organs make no attempt to assault the Ministry, nor do they betray any disposition to adopt the destructive tactics pursued so inveterately by their former opponents. But they are very much alive, we imagine, though little *en evidence* for the moment, and it might be wiser for the *Yomiuri* and its allies to let them bide in peace.

O'TENTOSAMA LODGE INSTALLATION.

The annual installation meeting of the O'Tentosama Lodge, No. 1263, E.C., took place at the Masonic Temple on Saturday. A very large number of the Brethren were present, many coming down from Tokyo for the occasion. The installation of Bro. S. E. Unite, D.G.J.D., as W.M., was most impressively conducted by Wor. Bro. G. Hodges, D.G. Treas., Wor. Bro. H. Moss, Pres. of D.B.G.P. delivering the address to the Lodge. Wor. Bro. J. T. Griffin conducted the musical portion of the ceremonies, which were of an ornate character. The Worshipful Master having been duly installed, he invested his Officers as below:—

Wor. Bro. C. D. MossI.P.M.
Bro. A. B. BrownS.W.
Bro. T. W. McIlraithJ.W.
Wor. Bro. H. MossTreasurer.
Wor. Bro. G. HodgesSecretary.
Bro. Rev. A. R. MorganChaplain.
Bro. J. B. BarrettS.D.
Bro. F. C. HerliJ.D.
Wor. Bro. W. A. CraneOrganist
Bro. C. B. ClausenI.G.
Bro. J. E. BealeSteward.
Bro. N. Gordon MunroSteward.
Bro. H. IvisonTyler.

After the ceremony, the Brethren adjourned to partake "of that nourishment which is called supper." Wor. Bro. S. E. Unite presided, being supported on his right and left by some dozen Past Masters of the English and Scotch constitutions. The first two toasts—"The Queen and the Craft," and "The Most Worshipful, H.R.H. the Grand Master and Officers of Grand Lodge"—were given by the W.M., who made allusions to the fact of Her Majesty having just entered upon the sixtieth year of her reign, and to the Prince of Wales having commenced his twenty-first year of office as Grand Master of English Freemasons. Both toasts were received with musical honours, the appropriate anthems to each being enthusiastically sung. Wor. Bro. Lea proposed "The R.W. the District Grand Master and Officers of D.G.L. Japan," to which Wor. Bro. H. Moss responded. Wor. Bro. Geo. Hodges proposed the toast of "The newly-installed Worshipful Master and his Officers," to which the W.M., S.W., and J.W. responded. This toast was accorded musical honours. Bro. A. B. Brown toasted "The Past Masters," to which Wor. Bro. Crane replied. "The Sister Constitutions and Visitors" was proposed by Wor. Bro. Retz—in the unavoidable absence, through indisposition, of the I.P.M.—which was responded to by Wor. Bros. J. McDonald (Tokyo Lodge), H. W. Lea (Yokohama Lodge), and Andrew Patterson (Star in the East). The time-honoured toast of "the Mothers, Wives, Daughters, and Sisters of Masons" was proposed by the Junior Warden, and "the Tyler's Toast" was given by the W.M. During the evening songs were sung by Bros. Clarke, Corke, Eagling, and the W.M.; Wor. Bros. Griffin and Crane, and Bro. Dr. Munro gave one of Haydn's trios; Bro. Donnenburg contributed some musical selections, and other Brethren delivered recitations: a most enjoyable evening being spent.

KOREAN NEWS.

The editor of the *Sōul Independent* announces that from the 1st of January next his paper will cease to be bilingual, as it is at present, and that he will publish a four-page English journal and a four-page Korean journal separately. The rates of subscription will, of course, be correspondingly increased, the cost of the English paper becoming six dollars annually, instead of \$1.30, the remarkably low charge now made. This increase in the size and scope of the *Independent* will be welcomed, if we mistake not, by all residents in the Far East. Korea is the naughty child of the Orient, and the question whether coercion or conciliation will eventually have to be resorted to is so decidedly interesting that we want to learn as much as possible about the country and its doings.

The Department of Justice in Sōul evidently remains far beyond the reach of effective reform. Several prisoners are said to have been confined there for months, without undergoing any form of trial or even having a specific charge preferred against them.

A magistrate of Chung-san writes to the *Independent* a letter showing that even provincial folks in the peninsula have begun to appreciate the uses to which a public journal may be put. Since the incident will probably stand in history at the first of its kind to occur in Korea, we reproduce the letter, which, for its own sake indeed, deserves notice:—

DEAR SIR,—I consider your paper as not a friend of any special class of people but a friend to all those who are wronged and oppressed. I have a grievance against my superior the Governor of South Chung-Chong, and desire to publish my feelings in your valuable columns so that it may be known to the world. The Governor of South Chung-Chong re-established several unnecessary offices under his direction according to the old custom, and levied tax on the people for the purpose of maintaining these places. Such offices had been abolished by the law and the Government never made any appropriation for them. The Governor demanded the Magistrates under him to collect illegal revenue from the poor and helpless people in order to support these illegal institutions. I did not think it was my duty to obey his order, which is illegal, so I refused to comply with his demands. The Governor charged me with insubordination and reported to the Home Department to that effect. I want no favour from any body, but I court a thorough investigation. If I am guilty I will receive the proper punishment without a murmur. I hope your paper will publish the communication and let the Home Department know the other side of the story.

Yours respectfully, YUN KAP PYEHO.
Magistrate of Chung-San.

September 28th.

The first attempt to form a political party after Occidental models has met with official opposition in Korea. Here is the story:—

Kwak II, of Chemulpo, issued a public notice among the citizens of Chemulpo and its vicinity stating that "people of other civilized countries have the right of criticising the actions of the Government officials who are paid by the people. But in Korea we, the citizens, simply pay out our money to support the officials, and these officials treat us like their slaves. This state of affairs is due to the ignorance of their rights on the part of the citizens. In order to right the wrong we must organize a party among the citizens of the Commonwealth, the object and duty of which will be to establish freedom of speech and criticise the actions of our public servants who try to oppress the poor and ignorant people. The name of the party will be called 'Liberal People's Party.' Those who approve the movement and desire to join the organization are requested to send their names to the Head-quarters, Chemulpo." It is reported that over 200 names have been subscribed on the list and this caused quite a stir in Chemulpo. The Mayor arrested Kwak and Kwak's friend, Choi Chin Han, and sent them up to Sōul for trial.

It is a veritable case of the cure is worse than the disease with the people of Pung-Duk. The troops sent to suppress the rebels in that district are more active than the insurgents themselves in the matter of looting villages. The people have petitioned the War Office in Sōul for relief, and orders have been issued in the desired sense. In truth, the state of affairs in Korean provinces seems to be most primitive. Here is an illustrative item:—

The people of Jiksan petitioned the War Office stating that some weeks ago a band of rebels entered the town of Kalsan and asked the people to take care of an ox which they claimed was their own. The people had to keep the ox in the public stable of the town. A few days later a man in the neighbouring town came to them and claimed the ox and took it away. Later the rebels came back and demanded the ox, and threatened to burn the town if it was not returned to them immediately. A company of Sōul troops arrived in the town just at that time and drove away the rebels. After this the Sōul troops began to press them for money and provisions so that the people are in a worse condition than ever before. The War Office ordered the commander of troops in that locality to prohibit all such conduct among the soldiers.

Korean courts of justice evidently attach much importance to the motive of a crime. A woman of Ye-ju surrendered herself to the police confessing that she had killed a man named Chang. If appeared that the man had murdered her husband some time previously. The woman, bent upon vengeance, hid herself in the vicinity of Chang's house after dark, and plunged a knife into his heart as he was passing homeward. Her sentence was three months' imprisonment.

The *Independent* continues the task of translating and publishing the laws governing the procedure of the new Council of State, or "National Council," as our Sōul contemporary calls it. Plainly the purpose of the drafters of the laws has been to follow the methods of deliberative bodies in the West. Any member of the Council has the right to introduce a bill, which is to be suffered to lie on the table for at least a week before being brought up for debate. Provision is made for speeches in due order, for amendments and for voting, the last being by closed ballot. Minority reports are also contemplated, and after a bill has duly passed the Council, it goes to the King for approval. Whether this innovation is to become abortive in practice or to possess real efficacy, the framers of the laws have unquestionably evinced a desire to subject public measures to free and intelligent scrutiny. Of course the Council, since it consists entirely of officials nominated by the Sovereign or enjoying the privilege of membership *ex officio*, cannot be said to represent the voice of the nation in any respect. But the same criticism might have been applied to the *Chihokwan Kwaigi* which was the embryo of representative institutions in Japan.

Min Yong-chun, who was appointed President of the Privy Council against his will, has tendered his resignation thrice. The Court has at last been obliged to acquiesce in his request. On the 10th inst. Min retired to his villa in the suburbs of Sōul.

The two ex-Vice-Ministers of the overthrown Kin Cabinet and nine others, all understood to hold progressive views, who were arrested several months ago on the charge of treason, were acquitted by the High Court on the 9th inst. The tables are now turned against their four accusers, three of whom have been sentenced to penal servitude for life, together with 100 blows, and the other to 2½ years imprisonment with 90 blows. It is said that this impartial judgment was chiefly due to the influence of Mr. Greathouse, who took part in the trial.

The coal sheds of the Russian Fleet at the Island of Wōl-mi having been completed, a steamer carried thither, on the 9th inst., 1,100 tons of coal from Chefoo. Magazines are said to have been built in the vicinity of the sheds. The latter cover only 150 *tsubo*, and can store only a limited quantity of fuel.

The Korean Ambassador to Russia reached Ninsen on the afternoon of the 20th inst. Mr. Waerber and several Korean officials awaited his arrival at Ninsen. Seven Russian officers who are to be engaged by the Korean War Office, accompanied the Embassy.

The *Yomiuri* gives strange news about some Korean refugees in Japan. It says that several recently met, and, as a means for propitiating the favour of the King, drew up a representation urging that the concession of the Sōul-Fusan Railway should not be granted to Japan. They have already forwarded this to the King through a certain channel.

CHINESE NEWS.

We are reminded of the marked difference between China and Japan in the matter of maritime enterprise, by an article in the *Peking and Tientsin Times*. It is now many years since the China Merchants' Steam Navigation Company was organized, yet not another enterprise of the kind exists to this day in the Middle Kingdom, and the Company's fleet of 26 steamers remains a constant quantity, no attempt being made to augment it. The fleet is commanded by foreign officers exclusively, no Chinese seaman being thought worthy of a master's billet. The shareholders are for the most part, Mandarins, and the head of the affair is Li Hung-chang. Add to all this the fact that China is practically without a sailing vessel of foreign type, and the contrast between her and Japan becomes very striking.

What some propagandists of Christianity have to endure in China is illustrated by the story of a missionary who, after spending ten months at Si-ning among the scenes of the Mahomedan rebellion, set out to travel with his wife to Lanchow, the capital of Kan-su. He mentions incidentally that they were glad to get away from Si-ning, not merely because the long period of strain and excitement spent there had tried their nerves, but also because the place was a "veritable dunghill, all the nightsoil, as well as the carcasses of horses, cows, mules, asses, and dogs, that had perished of hunger, having been deposited in the streets throughout the siege. The journey from Si-ning to Lanchow was an affair of nine days. "The first night," writes the missionary, with the most-of-fact nonchalance, "we"—that is to say, he and his wife—"shared part of a brick bed with others, and had as much room for the four of us, including our servants, as an ordinary-sized man would require for himself. Another night, we shared bed with four soldiers who very kindly crushed together to make room for us."

Terrible accounts are published of incidents with the Mahomedan rebellion in Kan-su. It is estimated that ten thousand Mahomedans, chiefly women, children, and old men, have died of hunger, or been frozen to death in the hills and mountains. Those that have submitted number eighteen thousand, women and children for the most part. Thirty or forty thousand remained under arms among the hills in the south-eastern district at the time (June 16th) of compiling the account from which we quote. The business of seizing and beheading the insurgents was conducted with wholesale vigour so soon as their strength was broken in any district. An average of sixteen had been decapitated daily for two weeks in Si-ning on June 16th, and as three thousand heads remained to come off, the sanguinary carnival was expected to go on for an indefinite time longer. Crowds of people watched the executions, and it is easy to conceive the demoralization that must have resulted from such prolonged intimacy with blood-shed. The missionary referred to above, writing in the *Peking and Tientsin Times*, says:—

Mr. H. and I witnessed twenty-two rebels being brought into the city a few days ago, a sight which we do not care to witness again. Looking up the main street we saw a vast crowd of people rushing toward us. They came on at a tremendous pace, forced forward by the crowds behind them. Every one was mad with excitement. Close on the heels of the mob came the body-guard in charge of the rebels. Some of the rebels were old, grey-haired men, whose tottering steps were scarcely equal to the hurried march; yet in their last moments no mercy was shown by the soldiers, who, at the least sign of their falling in the rear, took them by the neck and ran them forward amidst sardonic laughs and jeers from the frenzied mob. We saw several soldiers waving their swords in the air, and uttering terrible things about the deeds they were about to perform on the bodies of living men with feelings and passions like themselves. We hastened our steps homeward to be far away from the scene of gloating blood-thirstiness.

It appears to be assumed in Shanghai that Mr. Dudgeon's mission to Peking has been a failure. We can not discover that anything definite is yet known about his doings in the Chinese capital, but the fact he left Peking on

the 5th or 6th instant is regarded as evidence that he could not accomplish anything. The *North-China Daily News* ascribes his failure to the fact that the co-operation existing among the various nationalities in the Shanghai Chamber of Commerce, which sent him, is not reflected in the Foreign Corps Diplomatie in Peking.

KEROSENE IN JAPAN.

The existence of "inflammable water" in Echigo has been known for more than ten centuries, though the extraction of kerosene and its purification for purposes of illumination date only from the Meiji era. It was in 1888 that machines were introduced and the extraction of the oil regularly started. But for a long time no satisfactory result was obtained. The introduction of American kerosene machinery, a year or two ago, was the signal for a sudden development of the industry, as may be seen from the following table:—

	Echigo, Totomi, Ugo, Shinano, Ishikari, Total.
1884.....(Koku)	24,885...3,784...771...481.....23.....30,541
1885.....(Koku)	25,023...3,630...805...425.....48.....30,931
1886.....(Koku)	25,042...3,832...840...625.....53.....30,393
1887.....(Koku)	26,259...3,507...1,118...609.....78.....33,504
1888.....(Koku)	224,866...2,548...3,115...345.....105.....231,072

Japan imports kerosene from America and Russia to an extent of five to six million yen per annum. Partly from a desire to meet this demand with home products, and also from the unusually satisfactory returns that some capitalists succeeded in making from this industry, kerosene extraction has become very brisk in Echigo. The latest returns of the Echigo petroleum companies record exceptional profits, the dividends declared by some being as much as 113 per cent., and none were less than 20 per cent. The attention of wealthy men being directed to the industry, several new companies were started lately with capitals ranging from 300,000 to 500,000 yen. The establishment of these companies has been a great desideratum, for owing to the nature of the industry the companies at work previously suffered severe strain owing to their paltry capital. Kerosene is chiefly obtained in the five districts of Koshi, Naka, and Higashi Kubiki, and Mishima and Kariba. The first district yields the largest amount of oil at present, owing to the employment of American machinery. At a depth less than 200 yards below sea level more than 30 koku (1 koku=30.70 gallons) can be daily extracted from some wells. The monthly output reaches about 20,000 koku at present. It is confidently expected that the introduction of similar improvements in other districts will be followed by a large increase in the total output of oil in Echigo.

CHINA AND JAPAN.

The *Fiji Shimpō* announces that after bringing very sharp pressure to bear upon the Chinese Government, Baron Hayashi has at length succeeded in obtaining strict observance of the terms of the Shimonoseki Treaty. Our contemporary does not explain the particulars of China's attempts to evade the Treaty, but alleges very emphatically that attempts in that sense were actually made, and that in some respects, the Treaty was deliberately violated. At the close of the paragraph announcing this news we find a significant corollary:—"The power of imposing taxes on manufactures is left to China." If our readers recall all that has passed upon this subject, they will appreciate the importance of the *Fiji's* corollary.

Another paragraph in the same paper says that, according to agreement, the ratifications of the new Treaty between China and Japan were to have been exchanged within two months of date of its signature, and that the two months would expire on the 23rd instant. Much discussion took place, however, with reference to the taxation of articles manufactured by foreigners in China, and it was not until the 20th that the exchange of ratifications could take place. As to the result of the discussion, what has been said above seems conclusive.

ROLLING STOCK MADE IN JAPAN.

This subject has already been mentioned in these columns, but the following items from the *Osaka Asahi* may be worth noticing. The information is said to have originated from Viscount Inouye, ex-chief of the Imperial Railway Department, and now President of the Rolling Stock Company in course of establishment at Osaka. The total mileage of Government and private railway lines in Japan open to traffic aggregates about 2,000 miles. When the traffic mileage of Japanese railways doubles this figure, considerable difficulties will be experienced in supplying sufficient rolling stock, judging from existing conditions. At present, the supply of rolling stock falls very far short of the demand as compared with the mileage open to traffic; and compared with the ratio that rolling stock bears to mileage in England, there is a deficiency of 275 locomotives, 1,390 carriages, and 15,951 waggons in Japan. At least 500 locomotives, 2,000 carriages, and 10,000 waggons should be provided in the near future for the additional mileage. If orders for all this rolling stock were sent abroad, the money that Japan would have to pay on that account would reach an enormous figure, the single item of locomotives alone amounting to more than 15 million yen. The exodus of so much money and its consolidation as fixed capital would bring about many economic troubles and ultimately would impair the development of railways in Japan. There are various benefits that would accrue from the making at home of rolling stock, and the one that specially commends itself to the attention of railway capitalists is that Japanese locomotives would be 6,000 yen cheaper than imported engines. If a home-made locomotive could be sold 10 per cent. cheaper than an English one, a net profit of 4,000 yen would be obtained per locomotive. This means a saving of 3,100,000 yen on 775 locomotives, supposing that future demands are entirely met at home. Then in regard to cars and waggons the saving made would also be immense. These considerations induced the Viscount to persuade Baron Iwasaki and other capitalists to start a rolling stock company in Osaka.

THE DOSHISHA.

The Letter of the Doshisha Trustees to the American Board has already been printed in these columns. A correspondent, not connected in any way with the Doshisha or with the Board, now sends us the reply that the Board made to the above letter, his feeling being—a feeling with which we entirely agree—that our readers, having heard one side of the question, should hear the other also, and should learn the thoroughly Christian treatment that the Doshisha Trustees have received both from the Missionaries and from the Board they represent. The following is the reply:—

Rev. H. KOZAKI, President of the Doshisha, Kyoto, Japan.

DEAR PRESIDENT KOZAKI,—Your communication signed on behalf of the Trustees of the Doshisha, bearing date April 30th, 1896, and received June 3rd, addressed to the Prudential Committee of the American Board, was presented to the Committee, who, after careful consideration, authorize the following reply, which has been delayed owing to the necessary absence of the secretary from Boston:—

It is needless to state that this Board, and the Churches of the United States supporting the Board, have from the first taken a deep interest in the cause of Christ in Japan, and especially in the Doshisha, which has been aided by this Board in order to advance the kingdom of our blessed Lord in that Empire. The large sums of money given for this purpose, the great number of men and women sent out, and the prominence accorded in the religious press of our denomination to Christian work in Japan, clearly show that. It must be clear, too, that there has been no other motive upon the part of the Board or its constituency than to hasten the day when Japan shall become a Christian nation. Money has been given, life consecrated, effort put forth, not for the Board nor for America, but for Japan.

Without further explanatory statements, we will refer to the main points of your communication.

The Missionary Houses in Kyoto.—It is only recently that the Prudential Committee learned that the Trustees regarded those houses and land as the exclusive property of the Doshisha. The Prudential Committee did not appropriate the money for the purchase of the land and the erection of the houses for any other purpose than to furnish residences for its missionaries in Kyoto. In one case, at least, land for one of these houses was purchased by the mission from the Doshisha. At first this property was held in the name of individual Japanese, and later, in order to secure greater safety, was transferred to the name of the Trustees of the Doshisha. The Prudential Committee did not consider the status of the property any different after the transfer than before, nor as differing in any way from the status of property held for the Board by individuals in various parts of Japan, none of whom ever claimed that the property was a gift. But few of the missionary houses were built when the letter you quote of Mr. Neeshima's (April, 1883) was written. This letter could not have referred to unbuilt houses or to unpurchased land. We understand that it refers exclusively to the land upon which the school buildings stand, and to the land only. The missionaries continued to occupy, care for, and manage the houses, such as were temporarily vacant, and collect and use the rents, etc., the same as before. It is only within two or three years that we have had any suggestion that the Trustees of the Doshisha laid claim to the absolute ownership and control of this property. The mission was as much astonished as the Prudential Committee and have repeatedly made protests against the exercise of such prerogatives.

The mission houses in Kyoto are legally in the hands of the Trustees of the Doshisha, consequently they have the legal right to say what uses they will make of them. We are gratified to learn by the action of the Trustees reported in your letter May 19th, that you have decided to permit the missionaries of the Board to occupy these houses, free of rent, for a term of fifteen years, according to the regulations of your corporation. (We do not know what the regulations are.) The question is not one of money or rent but of Christian integrity. We believe this act of the Trustees, assuring the Prudential Committee that the missionaries, for the next fifteen years, will be permitted to occupy these mission houses, free of rent, will meet the approval of the Christians in America and of Japanese churches.

It seems to us unnecessary to enter into discussion regarding the *Hospital and Nurses Training School*. We see no reason for changing the statement made in the report of the Deputation.

Regarding the change that has taken place in the spirit of the Doshisha.—Nothing in the history of the work in Japan has so pained the friends of the Board as the marked change in the spirit of the Doshisha. That such a change has taken place seems to be the almost universal opinion of Japanese pastors and prominent Christians of various denominations in Japan, as well as large numbers of the members of the Churches and almost the entire body of foreign missionaries of all Boards. Certainly, the American Board and American Christians would not have contributed to found, endow, or build up an institution in Japan in which professors or others under the auspices of the school were permitted openly and publicly to attack the principles of Christianity which the constituency of the Board regard as vital to the faith. We would not deprecate free discussion nor deny the right of free speech, but a school founded and endowed to strengthen and build up Christianity in Japan can not be used directly or indirectly for attacking the faith without a misappropriation and misuse of sacred trust funds. A single man upon the Faculty can do more harm to the pupils of the school in a week than all the rest of the Faculty combined can correct in years. We would not always insist that every member of the Faculty must be an earnest Christian, although that would be most desirable, but it does seem to us that no one connected with the teaching corps of the school should be permitted to maintain his position and assent in the presence of his pupils or elsewhere the very principles which the institution was founded to promulgate. We do not believe that the founders would have permitted it; we are sure the missionaries would never have sanctioned such action; and we know the American Board would not have given money to aid or endow such an institution. Herein lies the change, which leads to much solicitude and anxiety upon the part of those who have had the interest of the Doshisha so much at heart. These changes involve the entire question of the Christian influence of the school and are apparent to the world.

We regret that you did not quote more fully and consecutively from the writings of Mr. Neeshima,

the founder of the school. Had you done so, it seems to us the spirit of the institution at that time would have been more clearly manifest. When he said in one of his published statements, "The most important work to carry out Christ's kingdom is to raise man after God's own heart. If you raise up strong and truly pious men to work for Christ, Japan will be ours in His name," there can be no doubt as to his spirit and purpose.

Regarding the Missionaries.—The many letters from their pens printed in the religious press of America, together with the large correspondence on file here in the Rooms and the annual Reports of the mission, are conclusive evidence that they have always attributed the great progress of Christianity in Japan to the efficiency of the Japanese workers. If they have ever taken the glory to themselves, it does not appear in their writings, nor in their addresses in the United States, but quite the reverse.

Withdrawing Aid.—Your favour of May 10th in which the Trustees express gratitude to the American Board for assistance hitherto rendered and request the discontinuance of its aid of money and foreign teachers from the close of 1896, was duly received. It has never been the policy of this Board to aid institutions which did not desire that aid. It would indeed be embarrassing and inexcusable for it to insist upon continuing the subsidy or forcing its teachers upon the Doshisha after the Trustees have taken definite action declining such assistance. We shall of course, comply with your decision in regard to aid in subsidy and teachers. Should you at any time have any proposition to make to this Committee regarding future relations, we assure you that we will gladly receive the same and give it most careful and considerate attention.

Your statement "that the Trustees have no intention of turning all missionaries out of the institution" is not clear to us, for your action previously reported in the same letter compels this Board to withdraw all teachers at the close of 1896, for the Board cannot permit its missionaries to teach in the Doshisha when the Trustees officially inform the Board that it no longer desires such aid.

Our missionaries are informed by this post of your action and the acceptance of the same by the Prudential Committee, and the consequent necessity of their withdrawing at the date you have set, namely, at the end of 1896. This is in accordance with the note of the trustees of the Doshisha and not of the Prudential Committee. The action as reported will necessitate, also, the withdrawal of subsidy and foreign teachers granted to the female department of the Doshisha. If that is not your intention, please inform the missionaries in writing, and report the same to us at your earliest convenience.

We enjoin upon the Trustees of the Doshisha not to think that by declining further subsidy from the Board and dispensing with the services of the missionaries, they thereby release themselves from obligations to maintain the genuine Christian character of the institution. All the aid given by the Board and by American Christians, has been contributed from the first for the purpose of establishing and supporting an institution positively and aggressively Christian, which shall be the centre and life of the Christian work in Japan. The eyes of the Christian world are upon the Doshisha, waiting to see what its future action will be.

Brethren of the Doshisha, by severing of all organic relations with this Board, you cannot separate yourselves nor your institution from our sympathies and prayers. We can not believe that the Doshisha is to fail of the object of its organization and disappear from the history of the Christian Church in Japan. We believe that it was established by prayers and divine intervention, and that God has wonderfully blessed it hitherto. We have faith also, that when the exaggerated national feeling has subsided and the mists have cleared away, we shall again see the school in the van of the advancing Christian movement, helping, inspiring, leading in every good work in the onward progress of the kingdom of Christ in that Empire. We want you always to regard the American Board as the warmest, truest friend of the Christian Doshisha.

Praying that you may have guidance from above, I am, on behalf of the Prudential Committee of the American Board,

Most faithfully yours,

(Signed.) JAMES L. BARTON,
Foreign Secretary.

July 13th, 1896.

Sales of tea at Yokohama on Tuesday include:—12,600 cattiees to No. 178; 9,600 cattiees to No. 1; 2,400 cattiees to No. 162; 8,200 cattiees to No. 225; 7,900, cattiees to No. 22; total, 41,700 cattiees.

A COMPOSITE COIN.

The suggestion made by "Inquirer" as to a coin composed of gold and silver is excellent in its way. It follows the principle of the compensating balance used in delicate machines. The same idea has occurred to others and has frequently been discussed. But it is open to the objection that bars the introduction of a bimetallic system, namely, that international agreement would be just as essential to the successful circulation of the composite coins as it is to the adoption of a fixed ratio between the two metals. In other words, the difficulty surmounted by "Inquirer's" method is connected simply with possible fluctuations in the relative values of silver and gold subsequently to the rehabilitation of the former metal, but how to bring about that rehabilitation remains still an unsolved problem. Many objectors assert that to attempt to fix a ratio of value in the case of two metals varying so greatly as silver and gold vary in all the natural bases of fixity, is and must always be, a hopeless task. To such persons "Inquirer's" proposal furnishes a conclusive answer. Nothing is easier than to obtain a measuring rod absolutely impervious to changes of temperature by uniting in its construction two substances with equal but opposite indices of expansion and contraction. Similarly, a coin composed of silver and gold united in quantities to-day equivalent must always possess a fixed value in terms of the two metals combined, for what is lost by its white component would be gained, by its yellow, and *vice versa*. But to bring themselves into practical touch with such a system would be nearly as perplexing for silver-using nations as is the old dilemma now confronting them. They could not place themselves beyond the range of the two metals' fluctuations except by combining them in their coinage, and that would probably be an operation beyond their financial competence. The gold element in the composite token of exchange would still remain to some extent variable in terms of silver, and to that extent the evils of fluctuating exchanges would continue to hamper trade. In short, the ideal state of stability would not be reached. We say "to some extent," because undoubtedly the proposed action would exercise a steadying effect. Were silver raised from the rank of a subsidiary metal and restored to its old functions for coinage purposes in countries now using gold alone, it would certainly recover stability of value in a considerable degree. But could gold-using countries be persuaded to undertake such a radical operation of re-coinage? The expense would be very great, and unless all civilized nations came into the arrangement, the evils now complained of would not be effectively remedied. Thus, as a device for obviating any need of re-adjusting the silver-gold ratio after bimetalism had been established, the composite coin is excellent; but as an aid to the establishment of bimetalism, it can not do much service.

"LES NEIGES D'ANTAN."

A correspondent writes:—"Here is a coincidence that is too funny not to be brought to your notice. I hadn't quite got over my amusement at the hopeless muddle that the writer of a sketch in the last *Westminster Budget* (p. 10) made of the very familiar line from Villon's "Ballade des Dames," "*Mais où sont les neiges d'antan?*" (i.e. the snows of last year, and hence applied to things that have gone beyond recall), when your Paris correspondent, in to-day's (15th) *Mail*, comes a cropper too over the very same line! But the *Westminster Budget* man must have the prize for his "go where autumn's snows went." We're not much accustomed to autumn's snows, but anyhow they can't well be lost: they would be found, I should say, under the following winter's snows. You must admit, I think, that after that effort, your man comes a long way behind with his "where are the snows of Antan?" We might be able to tell him if he allowed us to consult an atlas."

THE CZAR'S VISIT TO GERMANY AND FRANCE.

The press comments in some of the latest papers to hand from Germany and France, with reference to the visit of the Czar and Czarina of Russia, are not without interest. We reproduce a few examples. The *Schlesische Zeitung* says:—"It is in many respects most regrettable that such important political events are announced so far in advance. The unavoidable discussions which follow such announcements do not always throw a clear light on the significance of the event; on the contrary, it is often the case that as a result of heated discussions by interested parties, excitement is produced and a feeling created that finally, when the event takes place, dims the objective view of the real situation. This applies, at least in part, to the pending visit of the Czar which, under given circumstances and some details of the programme of this journey, is doubtless not without important political significance. For the last quarter of a century every journey of the ruler of Russia to Western Europe has been the occasion of all but agreeable discussions, as to whether the Czar would touch Germany and visit the Imperial Court. It must be admitted that this fact was most inconvenient to the Emperor of Russia. If the late Emperor, Alexander III., always found it difficult to make up his mind to visit Germany, and if none of his visits left a completely harmonious impression, the then political situation may not have been the only cause; the tiresome and depressing discussions about the friendship between Russia and France and the possibility of Russia's assisting France in case the latter should undertake a war of revenge against Germany, made it impossible for him to remain any length of time at the German Court. The burden of the blame for this regrettable fact falls upon our Western neighbours with their feverish desire for revenge, as set forth in their press ever since the peace of Frankfort. It seemed sometimes as though the thought of revenge was the only patriotic sentiment remaining in France. The late Czar had no sympathy with that attitude of the French people, and could never be induced to visit France. It is to be different hereafter! The young Czar, Nicolas II., believes he cannot avoid a visit to France. A glance over the columns of the French press, since the announcement of the Czar's visit, reveals an amazingly ill-conceived and overheated national fantasy. Not a firm friendship based upon mutual inclination, but a hatred against Germany. The hatred is nourished in French soil. The Imperial visitor will not reciprocate, and therefore there can be no real uniformity of sentiment. The German press has again in the present instance followed a dignified course, over against the chauvinistic demonstrations of the French press. Some of the German papers have properly pointed out that, in consequence of the close relationship of the two Imperial houses, a visit by the Czar and his wife to Germany was unavoidable and self-evident, wherefore it has no particular political significance, while no Court etiquette required a visit to Paris. No doubt political interests alone are the motive of the Czar's visit to France. * * * There must have been very strong reasons that led the Czar to believe that he could not avoid a visit to France, although the task is difficult enough. There is no occasion to speculate on those reasons. That he should go there merely to place Russian loans, seems to us putting the Czar too much in the attitude of acting the part of a merchant. We could only be interested in this subject if the Czar's visit had, as its ulterior object, the intention of uniting the military forces of Russia and France in a future war against our fatherland. Such a possibility we must regard as entirely excluded. An extension of Russia towards the West is at present not intended, nor will it be for a long time to come. Russia's tendency and far-reaching plans are directed toward the far East. But even if there were a tendency towards the West, the realization would first have to reckon with German opposition. In this connection, it is significant that the

Russian press, which is under the powerful influence of the Government, just at this moment, and in connection with the Czar's visit, strongly favours a close union between Russia, France, and Germany, and as a proof of the advantage of such a union, points to the satisfactory outcome of the united action of these three Powers in the Orient last year. Such a union, of course, is not what the French intend while preparing their ovations for the Czar. For the very reason that we see no unfriendly intentions against Germany in the Czar's visit to France, we regard a discussion of this subject as out of place. As is seen from the above quotation, the *Schlesische Zeitung* labours under the impression that the entire French press has lost its head over the visit of the Czar. This, however, is not the case. In *La Petite République* we find the following:—"The visit of the Czar is perhaps only a *fata morgana*. As the time approaches, its significance decreases. At first the whole nation was called upon to honour the great friend of France. Every one strained his imagination, and plans developed like mushrooms after rain. Then the first disappointment. The Government reserves the right to prepare the programme. 'Not over zealous,' it says to daring chauvinists. Second disappointment. The Czar will lodge at the Russian Legation, so that even while he is with us he will be on Russian soil; he will thus be here without being really in France. He leaves one foot in his empire and ventures only to place the points of his toes among us just enough to permit submissive tongues to lick them. While the Germans, the Austrians, and the English, on the other hand, will have full possession of him. Let us not be disappointed on this point, when he comes along. Third disappointment. One hears that it was originally planned that the Czar should remain ten days in France; now it is reduced to two days. We are a beautiful, a good, and a great country, but distinguished people have no desire to remain long in it. In *Justice* (Paris), Clemenceau writes as follows:—"During the visit of the Czar let us guard against acting undignifiedly. Too much zeal may be as fatal to friendship as it is to diplomacy. This noble sentiment requires equality, reciprocity, and reservation; for it can easily degenerate into servility when the attitude of the one is to constantly offer, while the business of the other is to consent to have so much love thrust upon him. In 1870 it was in Russia's interest to have us crushed, to-day the reverse is the case: Russia then gained by our defeat; she is now prepared to gain by our restoration. This is the plain truth, and is the admitted reason why our great friend will now pay us a visit. It is also in his interest to leave our enthusiasm unfettered. We wish to have Russia become the means of our revenge. No one would believe us if we were to deny this: it is therefore simpler to admit it. We wish to make a bargain, and nothing but a bargain, wherefore we have no desire to hear stories about the ideal beauty of our mutual feelings. As this is a business transaction, it is about time to learn what France is to receive in return for her milliards.

RAILWAYS IN FORMOSA.

It has long been understood to be the Government's intention to leave to private enterprise the work of constructing railways in Formosa. The contemplated railway system is to be divided, we believe, into four sections; the first, a line from Kelung to Takow, passing through Taipeh, Taichu (Taiwan), and Tainan, that is to say, a line along the Western coast; the second, from Kelung to Giran, in the north; the third, from Takow to Hienchun in the south; and the fourth, from Hienchun to Giran, along the east coast. A company has already been formed in Japan for the purpose of undertaking the work. It is said to have a capital of fifteen million yen, and doubtless it will find no difficulty in obtaining a charter from the Government. The *Shogyo Shimpō* contains a paragraph to the effect that work on the Kelung-Taipeh road will soon be commenced.

THE CUBAN INSURRECTION.

According to latest statements, the insurgents in Cuba now aggregate 44,300. At the outset their number was much smaller, but the failure of the Spaniards to subdue them has gradually put heart into the movement. They are not organized into one compact body, however, but are divided into forty bands, ranging in strength from 200 to 5,000, and scattered over three provinces. Among the leaders of these bands two are women, Clotilda Garcia, with a following of 800, and Pilar Rosa, with a following of 200. Antonio Maceo, the commander-in-chief, has 5,000 men under his command, and Roloff, a Prussian, has 1,500. But in addition to these regularly organized and tolerably well equipped corps, there are said to be a number of petty companies, formed chiefly for the purpose of pillaging the property of the loyalists, and there are, moreover, two hundred and fifty thousand separatists, who, though they do not actually fight, assist the armed forces and harass the Spaniards in every possible way. Spain, if we may credit official statements, has now a hundred and twenty thousand troops in the island, but it is extremely difficult to believe that, in the first place, she has been able to transport such a force to such a distance, and in the second, that she can keep them supplied so as to render them efficient. Under any circumstances, the task still awaiting Spain is tremendous, and its accomplishment must tax her resources to the very utmost.

THE METHODIST EPISCOPAL CHURCH IN JAPAN.

The "Official Minutes of the Japan Conference," as the Methodist Missionaries call their annual record of work done, is a very full and minute account of everything connected with the Mission throughout the year under review. In examining such a publication, with its detailed reports from eighty-three districts, its elaborate statistics and its maps, the reader can not fall into any mistake about the diligence and earnestness of the men engaged in the task of propagandism. If patient and enthusiastic labour deserve to bear fruit, the missionaries ought to succeed in Japan. Yet the results are as yet scarcely worthy of the effort. There are twenty-one Methodist Missionaries on active service in this country. The oldest has been at his post for nearly twenty years, and no less than eleven of the number have a service of over ten years. They are assisted by 33 local preachers; they have 126 schools, with 430 officers and teachers and 6,310 scholars, and they have 44 churches. Yet their full members aggregate only 3,369, and their probationers 1,018. Truly, when one considers the population of Japan and compares it with these latter figures, one is disposed to recall the disciples' ejaculation "what are these among so many!" Still the zeal and hopefulness of the workers do not seem to be one whit diminished. From the island of Ezo, where, after 22 years' work, the church membership amounts to only 433, and the baptisms last year numbered 78, we find in the reports such expressions as:—"Hakodate was blessed with such a spirit of revival during the winter as the church has not known for many a year;" "Otaru was touched by the revival flame," and "No more hopeful and encouraging field is to be found in Japan than Hokkaido." Doubtless if that spirit of inexhaustible confidence were not sustained, the workers must soon begin to flag. We should have been interested to find in this volume some exact statistics of the work done at the Aoyama Gakuin, a college of exceptional size, well equipped and well conducted, which has long been the centre of Methodist-missionary effort in Japan. But the record does not help us to discover the number of students, of teachers, or of graduates, a regrettable want of information at a time when the progress of all educational institutions under missionary control is keenly watched. The Rev. John Wier, Dean of the College, makes these comments in his reports:—

Method must conform to circumstance. Circumstance in the Orient is far from the same as in the Occident. To the missionary this is a commonplace; but only long residence in the East leads one to clearly perceive it.

In England or America, for instance, the young man enters his Theological School from a Christian environment, possesses a Christian ancestry, and has had no immediate acquaintance with or experience in religious systems other than the Christian. From his infancy he has been familiar with the Bible and the cardinal truths of Christianity. The breathing of a Christian atmosphere from his cradle has given him all and the only moral life he has. His work upon leaving the Theological School will not be to traverse and refute other religious systems, but to persuade men to accept that gospel with which they are already as familiar as himself, and which their own Christian conscience dictates they should accept. Such a man a short and practical seminary course will fit for a life of usefulness.

But in Japan the case is different. Here the young man comes with a mind more subtle and active than his brother in the West, from no Christian environment, with little previous Christian experience and training, and thought saturated with non-Biblical systems. To this man the Theological School is not to be a mere training place for practical, evangelistic work; it is the place to acquire much of the knowledge with which the American or English student begins his course. If during the twenty-seven months allowed him at the Seminary his time is much employed in what we denominate "practical" or outside effort, he misses in proportion his only chance to obtain information respecting the literature, doctrines and history of the very system of religion which he must go forth to represent, teach and defend. If to him the school is to be mainly a place for cursory training in evangelistic methods outside of its halls, why the school? This "practical" technical training can be done where alone it is possible to efficiently do it,—in association with the pastors and presiding elders in the field. The School must undoubtedly combine practice with knowledge; but in a place like Japan the knowledge is the prime essential. All judicious and successful practical effort presupposes the possession of something to use in practical effort. It does not require a large gift of political prophecy to foresee that, in Japan, one of the Church's future dangers will be zeal and activity without substantial knowledge.

Therefore let not the highest conception of a Theological School in Japan be chiefly a band led by the Faculty in aggressive evangelistic work; but rather a School where scholarly, level-headed, yet practical-spirited evangelical men devote their time to the imparting of knowledge to be put into practical aggressive use when the student goes forth to the field under the direction of our ecclesiastical practitioners,—the pastors and presiding elders.

TRAIN OFF ON THE EX-VICEEROY.

The coming of Earl Li to the United States set the bee buzzing in the bonnet of Citizen George Francis Train. It must be premised that some indignation seems to be felt in the States because the President, instead of receiving Li at the White House, received him at Ex-Secretary Whitney's New York residence. The *Washington Telegram* says that "Citizen George Francis Train, who was so well received in China, is one of the most prominent men that has (*sic*) expressed his (*sic*) indignation at the treatment accorded the great Chinaman." From that fact, the magnitude and importance of the indignant multitude may be inferred. The great citizen wrote a letter to the distinguished visitor, but owing to a conspiracy on the part of the New York city papers and the United Press and Associated Press papers, the document barely struggled into daylight through the columns of the *Washington Telegram*. It has been forwarded to us as a cutting from that journal, duly corrected Citizen Train, and we reproduce it for our readers' extreme delectation:—

REPUBLIC'S (ONLY) CITIZEN TO CHINA'S GREATEST STATESMAN? SHOWING UNITED STATE'S INSULT TO CHINESE EMPIRE!

Citizen Ambassador to Cosmos Li Hung-chang, The Waldorf, New York.

By Imperial Appointment, Director of the Northern Fleet, and of Coast defence, Senior Guardian of the heir apparent, Grand Secretary, Viceroy of Pe-che-lee, Earl of First Rank, Li, Ambassador from Pekin to all Nations visited!

You ask questions! So do I! What Evidence have you that China has more than One Hundred Million Population, instead of Four Hundred Millions alleged?

Can you reach Shanghai from U.S.A. (Puget Sound) in 13 days! I made it in 15 days, (Three years ago) via Yokohama and Kobe! (Holding 60 Day Round World Record (England cannot reach there (via Suez Canal) under 35 days! China can now visit Europe (via America) in 21 days! (Asia and America are only parted by Forty miles (Three Islands Station) at Behring Straits!

(As only citizen in 70,000,000, being Democrats or Republicans Gentiles or Jews,) I apologize to you for Ignorance of President and Cabinet, in receiving you in Standard Oil Headquarters (Private Residence), and in Tavern (where any one can get room for Two Dollars a Day! President came in Borrowed Yacht and received you in Borrowed Private House! (An insult through Gross Ignorance of Official-Diplomatic-Etiquette! Did not Foster-Drew-Russell-and-Wilson know this?)

HOW EUROPE HONORED ASIA WITH ROYAL COURTESY!

Ovated, As Royal Prince, with National Honors, by Russia, Germany, England, and France, why should United States of America receive the Friend-of-all-Americans (for Forty Years) (Un-) officially unless from suggestion of English and other Foreign Ministers at Washington? (Presuming on Ignorance of Cabinet and President?) Smallest of 13 South American Republics, and Half-Dozen Central American Republics (Bolivian-Guatemalan-Columbian-Yucatan-Honduras) have their Ministers received Officially in The Mansion of the Nation with Honors due their Respective Countries!

You have behaved splendidly (old Friend), and I am proud to know (as Asia's Grandest Statesman) that you return the Official Insult (quietly) by ignoring National-Ignorance? How-in H'll did you pass Ellis' Island with Forty Servants, when Our Laws (through very Administration that received you), forbid Chinese to land in this (Mis-) called 'Republic-of-Liberty' (and Assumption?) I am surprised that when face to face with President, so ready a Questioner, did not ask if United States still intended to Insult the Chinese Empire, by making that Nation only One whose People are Prohibited from Landing on our shores!

HALF-CENTURY BUSINESS CONNECTION WITH CHINA.

My Business Relations with China through Great American Firms, Russell & Co., Augustine Heard & Co. and Gideon Nye (Hongkong, Canton, and Shanghai) for Half Century is my excuse for talking to America's Friend so plainly. Flying Cloud, Sovereign-of-the-Seas, Red Jacket-and-Staffordshire (2,000 tons Clippers) were some of the Clipper Fleet under my control despatched to China almost Five decades ago! The Sovereign-of-the-Seas (2,200 Tons), stood in my name at the Custom House (1849) when I was but Nineteen Years Old! As Merchants-Bankers and Tradesmen the Chinese are most honest people in the World!

HOW TO (RE) CONSTRUCT CHINESE EMPIRE!

Abolish Gold (and Silver) Currency (now) Wrecking our Republic! Build your own Railways with your own People, Manufacture your own clothes! Prohibit Foreign goods! (Whether England likes it or not!) And Send our Missionaries out Country who are always Rioting round your Joss Houses! Were Chinese to Proselyte our People round our Joss Houses They would be killed Front of Parkhurst Church, and Corrigan's Cathedral! Our Chinese Treaties, have Framed Nation-Clause and China should Shut out all Americans till our Laws against Chinese Immigration are Repealed! I explained to your Interpreter, (L. Wing, Chinese Embassy) who called on me at Continental, my long Commercial Connection with your People! And that I was the welcome Friend for Fifty years in Chinese Seas!

Our country is on Eve of Revolution! South and West Solid Against English Syndicates (Old England In New England) in new Declaration of Independence which does not mean another Century as Financial Slaves in British Colonies.

THE GREAT QUESTIONER QUESTIONED.

Let me discount you by asking few more Questions? Why don't you interview Press-Club on Greary Bill-Insult to Friendly Nation? Why don't you Metairieuse our Subsidized-English-Gold-Bug-Newspapers? Why don't you visit China-Town to see how our White Caps clean Chinese streets! Why not stop Seventh Regiment Parade? why visit West Point, Annapolis and Washington after National Insult at Wheat-Nee's Standard Oil Palace? Why invite Huntington to China before he pays Hundred Millions owed

to Government? why not tell World you understand Seven Languages? Why not explain that you don't propose to Buy American Ship or invest Chinese Money in Country that Breaks Treaties, and Insults Your Emperor, and Friend Empress Dowager, by not receiving you in White House at Washington! I do not call upon you because you are Surrounded by Americans who are not 'Big Enough to take-Me-In' and are Jealous of my Cosmopolitan-Reputation!

Geo. FRANCIS TRAIN.

All these points were acted upon by Li Hung Chang (save Washington visit) and the Viceroy not only wrote Citizen Train polite note acknowledging kind remembrance, flowers, and courtesies; but his son, Lord Li, called personally, on the Citizen, at Continental Hotel, with Photograph nearly Foot Square of His Excellency!

Editors Washington, D.C. Telegrams.

SUDDEN DEATH OF MR. W. H. R. CAREW.

We regret to record the sudden death of Mr. W. H. R. Carew, that took place between 4 and 5 o'clock at the Royal Naval Hospital, Yokohama, on Thursday afternoon. For some time he has been far from well, but it was only yesterday afternoon that Dr. Wheeler, his medical attendant, had him removed from his house to the Hospital. This took place about 3 o'clock, and in less than two hours death supervened, being due to suppressed jaundice and liver complications. The deceased gentleman was for many years the Secretary of the Yokohama United Club, being very popular among the members. A keen lover of all kinds of sport, Mr. Carew was active both afloat and ashore. He generally acted as scorer in the interport cricket matches, and was Vice-Commodore of the Mosquito Yacht Club, sailing his boat, the *Cocktail*, with great skill and pluck in all weathers. Much sympathy will be felt for the widow and her little son.

CORRESPONDENCE.

Our readers must distinctly understand that we are in no sense responsible for that sentiment or opinion of our correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.

LAND TENURE IN JAPAN.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—There has been some interesting discussion in the papers on the subject of land tenure in connection with foreigners in Japan. As you correctly say, land can be rented without ownership. The ownership simply means that the landlord collects the rent. If one buys land he, instead of paying rent yearly, pays it all in a lump sum. The title always continuing in the name of the Japanese they will get the "unearned increment." The most important element in this question in these discussions is left out, that is, within a very few years the Single Tax will be in operation in Japan, and the community will take the rent, because it belongs to them, and then land speculation will have become a thing of the past. The Single Tax propaganda is advancing by leaps and bounds in New Zealand, New South Wales, England, and the United States.

After one country has adopted it, others will be compelled by public opinion to follow the example, and the era of *free production*, which is more important than free trade (we shall have both), will be ushered in. The Single Tax will place natives and foreigners exactly on the same footing. It will make the land free and it will cease to have a speculative value. When a man uses land all his capital can go into his business.

The higher land is taxed up to the rental value, the better for the *user* of the land, because the larger is his share of what is produced. The landlord, as such, produces nothing, and should therefore have nothing.

There is no use in wasting printer's ink on the land question, if justice and equity are not sought: they can only be attained by giving to the community what it creates, the rent of land, and by giving to every individual what he creates, that is, exempt his property from taxation. Land is rising in price very rapidly in Japan, which means that proportionately labour is being paid too little.

The poor are now on the "starvation line," and many will, during the coming winter, go below it. "Prevention is better than cure," give the

people their rights to land and let them help themselves.

The Emigration Society is, in my opinion, a disgrace to Japan. Let every man who considers the land question, remember that the day is not distant when the community will be the landlord. Every lease for land should have a clause in it expressly stating that all taxes are to be paid by the landlord.

CHAS. E. GARST.

44, Tsukiji, Oct. 16th, 1896.

THE GIFU FLOODS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I beg to acknowledge with many thanks the following additional subscriptions to the fund for the relief of sufferers by the recent floods in this district.

Yours truly,

H. J. HAMILTON.

A SOLUTION.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—At the present value of silver, about twelve grains of gold are equal to one silver dollar. The silver dollar, for the sake of argument, is worth fifty cents; therefore, 412 grains of silver plus 12 grains of gold are worth one gold dollar. Why is it that a coin composed of the two metals in these proportions should not always remain of the same value? For if silver became further depreciated, the gold in the coin would be appreciated to the same extent, and *vice versa*. This would be bimetalism made easy.

Your obedient servant,

ENQUIRER.

Tokyo, October 20th, 1896.

THE POLITICAL SITUATION IN EUROPE.

(FROM AN OCCASIONAL CORRESPONDENT.)

London, September 7th.

The greatest difficulty for a political correspondent at any one place is to be able to report on the general aspect of political affairs. As a rule he will be inclined to over-estimate the importance of impressions received on the spot and to underrate the facts and events arising elsewhere. Hence the diplomatic reports received from different sides not only differ in their opinions but are even contradictory in their tendencies, and hence, too, the great difficulties encountered by the central authorities whose duty it is to form a general policy on the strength of the facts reported, and on the true international position of the Powers as ascertained by their agents. Public opinion in Europe is supposed to be very sensitive, and as a rule to be guided by something positive. Unfortunately, however, it is really led by impulses, and not by perceptions, and in consequence of the artificial methods employed by most continental Governments for its official or semi-official tutelage often driven to conclusions contrary to the conditions of the case and even detrimental to the real interests at stake.

How absurdly public opinion can be led we have lately been able to observe in the case of the reception accorded to Li Hung-chang. In this case it was not only Germany, but also France, England, and probably even the United States of America that were taken in, led astray by the managers of this absurd "ambassadorial farce" and induced to worship the "viceregal idol," who was carried in triumphal procession throughout Europe! Now the great Chinaman has left Germany, its industrialists have noticed that he has not ordered anything from the German workshops, and the French have reluctantly observed his peculiar habits of daily life, so very contradictory to the European conventional rules of decency and respectability, and last, but not least, Englishmen have felt and even resented the impertinent manner and overbearing conduct of the ex-Viceroy, who cleverly engaged their hospitality, accepted their adulation, but gave nothing in return.

For Japan there remains the satisfaction to note, however, that after all the great demonstrations of friendship and all the brilliant pictures developed

by this "extraordinary Embassy," the result for China has been nothing, and the effect created by Li is very much like that of a flashy firework. The spectators are now again in the dark, and nothing but a disagreeable smoke fills the space which for a short time was so beautifully and artistically illuminated. We may therefore leave for the present Li Hung-chang to oblivion and turn to something more important, namely, the consideration of the general political aspect of Europe.

During a recent trip to Austria and Hungary, I had some opportunities of observing the political horizon, especially during the visit of the Emperor and Empress of Russia to Vienna. It would, however, be contrary to the principles of sound political judgment to base an opinion on the impression produced by these fraternal interviews between the Austrian and Russian sovereigns, or on those happening just now in Silesia between the German and Russian Emperor. The official Press on such occasions is scarcely a true indicator of public feeling. We must also distinguish here clearly between the sentiments existing between the sovereigns of Europe—that is to say, the natural tendency of the reigning houses to each other—and the feelings of their peoples, namely, the predominant opinion, which a certain fraction of those peoples, statesmen, journalists, bankers, and a portion of the so-called educated masses for a time hold or act upon. I may here at once observe that to-day there scarcely exists in Europe a sovereign who personally exercises such influence on the destinies of the world, as monarchs exercised during the middle of this century until the great war of 1870. The sovereigns to-day are more closely allied to each other, from the fact that their interests as sovereigns are identical owing to the necessity of guarding in common against the socialist and anarchistic tendencies of the masses. Their personal inclination is therefore always for peace, and this tendency is augmented by the noble desire of preventing the immeasurable sufferings to their peoples which the outbreak of a general war would be sure to produce. There is therefore no reason to apprehend disturbance of the peace from highest regions, whereas during former centuries and even during the greater part of this century, the passions, prejudices, jealousies and ambitions of individual rulers were productive of much conflict. But, unfortunately, some other causes of international dissension still remain in force, and these are all the more to be dreaded because there is no living statesman in Europe who with a master hand can attempt to guide the conflicting interests and is able to find sufficient guarantees for peace. No one in Germany has succeeded in replacing Bismarck, and the loss Russia has suffered by the death of Prince Lobanoff, her able Minister for Foreign Affairs, produced a far greater shock than could have been expected. The difficulties experienced by the Russian Emperor in obtaining another competent man to fill this post are a proof how well the late minister had succeeded.

The necessity for some guiding spirit in the chaos of European politics is all the more felt because the most complicated questions are daily springing up, requiring ingenious and statesman-like solutions and something better than the old fashioned system of maintaining the *status quo*, which is only a diplomatic and polite phrase for "procrastination." The Turkish Empire is a mixture of Despotism, Ignorance, and Barbarity. It is fast going to pieces. All measures taken so far have only succeeded in temporarily keeping down the flames which are breaking out continually in one or another quarter of the Ottoman Empire. Not a single Power trusts the other, and none of them are trusted by Turkey, but the latter succeeds, by artfully playing one power against the other, in keeping its head over water. But this expedient will only be effective for the moment and can only last until the day when the causes working for the destruction of the Turk's power will have reached a point when either the Turkish Empire will have to be cut up, or a revolution from within and without make an end to a polity neither suited to this century nor admissible within the European system of civilized states. Again, looking towards France, we find her resolved to have her revenge, though that is more the result of passion than a resolution guided by considerations of interest. The alliance with Russia is growing more and more intimate, and fresh ties will be created by the visit of the Czar to Paris. Germany, in the meantime, has unfortunately lost all chances of an rapprochement with England. The causes of the strange disagreement are too well known to be repeated here, but are all the more to be regretted, for if it had been possible to bring Germany and England closely together, there would have been an increase in the strength of the triple alliance which would have made it almost irresistible; or, if the triple alliance had failed, the union of Germany with England would alone have suffered to secure peace.

So we find Germany now divided between its apprehension of France's revenge, its suspicions of the latter's ally, Russia, and its monarchical preferences for Russia with whom the Prussian Court has been always on exceptionally good terms. The Austrian connection with Germany is more artificial, for it is only the Hungarian element in the dual Empire that really is at heart in favour of the alliance, principally from hatred of the Russians, whose armies assisted the Austrian Emperor in 1848 to punish his subjects and to reconquer Hungarian dominions. But Austrian statesmen can scarcely look with satisfaction towards the prospect of an increased gravitation of the German element in Austria toward the German nation. Besides, the numerous Slav elements in the Austrian crown dominions have sympathies towards Russia. The third partner, Italy, is weakened by financial difficulties and is momentarily paralyzed by an ill advised colonial experiment, and would be therefore unable to bear the burdens of a great war in conformity with the obligations of the compact of the triple alliance. Thus the last work of Bismarck, and far from his best, is scarcely a complete guarantee of peace, and may, when actually called upon to take practical effect, prove utterly insufficient.

The only rational policy under the circumstances seems that of England, namely, to keep aloof from all engagements and reserve its strength and freedom of action for the decisive moment. England, great as a naval power, is still vulnerable at many points, owing to the expansion and decentralization of its dominions. Hence the necessity of very cautious action, which on the one side exposes it to the reproach of egotistical selfishness, and on the other to that of a want of vigour. If all appearances do not deceive, England after all will be the Power to show the least forbearance, when it comes to the conviction that its real interests are in jeopardy. For the present its big game with Russia should be watched with interest, both in Europe, on the Bosphorus and in Crete, whilst in Asia along the whole line of contact and contention, every nerve is already strained to the utmost tension. How long will this last, and where will the powder-mine explode? That is the question which for practical statesmen is the most important. Much will now depend on the person chosen to succeed Prince Lobanoff. According to the character of that individual it may be possible to forecast to a certain extent the appearance of the unavoidable catastrophe, in which the Far East, especially Japan, is so much interested. Prince Lobanoff's game in Turkey and China was a big one—it meant the whole as a prize or nothing. Perhaps his successor will be able to reap the fruits of the seeds the former so cleverly sowed; perhaps, but not likely, will the joint efforts of mediocrity succeed in patching up peace for a score of years—though this respite will, under the tolerant system pursued towards Turkey and its maladministration, scarcely be a credit to Europe or an advantage to the world.

THE YOKOHAMA JUVENILE TONIC SOL-FA CHORAL SOCIETY.

The annual meeting of this Society was held on Saturday in the Vestibule of the Public Hall. All the members were present except three. Mrs. E. S. Patton (President), while congratulating the Society upon having attained its 5th anniversary, regretted the gradual shrinking of the choir from year to year, but expressed a hope that it had now reached its minimum, the number of old members being reduced to eleven, out of a choir originally composed of forty-three. The accession of four new members brought the present number to fifteen, and there was a prospect of several others joining when they had reached the necessary grade.

Mrs. Patton read a list of no fewer than 63 names of former pupils who had been musically educated to become members of the Choir, of whom there were now only three remaining. This made the continuance of the Society very arduous, especially as parents appeared so little sensible of its advantages to their whole lives, as it enabled them, when grown-up, to take a position in any Choir or Musical Society. It was much the fashion in Yokohama for parents to deplore the very limited opportunities there existed for giving children a liberal education. She supposed that if there were no Juvenile Choral Society in the place parents would bemoan the absence of one, but the appreciation in which the present one was held was sufficiently evidenced by the fact that out of the large number of families growing up in Yokohama, there had only been three applications from parents desiring a child to join a preparatory class for the new

season. The President then read a letter from two sisters, who were amongst the eldest members of the Choir, resigning their membership on account of their having out-grown the age suitable for a Juvenile Society, and expressing in polite, grateful terms, their appreciation of the benefits they had received from Miss Bloxham's and Mrs. Patton's musical training, and wishing all success in the future to the Society. The President said this seemed but a small matter to bring into prominence, but she felt compelled to allude to it, because the reception of such letters on members resigning, was altogether exceptional. She was sorry to have to state the fact that in this land of "gentle manners," as Sir Edwin Arnold designated Dai Nippon, the members who on leaving the Society had expressed themselves, either personally or through their relatives, as sensible of the benefit the choir drill had been to them, were decidedly in the minority. The majority had simply discontinued their attendance without even the formality of forwarding their resignations, showing that the universal atmosphere of politeness popularly supposed to pervade the air of Japan, had not been inhaled by them. In saying this she hoped it would be clearly understood that she was not casting any reflection upon the Japanese people, as there were none of that nationality of the choir.

The Treasurer reported a clear balance to the Society of \$100.54, exclusive of the incoming subscriptions from members; therefore it was voted, on a suggestion from Mrs. Patton, that a donation of \$20 be forwarded by the Treasurer for transmission to Bishop Bickersteth's relief fund for the sufferers by the late disastrous inundations.

It being necessary to appoint a new secretary in the place of Mr. N. J. Sargent, Miss Emily Jarman was elected for the ensuing year, Master Bennett and Miss Diack retaining their positions as Treasurer and Librarian.

Miss Bloxham, who was present, suggested that the weekly practice be resumed on the second Monday in November. This terminated the meeting.

DEATH OF MR. J. T. BOAG.

INQUEST.

An inquest was held at No. 153, Bluff, Yokohama, on Wednesday morning, by John Carey Hall, Esq., H.B.M. Consul, acting as Coroner, under the circumstances attending the death of Mr. John Thomas Boag, exchange-broker, who was found by his house-boy dead—shot through the head—in his bed at the 153, Bluff, on Tuesday evening shortly before 12 o'clock.

Upon the names of the jurymen summoned being read out, it was discovered that Messrs. J. B. Coulson and G. Syme Thomson were absent, and the Coroner inflicted a fine of \$50 upon each for non-attendance. Mr. J. B. Coulson, however, arrived just as the jury were being sworn, and upon proper excuse being tendered by him, his fine was remitted. The following jury were empanelled:—Messrs. G. W. Rogers, J. B. Coulson, W. Gordon, and H. B. Collins. Having viewed the body, that lay in the bed just as it was found by the house-boy, the following evidence was taken:—

Edwin Wheeler, M.D., sworn, said—This morning, a little after midnight, I was called up to see Mr. Boag. On reaching the house I went to his bedroom and found that he had been dead between one and two hours. On examination, I found a bullet wound just about an inch and a half above the right ear. The bullet had evidently passed right through the head; penetrated the brain and passed out at a spot on the same level as its entry, on the left side. Upon examining the room, I found the bullet embedded in the door of the ward-robe. In my opinion, death must have been nearly instantaneous. I have no doubt that death resulted from this pistol wound.

To the Coroner—I found a revolver in the room. There were still five chambers undischarged. I found the pistol lying on the bed across deceased's stomach, near his hand, not in it. Only one chamber had been emptied.

The Coroner—Now, to your knowledge, was there anything that could lead you to suppose that he had taken his own life?

Witness—As his private medical man, I may state that he had periodical fits of very heavy drinking. This has been so for some years past. I saw him last alive yesterday morning, at half past 9 o'clock: he was then in bed. I made him go to bed on Monday. He said then that he had not been feeling up to the mark; that he had been drinking a little too much, but had stopped it. I gave him some medicine, and when next I saw him he said he felt better. In the course of our talk on Tuesday he said that he could not face

business that day, but would go down the day following. I tried to cheer him up, endeavoured to get him to eat something, and before leaving ordered his breakfast to be sent in at 10 o'clock.

Mr. Rogers—There was nothing unusual in his manner then to induce you to believe that he was out of his mind?

Witness—Nothing unusual. But he was rather despondent.

Mr. Rogers—Had he shown any previous tendency to self-destruction?

Witness—No, never.

The Coroner—Are you aware whether he has been drinking lately?

Witness—Well, he has complained to me lately that he "could not leave off taking the beastly stuff." I talked to him about it, and he said, "No, I can't leave it off." He seemed despondent at not being able to brace up and shut-down on the liquor—to use his own terms.

Mr. Gordon—On Tuesday, was he more despondent than usual?

Witness—No, not more than usual. He seemed angry with himself for not being able to shake off the liquor. A little while ago I tried to get him to go into hospital for ten days. He went to the German hospital, but only remained there four days. He said to me that he could not stay there, it was like a prison. He was a man that could not bear restraint of any description. I told him that people in hospital had to conform to the rules of discipline there, and he said he could not bear restraint. He was a little better after this. Then he had a relapse. He went into hospital, I think, about a month ago.

Yamada Seishu, the deceased's house-boy, cautioned, deposed—I went into the deceased's bedroom about half-past eight o'clock last night, with some beef-tea and toast. As my master had not taken his medicine, I urged him to take it, but he said he could not, but would take it a little later on. I went to the room again at half-past nine o'clock and asked him again if he had taken the medicine. He said that he had not done so, but I was to leave it on the table. Then my master said: "As you have not slept for four nights you had better go and have a sleep." I left the room and went to get some sleep. I thought my master would be able to go to the office in the morning. At a quarter to twelve o'clock, as I had not locked up the house, I came out of my room to see if all was right. I went into the deceased's room and found a candle still burning, which I thought dangerous. My master was lying quite still. I asked him if he had taken his medicine, and looking at the glass I saw that he had not. Then I said: "Please take it." At the same moment I noticed that my master's face was changed. Previously, I had been told by my master, that whenever he had been drinking I was to pull him by the leg and wake him up. By the light of the candle I looked at my master's face and found that the appearance was not that of sleep. Looking at the left side of the head I saw blood, this caused me great consternation. Then I called the other boy and sent for Mr. James, of No. 158. Mr. James came soon. On Saturday afternoon my master drank a lot; and on Sunday morning asked me how long I had been in his service. I told him 18 years and 8 months. He said, "If I were to die, it would be a bad thing for you, would it not?" I said, "Yes." He then said that he would probably die of drink like another person he named. Then he added, "I will leave you a present of money, \$1,000, as you have been in my service so long." I think, judging from this, that my master intended to commit suicide, as he was in this right mind then—in view of what happened last night.

To the Coroner—I have seen the revolver before I first saw it twelve days ago. I believe it was bought at a Japanese shop. I did not notice any pistol when I first found my master. I was too flurried. Counting the *finrikisha* men, there are eight servants on the premises, none of us heard a report. All the doors in the house were shut, as my master objected to outside noises. I alone was in attendance on him.

To Mr. Coulson—I have never heard my master talking about suicide, only of dying. Deceased drank, but not very much, the day before his death. Yesterday my master was calm in manner, and told me he would go to the office next morning.

To Mr. Rogers—The pistol was kept on the top of the drawers close to the bed. He would have to get out of bed to reach it.

The Coroner said that this was all the evidence he had to bring, but he thought it was sufficient to enable the jury to give the simple verdict that was required of them. If there was doubt upon any point, if they thought that any point in the sad affair was obscure and needing clearing up, then he would consider the advisability of adjourning the enquiry until another day. But he thought the evidence given by Dr. Wheeler was so clear,

and the evidence of the houseboy so explicit, that the jury would have but little difficulty in arriving at a verdict.

Mr. Coulson thought that there was one point that might be made clearer. If the Japanese from whom the deceased had purchased the revolver could be found, he might be able to say whether the deceased made any remark as to the purpose for which he bought it. Still he did not press the point.

The Coroner thought that the evidence already given was sufficient for the purpose of enabling the jury to give their verdict. It was unnecessary for him to sum up in detail. They had heard the evidence of the old and faithful servant, who deposed to having gone to the deceased's bedroom about a quarter to twelve last night and found a change in the face of his master, a change that he soon discovered meant death. Then they had the evidence of Dr. Wheeler that the wound must have been self-inflicted. As for the reason that the servants heard no sound or noise of a pistol-shot, the servants slept in their own quarters that were far away from the bedroom that deceased himself occupied. Then came the question as to deceased's state of mind when he committed this deplorable act? It was the old, old story—too much drink. It was an old and well-tried axiom that nothing deranged the mental faculties so greatly as over indulgence in drink. Then as to the purchase of the pistol: it took place some days ago, and if there had been premeditation at that time, the jury must recollect that between the time of purchase and last night a considerable interval had elapsed. It seemed hardly probable that the deceased was continually and uninterruptedly meditating on self-destruction during all that time. When there were two possible ways of ascribing such an act, it was, in his opinion, the more charitable that was often found to be the more correct. Drunkenness had been found, over and over again, to have injured the balance of the faculties, and without going further into the case, he would leave the jury to consider their verdict.

The jury, after a short consultation, found that John Thomas Boag, between the hours of half-past nine o'clock and a quarter to twelve on Tuesday evening, shot himself in his bedroom at No. 153, Bluff, while of unsound mind.

The Coroner—In that verdict, I concur with you, gentlemen of the jury.

H.B.M. COURT FOR JAPAN.

Before R. A. MOWAT, Esq., Judge.—FRIDAY,
October 16th, 1896.

DIACK V. DIACK.—JUDGMENT.

The afternoon judgment was delivered in the case *Diack versus Diack*. Mr. J. F. Lowder appeared for the plaintiff, Mr. H. C. Litchfield for the defendant.

His Honour said—This is an action by a wife against her husband for specific performance of an agreement made between them on the 27th January 1888, under which (so far as this action is concerned) she was to receive from him an annual allowance of £60, in half-yearly installments of £30, in January and July. The husband and wife have, it appears, lived apart since some time prior to November, 1886—the plaintiff at home and the defendant here. Payments in the shape of bank-drafts were regularly made under the agreement by the defendant to his wife's agent here every January and July without any demur till July, 1893, when, in forwarding the draft representing the allowance to January, 1894, defendant wrote that in future, before making any further payments, he desired to be furnished on each occasion with a certificate from a well-known resident of standing in the locality where his wife was living, showing that she was alive. This procured from her solicitor in Aberdeen, Mr. Gillies, an advocate and notary public there, a certificate under his notarial seal, stating that he had personally paid to her on the 2nd September, 1893, the half-year's allowance then received, and undertaking personally to pay to her all further remittances from her husband or to account for any remittance that might be received by him after her death. This certificate and the undertaking given in it would appear to have satisfied the defendant, for he continued the payments, as before, for two years without any evidence of the kind he had said he desired. Suddenly, however, on the 30th January, 1896, he, for some unaccountable reason, wrote to the plaintiff's solicitor in Aberdeen, complaining strongly of the terms of the very certificate and undertaking with which he had found no fault whatever when it reached him twenty-seven months previously. In the same letter he ad-

ded, to the original requirement in his letter of July, 1893—viz., a certificate that his wife was alive—the further one that he should be furnished on each occasion with an acquittance showing that the previous remittance had been applied to the purpose for which it was sent; and he gave notice that unless such certificate and acquittance were sent he would not remit further funds after the remittance he was then making. He added that he would decline to accept as valid a certificate or acquittance from anyone through whose hands the money might pass in transit (which would include, of course, Mr. Gillies), or from certain other persons. He wrote further: "On this occasion the draft is in my own name"—they had up to that time been drawn in favour of the wife's agent here—"and endorsed by me, and should this or any future draft, reach you after your client's death you are in no way authorised to cash such draft but must return the same, both first and second, intact to me." To that letter the solicitor replied on the 4th March. He admitted that the defendant was "of course entitled to an acquittance and also to a satisfactory certificate of survival when each installment is paid," and explained that as he was in the habit, in his capacity of Notary Public, of giving certificates of survival in connection with annuities and pensions both for his own clients and others—which certificates were accepted by the Government Departments—it had not occurred to him that the fact that he was receiving the annuity on behalf of the payee would be considered by the defendant as any disqualification to his granting the certificate in the present case. He added: "I should certainly consider myself personally responsible to you to refund any installment arriving after the death of my client, and I hereby accept notice of your intimation that in the event of the draft now on its way or any future draft reaching me after my client's death, I am not in any way authorised to cash such draft, but must return intact the same to you." I presume you received from Mr. Lowder—"the plaintiff's agent here—" acknowledgments of the payments up to date, and in any case I have taken from Mrs. Diack specific receipts for each half yearly payment up to and including that receipt in August last. I shall continue to do so, and undertake to hold these available as evidences of the payments made by you. Trusting the above letter will fill the requirements indicated in yours of 30th January last, I am, etc." This, however, did not satisfy the defendant, who wrote in reply on the 28th May, insisting that the certificates of acquittance and survival asked for in his previous letter should "be promptly rendered, without which I shall withhold remittance." This unfortunately did not lead to a certificate of either kind being sent: in Mr. Gillies' reply of 10th July the defendant was only offered an opportunity of satisfying himself, by making enquiries in certain stated quarters, as to the "responsibility" (by which is evidently meant the standing and reputation) of Mr. Gillies. He was further informed that the remittance of 30th January had come to hand, and that the receipt of it was not acknowledged in the earlier letter "because it is with Mr. Lowder that you have to do and you no doubt received his receipt." The defendant had in the meanwhile, before that letter could be received, intimated on the 29th July to the plaintiff's agent here that a draft for the allowance to 31st January next was ready for delivery to him in exchange for the acquittance and a certificate showing at the latest reasonable date that the plaintiff was alive. No such certificate, of course, could be supplied by Mr. Lowder, nor was any, as I have said, received subsequently from home.

The plaintiff thereupon brought her action for specific performance, to which the defendant pleaded,—that he had always been and still was willing to pay the £30 half-yearly on evidence being sent to him that the plaintiff was alive at a time approximately near the date of the said payments becoming due; that he had received no notice or certificate of any kind, that the plaintiff was alive in 1896; and that he had tendered the plaintiff's counsel in Japan a draft for £30 on the condition stated;—and he brought into Court the draft in question. His answer raised the further defence that a certificate of survival given by a relative or person interested in the case or the attorney or agent of such person, was not a valid certificate of survival; but nothing arises upon this contention, because as a fact no certificate of survival was given at all: there is nothing beyond the statement in Mr. Gillies' letter of the 10th July that the remittance of January 30th had come to hand in March.

At the hearing, the only evidence consisted of the correspondence, etc., between the defendant and the representatives here and at home of the

and Tyack, with 27, which included a distinct chance to the wicket keeper when he had made 8, being the highest scorers. The Japan eleven went in to bat for the second time after the interval for tiffin, and until after the fall of the third wicket the prospect was by no means unsatisfactory for them. White had scored 28—he should have been caught when he had made only a single—and Lucas was punishing the bowling with considerable freedom. Mann was put on to bowl at this point, and so effectively did he do his work that the wickets fell rapidly, the last seven wickets adding only 24 to the score, and the innings, closing for 83, leaving the S.C.C. 69 runs to win. Of this number 23 were obtained before Tyack and Farbridge, who had opened the second innings, were separated. The next wicket, St. Croix's put on 10 more, and the next, Moule's, just double that. Then McClure and Mann came together, and settling down to determined hitting they quickly knocked up the requisite runs, the match ending a few minutes before five in a victory for the S.C.C., as already stated. Full score and analysis:—

SHANGHAI RECREATION CLUB VS. JAPAN.

The visitors on Oct. 15 gained a victory by 38 runs over the strongest team the Shanghai Recreation Club could put into the field, and then playing out time, put together 110 runs for the loss of but three batsmen. The Japan captain won the toss, and a favourable beginning was made, the first three wickets putting on 75 runs. The remaining batsmen, however, were not able to maintain such a high rate of scoring, the ninth wicket—Robinson being unable to bat on account of the injury to his hand—falling for the addition of only 22 more runs. When it came to their turn, the S.R.C. batsmen, with the exception of Jackson, who played a very spirited innings of 30, were able to do comparatively little with the Japan bowling, and they were disposed of for 59 runs. For a second time the Japan eleven went in to bat, and in the time remaining scored 110 for three wickets, Lucas again playing vigorously, for 41, and Walford being not-out 39.

Full score and analysis of the day's play are appended:—

A RETROSPECT.

The Japan cricket eleven, who have been with us since the 3rd of October, leave here by the *Melbourne* for Japan. Their stay was prolonged on account of the wet week which commenced on the second day of the match against a combined eleven of Shanghai, and though as cricket enthusiasts we lamented the abandonment of that game and the postponement of further play, we are able now to look upon it as a disguised blessing, for it enabled Shanghai to become acquainted with the social merits of its guests, and to return in some slight degree the profuse hospitality heaped upon Shanghai cricketers when visiting Kobe and Yokohama. Besides the more public functions, such as the dinner at the Shanghai Club and the entertainment at the Lyceum Theatre, many members of the community have been only too glad to do what they could to add pleasure to the visitors' sojourn, and had the weather been less favourable no doubt a good deal more would have been possible. It is pleasing to notice, in this connection, the completeness and excellence which marked the arrangements connected both with the Cricket, and the less serious amusements, and it is only right to say that for this Mr. Gumpert, the Hon. Secretary of the S.S.C., deserves the warmest praise. The performance of such duties as his demands much tact and judgement, and he has shown he possesses those qualities in a high degree.

From a cricket point of view the festival has been a great success. With the first match, when the prospect for Shanghai looked certainly bright, the rain came on the second day, and cut the game short when Japan had made gain in the first innings, and Shanghai, 177 for six wickets. The downpour continued for days, but at last on Tuesday, the weather changed, and the S.C.C. ground drying with its usual rapidity, the Club began a match against the visitors which was continued on Wednesday and resulted with the home team gaining a decisive victory. On Thursday an invitation was accepted to play against the Shanghai Recreation Club, and here the visitors had the satisfaction of achieving well deserved success, whilst the way in which they punished the S.R.C. bowling in the second innings will not be quickly forgotten. It is not necessary to criticise in detail the performances of the individual members of the eleven, for, like most visiting teams they could not embrace the full cricketing strength of Yokohama and Kobe, but we may say this much that collectively they appeared to be undoubtedly strong in bowling, but weak in batting. Their fielding all round was excellent, but the few mistakes they made in the way of missed catches proved decidedly expensive.

In bidding them good-bye to-day, the many friends they have made in Shanghai will cordially wish them a pleasant journey homeward, and an-

ticipate the renewal, at a not distant period, of a companionship which owes its existence to the finest of all manly games, and which has been so mutually enjoyable.—*North China Daily News.*

KOBE V. YOKOHAMA.

Kobe on Tuesday went a long way to retrieve its fortunes in the cricket field, when the match with the Yokohama eleven was begun. More suitable weather could not have been desired; it was cool and, though somewhat cloudy, the light for the best part of the day was good. Kobe won the toss and went to the wickets with J. Marshall and Wilkinson. Yokohama put on Murray and Goddard to bowl. Play commenced about half-past ten. The opening play was somewhat disappointing, the bowling was poor, and included several wides—three from Goddard in one over—but it soon showed signs of improvement. At the commencement of the sixth over, the score stood at 20. The seventh over yielded seven to Marshall off Murray's bowling. Goddard's was safer but did not allow of many runs. After the thirteenth over, Edwards relieved Murray and began with a maiden. Wilkinson in the next over made a boundary hit off Goddard, and a little later three for a bye was put down against Edwards. Kingdon was sent in to relieve Goddard when the score had reached 40, and for the next two overs only two were added to the score, but Wilkinson in the next two scored three boundary hits, and 50 went up. Edwards made up for this by making his next two overs maidens. Goddard returned to relieve Edwards and began with a maiden. Kingdon had five maidens in succession to his credit. The fielding of the visiting team was smart, and successfully kept the Kobe men from scoring rapidly. When Murray was put on again to relieve Kingdon, a smart catch by Tyng put Marshall out for 26, the score standing then at 73. C. Lucas went in next, and the stand was maintained for some time, but with small results. They had only added 9 to the score when Wilkinson was bowled by Murray, the ball going off his pads. Score—79-2-39. Tate filled the vacancy, and began play with a boundary hit off Goddard. Lucas made another in the next over. The century was reached at seven minutes past twelve, and then Edwards was sent in to relieve Kingdon. Tate made the first straight drive of the day, counting 4, and he made the second not long afterwards. Boundary hits were a very good feature of the Kobe play and about equally distributed among the batsmen. Just before the adjournment, Tate might easily have been caught by Libeaud, but a good chance was missed. The adjournment for tiffin was made at half-past twelve, the score standing at 134-2-39. Lucas then had 26 to his credit and Tate 25.

Play was resumed shortly after two o'clock, Murray and Edwards sharing the bowling. Only two overs had been played and 13 added to the score when Lucas was cleaned bowled by Murray. Score—147-3-30. Tate with the next ball added 3, and then a straight drive counting 4. Lightfoot went in, and came out for a duck's-egg, being smartly caught by Libeaud. Score, 155-4-0. Edwards filled the vacancy at the wicket. Tate made his fourth 4 in the next over. Edwards made his first run off a high ball which ought to have been caught. After two or three single runs, Tate added another 4, and Kingdon was put on to bowl again, relieving Edwards. Tate continued to bat well, but Edwards was not up to his usual form. The first maiden after tiffin was made by Murray off Edwards, but not long afterwards the batsman buckled to it, and made two drives (4's) in succession off Murray's balls. Tate followed this with a 3, and Edwards with 3. Two or three singles, and then another 4 drive by Edwards. Another good attempt followed, the ball going high and dropping near the boundary with no one there to catch it. Only one run was made off the hit. Edwards fell shortly afterwards to a straight ball played on by Murray. This bowler, it will be noted, had taken all the wickets, though at no light cost. During the partnership of Edwards with Tate the score was increased by 52, so that it now stood at 207-5-22. Scrymgeour was the new-comer, and three overs later Edwards went on bowling again in place of Goddard. Tate's next good hit added a 6 to his score, the ball going clean over the boundary into the road. His next was a good driving hit but the ball was well fielded. Scrymgeour fell just afterwards, being caught by Goddard at cover point off a ball by Edwards. Score 228-6-3. Abbott was the next man to go in, but Tate was the next out, for 86—the highest score of the day. Murray took the wicket with a ball played full on. Score, 247-7-86. Townsend took the place of Tate at the wicket. Abbot's wicket was taken for 6 by a full pitch from Edwards. Score, 250-8-3. W. Braess was the tenth man in and it was not long before Murray took Townsend's

wicket for 3. Score, 250-9-3. The last batsman to go in was S. Lucas. He looked like making a stay, but these expectations were soon disappointed by Braess being caught out for 4 by Tyng off Kingdon. The innings closed for 266; including, it will be seen, 41 extras:—

BOWLING ANALYSIS.	
	R. B. M. W. WD.
Mr. Murray...	160 107 4 7 1
" Goddard	95 58 6 6 4
" Edwards	120 43 11 8 3
" Kingdon	81 59 6 1 0
" Johnson	10 0 0 0 0

The Yokohama team went in sharp at four o'clock, when the light was getting bad. Dickinson and Tyng went to wickets, and Tate and Edwards were sent out to bowl. Dickinson's stay at the wickets was brief. A weak hit off Tate gave C. Lucas an opportunity for an easy catch, and the batsman was out for 4. Score, 5-1-4. Johnson took his place but was soon dismissed for 2, the total for the two wickets being 10. Tyng, the youngest member of the Yokohama team, made a brave stand against fairly good bowling, but the smart fielding of the Kobe men did not admit of his scoring very much. Four maidens were made in succession by the bowlers—two each. When Murray succeeded Johnson, C. Lucas relieved Tate, who probably was fatigued after playing nearly the whole time. There was no other reason for changing; at any rate, Kobe could not hope to do much better than to get 2 wickets for 10 runs. There was not much run-getting for some little time after this. The monotony was broken by Tyng being neatly caught by Wilkinson off Lucas. Score, 17-3-8. Wallford was partnered with Murray, but his stay was very brief, being caught by Braess (wicket keeper) off Edwards. Score, 20-4-3. Edwards (brother of the bowler) then went out. He was some time without scoring, and then surprised the field by a drive for 4. Though Murray remained a good time at the wickets it was without any compensating advantage to the total score, as he only managed to get a single and a three and was then caught out by Edwards off Lucas. Score, 28-5-4. Kingdon signalled his advent at the wicket by a drive for three and when that over was finished, stumps were drawn—about five o'clock—the light at the time being very bad. Their scores were:—

YOKOHAMA.	
Mr. H. V. Dickinson, c. C. Lucas, b. Tate	...
" T. Tyng, c. Wilkinson, b. Lucas	...
" R. C. E. Johnson, b. Edwards	...
" G. C. Murray, c. Edwards, b. Lucas	...

" E. O. Kenyon	...
" E. F. Libaud	...
" J. H. Pearson	...
bye 1, no ball 1	...

A fair number of spectators followed the play with keen interest. Mr. Rizetti's band was in attendance and at four o'clock tea was provided in the Ladies' Pavilion, Mrs. Playfair presiding.—*Kobe Chronicle.*

THE REBELLION IN THE PHILIPPINES.

[SPECIAL CORRESPONDENCE.]

Manila, October 6th.

Quarantine has been abolished, as you are no doubt aware, and the shipping people are consequently elated.

Affairs in the country still remain in a state of disturbance similar to the condition a week ago. Last Friday, the Spanish Transatlantic Company's steamer *Cataluna* arrived with 937 of the 1,500 troops expected, and to-day the *Montserat*, belonging to the same Company, arrived with probably the same number aboard, for the number stated to have been sent is also 1,500. The streets in consequence have been decorated with arches and floral displays, while the buildings are draped with the national colours, red and yellow. Meanwhile, the firing can be plainly heard, as the gunboats and fort keep pounding away at the rebels of the Cavite province, who hover dangerously near the village of Old Cavite. Yesterday morning a severe engagement took place near Binacayan, where the Government powder magazine is established, and the Spanish forces thought

it prudent to withdraw and wait for reinforcements. Fortifications have been erected by both rebels and Spaniards, and as yet the latter have acted only on the defensive. At present, out of the 22 villages in the province the rebels hold 19. With the Spanish reinforcements arriving the Government will soon no doubt be able to put a force into the field sufficient to drive the badly armed insurgents into the hills. But what then? Will the Spanish be able to pursue and subdue them completely? Opinions do not vary on that point. It is almost an impossibility, unless the Spanish can put ten men in the field where they have one now. The mother country cannot do this until the Cuban difficulty is settled.

The native troops, have been loyal to the Spanish from the first, and it is, to say the least, most creditable. Throughout the difficulties they have not yet swerved from the path of duty. And this, one must remember, at a period when the power was in their own hands, and they could have put a bullet in the heart of every Spaniard in Manila if they so desired. Will the Government recognize this loyalty? They should. One cannot view the profuse displays, the expense incurred in decorating and banqueting the arriving Spanish troops, without wishing that the money spent, or that a similar sum, be afforded to give to these poor weary natives whom one sees marching backward and forward in the heated streets, a testimonial of the appreciation that the citizens have for their loyalty.

Arrests continue, and it is said that over two thousand prisoners are now confined, packed in ill-ventilated dungeons to an extent that, if not absolutely fatal to great numbers, causes much suffering. But the fearful incident of the "black hole of Manila," when 57 suspects were smothered to death, will probably not be again repeated, for the Governor-General, who is generally known to be a man of sterling qualities, was greatly enraged over the affair, which the guards in attendance swear was an unavoidable accident, and has given such orders that the soldiers are aware it would be greatly to their disadvantage to allow any more such "unavoidable accidents."

H.M.S. *Pigmy* is here, and it is reported that the officers have had a slight controversy with the Spanish Naval authorities as to what the duties of a foreign warship in a similar position may be. A mutiny broke out aboard a Nova Scotia ship yesterday morning, and a squad from the *Pigmy* went aboard to quell it. This the Spanish feel was not the proper thing, for in Spanish waters they do not like it to appear that they can not protect foreign ships that may for the time be in their jurisdiction.

THE RÖNTGEN RAYS AND THE VICTORIA INSTITUTE.

The Annual Meeting of the Victoria Institute of 8, Adelphi Terrace, London, England, held in September, must certainly be regarded as the most important one in the history of this Institute.

For the last twenty-six years the Victoria Institute has held each successive Annual Meeting in the large hall of the Society of Arts, on each occasion chronicling the gradually-increasing extension of its most important work, carried on during the lifetime of its late president, the last Earl of Shaftesbury, under whose auspices the Institute was founded; and, during the last few years, under his earnest and gifted successor, Sir George Stokes, Bart., the initial objects being steadily kept in view by its energetic Council, among whom are still to be found many of those earnest workers who first assisted at its foundation. Those objects seem never to be forgotten, and on Wednesday last, two of the greatest scientific men of the age, the President, and Lord Kelvin, supported by a crowd of some of the foremost scientists of the age, gathered together to listen to the thirtieth Annual Address on the Institute's progress and the greatest discovery of the age. Whether it be Lord Kelvin or Sir George Stokes who is the greatest authority on heat and light, it matters not, both gave their verdict, as members of the Victoria Institute, on the Laws of Light and the Röntgen Rays, and the whole scientific world in England receives it with respect. Well may we congratulate the Victoria Institute in having steadily maintained its course, and having successfully united men of cultured minds and calm judgment in the investigation "of important questions which bear on the great Truths of Holy Writ"—in order that hasty conclusions might no longer afford ground for unseemly attack—to the injury both of Religion and Science.

Rarely has the Society of Arts seen so great and important a gathering as at this meeting. Every

seat was occupied, the entrance lobby was crammed, and many late arrivals found it hopeless to obtain even standing room. The following are a few among those present:—Lord Halsbury, the Lord Chancellor, Lord Kelvin, who appeared at the meeting immediately on his arrival from Windsor and receiving his new honour, Lord Greenock, Lord Radstock, the Bishop of Ripon, the Right Hon. Sir R. Couch, Sir Sidney Shippard, Sir F. Middleton, Sir H. Barkly, Sir G. Parker, the Sub-Dean of the Chapels Royal, Sir Joseph Lyster, President of the Royal Society, Dr. Crookes, F.R.S., Captain Creak, F.R.S., Inspector-General Meiklejohn, F.R.S., Professor E. Hull, F.R.S., J. H. Gladstone, F.R.S., Dr. Common, F.R.S., Dr. Seeley, F.R.S., A. Hailey, F.R.S., J. Althaus, F.R.S., H. W. Blake, F.R.S., Generals Robinson, E. D. Smith, Colonel Welby, M.P., Mr. Radcliffe Cooke, M.P., James Round, M.P., and others; in all about 400 were present. Letters of regret were read from the German Ambassador, Sir J. W. Dawson, C.M.G., F.R.S., Professor Sayce, and others. The report was read by the hon. secretary, Captain F. Petrie. The number of members had risen to 1,500, of whom one-third were resident abroad. Among its losses the Institute had to regret the death of Professor Pasteur, who had been a firm supporter. Among those who had contributed to the subjects discussed during the season were Sir J. Dawson, C.M.G., Professors Cleland, F.R.S., Calderwood, Hull, Fritz Hommel, Sayce, Macloskie, and many others. The Report having been adopted, the President gave a brilliant address. Prefacing it by referring to the work of the Institute, he described the bearing of the laws of light on the question of Röntgen rays, which he considered merely transverse vibrations of very short period. Dr. Gerard Smith, M.R.C.S.E., one of the Council of the Institute, contributed much to the interest of the address by showing illustrations of the effect of the rays. Towards the close of the address Lord Kelvin entered the meeting on his arrival from Windsor, whither he had been summoned to receive his new honour. His appearance was the signal for the whole meeting rising and warmly applauding him. In afterwards moving a vote of thanks to Sir George Stokes, he, to point out one of the marvels of the Röntgen rays, mentioned that the rays of green light vibrated 70 thousand million million times in a second. Sir Joseph Rayner, K.C.S.I., F.R.S., seconded the vote of thanks, which was conveyed to Sir G. Stokes by Lord Kelvin.

We may here point out that the Victoria Institute practically consists of two classes, 1st, the workers, and 2ndly, those who approve of the work done, and desire to strengthen a Society formed with such high objects, and all of these, clergymen especially, profit by the carefully and simply arranged results of the work done as published in the Institute's journal.

LATEST TELEGRAMS.

(REUTER'S "JAPAN MAIL" SPECIAL SERVICE.)

London, October 17.

The Times, in an article referring to the increasing virulence of the German press, observes that it is gradually alienating Great Britain at a time when British support to the Triple alliance is especially useful in view of the alliance between Russia and France.

London, October 22.

Trafalgar Day was largely celebrated throughout London yesterday. The Nelson column was decorated with wreaths from top to bottom and great crowds assembled in the square, where patriotic speeches were delivered.

The newspapers concur in the opinion that nothing hostile to foreigners was implied by the celebration, and that it was only awakening the nation to the importance of the Navy.

("SPECIAL" TELEGRAM TO "JAPAN MAIL.")

Kobe, October 21.

The Yokohama team, continuing their innings this morning, were all out for 38, and then, following on, made 99 in their second innings, the Kobe team thus winning by an innings and 129 runs.

Kobe, October 23.

In the baseball match, Kobe won twice, the Yokohama totals being 14 and 6, the Kobe totals 16 and 25.

(Reuter's Service of Telegrams supplied to the "Japan Herald," the "Japan Gazette," and other Subscribers in Tokyo and Yokohama.)

London, October 19.

The reported cession of Kassala to Great Britain is declared to be unfounded.

It is reported from Washington that President Cleveland, in his next message to Congress, will announce an amicable settlement of the Venezuelan question.

The French Minister of the Interior has announced that the Government's programme to be submitted to the Chamber of Deputies, will include proposals for the creation of a Colonial army.

(FROM THE "SINGAPORE FREE PRESS.")

London, September 23.

Baron Banffy, President of Council, speaking in the Hungarian Diet, states that Austria and Russia have agreed upon a pacific policy, and to endeavour to maintain the *status quo* in the near East.

The *Times* states that the Russian fleet at Sebastopol has been placed upon a war footing and has embarked three battalions of infantry, and that it will go to the Bosphorus if a telegram from the Russian Ambassador so orders.

(FROM THE "LA COURRIER D'HAIIPHONG.")

Penang, Oct. 1.

The trial of Swi Bock and Low Chang, formerly store-keepers at Messrs. Behn, Meyer & Co., who have been on their trial for criminal breach of trust in respect of tin, has at last concluded after lasting for seventeen days—a record case.

Both prisoners were found guilty, but Counsel moved for an arrest of judgment.

Paris, Sept. 27.

The rumour that the Czarewitch was very ill is denied.

Sept. 28.

An English despatch from Shanghai announces a general rising in Thibet against China.

Sept. 30.

Count Tornelli and M. Hanotaux (the French Foreign Minister) have signed a new treaty in regard to Tunis. Italy abandons all her claims, and her products will be admitted into Tunis on the minimum French tariff.

Oct. 1.

France and Italy have signed a convention conceding reciprocal and national treatment and freedom of navigation in their respective ports.

(FROM "LA COURRIER DE SAIGON.")

Paris, October 2.

M. Chichkine, permanent secretary in the Foreign Department of Russia, has arrived in Paris. The President of the Republic has nominated him to the Grand Cross of the Legion of Honour.

The epidemic of cholera in Egypt has entirely subsided.

(FROM THE "SHANGHAI MERCURY.")

Hongkong, October 13.

There is a severe outbreak of bubonic plague at Bombay. It commenced on the 20th Sept., and by the 25th there were 300 deaths. Hundreds of rats, as in the Hongkong epidemic, died. The outbreak is attributed to the foul state of the sewers.

October 15.

Captain James Stewart, Commander of the Customs cruiser *Kaipan*, died yesterday.

The steamer *Malacca* spoke the British barque

West York, which was anchored fourteen miles from Turnabout, with all masts gone.

(FROM THE "SINGAPORE FREE PRESS.")

Penang, October 5.

Low Chang (the father of the other accused) has been condemned to seven years' rigorous imprisonment; a further term on one charge is reserved for appeal. Swee Bock (the store-keeper of Behn Meyer and Co.) has been condemned to twelve years' rigorous imprisonment.

(FROM THE "N.C. DAILY NEWS.")

London, October 10.

The Sirdar, Sir H. H. Kitchener, and his chief officers have returned to Cairo.

October 12.

The Archbishop of Canterbury, who was seized with apoplexy in Hawarden Church, and expired at the Rectory, was the guest of Mr. Gladstone, who was absent from church owing to the cold weather.

October 13.

The *Times* states that owing to Lord Rosebery's suggestion that Mr. Asquith should be his successor as Leader of the Liberal Party, and to the certain opposition of Sir William V. Harcourt, the situation is complicated, and that Mr. Gladstone's return is seriously advocated.

The *Novoe Vremya* says that the changed tone displayed by England will materially facilitate united European action with regard to the Porte.

October 14.

It has been officially stated in Paris that China has entrusted Frenchmen with the reconstruction of the Foochow Dockyard, and that the contract was signed at Peking on the 14th inst.

October 15.

In a recent speech, Sir Michael Hicks-Beach, Chancellor of the Exchequer, denounced the connivance of the Sultan and of the Porte in the late massacres, but stated that Russia, Austria, and Germany were determined to uphold the *status quo* in Turkey, and that therefore the British policy consists in promoting concerted action by the Powers with a view to advising and, if necessary, compelling reforms.

He stated that Dongola was the stepping-stone to a further advance when the time was ripe.

The Right Hon. G. N. Curzon, speaking at Glasgow, said that the Nile task would be incomplete until the Egyptian flag was hoisted again at Khartoum.

Referring to Armenia, he said that he deprecated agitation as long as Great Britain did not intend to go to war on behalf of Armenia.

(FROM THE JAPANESE PAPERS.)

Kobe, October 20.

In the cricket match to-day, Kobe went in first and made 266—Tate 86, Wilkinson 39, Lucas 30, Marshall 26, Edwards 22. Murray took seven wickets. For Yokohama, when the stumps were drawn, five men were out for a total of 21 runs, the highest scorer being Tyng, who made 8.

Nagoya, Oct. 20.

Twenty-two officers and nine hundred and eighty-seven men of the 18th Regiment left here for Hiroshima on Monday evening, *en route* to Formosa.

Kyoto, Oct. 20.

Marquis Yamagata arrived here on Monday evening.

Sendai, Oct. 20.

Lieut.-General Yamaguchi and Major-General Ogihara, who went to Yamagata Ken for the autumn manoeuvres, have returned to the city. Major-General Ogihara afterwards left for Aomori.

Kobe, Oct. 20.

The Japanese man-of-war *Matsushima* left this port on Monday evening for China.

Nagasaki, Oct. 20.

The German flag-ship *Kaiser* arrived here this morning.

Bakan, Oct. 20.

Three thousand ruffians attacked the Oshima district office. Four policemen were wounded in the tumult.

Takamatsu, Oct. 20.

Lieut.-General Oku, Commandant of the Fifth Army Division, who was appointed Commandant of the First Army Division, arrived here *en route* to Hiroshima from Tokyo. On Monday morning, he left for Kotohira.

Nagasaki, Oct. 19.

Generals Kawakami, Noda, Ishiguro and suite arrived at this port to-day by the *Otaru Maru*. This evening they leave for Formosa.

Bakan, Oct. 19.

Major-General Shioya, who was appointed Commandant of Wei-hai-wei left here to-day for Tokyo.

Marugame, Oct. 20.

The autumn manoeuvres of the Fifth Army Division ended on Monday. An entertainment was given to the whole army at Kotohira-cho to-day.

Takamatsu, Oct. 21.

The autumn manoeuvres of the Fifth Army Division have come to a close. The troops were dismissed to day at Kotohira.

Yatsuyama, Oct. 21.

The Japanese men-of-war *Matsushima* put into Matsugahama on Tuesday. She leaves for Nagasaki to-day.

Fukushima, October 21.

Mr. Ogura, Governor of this Prefecture, returned last night.

Aomori, October 21.

The Governor gave an entertainment last night at his official residence to all the high officials, to celebrate his new appointment.

Bakan, Oct. 21.

Oshimo-gori is still in a disturbed condition and the people are greatly excited.

Kyoto, Oct. 21.

Marquis Saionji has been robbed of a revolver, a telescope, and two other articles.

Marquis Saionji left here for Tokyo to-day.

The troops of the Nagoya Division leave here to-morrow for Formosa.

Hiroshima, Oct. 22.

The *Gaisen Maru* and *Fusan Maru*, conveying Formosa reliefs, arrived here on Wednesday evening from Formosa. This morning the men were landed. The *Kyoto Maru* is due here to-morrow.

Kyoto, Oct. 22.

H.I.H. Prince Yamashima has left here for Ise.

Matsuyae, Oct. 22.

Colonel Tazaka is surveying the vicinity of the town.

Toyama, Oct. 22.

The Shokonsai fête held to-day was very successful.

Aomori, Oct. 22.

Dysentery cases in this Prefecture now number four hundred and seventy-four.

Kyoto, Oct. 22.

The mother of H.I.H. Prince Arisugawa arrived here to-day from Maiko.

Kyoto, Oct. 22.

Marquis Yamagata, who is staying here, will hold a conversation on Saturday to which he has invited the high officials of the city.

Sapporo, October 22.

Mr. Hara, President of the Hokkaido Ad-

ministrative Office, who had gone on a tour through the Island, returned here on Wednesday. Colonel Asada, Head-Councillor of War of the Seventh Army Division, who was appointed Head-Councillor of War in the Eastern Section, is to leave here for Tokyo on Sunday to take up his new appointment. A farewell was tendered him to-day.

Kobe, Oct. 22.

The Imperial Chamberlain, Viscount Higashizono, and *suite* arrived here to-day from Nishinomiya. To-morrow they will inspect the recently flooded districts.

CHESS.

(All Communications to be addressed to the CHAMBERLAIN.)

The Yokohama Chess Club meets on Monday and Thursday in each week, at the Club Hotel, No. 5, Bund, from 5 p.m. to 11 p.m.

Visitors to Yokohama, and Officers of ships (whether Navy or Merchant service) who are Chess-players, are welcome to use the Club during their stay in this port.

The Tokyo Chess Club meets at the Tokyo Hotel, every Friday, from 1 p.m. to 7 p.m.

SOLUTION OF PROBLEM No. 252.

WHITE. BLACK.
1—R to R 8 1—K takes Kt
2—Q to R 7, mate.

Correct answers from Shogi, W.D.C., J.D., W.H.S., W.d.H., and Omega.

SOLUTION OF PROBLEM No. 253.

WHITE. BLACK.
1—R to R 6 1—B takes R
2—Q takes Q, mate
2—Q takes Q, mate
2—Kt to K 2, mate
2—Kt to Q 3, mate.

Correct answers from W.D.C., J.D., Shogi, W.H.S., W.d.H., and Omega.

Problem No. 251.—W.D.C. sent correct solution and we omitted to mention it last week, for which sincere apologies.

PROBLEM No. 255.

By S. LOYD.

White to play and mate in three moves.

PROBLEM No. 256.

By the Hon. EDWARD PLUNKETT.

White to play and mate in two moves.

HONGKONG.

The *China Mail* notes that the "Japanese" (!) Chess Clubs have reopened for the season. We thank you for your kindly interest dear Black Bishop, but please don't call us "out of our names." We are not yet under Japanese jurisdiction much less have we become Japanese subjects, nor do we play Japanese chess, but the same old game beloved by the Salamanders of Hongkong.

GAME No. 588.

Notes by JAMES MASON.

ROY LOPEZ.

WHITE. BLACK.
W. Weiss. W. Pollock.
1—P to K 4 1—P to K 4
2—Kt to K B 3 2—Kt to Q B 3
3—B to Kt 5 3—P to Q R 3
4—B to R 4 4—Kt to B 3
5—P to Q 3 (a) 5—P to Q Kt 4
6—B to Kt 3 6—B to B 4
7—P to B 3 (b) 7—P to Q 4!
8—P takes P 8—Kt takes P
9—Q to K 2? (c) 9—Castles
10—Q to K 4 (d) 10—B to K 3
11—Kt takes P? 11—Kt takes Kt
12—Q takes Q Kt 12—Kt to Kt 5 (e)
13—Castles (f) 13—Kt takes Q P
14—Q to R 5 14—B takes B
15—P takes B 15—R to K sq. !
16—Kt to Q 2 (g) 16—Q to K 2
17—P to Q Kt 4 17—B takes B P ch. !
18—K to R sq. (h) 18—Q to K 8!
19—P to R 3 19—Kt takes B (i)
20—R takes Q 20—R takes R ch.
21—K to R 2 21—B to Kt 8 ch.
22—K to Kt 3 22—R to K 6 ch.
23—K to Kt 4 (j) 23—Kt to K 7!
24—Kt to B sq. (k) 24—P to Kt 3
25—Q to Q 5 25—P to R 4 ch.
26—K to Kt 5 26—K to Kt 2!
27—Kt takes R 27—P to B 3 ch. and mates in 2 moves.

(a) White should Castle soon when this mode of defence is adopted, and play P to Q 4 in preference to P to Q 3. This defence was a favourite with the unequalled Paul Morphy and is in reality a counter-attack of considerable force. It is unsafe for the player to rely on the prospective weakness of his adversary's Queen side Pawns in the ending.

(b) It would be better to Castle.

(c) P Castles would still be better.

(d) A hazardous and misguided attempt to secure the Pawn.

(e) Very pretty play which turns the scale in Black's favour.

(f) It is scarcely too much to say that White is virtually lost from this point. He should take the Knight. Then, if 23... B takes Q Kt P ch.; 24—Kt to B 3; B takes B; 25—Castles, he would still have a game to play.

(g) An awkward defence of the Bishop Pawn, which Black threatened to take with his Knight, after first attacking the Queen by 16.... P to Kt 3, relieving his Bishop.

(h) White's difficulties accumulate. Evidently 18—R takes B would lose the exchange, at the very least; as if the two pieces were taken for the Rook, mate would follow in two moves.

(i) Black conducts all his operations with great skill. He must get more than an equivalent for the Queen if White refuses to go out and face the chance of mate at move 22, as in that case the Knight would be lost by 22.... B to K 6 ch. &c. Afterwards the doubling of the Rooks would soon prove decisive.

(j) Interposing would be no better; 23—P to Kt 4, B to B 7 ch.; 24—K to R 4, R to K 5 ch.; 25—P to Kt 4, B to B 7 ch., and mates in two moves. White is in the toils and has no escape from mate or loss of his Queen.

(k) If 24—R takes B, then 24.... R to Kt 6 ch.; 25—K to R 4, P to Kt 4 ch. &c., and Black would come out a Rook to the good.

BUDA-PESTH.

This tournament was to begin on 5th instant, but so far we have heard no results. Steinitz and Pillsbury had both entered and the Steinitz-Lasker match in Moscow is postponed till November.

GAME No. 589.

WHITE. BLACK.
E. Lasker. E. Schallopp.
1—P to Q 4 1—P to Q 4
2—Kt to K B 3 2—Kt to K B 3
3—P to B 4 3—P to K 3
4—Kt to B 3 4—B to K 2
5—B to B 4

We do not think this move is worth playing.

We are quite sure that this is premature.

6—P to B 5 5—Castles
7—P to Q Kt 4 6—P to Q Kt 3
8—P to Q R 3 7—P to Q R 4
9—Kt takes Kt 8—Kt to K 5
Likewise not good; loses a pawn.
10—Kt to K 5 9—P takes Kt
11—Kt to B 4 10—P to K B 3
12—R P takes P 11—R P takes P
13—Q takes R 12—R takes R
14—Q to B 3 13—Kt to B 3
14—Kt takes Q P 14—Kt takes Q P

All this is excellent play.

15—P to K 3 15—Kt to B 4

We prefer Kt to Kt 4.

16—Kt to Q 2 16—B to Kt 2

Fatally tempted by a fine idea, P to K 4 was a simple continuation.

17—P to B 6 17—B takes B P
18—Q takes B 18—B takes P

19—Q to B 2 19—Q to Q 4
Q to Q 4 seems better, for then R to Q sq. or R to R sq. could follow.

20—B to B 4 20—B takes Kt ch.
21—K to K 2 21—Q to B 3
22—K takes B 22—K to Q sq. ch.
23—K to K 2 23—R to Q 4
24—Q to Kt 3 24—R to B 4
25—B takes P ch. 25—K to B sq.
26—R to Q sq. 26—Kt to Q 3
27—B takes Kt 27—P takes B

The romance of Black is now rapidly drawing to a close, and White will win; such is the luck which favours strong players.

28—B to Q 5 28—R to B 7 ch.
29—R to Q 2 29—R takes R ch.
30—K takes R 30—Q to B 4
31—B takes P, and White won.

As will be seen from the above game, White did badly in advancing his Q B P to B 5 too early. Nobody knows this better than Lasker himself, who won one of the finest games he ever played against Steinitz through the latter playing P to Q B 5 too early. As a further illustration of this point, we also append the opening moves of a good game played at Llandudno, between Messrs. Gunston and E. O. Jones, in which White likewise loses through the same fault.

GAME No. 590.

QUEEN'S GAMBIT.

WHITE. BLACK.
W. H. Gunston. E. O. Jones.
1—P to Q 4 1—P to Q 4
2—P to Q B 4 2—P to Q B 3
3—Kt to Q B 3 3—P to K 3
4—P to K 3 4—B to Q 3
5—Kt to B 3 5—P to K B 4
6—P to B 5 6—P to B 2
7—P to Q Kt 4 7—Kt to Q 2
8—P to Q R 4 8—Kt to B 3

Such an attenuated advanced line is always weak.

9—Kt to Kt 5 9—Q to K 2
10—P to B 4 10—Kt to K 5
11—Q Kt takes Kt 11—B P takes Kt
12—B to Q 2 12—Castles
13—B to K 2 13—P to K 4!

A fine move, which pulls White's game to pieces.

14—Q to Kt 3 14—P takes Q P
15—Castles 15—P to K R 3
16—Kt to R 3 16—P to Q 6

and Black won.

PILLSBURY VERSUS SHOWALTER.

Through the efforts made by the New York *Tribune* there is now a prospect of a Pillsbury-Shawalter match. The former is willing to play the Kentuckian for \$1,000 a side, and it is expected that the match will come off soon after Pillsbury's return from Europe. If the match really takes place the odds will be greatly in Pillsbury's favour, as his recent play has shown him to be immeasurably superior to his probable opponent.

Li Hung-chang has the reputation of being one of the best Chess-players in China.

CHESS AT ODDS.

As a relief from the dullness of the precise style of modern match play, we quote the following game played about 1834. Mr. M'Donnell, a native of Belfast, was then considered the strongest British player, and excelled at giving odds, for he rarely played against those of his own strength. His opponent was the celebrated Captain Evans, the inventor of the immortal Evans Gambit. Captain Evans never attained the strength of M'Donnell, but the following game was played long before he attained his maximum strength.

GAME No. 591.

REMOVE WHITE'S K KT FROM THE BOARD.

WHITE. BLACK.
M'Donnell. Capt. Evans.
1—P to K 4 1—P to K 4
2—B to K 2 2—Kt to K B 3
3—P to Q 3 3—B to Q B 4
4—Castles 4—Castles
5—K to R sq. 5—P to Q 3
6—P to K B 4 6—Kt to B 3
7—P to B 3 7—Q to K 2
8—P to B 5 8—B to Q 2
9—P to K Kt 4 9—K to R sq.
10—P to Kt 5 (a) 10—Kt to K Kt sq.
11—P to K R 4 11—P to K B 3
12—Q to K sq. 12—Q Kt to Q sq.
13—Q to K Kt 3 13—Kt to B 3
14—P to Kt 4 (b) 14—Kt takes P
15—P to R 3 15—Kt to B 3
16—R to R 2 16—Q to B 2
17—R to Kt 2 17—Q to K 2
18—B to Q sq. (c) 18—P to Q R 3
19—R to R Kt 2 19—P to Kt 4
20—Kt to Q 2 20—Q R to Q sq.
21—Kt to B 3 21—B to B sq.

22—P to Kt 6 (d)
 23—Kt to R 2
 24—Kt to Kt 4
 25—P to Q 4 (e)
 26—R (B sq.) to Kt sq.
 27—Kt takes R P (f)
 28—Q takes B P
 29—R to K sq.
 30—R to Kt 7 ch.
 31—Q takes Kt
 32—R to Kt 4
 33—R to B 4
 34—B to B 3
 35—B takes P
 36—Q to R 4
 37—K to R 2
 38—R (B 4) takes B
 39—R takes Q
 40—K to R sq.

(a) This game is typical of one at odds. The odds-giver must, for the chance of winning, risk much and adopt original play at the expense of soundness.

(b) In an ordinary game this would be an error (and Mr. Staunton thinks it so here), for Black can play Kt takes P, and if 15—P takes Kt, B to Q regains the piece; but the error is doubtful, for White, at the cost of a Pawn, gets his Q R into play.

(c) If 18—R takes P, R to Q Kt sq. would force an exchange of Rooks, which the odds-giver must avoid.

(d) White's attack is very showy, but 22—B to Kt 3 seems stronger.

(e) Preparing for a sudden onslaught, which must either carry the position by storm or utterly fail.

(f) This is the onslaught, but it is insufficient. The play is very interesting.

(g) Black intentionally gives up his Kt, as he has sufficient force to win.

(h) A move of a high order, and not expected from a Knight-receiver. The White Bishop at K 4 cannot move now.

(i) Black finishes the game remarkably well. His play shows that he was too strong to receive a Knight.

George Schreyer, who must be somewhat of a philosopher, writing in Art and Literature, delivers himself of the following:—

The game of chess itself is an allegory of life. The world is a globular chess board, and all the men and women merely figures which destiny moves at her will. In the turning lathe of nature some are fashioned into kings and queens, others into bishops and knights, and the majority come into the world as pawns. As in chess, so in life, position is everything. Like a pawn, the most humble person as he slowly moves over the squares of this sublimary chess board, may eventually arrive at that square upon which he assumes a power even greater than his own king.

GAME No. 592.

QUEEN'S GAMBIT DECLINED.

WHITE. Steinitz.	BLACK. Janowski.
1—P to Q 4	1—P to Q 4
2—P to Q B 4	2—P to R 3
3—Kt to Q B 3	3—Kt to K B 3
4—Kt to B 3	4—B to K 2
5—Q to B 2 (a)	5—Castles
6—P to K 4	6—P takes K P
7—Kt takes P	7—Kt to B 3
8—B to K 3	8—Kt takes Kt
9—Q takes Kt	9—P to B 4 (b)
10—Q to Q 3	10—P to B 5
11—B to Q 2	11—P to K 4
12—P takes P (c)	12—B to K Kt 5
13—Q to Kt 3	13—Kt to Q 5
14—Q to Q sq.	14—B takes Kt
15—P takes B	15—R to B 4
16—B to Q 3	16—R takes P ch.
17—B to R 4	17—Q to Q 2
18—B to B 3	18—P to B 4
19—Q to Q 3	19—R to Q sq.
20—Castles (Q)	20—Q to R 5
21—K to Kt sq.	21—B to B 3
22—B takes Kt P (e)	22—R to K 2
23—B to K 4	23—R to Q Kt sq.
24—K R to K sq.	24—K to R sq. (f)
25—B to Q 5	25—R to Q 2
26—R to K 4	26—R to Q 3
27—Q R to K sq.	27—R (Q 3) to Kt 3
28—R to B sq.	28—P to Q R 3
29—P to K R 4	29—P to Q R 4
30—P to R 5	30—R to R B sq.
31—P to R 6	31—Q takes R P
32—R takes P	32—R (B sq.) to Q Kt sq.
33—P takes P ch.	33—B takes P
34—R (B 4) to K 4	34—Q to R 8 ch. (g)
35—K to Q 2	35—K takes P ch.
36—K to R 3	36—R to K B sq. (h)
37—P to B 4	37—Q to R 4
38—B takes R	38—Q takes B
39—R to K R sq.	39—P to R 3
40—R to K 5 (i)	40—R to Q Kt sq.
41—B to K 4	41—B takes R
42—R takes P ch.	42—K to Kt 2

Resigns.

(a) Unusual in this opening. Steinitz's object is to play P to K 4 and endeavour to produce a lively game out of a dull opening.

(b) Very enterprising on part of Black. By the bold play here and in the next few moves he gains time and development.

(c) Probably best. P to Q 5 looks good, but Black had several replies, all assisting his development.

(d) Quite safe for Black: White cannot play 27—B takes R P ch., for after 28—K to R sq. Black threatens Kt to K 7 ch. and wins.

(e) It is interesting to watch how Black utilises this open file for purposes of attack.

(f) It is now necessary to guard against B takes R P ch.

(g) The game now becomes exceptionally interesting; till the end the play is most instructive.

(h) This is all well planned. If 37—R takes Q, R takes P mate.

(i) The Rook cannot be taken, otherwise White mates.

MAIL STEAMERS.

THE NEXT MAIL IS DUE.

From America	per P. M. Co.	Sunday, Oct. 25th.*
From America	per O. & O. Co.	Thursday, Nov. 5th.

PASSENGERS.

ARRIVED.

Per American steamer *City of Rio de Janeiro*, from Hongkong via ports:—Mr. W. E. Hunt, Mr. C. Michelan, Rev. and Mrs. Moore and 2 children, Mr. R. Perrott Forshaw, Captain W. Walker, and Mr. Takeshiro Mayeda in cabin. For San Francisco:—Mr. E. H. Warner, Lieut. H. G. Hannun, U.S.N., Mrs. Warner, Mr. C. Laughton, R.N., and Surgeon-Lieut. and Mrs. Hyde and 3 children in cabin.

Per British steamer *Doric*, from San Francisco via Honolulu:—For Honolulu:—Mr. Otto Isenberg, Mrs. Isenberg and 2 children, Mrs. Chas. Cooke, Master Cook, Mr. W. W. Goodale, and Mr. Sim Mack in cabin. For Yokohama:—Mr. J. M. Rothschild, Mrs. W. W. Law, Miss Law, Mrs. Wm. Russell, Mrs. M. P. Bligh, Miss Bligh, Mr. L. Anderson, Mrs. A. Duncan, Mr. S. Shibutani, Mr. R. Nagao, Rev. J. Soper, Rev. L. W. Atwood, Mr. T. Asai, Mr. Konmiasay, Mr. D. Arai, Mr. G. J. Campbell, Miss Ella R. Church, Mr. T. Nishigawa, and Mrs. T. Nishigawa in cabin. For Shanghai:—Miss Annie Bardsley, Colonel C. de Wogack, Mr. Tung Ping Foo, Mrs. M. Bond, and Mr. Kwei Ping Hong in cabin. For Hongkong:—Mr. W. C. Vander Heyden, Mr. G. Stafford Northcote, Mr. Chung Liang Wong, Mr. Milton Harley, Mrs. Lida S. Ashmore, Mrs. M. R. Norris, Mr. L. E. Clayton, Mrs. A. B. Brolly, Miss A. Hart, and Mrs. L. Miller in cabin. From Honolulu to Yokohama:—Mr. J. V. Sweetser, Mrs. Sweetser, Miss Delight Sweetser, Mr. Cortaz, Mrs. Cortaz, Mr. T. H. Miller, Mrs. Bouschoff, Mrs. L. McCormick, Miss McCormick, Mrs. J. M. Rothschild, Miss Rothschild, Miss Parrish, Mr. G. H. Pattengill, and Mr. S. Ozaki in cabin.

Per British steamer *Verona*, from Hongkong via ports:—Mrs. J. C. Abell, Mr. Lo Sui Choi, Mr. W. Curtis, Miss Curtis, Mr. R. W. Almond, General Flagg, Mr. K. Tanabe, and Mr. J. Johnstone in cabin; one Chinese and child in steerage.

Per French steamer *Melbourne*, from Marseilles via ports:—Mr. Sakai, Mr. S. Soga, Mr. M. Allix, Mrs. Abramovitz, Mrs. W. Ellis, Mrs. P. Hoffmann, Mr. O. Oppenheim, Mr. G. V. Bodenhausen, one Chinese, nine Roman Catholic Missionaries, Dr. H. M. W. Furness, Dr. H. M. Hiller, Mr. L. L. Eizel, three Roman Catholic Sisters, Mr. F. Casati, Dr. W. Miller, Miss Brandt, Mr. F. Schoene, Mr. Berlioz, Mr. W. Aratoon, Mr. L. Hashin, one Roman Missionary, Mr. F. G. Tay, Mr. Liu Cheng Chee, Mr. A. Delbourgo, and Baron T. d'Anethan, Belgian Minister, in cabin.

Per British steamer *Kobe Maru*, from Shanghai via ports:—Miss M. Shade, Miss Terris, Messrs. T. I. Shade, Chaffanor, L. Gay, Mangini, K. Inagaki, Major and Mrs. Park, Mr. and Mrs. G. T. How, Messrs. Walford, Dickinson, R. Fukushima, H. Sharp, and Tallor in cabin; Miss M. Yukawa, Messrs. Tominaga, Ogita, and J. Murphy in second class, and 71 passengers in steerage.

DEPARTED.

Per French steamer *Océanien*, for Shanghai via Kobe:—Mr. Tennant, Baron d'Anethan, Messrs. Murray, Edwards, Dickinson, Tyng, Kenyon, Libeaud, Johnson, Pyle, Ellis, Smith, Scott, L. H. Abel, Ed. L. Van Nicrop, J. Sibiodon, L. de Michaux, Baron Oberkamp, Miss Oberkamp, Mr. and Mrs. Booth, Mr. Chantoiseau, Miss Lanjuinier, Messrs. Ebrahim, Abdul Kather, V. Delbourgo, Cheong Yue Cheu, K. Gadellus, Kwan Sang, Wan Chee Cheong, J. Ritchie, Goddard, Gaultillon, H. Bhunia, Miss S. Rome, Mr. Kwan Yue, Mr. Charpentier, Captain F. S. Johnson, Colonel A. Howle, Mr. J. R. Mikkers, Mrs. Wm. H. Stone, Messrs. A. Veillon, H. A. Twidall, Fioravanti, Mrs. Tanning and maid, Messrs. J. A. Guibert, Cottin, Helm, P. Vieugne, W. Andreeff, Kumazo Kuwada, and Captain L. H. Petersen in cabin; one Japanese in steerage.

Per British steamer *Ceylon*, for London via ports:—Captain and Mrs. Pritchard, 2 children, infant, and European nurse, Master George Moss, Mr. L. H. Roots, Mr. Serno, Mrs. Wehrmann, and Misses Wehrmann (2) in cabin.

Per American steamer *City of Rio de Janeiro*, for San Francisco via Honolulu:—Mr. Robert E. Carney, U.S.N., Mrs. Carney, Lieut. B. Cherevkoff, Mrs. B. Cherevkoff and child, Mr. A. Grille, Dr. F. Grunewald, Lieut. W. G. Hannum, U.S.N., Surgeon-Lieut. Hyde, Mrs. Hyde and 3 children, Mr. K. Komura, Mr. C. Laughton, R.N., Rev.

and Mrs. S. F. Moore and 2 children, Mr. M. Oshima, Mr. F. Onana, Mr. H. Passavant, Mr. and Mrs. S. W. Rosendale, Mr. D. P. Thompson, Mr. J. Takayama, Mr. E. H. Warner, Mrs. Warner, Miss L. Wisemsky, and Mr. G. Yasunaga in cabin.

Per Japanese steamer *Saikio Maru*, for Kobe:—Mrs. Tait, Mr. F. J. Hall, Mr. E. Krause, Mrs. Hellyer, and Mrs. and Miss Bligh in cabin; Mr. M. Wusami, Mr. and Mrs. Kawakami, Mr. S. Matsuo, Mr. D. Takashi, and Mr. K. Tagawa and family in second class. For Kelung:—Messrs. T. Makino, T. Wuchiyama, and T. Owatari in second class. For Shimonoseki:—Messrs. K. Fukagawa and T. Suzuki in cabin. For Nagasaki:—Mrs. A. J. Boushneff, Mrs. Thompson, Miss Grey Le Mais, Mr. Y. Shibayama, and Mr. T. Kamaya in cabin; Messrs. C. Lucini and Tominaga in second class. For Shanghai:—Mr. W. B. Chorton, Mr. A. Chorton, Mr. Twentyman, Miss DelBerigny, Mrs. Twentyman and 4 children, Mrs. M. Bond, Mrs. A. Duncan, and Mr. L. Andersen in cabin; Messrs. REPORTS.

The American steamer *City of Rio de Janeiro*, Captain Wm. Ward, reports:—Left Hongkong the 9th October, via Nagasaki the 15th, and Kobe the 17th. Arrived at Yokohama the 18th October at 8.40 p.m. Had heavy N.E. gales and high sea in the Channel and crossing the eastern sea.

The British steamer *Doric*, Captain H. Smith, reports:—Left San Francisco the 30th September at 4.29 p.m. and arrived at Honolulu the 6th October at 9.31 p.m. in 6 days, 7 hours, 24 min. Sailed thence October 7th at 4.25 p.m., crossing the 180th meridian in lat. 31° N. and arrived at Yokohama the 18th October at 11.55 p.m. in 10 days, 11 hours, 40 min. Experienced strong W., N.W., and S.W. winds and heavy confused sea on 15th, 16th, and 17th, otherwise fine weather with northerly swell.

SHIPPING IN YOKOHAMA.

Undaunted (12), British cruiser, Captain Halifax, 15th October.—Hakodate 13th October.

LATEST COMMERCIAL.

IMPORTS.

The Import trade generally is far from satisfactory, the financial stringency appearing to give considerable trouble. Probably the revival in demand for the chief export (Silk) may relieve the money market presently by transferring dollars from the Foreign to native bankers, and thus benefitting the Import trade indirectly.

COTTON PIECE GOODS.

	PER PIECE
Grey Shirtings—8 1/2 yds, 38 yds, 50 inches	\$2.40 to 2.80
Grey Shirtings—9 1/2 yds, 45 inches	2.75 to 3.20

Nos. 2/100, Gassed	120.00 to 127.00

METALS.

Quiet and unchanged. Dealers protest against higher prices and will not pay them until absolutely obliged.

	PER TON.
Flat Bars, 4 inch	13.50 to 13.55
Flat Bars, 4 inch	3.00 to 3.65
Round and square up to 4 inch	3.50 to 3.65
Iron Plates, assorted	3.40 to 3.60
Sheet Iron	4.70 to 4.80
Galvanized Iron sheets	9.20 to 10.00
Wire Nails, assorted	5.00 to 6.00
Pin Plates, per box	5.00 to 5.30
Pin Iron, No. 3	1.70 to 1.72 1/2

KEROSENE.

Satisfactory market, but there are signs that buyers have about filled their present requirements. It seems that "Langkat" is to be regularly imported in future, and some dealers think that it will, in time, become a powerful competitor with American and Russian brands.

American	\$2.25 to 2.27 1/2
Russian	2.27 to 2.28
Langkat	—

SUGAR.

Brown—Nothing of particular moment. White—Good business has been done at quotations.

	PER TON.
Brown Takao	\$4.70 to 4.75
Brown Manila	5.50 to 5.60
Brown Daitong	3.95 to 4.00
Brown Canton	3.85 to 4.75
White Java and Penang	7.10 to 7.15
White Refined	7.00 to 9.05

EXPORTS.

RAW SILK.

Another "boom" has been experienced in this market. At the beginning of the week things looked blue, but holders reduced their prices and tempted buyers into the market. As soon as business resulted on a fairly large scale dealers rushed up prices once more, and are asking an advance on the quotations current a fortnight ago. This will probably check buyers for a bit. Our quotations must be considered nominal, as there are no sellers except at an advance, which for the moment staggers buyers.

QUOTATIONS.

Filatures—Extra 9/11, 10/12 den	\$880
Filatures—Extra 13/15, 14/16 den	870

THE GREATEST WONDERS OF MODERN TIME

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In 1 short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Mr. J. T. Coates, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a teaspoonful of Ointment was worth a fowl and any quantity of peas and the demand became so great that I was obliged to lock up the small remaining stock."

Sold by all Chemists and Medicine Vendors the throughout World. May 1st, 1896.

FOR SALE,

Strongly bound in Leather and Cloth, with a Full Index,

HALF-YEARLY VOLUMES OF THE "JAPAN WEEKLY MAIL."

These Volumes contain Leading Articles dealing mainly with subjects affecting Japan and the Far East, besides numerous Miscellaneous Articles embracing a variety of topics; also Letters by Special Correspondents in Europe and America and other Countries, Commercial Trade Reports, Reviews of New Books, Government Notifications, Translations from Japanese Journals, Editorial Correspondence, Verbatim Reports of Public Meetings and the Law Courts, Theatrical, Sporting, &c., and a large number of Editorial Notes on a great variety of subjects of local and general interest, the whole forming a record not to be found in any other existing publication.

An extended Summary of the Proceedings of the Imperial Diet is given during the sittings of Parliament.

A special feature in the "JAPAN WEEKLY MAIL" is its Market Report, containing trustworthy statements of the course of trade in Imports and Exports. There is also a record of all Shipping entering and leaving Yokohama.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, OCT. 31ST, 1896.

DEATH.

On Monday, Oct. 25th, shortly after 2 a.m., at the German Naval Hospital, Yokohama, JOSEPH BERRICK, aged 49.

SUMMARY OF NEWS.

MR. J. C. HALL is appointed H.B.M. Consul at Hiogo and Osaka.

LI HUNG-CHANG has been reappointed a Minister in the Tsung-li Yamén.

A RUMOUR is afloat that the Department of Colonization will be abolished.

YOKOHAMA beat the Fleet at cricket by about 20 runs on Wednesday afternoon.

THE treaty between Japan and China having been completed, the Chinese Consulates at

Nagasaki, Kobe, Hakodate, and Yokohama will be reopened within a few weeks.

THE chrysanthemum show at Dangozaka, near Uyeno Park, was opened on the 25th inst.

THE Minstrel troupe of H.M.S. *Undaunted* give an entertainment at the Public Hall this evening.

THE Yokohama Juniors beat the Tokyo Recreation Club at Cricket last Saturday by a few runs.

THE Treasury has granted yen 220,000 to Gifu Ken and yen 60,000 to Fukui Ken for flood repairs.

THE treaty between Peru and Japan having passed the Diet of Peru, will be ratified in Japan in a short while.

T.I.H. PRINCE AND PRINCESS KIKUMARO, who recently went to Kyoto, returned to the capital on Saturday last.

THE Right Rev. Frederick Temple, D.D., Bishop of London, has been appointed Archbishop of Canterbury.

MR. JAMES TROUP, H.B.M. Consul at Yokohama, returned to the port on Tuesday, after a year's absence on leave.

FOR the fourth week in succession, lack of breeze on Saturday afternoon turned all the yacht races into failures.

THE further hearing of the Iron-pipe Scandal case will come on at the end of November or beginning of December.

THE rebellion in the Philippines is said to be slowly dying out in the face of strong reinforcements for the Spanish garrison.

MR. HIROKAWA HIROSHIRO, *Kogakushi*, an expert in the Communications Department, died suddenly on the 22nd instant.

H.I.H. PRINCE MORIMASA, who has been with the troops in Elhime and Kagawa Kens, returned to his Regiment on Sunday last.

PROF. CLEMENT gave a chatty paper on Tom Hood at the fortnightly meeting of the Yokohama Literary Society on Friday night.

IN Formosa some slight disturbances have occurred through three native tribes objecting to telegraph wires being stretched through their districts.

MARSHAL COUNT NODZU, Commandant of the Eastern Section, will command the troops that pass in review before the Emperor on the Third of November.

THE Treaty of Commerce and Navigation between Belgium and Japan having been ratified, was despatched on Tuesday to Viscount Aoki, Minister to Germany.

THE fifth of November being the first anniversary of the death of H.I.H. the late Prince Kitashirakawa, a grand memorial service will be held at his late residence.

COMMANDER TSUDA, Engineer Tomioka, Surgeon Kuwabara, Paymaster Yamada and several others have been ordered to bring home the Japanese man-of-war *Fuji* from England.

THE autumn meeting of the Nippon Race Club has been favoured with fine weather, good fields, and fast times. H.M. the Emperor visited the course on Thursday.

AN inquest was opened on Saturday by H.B.M. Assistant Judge, into the circumstances sur-

rounding the death of Mr. Carew. A chemical analysis of the contents of the stomach was ordered and after the evidence of five witnesses had been taken the inquiry was adjourned till Monday next.

THE license for the Formosa Railway having been granted, Baron Yasuba, President of the newly projected Railway, will cross to the Island shortly.

AT a crowded meeting held at St. James's Hall it was resolved to support the Government in any steps taken to end the reign of terror in Turkey. A letter from Mr. Gladstone was read, deprecating the abridging of Lord Salisbury's discretion by prescribing any particular line of action.

THE *New York Herald* in a forecast of the Presidential election, gives Mr. McKinley 261 votes against 134 for Mr. Bryan, 65 votes being counted doubtful. The same journal says that a large majority of the new Representatives will be anti-Silverite, whilst in the new Senate the Goldite and Silverites will be almost evenly matched, a majority on either side being uncertain.

TRADES have been issued at Constantinople imposing a poll tax of five piastres on Mussulmans, putting an increase on the sheep tithes, and making other increased imposts to yield £T. 1,250,000. The Porte is devoting the proceeds of the new poll tax to arming the Mussulman population. The foreign Ambassadors at Constantinople have met to consider this grave measure.

PRINCE BISMARCK's organ, the *Hamburger Nachrichten*, says that a secret Russo-German agreement was concluded soon after the accession of the late Czar, Alexander III., by the terms of which if either country was attacked, the other was to remain in a position of benevolent neutrality. Count Caprivi, ex-Imperial German Chancellor, terminated this agreement in 1890. The statement has caused a great sensation in Austria.

IMPORTERS are hard-pushed these days to discover business of any description, and the godowns at Yokohama and Kanagawa are steadily filling with goods that arrive. Not that the Japanese dealers do not want the goods, they would be only too willing to take delivery could they but find the money to pay for them. Importers are wary these days of accepting "paper," and consequently the tone of the market is deplorably below par. But as soon as the financial tightness has passed a bit we shall see a little better business doing. Cotton-piece goods, Woollens, Cotton-yarns, and Metals have all experienced a blank week. There is a more healthy ring about the Kerosene market, although sales are not very large at the moment. In Sugar there has been a fair business for Browns, and a steady sale for Whites at unchanged rates. The week has seen another speculative movement in Raw Silk, principally for full-size Filatures and Re-reels for the United States. Dealers are anxiously awaiting the tidings that the 3rd of November will bring, for it is thought that as soon as the Presidential election is over there will be a strong revival in business generally in the States of the North American Union. It is now admitted that the best grades of Filatures and Re-reels will be scarce on the Yokohama market this year, so that things point to a rise in them very shortly. The Waste Silk business has been steady throughout the week. Tea is active and prices are tending upwards for desirable lots owing to the greatly reduced stocks now in the market. Exchange closes steady despite a slight drop in Silver.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The new Commercial Treaty between Japan and China, published on Thursday, is regarded with unmixed satisfaction by the vernacular press. The Tokyo papers agree in warning the Government that no effort should be neglected to enforce the Treaty to the letter, for no Treaty, however advantageous its text, can be of any practical value unless its observance be guarded with jealous care.

The *Yiji* thanks the Authorities for having succeeded in concluding such a good treaty with China, a country notorious for procrastination, irresolution, and incorrigible obstinacy. It hopes that the Japanese people will avail themselves of the rights and privileges secured to them by the Treaty and will strive to promote the prosperity of their country. While grateful for having obtained, in virtue of her victories in the recent War, such an advantageous treaty, Japan should not forget that the document imposes grave obligations on her also towards China. In other words, she must keep in mind the important fact that China, from whom she has obtained large privileges, some of them non-reciprocal, is a member of one big community in the Far East and is not less concerned than Japan in the welfare and tranquillity of this part of the world. Japan should endeavour to lead China out of her present state of darkness and ignorance, for such a change would be of mutual benefit.

The *Kokumin* thinks that there are two weak points in the armour of the present Cabinet, namely want of cordial unity among the Ministers themselves, and deficiency of prestige. The necessity for a long and somewhat acute discussion before the Premier could deliver a speech—though it was a speech anything but precise in phraseology—illustrates the former point; and the discontent that certain heads of bureaux and local officials are said to secretly entertain towards the Central Government indicates deficiency of prestige. These are indeed grave matters, for steady views and resolute actions are possible only when the Ministry are firmly united; and maintenance of official discipline is out of the question unless the central authorities possess sufficient prestige. It behoves the Cabinet to remedy its weaknesses promptly and completely. To secure cordial unity of views among its members, it must divest itself of all trimming or invertebrate tendencies, and to command unqualified respect it must introduce drastic changes in the *personnel* of subordinates, especially Local Officials.

The *Yiji* desires to call the attention of the new Foreign Minister to the state of affairs in Korea, especially to the utter decadence of Japan's influence in the peninsula in the sphere of politics and commerce alike. A glance at the Customs returns will suffice to convince anybody of the latter point. In May of 1895, the imports by Japanese and Chinese merchants totalled 234,000 *yen* and 61,000 *yen*, respectively, and in June, the corresponding figures were 211,000 *yen* and 36,000 *yen*. But the situation has been completely reversed so that the figures for May and June of the current year were 121,000 and 188,573 *yen*, and 70,000 and 101,000 *yen* respectively, all in round numbers. Japan entertains no ambitious designs upon Korea. Her principal purpose in endeavouring to guide her neighbour out of darkness into light is to promote commercial relations with her. But that purpose is now completely defeated. The fault does not lie with merchants alone, but also with the Government, for the latter's protection is especially essential for promoting commerce in such a disorderly country as Korea. The little kingdom must be treated as a patient, officious grandmother would treat a naughty grandchild. While sternly warning the nation against any repetition of bad conduct, it must be put into good humour at times by administering sweet things. The contention that a display of force alone is appreciated in Korea, can not be demonstrated by actual facts, for Russia, without

moving a single soldier, has succeeded in bringing Korea completely under her sway. While extending every possible protection to the commercial transactions of Japanese subjects, the Government must, at the same time, encourage people to go to Korea and establish themselves there as in a second home.

In another article devoted by the *Yiji* to the same subject, it calls the attention of the authorities to trite old sayings about thrift and the preservation of sound health, and observes that, just as a man who aspires to obtain a competence and to be in sound health must practice thrift and live hygienically, so the Japanese Government, in striving to regain its influence in Korea, must not neglect to pay attention to the most trifling details, and must expect to attain its goal by step after step of steady progress.

The *Nichi Nichi* publishes a series of articles about the economic situation. It thinks that the present troubles are more sentimental than actual. People speak gloomily about the probable outcome of the year's rice crop, but even that cause of despondency does not exceed, according to the latest trustworthy information, ten per cent. of an average yield; that is to say, only four million *koku*, which, estimated at the rate of 10 *yen* a *koku* amounts to a loss of 40 million *yen*. Excess of imports over exports from the beginning of the year constitutes another important source of public apprehension. It is true that the excess amounts to about 51 million *yen* up to September. But people should remember that specie and bullion were imported at the same time to the amount of over 16 million *yen*, and that it is not clear whether the goods imported have already been delivered to consumers, or are stored away, awaiting purchasers. Further, if, as the recent turn of affairs in the market indicates, the export of silk and other staples steadily increases during the remainder of the year, the ultimate excess of imports may be reduced to a small sum. The fact is that the advent of a panic having been loudly predicted by pessimists, and enterprise having apparently become feverishly active in various directions, people recalled the experience of Germany after the Franco-Prussian War, and became so nervous that something like a panic created itself out of no solid materials whatever. The way to dispel the delusion must be equally sentimental. Thus, the time for convoking the next sitting of the Railway Council should be delayed till the public mind has recovered its equilibrium. People will then be assured that no further fixing of capital need be feared from the railway quarter, and their overstrung nerves will be calmed.

The *Kokumin* assigns a grave duty to the Matsukata Ministry, or the "Sasshu Cabinet," namely, the transfer of power to the people. This process is called by our contemporary the "Second Restoration." It consists in effecting drastic reforms in the Administration, and in recasting the *personnel* of the Government. If the Sasshu statesmen are really resolved to carry out this Second Restoration, or more properly, Reformation, then they must calmly and honestly observe the trend of affairs in general, and must make up their minds voluntarily to hand over the power to those that may properly be regarded as representatives of the people. Granted that these statesmen will have to give up their authority to others, sooner or later, how much more conducive it would be to the development of the people's political ideas and to the furtherance of the country's welfare, did they make the surrender of their own accord to the peoples representatives, than did they wait to be compelled by their rivals, the statesmen of Choshu extraction! In recommending for the Sovereign's approval candidates qualified to be entrusted with power, the Satsuma statesmen need not concern themselves much about the capacity of the men recommended: it will suffice if they select persons not tainted by clannishness. That is the most important thing that the people have to expect from the present ministry. Dis-

cussions about the responsibility of the Cabinet and so forth are merely secondary matters.

The *Yiji* is inclined to believe that the new Cabinet will really prove itself a *Sekinin Naikaku* (responsible Cabinet), judging from all that has been said on both sides of the question. The Home Minister's declaration before the Governors is regarded by this paper as an evidence of caution on the part of the Cabinet. The Home Minister must have thought, when he delivered his speech before the Local Governors, that as politics, after all, are of mobile and even shifting character, and as the important needs of the nation are liable to be overlooked at times owing to excessive party rivalry, the Government must be prepared to dissolve the Diet over and over again should political parties be betrayed into temporary aberration. Therefore, while secretly resolved to shape his actions according to the principle of responsible cabinets, Count Kabayama doubtless felt it necessary, as a point of caution, to make declaration capable of a wholly different construction. None the less, in view of the very considerable development that the political ideas of the people have attained, the Cabinet must bring its procedure into conformity with the drift of popular opinion as indicated in the House of Representatives. However rich in statesmen of conspicuous resolution the Cabinet may be, it will never have recourse to repeated dissolutions of the Diet. Moreover, the inauguration of the system of responsible Cabinets being one of the few points maintained in common by the *Shimpo-to* and their rivals the Liberals, any administrative policy in direct conflict with that principle would range the two parties alike against the Government, and produce its speedy fall.

Mr. Miyake Yujiro, writing in the columns of the *Nippon*, regrets to see the anti-Government politicians fail to present a firm and united front. A weak-kneed Opposition is most pernicious, for it is under the stimulus of resolute and keen-eyed opponents that the heads of an Administration develop their highest qualities of statesmanship. The writer advises Marquis Ito and his adherents to impose a check upon the desultory and rampant action of Baron Ito's section, and recommends Count Itagaki to restrain the similarly irregular proceedings of Mr. Hayashi Yuzo's followers. By so doing, the Party can recover its wholesome tone, as well as its capacity for delivering bold, upright, and square attacks, with benefit not only to itself but also to the nation at large.

The last two volumes of the fortnightly proceedings of the Liberal Party vehemently attack the Matsukata Cabinet, accusing the Premier and his influential colleagues of the crime of fomenting socialism, inasmuch as they try to overbear the people by the power of money. The accusation that the Premier overthrew the last Cabinet through the instrumentality of certain millionaires with whom he is closely allied, has already been ventilated in the columns of the Liberals' daily organ, the *Tokyo Shimbun*, and referred to by us. But the "Crime of fomenting socialism" being a new count, we shall briefly summarize the articles embodying it. The *Toko*, which is the name of the fortnightly proceedings, dwells very much on the personalities of Counts Matsukata and Okuma and Viscount Takashima. It describes how Count Matsukata, uniting himself with the Iwasaki and the Matsumoto by ties of marriage, and Count Okuma, ingratiating himself with the Mitsubishi while he was Minister of Finance, and resorting to various shady transactions (upon which the *Toko* does not fail to dilate) have sought to court the favour of the wealthy; and how Viscount Takashima, though himself a soldier, is absorbed in the business of money making through the medium of his relatives who undertake the work of emigration agents. Side by side with this trio, Marquis Ito with his strict disinterestedness and incorruptibility, Viscount Watanabe with his constancy and integrity, and Count Itagaki with his honourable poverty, form a striking contrast. The alleged cupidity of

Count Matsukata and Count Okuma, is all the more culpable when it is remembered how they abuse the power of their wealth and their friendship with millionaires to satisfy their political greed. Did not Count Matsukata secretly ask his "monied friends" to refrain from subscribing to the last installment of the Loan when it was issued by the late Cabinet? In short, the Matsukata Cabinet seeks to corrupt the administration of the country by the force of money and to secure the power of the State for an oligarchy of monied men. What difference is there between this form of oppression and that exercised by the *Samurai* in feudal days? The Liberals played no small part in subverting the military regimen, and they must similarly exert themselves to do away with this new form of abuse.

With unwearied persistence, the *Fiji* continues to draw the attention of the public to the importance of maintaining a strong naval force. Our contemporary thinks that, in view of the maritime strength of Occidental Powers in the East, Japan may find it necessary to increase her navy from 200,000 tons displacement to 250,000, or even 300,000 tons. In short, the *Fiji* would be pleased to have Japan's navy increased, even though the effort involved some sacrifices on the side of the land forces. For that purpose the nation should tax its capacity to the limits of feasibility. Our contemporary is of opinion that the maintenance of a fleet of 300,000 tons would not be difficult, judging from the present condition of the national resources.

EDITORIAL NOTES.

DEATH OF MR. JOSEPH BERRICK.

A LINK with the early business days of Yokohama is snapped by the death of Mr. Joseph Berrick, that occurred early on Monday morning at the German Naval Hospital. A native of Liverpool, Mr. Berrick came to Yokohama in 1872, after a short stay at St. Louis, U.S.A., and joined the firm of Berrick Brothers as junior partner. His business operations were very successful and long before he left Japan in 1891 for England, the firm held a commanding position. About 5 years ago Mr. Berrick determined to go home for good, but he paid a visit to Japan in 1893, and again this year, arriving by the O. & O. steamer *Belgic* three months ago. His health then gave grave cause for anxiety, and the day after landing he entered the German Naval Hospital, where he gradually sank under exhausting liver complaints and cardiac affection. A genial, large-hearted man, Mr. Joseph Berrick made a host of friends in Japan, and his early demise—he was but 49 years of age—will be much regretted.

The funeral of Mr. Joseph Berrick, that took place on Tuesday from the German Naval Hospital, was very large attended. The services at the hospital and at the grave-side in Yokohama cemetery were conducted in accordance with the rites of the Hebrew faith. Many lovely wreaths were sent by sorrowing friends, besides some stands of Japanese mortuary flowers from the Japanese staff in the employ of the firm of Messrs. Berrick Bros.

YOKOHAMA LITERARY SOCIETY.

LAST night's meeting of the Yokohama Literary Society was mostly devoted to Thomas Hood, the elder. Prof. Clement, of Tokyo, read a sketch of the poet and essayist's life, with apt quotations from his work; Mrs. Clement, the Rev. L. Dearing, and Mr. Schurr gave appropriate readings. Miss Webb sang "The Garden of Sleep," Miss Griffin gave a piano-forte solo, and Miss Vincent and Mr. Griffin concluded with one of Mozart's duets.

CUT TO PIECES ON THE RAILWAY.

THE *Hiogo News* reports that as the 6.18 p.m. up-train on the Sanyo Railway from Himeji was crossing the bridge over the Ichikawa on Thursday it ran into a party of four women, aged about 54, 34, 26, and 17 years respectively. All

save the second were killed on the spot, the bodies being horribly cut up; that the oldest woman was literally cut in two at the thighs and the trunk was dragged for some distance across the bridge. The survivor has, it is feared, very small chance of recovery. The women were all well dressed; it is surmised that after a day's outing they had taken to the railway as a short cut for home.

MONTHLY CUSTOMS RETURNS.

THE following is a summary of the Customs Returns for September, showing the foreign trade of the Empire for the month:—

	1895.	1896.
Exports	13,299,210.350	8,098,903.330
Imports	11,509,187.320	15,813,183.310
Total exports and imports	23,912,176.640	23,912,176.640
Excess of imports	899,443.400	899,443.400
CUSTOMS DUTIES.		
Exports	125,699.589	125,699.589
Imports	474,176.311	474,176.311
Miscellaneous	19,040.079	19,040.079
Total	618,915.979	618,915.979

TOTAL VALUE OF EXPORTS TO AND IMPORTS FROM VARIOUS FOREIGN COUNTRIES.

ARTIFICIAL SILK.

THE *Textile Mercury* says, with regard to artificial silk:—Our sympathy is with the gentlemen who, after a series of highly interesting chemical experiments, appear to have deluded themselves into the belief that they have succeeded in supplanting the silkworm; and should a company be formed in this district, the shareholders will, we fancy, certainly be entitled to commiseration also. The *Mercury* thinks that "wood pulp" may have its uses, but as a substitute for the queen of textile materials, it says, "practical experience up to the present utterly condemns it." It regards the assertion that the English company (should it ever be formed) will be able to

sell artificial silk at 4 shillings a pound as surprising, in view of the fact that on the Continent, where the production is cheaper, 8 shillings a pound is charged for the yard in the gray condition. It adds: "From the facts already given, and others which have come under our notice, we do not think that artificial silk merits the claims put forward on its account, and we are able to announce the important fact that anyone offering cloth composed of the material, the nature of which is not clearly indicated, will be prosecuted by the silk manufacturers themselves, who are determined that an article possessed of such inferior properties shall not be allowed to masquerade as the real thing itself. The fibre, if fibre it can be called, may be used in small quantities as well, alternately with threads of a stronger and more lasting material, but to say that the article is a substitute for real silk is such a glaring perversion of the facts of the case that we feel it our duty to issue this warning to the trade at large. In doing so, we may add that if artificial silk was likely to fulfil the promises made concerning it, silk manufacturers would be the first to establish its manufacture, and to consume the yarn themselves. They have no sentimental consideration for the silk-worm, if they can find a cheaper product and one that answers their purpose as well as that of the *Bombyx mori*. The fact that they have tried artificial silk, and will have none of it, speaks for itself."

A WRECK AT NAOYETSU.

A DISPATCH from Naoyetsu to the *Fiji*, states that the steamer *Tamahime Maru*, which called there to discharge some cargo on the 19th inst., on her way from Kobe to Otsu, got aground in consequence of a gale. Four steamers tried to tow her off and the inhabitants of Naoyetsu did all they could for her assistance. All efforts were, however, of no avail and the position of the steamer got worse on account of a high sea which set in on the morning of the 20th, and her rescue became hopeless and the crew abandoned her that morning. The steamer was insured for 50,000 yen with the Japan Marine Insurance Company. She was originally the Blue Funnel liner *Sarpedon*.

A THIEVING SAILOR.

ON Friday morning, in H.B.M.'s Court, before John Carey Hall Esq., Acting Assistant-Judge, Allen Pringle Mann, who a week previously had pleaded guilty to the charge of stealing a pair of trousers, and other articles from the boarding house of Mr. John Kernan, 187, Settlement, on the afternoon of October 21st, was brought up on remand. In answer to His Honour, the prisoner said he wished to have the case dealt with summarily. He hoped His Honour would be lenient, as he intended to amend his evil ways. A sentence of one month's imprisonment with hard labour was imposed.

MR. DU MAURIER.

MR. DU MAURIER, the gifted *Punch* artist and author of "Peter Ibbetson," "Triby," and "The Martian," died in London on Oct. 8th. His death will be regretted by many who loved his exquisite black-and-white work, while the world of letters is the poorer by one delightful thinker and writer.

AN EXCITED LEGISLATURE.

THE elementary passions seem to have full sway in some of the Colonial legislatures, to judge by reports of oft-recurring "scenes," but the disturbance in the New Zealand Chamber, detailed in an Auckland letter to the *Sydney Mail*, appears to take the "cake"—A disgraceful scene, it says, arising out of the banking inquiry, occurred in the lobby of the House to-day. During the examination of Mr. Vigers, one of the liquidators of the Colonial Bank, before the Banking Committee, Mr. Hutchison, member for Patea, made a remark to the effect that if the Judge of the Dunedin Supreme Court were present at the committee meeting the Minister for Lands would insult him. The Minister thereupon, in threatening tones, remarked that he should like to hear Mr. Hutchison make that remark in the lobby,

adding that if he did he would get "a smack over the head." Subsequently Mr. Hutchison met the Minister in the lobby, and addressing him said, "Well, John M'Kenzie, you challenged me to repeat the words in the lobby. I do so." The Minister immediately tore off his coat and threw it to one of the members standing near and proceeded with clenched fists and threatening attitude towards the member for Patea. The latter stood calmly awaiting an onslaught. Mr. J. G. Ward, ex-Colonial Treasurer, however, came between the two men, and Mr. Graham, chairman of the Banking Committee, also intervened, crying excitedly, "Don't disgrace us; don't disgrace us all!" The Premier also stood guard over Mr. Hutchison. The Minister for Lands several times attempted to break away from restraint, but eventually the counsels of friends prevailed and he retired to his room.

TRAFALGAR DAY ON THE "GRAFTON."

ON Wednesday, the 21st inst., by way of commemorating Trafalgar Day, Rear-Admiral Oxley gave a half holiday to the Squadron under his command at Hakodate. A regatta, for service boats, took place in the afternoon, and in the evening H.B.M. Consul and Mrs. Bonar, the Captains of the ships in port, and a large number of the Officers were entertained by the Admiral at dinner, after which a Smoking Concert was given on board the Flagship, to which the Officers and ships' companies were invited. This is the first entertainment of the kind attempted by the *Grafton*. The programme, which we give below, opened very appropriately with the grand old song "The death of Nelson," very creditably rendered by Mr. Allen, R.N., the chorus being taken up by all present in the most effective manner. The entire programme met with the general approbation of the audience, many of the performers being recalled, but the omission of Lieut. Wilde's song was regretted. It is hoped that the talent brought to light on this occasion may continue to develop, and the pleasant impromptu concert on Trafalgar Day may be the forerunner of still greater triumphs. During the interval and after the performance all the guests were most hospitably entertained, the ship's company providing quite a substantial supper for their friends. The following is the Programme:—

Overture	Band.
Song	"Death of Nelson".....Mr. Allen.
Song	"Half Mast High".....Gunner A. Aconley.
Mandoline Duet	{ Private C. Winalade.
	{ P.O. & cl. J. Manser.
Song of Songs	Private J. Croft.
Song	"The Pirate of the Isles".....P.O. & cl. H. Bush.
INTERVAL OF 30 MINUTES.		
Song	"Mother-in-Law".....Private C. F. Jones.
Song	"Anchored".....Gunner A. Aconley.
Song	"Tommy Atkins".....D. Capponi, A.B.
Song and Dance	{ G. Meade, Sig.
	{ R. Herd, Ste.
	{ H. Clark, A.B.
Song	"Comedian".....G. Barry, A.B.
Song	"Jack Jones".....A. Clements, A.B.
Song	"No more up in Covent Garden".....Lt. Wilde, R.N.M.
Song	"Molly Riley".....Private H. G. West.
	"God Save the Queen."

NEWCHWANG.

In their circular dated the 6th October, 1896, Messrs. Bandinel and Co. say:—The crops within 100 miles from this and along the river banks are badly damaged, but elsewhere are said to be so very good as to make the total yield a fair average one; meantime, beans come in very slowly, and are not expected in quantity before 30th inst. Princes are high and there is but little doing, except for Japan to fill contracts. Arrivals to date are 302 steam and 7 sail, against 273 steam and 36 sail in 1894. Vessels in ports—*Sullberg*, *Chunsang*, *Peiping*, *Frogner*, *Sumiyoshi Maru*, *Pakhoi*, *Chili*, *Orient*, *Bylgia*, *Galveston*.

A SALVAGE SUIT.

The *Paoting-Strathesk* Admiralty suit was concluded before Sir N. J. Hannen at Shanghai on the 10th inst. Messrs. Butterfield and Swire, agents for the China Navigation Co., claimed Tls. 20,000 for salvage services rendered by the *Paoting* on the 24th, 25th, and 26th July, the *Paoting* towing the *Strathesk* 167 miles to Woosung. The owners of the *Strathesk* tendered Tls. 10,000. After evidence in detail and long arguments, Mr. W. A. C. Platt, agent for the plaintiffs, stated, in reply to His Lordship,

that he based his claim at ten per cent. upon the value of the ship saved. His Lordship, in giving his decision, said—"I do not think it would be any use my taking time to consider the case further. I think the offer made by the other side is as much as could have been expected, and I think it is about right. Whether it should be a little more or a little less I do not think it is worth my while or anybody else's to inquire. I think that Tls. 10,000 is a proper amount. It has been paid in and it has not been accepted. It must go as amount to be awarded to the plaintiffs, and as they have not accepted it they will have to pay costs. Judgment accordingly." Damage to the extent of \$1,000 was done to the *Paoting* in rendering towage service.

BISMARCK ON SILVER.

We take the following interesting item from an American exchange:—

Governor Culberson, of Texas, wrote to Prince Bismarck of Germany to secure his views on the silver question, particularly his opinion of the effect of the immediate adoption of bimetalism by the United States, and has received the following reply:—

Friedrichsruh, August 24, 1896.

Honored Sirs—Your esteemed favour of July 1st has been duly received. I have always had a predilection for bimetalism, but I would not, while in office, claim my views of the matter to be infallibly true when advanced against the views of experts. I hold to this very hour that it would be advisable to bring about among the nations chiefly engaged in the world's commerce a mutual agreement in favour of the establishment of bimetalism.

Considered from a commercial and industrial standpoint, the United States are freer by far in their movements than any nation of Europe, and hence, should the people of the United States [literally North America] find it compatible with their interests to take independent action [literally, "einen selbstständigen Schritt"—*Editor LITERARY DIGEST*] in the direction of bimetalism, I cannot help but believe that such action would exert a most salutary influence upon the consummation of international agreement and the coming into this league of every European nation.

Assuring you of my highest respect, I remain, your most obedient servant, BISMARCK.

CHESS AMONG THE MALAYS.

MR. HULBERT, the district Magistrate of Kuala Kangsar, writes in his last month's report:—I commenced and brought to a conclusion, in July, a chess tournament among the Malays in the different Kuala Kangsar mukims. They divided into two classes, viz., those who considered themselves adepts, and those who did not. There were 32 entries for the prizes, amounting to \$30, given by the District Magistrate. It was surprising the amount of interest the Malays all over the district took in it. I propose to hold one every six months. The Datoh Sri Adika Raja and Raja Ngah Petra won the first and second prizes in the adepts class, a deaf and dumb Malay getting into the semi-final. In the novices class two small boys from Kota Lama won the prizes, greatly to the delight of the onlookers, beating, as they did, several elderly Malays, who were very much chaffed.

PRESENTATION TO MR. LIGHTFOOT.

A WEDDING gift was presented to Mr. C. H. Lightfoot at the smoking concert given in Kobe on Thursday. The gift, which consisted of a beautiful case of cutlery, was subscribed for by the members of the K.R. & A.C., not only in appreciation of Mr. Lightfoot's valuable services to the Club, but also as a token of personal esteem. Mr. Abell, the President, in handing the gift to Mr. Lightfoot, expressed the indebtedness of the Club to him, and on behalf of the members wished both Mrs. Lightfoot and himself long life, health, wealth, and prosperity. Mr. Lightfoot appropriately acknowledged the gift, which was accompanied by the enthusiastic cheers of the gathering.

NEW CHINESE CRUISERS.

THE *N. C. Daily News* announces that on Saturday, Oct. 17, the Tsung-li Yamên signed with Mr. J. J. Bucheister a contract for two cruisers to be built by Sir Wm. Armstrong's company at Elswick.

CAPTAIN RIDDERBËLKE RETURNS.

CAPTAIN RIDDERBËLKE has returned to Yokohama without accomplishing his intention of

crossing the Pacific in a 17-ft. boat. He only got as far as Hakodate, storms and heavy gales having been the order of the day almost from the day of leaving Yokohama. He intends starting the voyage again from Hakodate in the spring.

THE "GLENFALLOCH."

THE Glen liner *Glenfalloch*, which arrived at Singapore from Kuchintotozu on the 19th September with a cargo of coal, has changed owners, having been sold to Messrs. Wee Bin & Co. for £6,500. She is now at New Harbour undergoing repairs and alterations to adapt her to the requirements of the local trade. It is understood to be uncertain as yet where she will be run to.—*Free Press*.

CUTTER RACE.

ON Saturday last a race took place in Hakodate Harbour between the cutters of Her Majesty's ships *Grafton* and *Æolus*. After a well rowed race over a course of four miles, the *Æolus* crew (stokers) won by four boats' lengths, the *Graftons* making a game struggle of it to the finish.

CAPT. DU BOULAY.

CAPT. N. W. H. DU BOULAY, R.A., who was attached to the Japanese army during the late China-Japan War, has been selected to succeed Major C. E. Callwell as brigade-major, Royal Artillery, Devonport.

DEATH ON THE "CENTURION."

ONE of the stokers on board H.M.S. *Centurion*, named J. Peters, died at Nagasaki on Wednesday last, from heart disease, and was buried on Friday at Urakami with naval honours.

DECORATIONS.

THE Emperor has advanced the Marquis C. Nembrini de Gonzaga to the Fourth Class of the Order of the Sacred Treasure. Don. Jose Caro, of the Spanish Legation, has received a decoration of the same order.

THE INUNDATIONS FUND.

WE have to acknowledge the receipt of the following sums for this fund:—

R. A. Mowat, Esq.....	\$100
C. Haas, Esq.	10

COUNT OKUMA ON FREE TRADE.

The vernacular press publishes a report of a speech delivered by Count Okuma before the High Council of Industry and Commerce. We reproduce here only the last portion of the address, namely, that embodying the Foreign Minister's opinion on the tariff system of the country. His Excellency thinks that the public are inclined to attach too much importance to the export side of foreign commerce. They frequently declare that imports must be checked, and exports vigorously encouraged. Now there can be no question that exports are of great importance, but it appears to Count Okuma that in their eagerness about exports, people are liable to overlook the equal importance of the import trade. In point of fact, there is no country in the world whose foreign trade consists of exports alone. A nation which, in order to foster its own home industries, imposes heavy duties upon foreign goods, is like a man doctoring himself with a drug more injurious than the disease it is intended to remedy. That is the case with the United States of America. So thoroughly is the American nation permeated with the poison of protection, that any rigorous attempt to cure the malady would almost paralyse the whole frame of commerce and industry? Though America is one of the largest countries in the world, and though it possesses a vast area of virgin and fertile land, the adoption of a high protective tariff has seriously impaired its producing power and only very mediocre results are attained. Commerce must be international from its very nature, and no country ought to think of confining itself to operations of sale. Without purchasers there can be no sellers. The Count excused himself for inculcating a lesson that should be self-evident to any intelligent man.

CURRENT TOPICS.

The Tokyo City Assembly met a few days ago and decided unanimously that a representation should be forwarded to the Authorities urging the abolition of the Special Municipal System now enforced in Tokyo, Osaka, and Kyoto. The Assembly contended, at the same time, that the amendment should be carried a step farther, in the sense of elevating the status of the city. At present Tokyo is placed on the same footing as country towns containing only forty or fifty thousand citizens, and ranks administratively below the prefectures. This anomaly should be changed: the capital must be placed above the prefectures. Tokyo has a population estimated at about a million and a half, and, in respect of wealth, it possesses nearly a quarter of the entire wealth of the country. Its citizens pay a third, approximately, of the total income tax levied from the whole nation. The expenditures of the capital must reach a sum of about 3 million *yen* per annum, the Water-works alone costing at present about one million. City improvements are in progress, and the work of harbour reconstruction is sure to be taken up sooner or later. In short, from every point of view, Tokyo deserves special consideration. The Municipal System Bill submitted to the Diet last session, contained provisions in that sense, but as it proposed to make the Mayor aldermen, and junior officials not servants of the municipality but Government officials, although, at the same time, their salaries were to be paid out of the municipal taxes, it failed to secure the support of the public or of the Diet. Were that fundamental point in the proposed system satisfactorily dealt with, the citizens of Tokyo would be glad to endorse the Bill.

The High Industrial and Commercial Council closed on the 26th inst. after having sat for one week. Of the seven topics of discussion brought before the Council, six obtained a favourable vote, and the seventh, namely the "Control and Protection of Mechanics," was entrusted to a special committee of seven.

The result of this year's rice-crop is thus estimated by a certain high authority:—

	Per cent. below or above average.	Estimated yield of the year. koku.
Tokyo, Saitama, Tochiki, Chiba,		
Ibaraki	-8.5	4,024,248
Kanagawa, Gumma, Nagano, Yamaguchi, Fukushima	-9.5	3,587,043
Miyagi, Iwate, Aomori	-9.0	2,208,173
Akita, Yamagata	-8.5	2,029,501
Niigata	-7.5	1,772,170
Toyama	-8.5	1,195,868
Ishikawa, Fukui	-7.5	1,214,494
Shizuoka	+5	946,680
Aichi	-7.5	385,503
Miyagi	-7.0	768,208
Gifu, Shiga	-5.5	985,568
Kyoto, Osaka, Hyogo, Nara, Wakayama	-9.0	4,135,661
Okayama, Hiroshima, Yamaguchi, Shimane, Tottori	+5	4,518,196
Shikoku	+5	1,981,162
Kyushu	+1.0	5,497,487
Total		35,879,962
Average during the last 5 years		39,661,617

ECONOMIC TOPICS.

It seems that the endeavours of several leading merchants of Tokyo to save the Sawa Firm from the disaster of bankruptcy have not been successful. The goods of the Firm were seized on the 22nd inst. by a creditor whose claim amounts to five thousand *yen*, and, as it inevitable under such circumstances, two or three others have similarly appealed to the law. Rumour further alleges that several other merchants in Kiryu are in an equally critical situation. In truth, the whole town of Kiryu is in a state of crisis. Almost every weaver in that large centre of the industry has dismissed employees and released apprentices, both male and female, so that the noise of the busy shuttle, once heard in all the streets, has been completely

silenced. Ashikaga is in a somewhat better condition, and weaving is still carried on there to a greater or less extent. In Sano, another weaving centre in Joshi, the depression has affected the industry to such a degree that wages have fallen by 50 to 60 per cent., to the great distress of the working class.

The trouble has extended to other industries in other districts. The cotton-flannel weavers of Kishu, for instance, decided that business should be virtually suspended after the 25th inst., and wages should be reduced by 50 *sen* a loom. The cotton-prints weavers of Takegahana, Mino, have also decided to stop production, and the silk and cotton-goods weavers of Aichi contemplate similar procedure.

The match-manufacturers, too, of the Keihan districts are reported to be suffering. The recent rise in the market prices of commodities and in rates of wages has so injuriously affected this business that manufacturers find themselves confronted by a great loss in the production of matches; the cost of producing a given quantity being 14.60 *yen*, whereas the selling price is only 13.80 to 14.30 *yen*. There is talk of suspending the industry pending the return of more favourable times, but no step in that sense has yet been taken.

The only redeeming feature of the situation is the silk market of Yokohama, where business has partially revived. The *Shogyo* reports that 1,300 bales were sold on Sunday last.

THE ECONOMIC TROUBLE IN OSAKA.

The economic trouble from which Osaka has been suffering is apparently about to end quietly, though it has involved the resignation of Mr. Kawakami, Director of the Osaka Branch of the Bank of Japan. The proximate cause of the complication was indiscreet transactions in cheques at the old clearing house in Osaka, certain banks having issued cheques beyond their means, and others having endorsed or accepted the cheques. Between the 16th of September and the 15th of October, the cheques that changed hands at the clearing house totalled over 5 million *yen*, generally redeemable in 30 days from the date of issue. The following were the chief debtors or creditors in connexion with those cheques:—

Creditors.	Amount. Yen.
The Hundred-and-Thirtieth National Bank	870,000
The Sumitomo Bank	710,000
The Thirty-fourth National Bank	720,000
The First National Bank	620,000
The Hemmi Bank	830,000
The Forty-second National Bank	630,000
The Third-National Bank	550,000
The Oni Bank	400,000

Both debtors and creditors grew more and more alarmed as the date of redemption approached, for they were well aware that funds available for the purpose could not be easily procured. They came to the conclusion that no exit from the dilemma was possible except to apply the Bank of Japan for help. Mr. Doi Michio, President of the Osaka Chamber of Commerce, was asked to lay the exact facts of the situation before Baron Kawada, President of the Bank of Japan, and at the same time, it was resolved to present a number of petitions to Mr. Kawakami. On the 18th inst., Mr. Matsumoto Jyutaro, one of the most influential merchants and bankers of Osaka—a man of almost the same standing as Mr. Shibuzawa in Tokyo, and President of the Hundred-and-thirtieth National Bank, and Mr. Tanaka Ichibei, President of the Forty-Second National Bank, called on Mr. Kawakami, then staying at Arima, for the benefit of his health. After submitting to him all the details of the complication, they requested him to advance 3 million *yen* on the joint responsibility of the principal banks of Osaka. Mr. Kawakami finally consented, on his own judgment, to grant the application. Mr. Doi, however, did not succeed so well with the President of the Bank, upon whom he called on the same day that Mr. Kawakami was visited by Messrs. Matsumoto and Tanaka at Arima.

Baron Kawada objected to give such large accommodation on the security of the Osaka Banks, but promised, at the same time, to make every possible effort to save the Osaka market from anything like a crisis. When, however, this decision of the President's reached the Director of the Osaka Branch of the Bank of Japan, it was too late, Mr. Kawakami having already given his promise to the bankers of Osaka. Hence there was nothing for it but that Mr. Kawakami should resign. Baron Kawada himself forwarded his resignation to the Minister of Finance, but the latter dissuaded him from taking any such step. Opinions are divided as to whether or no the three million *yen* have already been handed over to the applicants, but even though the money has not been paid, the Bank will feel bound to implement a promise made by its Osaka manager, and it is therefore concluded that the Osaka folks will be helped out of their difficulty. The Hemmi Bank, though a small concern of only 100,000 *yen* capital, has always enjoyed great credit in Osaka, so that it was able to transact business considerably out of proportion to its capital. A telegram received by the *Fiji* from Osaka says that Bank has succeeded in borrowing 300,000 *yen* from the Nippon Ginko and that a total advance of 1½ millions will settle the trouble satisfactorily.

COUNT MATSUKATA ON FINANCE.

On the 22nd instant, Count Matsukata addressed the High Council of Agriculture, Commerce, and Industry on the subject that has given rise to so much speculation of late, the revenue and expenditure of the State. A résumé of the speech was published, on the 24th, in the columns of the *Shogyo Shimpō*, but owing to a very grave error on the part of the reporter, the public were, for a moment, greatly misled. According to the *Shogyo*, the Minister informed his hearers that the estimates of expenditure submitted by the various Departments of State for the 30th fiscal year—April 1st, 1897, to March 31st, 1898—aggregated 300 million *yen*; that revenue to meet such demands not being available the Heads of the Department had been invited to a conference, with the result that the total was reduced to 250 millions, and that since sources of income to defray even the latter amount were not forthcoming, it would be necessary to issue bonds to the extent of 120 millions; in other words, to increase the national debt by the latter amount. This somewhat startling description of financial prospects created considerable surprise, but, on the following day (25th) the same journal explained that its report was misleading. What the Minister had really said was that the total expenditure for the next fiscal year, including extraordinary as well as ordinary outlays, would be 250 million *yen*; but of that total only 120 millions represented ordinary expenditures. Moreover, on the revenue side, when His Excellency spoke of 120 millions, he alluded to the ordinary revenue only, and did not include the extraordinary. The latter would include the surplus from the preceding year; an appropriation of more than seven millions from the indemnity fund; subscriptions to public undertakings bonds, and so forth, the combined sums being sufficient to cover the extraordinary expenditures. There was thus no idea whatever of an addition to the national debt. The *Shogyo* further explained that from the beginning of 1897 the additional revenue from the tobacco monopoly would begin to accrue, and as that must be regarded as ordinary revenue, the total of the latter would ultimately stand at 130 millions. In brief, then, the financial situation, as outlined by Count Matsukata, is that the ordinary revenue and expenditure for the next fiscal year will each be 120 millions *yen*, and that the extraordinary expenditures will aggregate 130 millions, to meet which funds are duly forthcoming.

MR. TAGUCHI UKICHI & FINANCE.

Mr. Taguchi, M.P., has published his views on the financial programme of the Government through the columns of the *Mainichi Shimbun*. He starts with the declaration that if, as rumour says, the present Cabinet follows the financial programme elaborated by its predecessor, with the coöperation of the Liberals, then he has no choice but to oppose it. Several of the financial measures formulated by the Ito Cabinet are regarded with strong disfavour by Mr. Taguchi, the most prominent being the expansion of the Army, the Tobacco Monopoly, and that portion of the Registration Tax bearing on the census. If, therefore, the Matsukata Cabinet can retrench the Army expansion programme by more than seven million *yen*, and abolish the other two new measures that the *Shimpo-to* declared for in the previous session of the Diet, nothing, according to Mr. Taguchi, could be more beneficial to this realm. Even if it should be found impracticable to carry out retrenchment in the Army programme, he must still persist in proposing the abolition of the other two measures. Such a proceeding would create no small gap in the finances of the State, especially when the recent sudden rise in the market prices of commodities is taken into consideration. Some other measures for meeting the State's necessities must therefore be devised. Mr. Taguchi proposes two such measures, namely, an addition to the land tax and the abolition of the free coinage of silver, the adoption of either alternative being sufficient to supply the lack caused by the abolition of the Tobacco Monopoly and the contested portion of the Registration Tax. First, as to the amendment of the Land Tax. Mr. Taguchi tabulates the quantity of rice employed in payment of the land tax before the amendment of the system of assessment, and arrives at the conclusion that the quantity employed prior to 1874 was 11 million *koku* approximately. The price of rice being quoted at 9 *yen* per *koku* at present, the burden on farmers prior to 1874, estimated at current rates, amounted to 99 million *yen*. At present, however, even including the newly-opened lands in Hokkaido and Loochoo, the total assessment does not exceed 38½ million *yen*, approximately, to which 14 million *yen* of local rates ought to be added. In other words, farmers now pay only 53 million *yen*, which, taking into consideration the appreciation of rice subsequent to 1874, is equivalent to the payment of 5,800,000 *koku* only, that is, only about out half of the assessment of two decades ago. Is not that a very extraordinary boon to farmers?

As a result of the redemption of inconvertible notes subsequent to 1882, the market for rice in Tokyo fell as low as 5 *yen* per *koku* in 1886, the average quotation throughout Japan being about 4 *yen*. On that occasion an assessment of over 42 million *yen* as land tax and 15 million *yen* as rates, in other words, an assessment in kind amounting to about 14 million *koku*, was somewhat stiff as compared with the assessment prior to 1874. This is attested by the extraordinary increase in the number of arrears between 1883 and 1886; farmers who were dealt with on account of failures to pay taxes ranging between 35,000 and 100,000. It was evident that the farmer's burden needed lightening at that time, but this is entirely unnecessary and unreasonable now that the market rate of rice has risen above 7 *yen*. In 1892 only 292 farmers were in arrears, and in 1893 only 345.

The contention that the land tax should be levied at the rate of 2½ per cent. on the registered value of land, possesses no sound basis. The real rate should be estimated on the amount of rice raised. Can the argument be maintained as sound that the rate should be 2½ per cent. irrespective of how the market stands, whether rice be fetching 4 *yen* or 11 *yen*? Viewed from this standpoint, the idea of the last Cabinet to establish Industrial and Agrico-Industrial Banks at a time when rice stood as high as 11 *yen*, and to further benefit the already forlorn farmers at the expense of other tax-payers, was indeed a most inexplicable proposal. These considerations induce Mr.

Taguchi to declare for the necessity of adding to the taxes laid on farmers. That is the simplest as well as the least injurious mode of increasing the revenue of the country, but if the public are deterred from carrying out the proposed amendment, the only alternative is to abolish the free coinage of silver. To tell the truth, Mr. Taguchi cannot countenance that step, but he waives any objection in the interest of adjusting the disordered national finance. Briefly stated, his idea is as follows: to melt down a certain portion of the present silver currency within a certain prescribed period, so that the gold price of silver may be reduced. To forbid the Bank of Japan to use silver bullion as specie reserves when issuing convertible notes. To issue loans bearing 2½ to 3 per cent. interest and to take advantage of the fall in interest to redeem the consols and War Loans. To reduce the salaries of Government civil and military functionaries, in accordance with the fall in the market price of commodities. The reassessment of the land tax may be carried out, when, subsequently to the enforcement of this scheme, such a step is considered necessary. The volume of currency now in circulation is about 170 million *yen*, but of that sum 50 million *yen* belonging to the Special War Fund may be withdrawn at once. The actual circulating currency may therefore be set down at 120 million *yen*. In order to bring silver to a parity with gold the further withdrawal of about 20 million *yen* of convertible notes will be necessary. The silver currency in one-*yen* pieces coined since 1870 totals over 130 million *yen*, of which a part has left this country and another part is lying in the vaults of wealthy men. But when the free coinage of silver is abolished and its gold value is elevated, the *yen*-pieces now abroad or privately hoarded will reappear. Supposing then the volume of currency is lessened to 120 million *yen*, and that a sum of 35 million *yen* over and above the guarantee reserve of 85 million *yen*, is be laid by in one-*yen* silver pieces (a process that the Nippon Ginko will be ready to carry out on its own accord, because of the advantages accruing from it), and supposing that another 30 million *yen* are needed for public purposes, then the remaining 70 million *yen* must be melted down. The loss attending this process would not exceed 20 million *yen*. Mr. Taguchi's idea in recommending this measure is to convert the currency system of Japan into one similar to that prevailing in the Latin League and in the United States of America. The following retrenchments, he says, can be effected by the enforcement of this scheme. Interest on loans of 400 million *yen*, now amounting to about 18 millions, can be reduced by one-third, and other administrative expenses may be reduced by one half. The Army expansion programme of 43 million *yen* and the Navy expansion programme of 95 million *yen* may be reduced by one-third at least. If the scheme is carried out, though the State incur every year more or less loss through melting down silver, the Tobacco Monopoly and the Census Registration Tax may be abolished, and other complicated and hard-pressing taxes may either be abolished or amended, and all without adding a new item to the list of taxes. Needless to say that murmurs of trade depression will fill the country for a short while, as was the case about the years 1885 and 1886, but the Government must steadily pursue its policy when once it has decided upon it. One of Mr. Taguchi's cherished ideas is to keep the price of rice at about 6 *yen* in ordinary times, as this rate is considered by him conducive to maintaining order in Japan's economy and providing against the Government's or people's incurring any serious loss. It is this motive that induces him to advocate the World's adoption of a bimetallic system. The adoption by the world of bimetallicism can not be expected to take place at once, but the adjustment of Japan's finances is a question of urgent necessity. Hence Mr. Taguchi makes these suggestions. In conclusion, he avers that there are at present no convenient resources for new taxation available for increasing the receipts of the Treasury. In fact, the new measures for-

mulated by the last Cabinet are far from being satisfactory, inasmuch as they involve, when in full operation, collection expenses amounting to as much as 1,450,000 *yen*. This sum would support one military division or a fleet of 20,000 tons displacement. But either of the two schemes he propounds will necessitate no expense at all. Of course, if the deficit in the revenue does not exceed a few millions, recourse may be had to many miscellaneous taxes, but the present deficit is not small. The only way to satisfy it is to adopt either of the above alternatives.

FINANCE.

There is much lack of uniformity in the reports circulated from time to time by the vernacular press on the subject of the Budget for next fiscal year. A few days ago, the *Shogyo Shimpo*, publishing the gist of a speech delivered by Count Matsukata before the High Council of Agriculture and Commerce, made the Minister say that against an expenditure of 240 million *yen*, a revenue of only 120 millions was forthcoming, and that it would consequently be necessary to issue public loan bonds to meet the deficiency. Two days later, the same paper explained that it had fallen into a serious error. The expenditures referred to were the ordinary and extraordinary combined, whereas the revenue spoken of was the ordinary revenue only. What the Minister really had said, according to our contemporary, was that a total expenditure—ordinary and extraordinary—of 300 million *yen* had been estimated by the various Departments of State, but after effecting economies, the figure had been cut down to 240 millions, namely, 120 millions of ordinary outlay and an equal amount of extraordinary. Moreover, revenues to meet these outlays were declared by His Excellency to be forthcoming, and there never had been any question of issuing loan bonds. But now we find the following paragraph in the *Fiji Shimpo*:—"The expenditures estimated by the various Departments of State for next fiscal year originally totalled over 300 million *yen*, but after consultation between all the Ministers, the sum was reduced by sixty millions. Still the available revenue did not suffice to cover such an outlay, and as no new source of income was available, nothing offered except to issue loan bonds. Subsequently, however, the Departments applied themselves once more to the task of effecting every possible diminution of their demands, the Naval Department especially cutting down its figures by notable amounts, and thus finally the expenditures have been brought within the margin of the revenue, and there will be no need to issue bonds." Obviously these two accounts are more or less contradictory, but from both alike the fact emerges pretty clearly that the total expenditures for next year will be in the neighbourhood of 240 million *yen*, and that they will be covered by the revenues.

The *Tokyo Shimbun*, on the other hand, alleges that it will probably be necessary for the Treasury to appropriate the proceeds of the House Tax—now devoted to purposes of local finance—from which source seven or eight million *yen* annually could be obtained. Our contemporary speaks as though there were a chance of the tobacco monopoly project and the new registration tax being abandoned, and says that while the Diet could easily be brought to approve that step, both of the measures being unpopular, it could scarcely be induced to vote an increase of the land tax and the abolition of the free coinage of silver, steps suggested by some financiers as means of increasing the revenue. We do not, for our own part, see how the Treasury could gain anything by stopping the free coinage of silver, for the operation puts an appreciable sum every year into the Government's pocket. We showed in a recent article that the total profits made by the Osaka Mint since its establishment are over eleven million *yen*. To prevent people from carrying silver to the Mint for coinage ought to reduce rather than to increase the States' income, and, at any rate, the matter is a veritable baga-

telle as a factor of public revenue. However, that is what the *Tokyo Shimpō* tells its readers. It further alleges that although the funds of the communes must suffer as much as the Treasury would gain by changing the destination of the money accruing from the House Tax, there is a belief that by thinning the ranks of local officialdom and postponing all public works not absolutely essential, no new burden need be imposed on the people to defray communal expenditures even though the House Tax were appropriated by the Treasury.

PRISON REFORM.

The new Minister of Justice has detailed to a representative of the *Maishichi* the points that he considers require reform in the present prison system of Japan.

In the first place he holds that the position of governors of prisons should be made more stable. At present, governors, being under the control of the Department of Home Affairs, are viewed in the same light as ordinary administrative officials, their tenure of office is similarly precarious. Even the main principles of prison administration are liable to be altered on the occasion of a change of Minister. Under such circumstances, it is impossible to expect any marked improvement in the prison system, for all reforms of that nature evidently require a long time before they can be made permanently successful. Theoretically the position of governors of prisons should be of life tenure, as is that of Judge, but such a change would scarcely be applicable at present, for the majority of the governors are old, worn-out officials, holding office simply as a means of support, and generally destitute of new ideas. The easiest method of correcting these evils would be to transfer the prisons to the control of the Department of Justice, especially from the standpoint of making the tenure of governors' offices more stable. When this transfer is accomplished and the post of governor becomes a life affair, the next step will be to reform the method of appointment, and to replace it by the competitive examination system, as in the case of Judges and public procurators. Were these changes effected, the real reform of prisons might be anticipated within a reasonable time. The *Yū* also prints an account of an interview that a member of its staff had with a high authority on police and prison affairs. The criminal record after the War, observed that authority, was unexpectedly satisfactory. The Police authorities had apprehended that the disbanded military coolies would behave in an unruly manner and might subject peaceful folk to considerable annoyance. But, on the contrary, these coolies conducted themselves in such a law-abiding way, that the public knew nothing of their existence, with the exception of the fact that they preferred complaints against certain contractors in connection with arrears of pay that the coolies considered due to them.

The supply of police constables, according to the same authority, is as deficient as ever, especially since the recent industrial activity and the appreciation of the market prices of commodities. Many factories engage ex-police constables as master mechanics at wages of over 50 *sen* a day, especially in the Kei-Han districts. Miyagi used to furnish a large number of Police constables, but even thence the supply is considerably diminished. At present it is only from the three districts of Kagoshima, Kumamoto, and Ishikawa that candidates for the police can be obtained in sufficient number. To obviate this embarrassment, the only remedy is to raise the rate of pay. The average monthly pay of a constable or jailer is now 9 *yen*; it should be increased to 10 at least. The opinion that prison expenses should be transferred to the Treasury, though frequently discussed in the House of Representatives, has no hope of being carried into effect in the present state of the national finances. Therefore people in the provinces, who hesitated to improve their prisons since the question of transfer has been mooted, must proceed at once to reconstruct the local prisons.

One of the most urgent improvements required is to increase the accommodation, so that numerous prisoners may not be huddled together in one cell. That change is necessary, not so much from a hygienic standpoint, as for the purpose of lessening the number of criminals. At present a prison may not unjustly be called a school of crime, for when many prisoners are kept together in one room, even those who are honestly disposed become liable to the infection of vice. Sometime ago a mason thrown into prison for robbery lived in the same cell with political offenders who had been connected with the Satsuma rebellion. He was so far converted that on emerging from jail he pursued his legitimate occupation assiduously, and earned an ample competence. But other convicts, who had lived in the same cell with him and who were also robbers, annoyed him so often with unwelcome visits that he could no longer continue his respectable and law-abiding career, but drifted once more into the community of robbers.

JOINT-STOCK BUILDING COMPANY.

The Joint-stock Building Company started business on the 1st inst. with a capital of one million *yen*. Mr. Yasuda, of the Yasuda Bank, is President, and Messrs. Takei Morimasa, Otani Kahei, and two others are Directors. The company will erect buildings and so forth. The most interesting feature in the Company's prospectus is the statement that it will erect houses and godowns at the request of applicants and effect the transfer of the buildings to the latter upon payment of yearly or monthly installments spread over a period of 5 to 15 years. When, for instance, a building costing 1,000 *yen* is required, the applicant must pay down, on conclusion of the contract, a sum corresponding to 30 per cent. of the cost, that is, 300 *yen*. Of that 300 *yen* two-thirds will go towards paying off the cost of construction and the remaining one-third will be held by the Company as security for the other monthly payments. After the remaining sum of 800 *yen* has been paid off, the 100 *yen* deposited with the Company as security will be refunded. The following table shows the rate of repayments on various investments:—

Cost of construction.	5 years.		7 years.	
	Yearly.	Monthly.	Yearly.	Monthly.
1,000.....	311 98	18 494	275 894	21 608
2,000.....	415 856	36 078	350 519	29 216
3,000.....	605 784	55 483	515 883	43 824
4,000.....	887 712	73 976	701 118	58 432
5,000.....	1,100 640	98 470	876 412	73 039
6,000.....	1,313 568	116 964	1,051 706	87 647
7,000.....	1,526 496	139 458	1,227 001	102 255
8,000.....	1,739 424	161 952	1,402 295	116 863
9,000.....	1,952 352	184 446	1,577 590	131 471
10,000.....	2,165 280	206 940	1,752 884	146 078

Cost of construction.	10 years.		15 years.	
	Yearly.	Monthly.	Yearly.	Monthly.
1,000.....	141 587	11 799	117 439	9 788
2,000.....	283 174	23 598	234 918	19 577
3,000.....	424 762	35 397	352 397	29 365
4,000.....	566 349	47 196	469 877	39 153
5,000.....	707 936	58 995	587 356	48 941
6,000.....	849 523	70 794	704 835	58 730
7,000.....	991 110	82 593	822 314	68 518
8,000.....	1,132 698	94 392	939 793	78 306
9,000.....	1,274 285	106 190	1,057 272	88 094
10,000.....	1,415 872	117 989	1,174 751	97 883

Buildings constructed on these terms must be insured, the premia to be paid by the applicant. The Company estimates that profits will accrue of not less than 15 per cent. per annum. This is considered by the *Tokyo Economist* as too high a rate, especially when the comparative freedom from risk involved is considered, as well as the average returns accruing from land, about 3 to 4 per cent. per annum. Be that as it may, the enterprise is well timed, seeing how badly Tokyo needs a better and more durable class of buildings than those that now so generally disfigure the capital.

THE NEW COMMERCIAL TREATY BETWEEN CHINA AND JAPAN.

The *Official Gazette* of the 29th inst. contains an Imperial announcement that the new Commercial Treaty between China and Japan has been ratified.

THE SPECIAL ADMINISTRATIVE INVESTIGATION COMMITTEE.

Our readers are aware that it has been the purpose of the new Cabinet to appoint a Special Committee, with the object of conducting investigations into Administrative organization. The names of the Committee have now been announced in the *Official Gazette*. They are:—President, Count Okuma, Minister of State for Foreign Affairs; Vice-President, Mr. Kioura Keigo, Minister of State for Justice; Members, Baron Ito, Vice-Minister of the Navy; Baron Kodama, Vice-Minister of War; Baron Kitagaki, Vice-Minister of Colonization; Baron Tajiri, Vice-Minister of Finance; Mr. Kaneko, Vice-Minister of Agriculture and Commerce; Mr. Suzuki, Vice-Minister of Communications; Mr. Matsunaka, Vice-Minister of Home Affairs; Mr. Hirata, Chief Secretary of the Privy Council; Mr. Komura, Vice-Minister of Foreign Affairs; Mr. Hama, Chief of the Audit Bureau; Mr. Matsumoto, chief of the Railway Bureau; Baron Noda, Chief Inspector of the Army; Baron Kawaguchi, Chief of the Bureau of Finance in the Naval Department; Mr. Sone, Chief of the Hokkaido Bureau in the Department of Colonization; Mr. Takahashi, Chief Secretary of the Cabinet; Mr. Komuchi, Chief of the Legislative Bureau; Mr. Takagi, Chief of Bureau of Civil Law in the Department of Justice; Mr. Nakabashi, Secretary in the Department of Communications; Mr. Yasuhiro, Chief of the Bureau of Shrines and Temples in the Home Department; Mr. Shibata, Secretary of the Cabinet; Mr. Ishizuka, Councillor of the Legislative Bureau; and Mr. Kawasaki, Secretary in the Foreign Office.

It is observed with regard to the composition of this Committee that excepting Count Okuma, Mr. Komura, Mr. Takahashi, and two or three others, the members are all men belonging to the late Cabinet, and the inference is drawn that the results of the committee's investigations may not be sufficiently satisfactory to win popular approval. Of course, considering the constant talk there has been about administrative reform—talk outside the ranks of officialdom—many critics are prepared to allege that the present Cabinet's chances of winning the heart of the nation depend entirely upon the issue of the Committee's labours, and unless some steps are taken signally progressive as compared with the conduct of affairs under Marquis Ito, the Matsukata-Okuma Ministry must fall. But very few people sincerely believe that Marquis Ito left a state of things offering much margin for reform, and perhaps no course could be adopted more injurious to the present Cabinet than to represent its public credit as depending upon the achievements of a committee which can not reasonably be expected to achieve much.

THE CODES.

A vernacular newspaper attributes to the Vice-Minister of Justice certain statements with reference to the Codes. It was originally intended, we read, to submit the remaining portion of the Civil Code to the Diet next session, but as the work of revision has not yet been completed, some delay may prove unavoidable. As for the revised Criminal Code, the draft was ready in the spring of this year, and will doubtless be laid before the Diet even though the revision of the Code of Criminal Procedure be not ready for presentation at the same time. The case of the Registration Law, however, is different. Some evidence of its practical working must be obtained by way of preliminary. Without such evidence, to submit the draft for the Diet's approval would be a useless undertaking, and there is therefore little probability that the law will be brought up for debate next session.

On the First of November, at Omiya Park, Saitama Ken, the autumn general meeting of the *Yū* will be held. Messrs. Hayashi, Tamura and a few others are to be despatched thither from Head-quarters.

HABEAS CORPUS.

WE observe that the old question of *habeas corpus* has again been brought up in Kobe, in connection with the case of a Chinaman who, having been discovered, when landing from the steamer *Doric*, to be in secret possession of opium and opium-smoking apparatus, was arrested, handed over to the Kobe police, examined before the magistrate the following day, remanded for public trial, and finally condemned, seven weeks later, to a term of imprisonment with hard labour. These are the facts so far as they have been published. On the strength of them a Kobe English journal alleges that in Japan "the right of bail is virtually denied," and that "the principle of the *Habeas Corpus* Act has been deliberately and purposely set aside by those responsible for the laws adopted for the governance of Japan, since she has set herself the task of identifying herself with the form, regardless of the spirit, of Western jurisprudence." It would seem that the writer of this last sentence laboured under some mental excitement too acute to consist with coherency of expression, for though he explicitly charges Japan with the intention of adopting the form only, and rejecting the spirit, of Western jurisprudence, he could not possibly be so silly in his lucid moments as to advance such an accusation. For the rest, the whole story and the comments evoked by it are characteristic of the blundering, slipshod methods too often followed by critics of things Japanese; methods so flagrantly prejudiced that whatever assistance the cause of reform might derive from the criticism itself, is marred by the mood of the critic. In the case of the Kobe Chinaman, one fact alone is seized: the man remained in prison for seven weeks before being finally brought up for trial. Did any special circumstances intervene to cause his detention? Did he make any attempt to recover his liberty upon bail? If he did, for what reasons was he unsuccessful? These are the first questions that would suggest themselves to any thoughtful person in considering the affair from the point of view of criminal procedure, and without distinct replies to them, he would never dream of offering any criticism. We ourselves are not in possession of any information to supplement that of our Kobe contemporary, but we gather indirectly from the published account that some difficulty of jurisdiction intervened, and if that be so, the delay becomes easy to understand. However, without attempting to discuss this particular case exhaustively, let us refer briefly to the general allegations that "the right of bail is virtually denied in Japan," and that "the principle of the *habeas corpus* has been deliberately and purposely set aside" by the framers of Japanese laws.

What is the *habeas corpus*? It is a

remedy for the violation of personal liberty. In old times, a common abuse of power was the detention of freemen in prison without any criminal charge being duly preferred against them. To guard against that abuse the writ of *habeas corpus* was introduced. It enables persons held in custody to obtain speedy access to a court of law, there to be remanded, admitted to bail, or discharged, in accordance with the view taken by the court. In England the Habeas Corpus Act is a special statute. Like many other laws of the United Kingdom, it had its origin in special circumstances. The absence of any independent law or ordinance in Japan of similar import has been frequently misconstrued as an evidence that the principle of *habeas corpus* does not exist here. But, of course, whether certain provisions be embodied in a separate statute, or included in a general code, the practical result may be precisely the same. What we have to see, then, is whether and how far the principle of *habeas corpus* finds expression in the Japanese Code of Civil Procedure. In the 73rd Article, it is laid down that any one accused of a crime must be brought up for judicial examination within 48 hours from the time of his arrest, and, after examination, must be either set at liberty or duly remanded. The 85th Article provides that, except in the case of *mise au secret*, an accused person is authorized to receive, in the presence of an official, visits from his parents, relatives, friends, or legal adviser. And the 150th Article provides that, on the demand of a person awaiting trial, a judge may order that he be provisionally set at liberty, under written engagement to present himself when required, and on furnishing bail. There we have a series of enactments apparently ample to guarantee an accused person, first, against being held in custody without a proper hearing of his case; secondly, against being secluded from those that are ready to assist him; and thirdly, against detention in prison if the nature of his crime admit of bail. So far, then, as the principle of the *habeas corpus* is concerned, it certainly finds expression in the Japanese Code of Criminal Procedure. Just as a writ of *habeas corpus* compels a man's jailers in England to conduct him, within a specified period, before a law court, where, if not again remanded, he may procure temporary release upon bail, so the 150th Article of the Japanese Code of Criminal Procedure entitles an accused person to obtain liberty upon bail, subject, of course, to the judge's decision. Nothing could be farther from the truth, therefore, than to say that in Japan "the right of bail is virtually denied," and that "the principle of the *habeas corpus* has been deliberately and purposely set aside" by the framers of Japanese laws. But whether the provisions of the Code of Criminal Procedure are so drafted as to preclude all abuses of

the kind under consideration, we are not prepared to say. That there have been some abuses under its operation is beyond doubt, and we ourselves have direct cognisance of an assertion made by the most prominent among its drafters, namely, that however excellent the intention of the law, its execution appeared to require fuller safeguards. The amended Code, which will be submitted to the Diet next session, is expected to be more satisfactory. But in the meanwhile the laws now actually in force certainly do not justify criticisms so sweeping as those referred to above. We have examined the matter here because of its interest for foreigners soon to come under Japanese jurisdiction, and because it seems a pity that the manufacture of ill-founded prejudices should be suffered to proceed unchecked.

THE OUTLOOK IN THE UNITED STATES.

ALTHOUGH the latest advices from America point strongly to the probability that Mr. MCKINLEY will be chosen PRESIDENT, it appears to be admitted by many of his adherents that if the election had taken place three months ago, or soon after the nomination of Mr. BRYAN, the Democrats would have held at least an equal chance of carrying the country. The change in popular feeling is said to have been largely caused by the failure of the Democratic leaders to convince their followers that the party "platform" was sound. Theories which at first delighted the impulsive multitude by their apparent hopefulness were found sadly defective when subjected to logical investigation. The working classes, and especially farmers, had long been disheartened by reverses for which they could discover no remedy, and the prediction that unbounded prosperity would result from the employment of a hitherto untried expedient was received in something of the spirit with which a despairing sick man accepts a panacea of alleged supernatural power. The free and unlimited coinage of silver, according to Mr. BRYAN and his allies, would at once diffuse comfort and happiness throughout the land, and insure the welfare of the majority of inhabitants without endangering in any degree the safety of the State. So certain was this process to secure the desired end, that no other measure was brought forward for discussion by the Democrats. Free silver was their only cry;—not the bi-metallic reform which the Republicans advocate, and the principle of which has already been recognised as feasible in a recent Act of Congress, but unrestricted coinage at a legally enforced and nationally independent valuation far above silver's actual worth. In holding out his promise of ease and plenty, at the outset of the campaign, Mr. BRYAN announced that he was prepared to stand by certain cardinal points of doc-

trine with arguments and facts that should carry conviction wherever they were heard. These were his premises:—

I.—That the establishment of a fixed ratio of sixteen to one was in strict obedience to the precepts of the statesmen who founded the Government a century ago.

II.—That free coinage would have the effect of restoring the commercial value of silver to what it was before the depreciation began, namely, \$1.29 an ounce.

III.—That the unlimited admission of silver would promote prosperity not alone by raising the prices of all products, but also by increasing proportionately the wages of all classes of labourers.

IV.—That the enormous addition of silver money to the circulation would not be followed by the expulsion of gold, and that the embarrassments consequent upon the disappearance of the yellow metal need therefore not be apprehended.

Upon these texts Mr. BRYAN has made some two hundred and fifty speeches during the summer and autumn. The people have waited eagerly for his promised demonstrations, and have often clamoured for the proofs he undertook to supply. What has he given them, and what has he encountered in return?

His first proposition, that he was sustained by the teachings of "the fathers" has been completely overthrown by citations from the writings of the "fathers" themselves, who left on record their judgment in favour of a ratio to be governed always by existing commercial values.

His second assertion has turned out merely the expression of his individual opinion. "I am firmly convinced," he has repeatedly said, "that by opening our mints to free and unlimited coinage of silver at the present ratio, we can create a demand for silver which will keep the price of silver bullion at \$1.29 per ounce measured in gold." At no time has he presented anything more conclusive than this. Not a scrap of evidence; not a solitary fact to assist him in controverting the universal experience of mankind.

His declaration that the general rise in prices which he anticipates will be accompanied by a corresponding advance in wages has been not only invalidated by economic statistics from foreign countries, but specifically refuted by reference to a Congressional report published within the last ten years, which shows that during the Rebellion, when the Republic was flooded with cheap currency, prices of goods were increased one hundred and seventeen per cent. above the rate ruling before the war, while the pay of the wage-earners never rose more than forty-three per cent.; the labourer being always left far behind.

His allegation that gold would not be supplanted in the event of an enormous influx of silver remains wholly unsupported by concurrent testimony and has been

overborne by the weight of adverse precedents collected from other nations.

It may well be believed that suspicion has at last been awakened by the inability of the Democratic candidate to redeem his pledges. He promised the people bread, and he has given them the most indigestible banquet of stones ever offered by a suitor for popular favour. On one vital and vehemently disputed question of his policy he considers that he has satisfied expectation by saying he is "firmly convinced" of the correctness of his views. On others he contents himself with prophesying events such as have never yet occurred under analogous circumstances, and the realization of which would be an absolute reversal of established economic laws. And on others he appeals to historical data which, when produced, are found so utterly at variance with his contentions that doubts are raised as to his having ever consulted them with serious purpose. Whatever impulses of enthusiasm may have swayed the masses of the South and West in the earlier stages of the contest, it is not surprising to hear that their faith is weakened by Mr. BRYAN'S unsatisfactory treatment of the few subjects he deems worthy of attention. It is with difficulty that he can be persuaded to utter a word except in persistent iteration of his own narrow group of ideas. If he is invited to touch upon deeper themes, he asserts that "there are no deep questions in government,"—a statement which does not greatly tend to reassure anxious minds. It is noteworthy, indeed, that when he does yield to wider demands for enlightenment, his responses are not always of a kind that his admirers can point to with pride. He consented on one occasion to depart so far from his regular course as to examine the charge that the enforcement of payment of debts in silver would be equivalent to spoliation of depositors in savings banks, and it was in the following curt sentences that he disposed of the matter:—"Our opponents express much solicitude for these depositors. They constantly parade before them the advantages of a gold standard. But these appeals will be in vain, because savings bank depositors know that under a gold standard there is increasing danger that they will lose their deposits because of the inability of the banks to collect their assets." To this astonishing *non sequitur* nothing can be compared, as an intellectual feat, except perhaps Mr. BRYAN'S impromptu discovery of the silver dollar's latest title to veneration. He was speaking at one of the numerous places in Virginia where WASHINGTON once flung a specimen of the coin across a river,—a habit to which, if tradition may be credited, the first PRESIDENT of the United States was as inveterately addicted as he was to not telling lies. Whether he did, or did not, throw the dollar, Mr. BRYAN recalled the legend with relish. "Would you believe it, my

friends," he cried, "that a silver dollar which was good enough to be handled by the Father of his Country is now so mean a thing as to excite the contempt of many of our so-called financiers?" The immediate listeners applauded, but judging from the more general comments which followed later, the nation at large was blind to the pertinence of this flight of argumentative inspiration.

The impression is plainly gaining ground in America that Mr. BRYAN might have done better for himself and his party by remaining silent in his Nebraska home than by engaging in oratory all over the country upon problems of grave public importance to which he seems to have given only the most superficial consideration. He has certainly shaken confidence in his fitness for the responsibilities of an exalted public station, and if he is destined to defeat, his overthrow is likely to be attributed—justly or unjustly we do not pretend to say—as much to his own rashness and imprudence as to the strength of his adversaries. On all sides we find the belief more or less openly declared that no other Presidential candidate within memory has suffered so severely from self-inflicted injuries. The comparatively few speeches of Mr. MCKINLEY, on the other hand, while rising to no very lofty height of statesmanship, and leaving untouched,—apparently with deliberate intent—some of the most disturbing political questions that now agitate American society—are emphatic in proclaiming that financial justice and integrity shall be maintained by the Government; and this, after all, is the main point upon which the several parties are divided in the present struggle. Neither of the rival candidates is credited with ideal attributes, but one of them represents at least a principle which no nation could renounce without forfeiting the confidence and respect of the world.

EDUCATIONAL AIDS.

The Department of Education having resolved, with the consent of the Diet, to disburse every year a sum of 150,000 yen towards encouraging technical education, already from Oct., 1894, to the 15th ult., 81 schools, where education of that kind is given, have been subsidized, the sums thus defrayed totalling over 66,000 yen. The chief motive of the Department being to educate experts in various branches of technical knowledge, schools of that particular description enjoy more consideration than others. In fact of the total thus far defrayed, more than one half has gone to such schools. The following table shows the number of schools subsidized, their nature, and the amount of the subsidy granted to each:—

	No. of School.	Total amount of subsidy. Yen.
Advanced technical schools ...	31	8,083.30
Technical schools for apprentices ...	14	18,740.00
Agricultural schools ...	25	20,190.00
Industrial schools ...	5	12,400.00
Commercial schools ...	6	6,000.00

Applications for subsidies are reaching the Department from many other schools, and all these cases will be dealt with according to the view that the Department entertains on this subject.

KOREAN NEWS.

The acquittal of the prisoners, arrested some time ago in Sôul, on a charge of plotting against the Government, is welcomed as an evidence of great judicial progress. The *Sôul Independent*, which, being edited by a Korean, must be credited with knowledge on such a subject, says that formerly men could be arrested without any charge being preferred against them and could be punished before trial. Their sentence was determined by the influential folks that caused their apprehension, and the Judges simply carried out the instructions given by the latter. But that cruel state of affairs has now been remedied. The last political suspects had a fair trial, and much of the credit is given to Mr. C. R. Greathouse, who has been appointed by the King to oversee the Judiciary and the procedure of the Courts. At the same time, the *Independent* thinks that conservative tendencies are now where so marked as in the police department.

A vivid idea of the state of affairs in the Korean capital is conveyed by the following incidents:—An aspirant for official position gave fifty-two dollars to an ex-Inspector of Police, who promised to use influence with the Minister of the Household in the interests of the aspirant. But the ex-Inspector saw a better device. He did, indeed, buy an office from the Minister with the money, but it was an office for himself. Thereupon, the brother of the deluded aspirant would have made public complaint, but, venturing into the Minister's residence, was imprisoned by the latter in a store-room. These facts having found their way into the columns of the *Independent*, the implicated Minister addressed a letter to that journal, declaring that he had not imprisoned the man, but had merely "invited him to my house and asked him to stay in one of my guests' rooms for the purpose of getting some information from him in regard to the scandal with which my name was connected."

An emphatic denial is published of the report recently circulated in Japan that the Russian Government had signed a convention with the Korean Government pledging the latter to seek Russian approval before opening Mokpo to foreign trade, or allowing any other country to construct telegraph lines or build railways in the interior.

The desecration of graves by black-mailers is a familiar crime in Korea. Recently, a band of robbers exhumed a corpse, and cut off and carried away its head, sending word to the son of the dead man—an ex-Governor of a province—that if he wanted to have the head restored, he must pay two thousand dollars within three days. The demand has not been complied with and the head remains in the robbers' possession.

The line of telegraph between Sôul and Wiju, on the Yalu, has now been restored to a serviceable condition, and it is announced that messages may be sent across it to any part of the world through the Korean Telegraph Office. This line was used constantly by the Japanese during the war.

The Sôul authorities are busily collecting statistics to obtain the census of the city.

Sôul has a new Governor, in the person of Mr. Ye Cha-yun, who formerly resided for several years in Washington, and is said to have an intimate knowledge of Occidental municipal systems. Mr. Ye had just been appointed Governor when the disturbance of last October occurred. He was then compelled to give up his office and retire to the country, but he has now been re-appointed, and strong hopes of municipal reform are entertained. There is a difficulty in the way, however: the police are entirely beyond the Governor's control, and the Chief of Police is opposed to progressive ideas. Thus the Governor's reforms are not likely to be carried out.

A robbery of some magnitude was perpetrated at one of the Government granaries in Sôul on the 12th of October. Ten thieves entered the building, tied up the guards, and carried off \$7,786. The loss of the money was not known until the next morning, when the officials were discovered as the robbers had left them, securely bound.

It is certainly singular that the watchmen, who equalled the thieves in number, were so effectually and noiselessly dealt with.

The work of constructing the Sôul-Chemulpo railway seems at length about to be commenced. An engineer has started from San Francisco and will make the final survey on his arrival in Korea.

The Korean Government's project of increasing the tax upon *ginseng* from \$10 to \$16 a catty threatens to kill the industry. Dealers allege that after paying such a tax no margin of profit remains, and that exportation would be a certain loss. The revenue at present derived by the State from the *ginseng* tax is \$150,000 annually.

A letter that has reached the Colonization Authorities from Formosa, under date of the 18th inst., reports that frequent raids are made by the aborigines in the vicinity of Ra-to-gai, who are evidently hostile to the Japanese. Capt. Imaya, the commander of a small garrison at Boryoshu, proceeded to the haunts of the aborigines on the 2nd inst., to inquire into the cause of these troubles. He was informed that this sudden outbreak of hostility on the part of certain tribes was due to superstition. An epidemic disease had been prevailing among them for some time, and the simple-minded folks had come to the conclusion that the stretching of telegraph wires through their district was at the root of the trouble. They forthwith set about cutting the wires, but the injuries were repaired with such celerity by the Japanese that the aborigines concluded they must turn their attention to the "wire-stretchers." Hence their raids into places inhabited by Japanese. Another cause of grudge against their new masters, was the refusal of the Local Authorities at Hienchun to give pay to the chiefs of these particular tribes, though others received that consideration. On the 5th inst. the chiefs of the 18 tribes under the jurisdiction of Hienchun Local Office were invited to repair to Hienchun, an invitation which the chiefs of the three tribes entertaining grievances against the Japanese refused to obey. The Authorities then asked the opinion of the loyal chiefs as to the steps that ought to be taken towards the recalcitrant tribes, and the unanimous reply was that an expedition must be fitted out against them, the chiefs of the loyal tribes undertaking to act as guides. The military authorities decided to adopt this advice, and despatched several detachments towards the districts inhabited by the three tribes. However, as the main object of this mission was to dispel the strange delusions under which the tribesmen were labouring, and also to warn them against any repetition of such misconduct, several civilians accompanied the expedition for the purpose of peacefully offering advice.

The family of Lieut.-General Baron Nogi, the new Governor-General of Formosa, apparently retain the old *samurai* spirit that flourished in the prosperous days of the Tokugawa régime. The Baron's mother, now a lady of over seventy years, and his wife, are to accompany him to the scene of his new duties, so as to render every aid in their power towards the discharge of his functions. The mother was specially warned by her physician against such a project, but she declined to pay attention. It did not matter, she said, whether she died in Formosa: one place is as good as another for dying, provided only that it be within the realm of Japan. The old lady's heart is in the right place, but we do not quite perceive what she is to do in Formosa.

A YOKOHAMA THEATRE DESTROYED.

About 4.40 o'clock yesterday morning, a fire broke out in the Chitose Theatre, in Chitosecho, and despite the exertions of a large number of firemen was completely destroyed by twenty past five. Several adjacent houses also were totally burnt out. The cause of the fire has not yet been ascertained, but the police are prosecuting enquires.

CHINESE NEWS.

The much-talked-of Shêng, Taotai of Tientsin, who like all prominent Chinese officials has as many assailants as supporters, had audience recently of the Emperor in Peking, and so won upon his Sovereign's approval by clever expositions that he received promotion to the rank of a Court Official of the Third Grade, and is thus the equal relatively of a provincial governor.

An instructive case of religious trouble is reported from Huangmei-hien, a city near Kiu-kiang. A man of bad character having been refused admission to the Protestant church until he reformed, took umbrage, announced himself a Roman Catholic, and posted notices declaring his intention of destroying the church and beating the pastor and members unless they quitted the place. He did catch one of the members and nearly beat him to death, and when the man complained, his assailant appeared with a self-inflicted wound, protested that he had been attacked first, and defied the magistrate to punish him as he was under the protection of the Roman Catholic priest. The magistrate did not even reprimand him, and the case is now creating some excitement. It may fairly be doubted whether this *ex-parte* account is quite correct, but under any circumstances it illustrates the trouble only too often arising between the Chinese local authorities and the Christian converts, of whatever denomination.

The Viceroy Lu, who was some time embarrassed by the scarcity of copper cash in the districts under his jurisdiction, has now resorted to the device of issuing one-tael notes to circulate throughout the province of Szechuan. The notes bear the great seal of the provincial treasury, and proclamation has been made that they can be exchanged at any time by presentation at the treasury in Chêngtu. If this experiment in note-issuing proves successful, it may possibly be largely extended. The Viceroy is said to have obtained the idea by studying foreign works on finance. Meanwhile, the cash difficulty is being dealt with in the province of Chihli by manufacturing quantities of coin containing nearly 30 per cent. less metal than the old cash. In carrying out this work the mint is not employing the highly finished stamps and dies imported at great expense some years ago. With that machinery bronze of high quantity only could be cast and cash of a fixed weight made. The process resorted to is moulding, and from one to two million coins are made every week. At that rate many months' work will not produce any very sensible relief.

The use of opium for suicidal purposes is said to be so greatly on the increase in China, that the Authorities are thinking of imposing some special restrictions on the retail of the drug. Death by swallowing opium is regarded as a delightful lapsing into dreams that end in a painless decease, and even children do not shrink from the act. Recently at Foochow three little girls, each about ten years old, who were being educated to lead a life of shame, swallowed opium after receiving a chastisement, and though two were saved by prompt measures, one died. Such things are inexpressibly sad, but who can regret that the unhappy child succeeded in escaping the wretched existence lying before her? The fact is that the prevalence of pain and want in China necessitates some refuge.

A riot on a large scale recently took place at the porcelain kilns of Kiangsi. About four thousand potters went on strike, and being unable to persuade the rest to follow their example, attacked them, killing six and wounding several others.

It has been virtually decided that yarns manufactured at foreign-owned cotton mills in Shanghai shall pay a duty of 10 per cent. on emerging from the mill. If native cotton mills are similarly treated, if raw cotton is not taxed on its way to the mills, and if the goods are not subjected to additional imposts before reaching the market, there will be nothing prohibitive in the programme.

The Han river has broken through its banks

and inundated the districts about Wuchang and Nguanlu-fu. The little town of Hanchuan is virtually swamped, the water being ten feet deep in some of the streets.

A letter from Mr. R. Jeffries, C.E., published in the *Peking and Tientsin Times*, gives some interesting information about the Pekin-Hankow Railway. Mr. Jeffries says that he actually entered into a contract last February with H.E. Hsu, who had been appointed by the Chinese Government to collect money and organize a company composed of Chinese merchants for the purpose of carrying out the work. The capital was to be 30 millions of taels, of which the Chinese agreed to furnish two-thirds and the syndicate represented by Mr. Jeffries one-third, provided that the latter received a contract to build and equip the road for a sum not to exceed a maximum of forty thousand taels per mile, the exact amount to be agreed upon after proper surveys had been made. It does not appear, however, that the actual commencement of the work is yet in sight. Mr. Jeffries is waiting to carry out his contract, but the Chinese have not completed the financial arrangements on their side.

TREATY RELATIONS BETWEEN CHINA AND JAPAN.

China has of late violated the provisions of the Shimonoseki Treaty, write several vernacular journals, in three ways; namely, with regard to privileges of navigation, arrangements as to neutral ground, and extraterritorial jurisdiction. She has, however, admitted herself to be in the wrong, and promised that there shall be no repetitions of such incidents.

The navigation of the Yangtze-kiang was one of the privileges ceded to Japan by the Shimonoseki Treaty. It was, however, provided that, pending the enactment of detailed regulations by the High Contracting Parties, Japanese subjects were to conform with the terms of the convention relating to navigation of Chinese inland waters by foreign ships. But China arbitrarily drew up special rules for controlling the navigation of her inland waters by Japanese vessels, and sought to enforce them against a service of steamers between Shanghai and Soochow. Remonstrances against that procedure on the part of the Chinese Authorities were at once lodged by Baron Hayashi, in obedience to instructions from the Home Government, and China had to admit the justice of Japan's protests.

In order to avoid collision between the Japanese garrison in Wei-hai-wei and the Chinese troops quartered in the vicinity of that place, the two Powers agreed to establish a neutral zone. But the Chinese troops subsequently disregarded the compact and pushed beyond the limits of the zone. On this point also China has promised to adopt such measures as shall prevent any repetition of the abuse.

Lastly, China showed a disposition to regard Japanese residents at the newly-opened ports of Soochow, Chungking, and so forth, as coming under the control of her own police, but in that respect also she has admitted her mistake.

It is said that the Tsungli-Yamen has issued instructions to the various local authorities with respect to the above points, and has warned them to guard against any repetition of such unwarranted procedure.

The ground given to Japan in the eight old or new open ports, for the purpose of laying out Japanese settlements, is reported to total about 400,000 *tsubo*. The lease is in perpetuity and the annual rent is 2 *yen* per lot of about 260 *tsubo*. It is said that the Japanese Government will transfer the land to Japanese subjects desirous of carrying on business in those places, at the rate of three hundred and fifty, two hundred, and one hundred and fifty *yen* per lot, according to the grade of the site, and that no one applicant will receive more than ten lots.

FORMOSA.

The Governor-General's Office has issued a notification relating to the sale of forests and forest products, as well as fields, in Formosa. Sales will be of two kinds, namely, by public auction, according to Art. CXXII. of the Law of Finance, and by special process. According to the latter, an intending purchaser is to deposit as security a sum corresponding to one-tenth of the price, and the transfer will only be effected after the whole sum has been paid within a prescribed period, payment by installments being permissible when the price is above 1,000 *yen*. In default of payment within the prescribed period, or when an application is withdrawn, or when the applicant violates the rules of the established process, the security will be confiscated. He may also be ordered to pay damages should he have caused any injury to the land or forest. When, after transfer has been effected, the purchaser fails to remove his property—as in the case of timber or other forest products—within the prescribed period, postponement of removal will be allowed if he pays in advance a sum corresponding to a thousandth part of the price. When, without previous permission, removal is delayed, he is liable to incur fines of twice the amount due. When, after having effected transfer by special process in consideration of the use to which the property transferred is to be applied, the purchaser arbitrarily changes his original purpose, or sells, or transfers the property to another, he is liable to incur the imposition of a fine equivalent to the original price. He may also be ordered to pay damages. Forests or fields will be sold for converting into open ground or pasture, the area to be sold not exceeding 100 *cho* per applicant. The clearing of forests or laying down of pasturage must be effected within four years when the area purchased is under 5 *cho*; six years when it is under 20 *cho*; eight years when it is less than 50 *cho*; and ten years if less than 100 *cho*. An intending purchaser must erect posts or marks on the boundary line within 30 days calculated from the day on which the license was issued, and he must start work within 90 days, also counted from the same date. When the work has been completed the fact must be reported to the Governor-General's Office. When the completion of the work is acknowledged, the price for the land shall be levied and its transfer shall be effected. The land may be taken back by the Governor-General's Office when any process relating to the transfer is violated, or when work upon it is unduly delayed.

FUNERAL OF MR. W. R. H. CAREW.

The funeral services over the remains of the late Mr. W. R. H. Carew took place on Saturday afternoon, and were very largely attended. The Rev. E. C. Irwine read the first portion of the beautiful Burial Service of the Church of England at Christ Church, after which the sad procession was formed for the Cemetery. The pallbearers were Messrs. James Dodds, R. A. Mowat, Jas. Stewart, L. J. Healing, and J. R. Parsons. At the close of the service, the Rev. E. C. Irwine, in a short address, referred in feeling terms to the regret and sorrow experienced by the friends of the late gentleman at his untimely death. Mr. Carew had endeared himself to all who knew him by his manly yet gentle character, and his loss would be mourned by many besides those who were nearest and dearest to him.

The floral *in memoriam* wreaths and crosses that covered the coffin were very numerous and included, beside some stands of Japanese mourning flowers sent by the Chinese and Japanese staff of the Yokohama United Club, lovely memorials from Mrs. Carew, Mr. Porch, the Yokohama United Club, the Yokohama Cricket and Athletic Club, the Mosquito Yacht Club, Mr. and Mrs. Strähler, Mr. and Mrs. St. John, Mr. and Mrs. Jas. Walter, Mr. and Mrs. Blad, Mr. and Mrs. Rogers, Mr. and Mrs. Tilden, Mr. and Mrs. Pollard, Mr. and Mrs. Fearon, Mr. and Mrs. Dare, Mr. and Mrs. Showler, Mr. and Mrs. Jackson, Mr. and Mrs. Woodruff, Mr.

and Mrs. Dinsdale, Mr. and Mrs. Budd, Mr. and Mrs. Strome, Mr. and Mrs. Colomb, Mr. and Mrs. G. W. Middleton, Mr. and Mrs. Lowder, Mr. and Mrs. Syme Thomson, Mr. and Mrs. Thomas, Mr. and Mrs. C. D. Moss, Mr. and Mrs. G. Guinness, Mr. and Mrs. Parsons, Mr. and Mrs. W. Campbell, Mr. and Mrs. Hutchison, Mr. and Mrs. J. F. Allen, Mr. and Mrs. Healing, Mr. and Mrs. S. Isaacs, Mr. and Mrs. Whittall, Mr. and Mrs. C. F. McWilliams, Mr. and Mrs. Bramhall, Mr. and Mrs. Gillett, Mrs. Colomb, Mrs. J. P. Mollison, Mrs. C. K. M. Martin, Mrs. Patton, Mrs. Wheeler, Mrs. Kitchell, No. 2 Mess, and Messrs. Kingdon, Andreis, Kinjiro, Tanner, Abenheim, M. Russell, Choep, Sutter, Schedel, Jephson, Adet, Babington, Daniel, Heap, Bent, Yasuda, Macondray, de Flesch, Fox, Herliby, Kaufmann, J. Fraser, W. Gordon, White, Hellendaal, Blum, and Dr. Runkwitz.

ELECTION INDICATIONS IN AMERICA.

The political barometer in America fluctuates very sharply, the mercury running up on the Democratic or the Republican side with remarkable regularity of alternation as lines of party cleavage are accentuated in this State or that. Louisiana has been a Democratic victory; Oregon, a Republican; Alabama, a Democratic; Vermont, a Republican, Arkansas, a Democratic, and Maine, a Republican. In the face of such a record, it is exceedingly difficult for outsiders to arrive at any clear forecast of the great December issue. Each party tries to belittle all indications favourable to the other, and so clever are these attempts that the grain and the chaff become indistinguishable. One fact, however, emerges plainly enough: it is that the people are excited to a degree of earnestness without precedent. The returns from each State show that the numbers polled are markedly in excess of those in previous years. It will be understood, of course, that the elections referred to are not Presidential, but merely for governors or congressmen. Still their results indicate pretty clearly the line that the States in question will take in December. We can not, for our own part, anticipate anything like a Democratic victory. The Bryan programme goes so far beyond the limits of reasonable finance that its endorsement by a reflecting nation seems incredible. Many a man who sees clearly that the rehabilitation of silver is absolutely essential to the world's prosperity, must hesitate before setting about the operation in a manner reckless of all the dictates of moderation. That silver will ultimately be restored by American action, we do not doubt. For the success of Republicanism next December would not bring back prosperity or re-establish business confidence. It is as bad for the merchant and the manufacturer that tariffs should become political weapons as that the currency should be perverted into a party platform by men of boundless rashness. Some contend that since of all things injurious to business uncertainty is the most injurious, therefore it would be better that the silverites should win the day in December, and that America should thus become a silver monometallic country once and for all, for such would certainly be the result of the financial leap proposed by Mr. Bryan. But the American people will probably think twice before they follow the Democrats over such a precipice. Yet, silver they will rehabilitate, sooner or later.

TERRIBLE ACCIDENT NEAR YOKOHAMA.

A terrible accident happened near Honmoku, Yokohama, about seven o'clock on Thursday evening. Mr. Kaneko Kamakichi, a barber, was engaged in blowing up a fox's hole near Sugita hill with dynamite, when the charge prematurely exploded. The man was severely injured about the head and body and his companion, Mr. Watanabe Eikichi, aged 33, was also wounded. Kaneko was taken to the Juzen Hospital, where little hopes are held out of his recovery; and Watanabe was taken to the Police station pending inquiries.

FINDING IN JUDGE BESSHO'S CASE.

The Supreme Court, after due hearing of the case against Judge Bessho, pronounced judgment on the 22nd inst. in favour of that official, and decided that the costs of the litigation must be borne by the State.

The facts adduced and the reasons of the finding are these:—The accused, while serving in the Kofu Local Court, received, through the acting Chief Judge of that tribunal, a notice from the Minister of Justice, dated May 13th, 1896, that he had been transferred to the Aikawa District Court. He returned the notice on the ground that such an order was *ultra vires*, being contrary to the provisions of Art. LXXIII. of the Law for the Organization of Law Courts. On May the 22nd, the Secretary of the Department of Justice, acting in obedience to instructions received from the Minister of Justice, sent another written communication, to the effect that, in filling up vacancies produced in the *personnel* of the Niigata Local Court, such vacancies having been caused by removal of six Judges to Formosa, the prompt discharge of judicial functions might be prevented if new men only were appointed, and that, consequently trained experts of experience like Judge Bessho, had been chosen as far as possible. The document further stated that, so long as the removal was effected in accordance with the provisions of Art. LXXIII. of the said law, and so long as the official notice was duly forwarded through the proper channel, the recipient of the notice, no matter whether he returned it or not, was clearly and as a matter of course a Judge of the District Court of Aikawa, and therefore he must, in accordance with Notification No. 17, Class D., proceed to his destination within the space of two weeks. This intimation from the Department of Justice and another of similar import subsequently conveyed to Judge Bessho, in each case through the Chief of the Kofu Local Court, were disregarded by the Judge, who persisted that he did not think it obligatory to obey what he considered an unlawful order. Now the provision in the above Law, with reference to the compulsory filling of a vacancy, becomes applicable only when no Judge of suitable status consents to be removed, and when, in consequence, the legal business of the Court in which a vacancy has occurred, is in danger of being retarded. This is borne out by another provision of the said law, which clearly sets forth that no Judge shall be removed against his will. An exceptional case must be interpreted in a restrictive sense, otherwise the whole spirit of a law might be destroyed by a single provision. Therefore the Court decides that the judgment of the lower tribunal, namely, that the defendant's action falls under Clause 1, Art. I., of the Law of Discipline of Judges, and that, in accordance with Clause 5, Art. II., of the said law, he should be dismissed from office, was not proper. The Court consequently reverses that judgment in accordance with Clause 2, Art. XLIV. of the said law, and acquits the defendant.

The decision of the Supreme Court does not terminate this vexed question, for the judgment merely relates to Judge Bessho's action, saying nothing as to whether the administrative order originally issued by the Minister of Justice should be held valid or invalid. That order stands as before and will continue to stand so long as it is not withdrawn. Theoretically considered, the Minister is at liberty to insist upon the removal of Judge Bessho, irrespective of the verdict of the Supreme Court, and the Judge may persist in refusing to be removed, so that the affair may drag on *ad infinitum*, since at present there is no special mechanism in Japan for dealing with a case of the kind. It is believed, however, that a compromise will be effected, and that Judge Bessho will be removed, presumably with his own consent, to some other place. One rumour has it that the Judge will resign and practice as a barrister.

The most curious incident connected with this affair has been the resignation of Chief Justice Miyoshi. The Chief Justice appears to have thought that the other Judges of the Supreme

Court were bound to subserve their opinions to his, and not being able to enforce that idea, he resigned. If the affair finally disposes of any such old fashioned fancies, something will have been gained.

THE GOLDITES AND THEIR METHODS.

Mr. David A. Wells, doubtless an economist of distinction but scarcely yet included in the ranks of celebrities, refers to Mr. Morton Frewen as "that silly Englishman." It is this tone of intolerant insolence that discredits so much of the writing of the anti-bimetallic school. The hauteur of conservatism seems to deprive them of all capacity to be courteous. They are so wise in their own conceit that every one venturing to differ from them is a fool in their eyes. Yet they ought by this time to have acquired some perception that their position is not absolutely unassailable. Twenty years ago, indeed, the voices of the bimetallics were few and feeble. Here and there in the *gorges vastus* of the monometallic heresy a rare Cernuschi or a Lavelaye ventured to raise his head, and found himself immediately greeted with a storm of derision. In those days the arena was virtually occupied by the gold men, and it was much if they could be persuaded to admit that some academical interest attached to the silver question. But what a change has come over the world since then! Instead of being whispered in corners, bimetallicism now fills the atmosphere everywhere. It is the question of the day *par excellence*, and surely the gold men should be able to perceive that their old pedestal of arrogant certainty is not less antiquated than absurd. They have always received civil treatment at the hands of their opponents. Is it beyond the range of their politeness to return like for like? If the crust of custom has grown so thick over their intellect as to render it impervious to any idea from without, can they not at least see that the forces arrayed against them have grown too formidable to be treated with rude disdain?

A MARVELLOUS MACHINE.

Mr. E. Charquette, of Bridgeport, in Connecticut, claims to have invented a machine which defies all the laws hitherto laid down by physicists, inasmuch as the power applied to set it in motion is only a small fraction of the power that it develops. Many devices already exist for multiplying power, but none operates without some corresponding loss in another direction, whereas Mr. Charquette insists that he can obtain a return of 2,500 units of horse-power out a machine upon which only 140 units are expended. Here is a description of the machine, reproduced by the *Literary Digest* from *The Railway Age*:—

The machine is an immense horizontal wheel, a little over 82 feet in diameter, composed of ten spokes or arms and the periphery made of latticed steel girders. By revolving this great wheel by means of two 70-horse-power steam-engines, located on a platform in the hub, 2,500 horse-power is to be developed in the shape of air under a pressure of 100 pounds per square inch. To attain this great power by the use of so little, at the end of each spoke a set of three vertical wheels 9 feet in diameter, and each weighing 41 tons, are to be journaled. The middle wheel of the three is to run upon a circular track, and the outside and inside wheels are to act upon the rocker levers of 100 air compressors, which in turn are to work the pistons in the air cylinders. The cylinders are 12 and 16 inches in diameter, and all have a stroke of 12 inches. An air tank carrying a working pressure of 100 pounds to the square inch is provided, and the air is led by pipes to this tank from the compressors. The large wheel is revolved at the rate of ten revolutions per minute by the two 70-horse-power steam-engines, and the solid 43 ton wheels in the periphery of the large horizontal wheel, continually engaging the rocker arms, do the rest.

Naturally something must happen, and it is seriously anticipated that 2,500 horse-power will be developed by this mechanism.

The criticism of *The Railway Age* is this:—

Under these circumstances, it seems natural to suggest that the use of the 70-horse-power steam-engines does not seem apparent. After the 2,500 horse-power has been developed 44 per cent. of it can be borrowed to keep the thing moving and the balance is clear gain. In fact, after it is started everything is clear gain, and it must run on forever or break down. As an off-hand suggestion it would seem that it might be as well to save the expense of the two steam engines, and start the revolutions by means of a crank and pinion.

THE NEW BATTLESHIP
"ILLUSTRIOUS."

The battleship *Illustrious* was floated out of dock at Chatham on September 17th in the presence of a large and distinguished assemblage. The ship was named in the orthodox fashion by Lady Bedford, wife of Rear-Admiral Sir Frederick Bedford, second Sea Lord of the Admiralty. The *Illustrious* is a sister ship of the *Magnificent* and *Majestic*. The principal dimensions of the *Illustrious* are:—Extreme length over all, 420 ft.; breadth, 75 ft.; draught, forward, 27 ft.; aft, 28 ft.; freeboard, forward, 25 ft.; amidships, 18 ft.; aft, 18 ft. 6 in.; displacement to load water-line, 15,000 tons. The vessel is built entirely of steel, and is effectively armoured. The sides in the vicinity of the load water-line are clad with hardened face solid steel plates, 9 in. thick, extending over a length of 216 ft. amidships. At the ends of this belt are rounded armour bulkheads, also of "Harveyed" steel, 14 in., 12 in., and 19 in. thick, which extend from the sides of the ship to the barbettes. The barbettes differ from those of the *Magnificent*, being circular, whilst those of the latter were pear-shaped; they are also of "Harveyed" steel armour, the upper tier being 14 in. thick, and the lower (which are behind the side armour) 7 in. thick. The main belt of armour is 15 ft. in breadth; the strake next above this, affording protection to the secondary battery of 6 in. guns, being 6 in. thick. A protective deck of steel, varying in thickness from 3 in. to 4 in., extends the whole length of the ship, and gives security to the propelling machinery, hydraulic machinery, air compressors, steering gear, the magazines, and shell rooms.

The propelling machinery consist of two sets of triple expansion engines, developing 10,000 horse-power under natural draught, and 12,000 horse-power with induced draught, with speeds of 16.5 and 17.5 knots respectively. She will carry four 46-ton 12 in. wire-guns in pairs, in the redoubts, and twelve 6 in. quick-firing guns, all protected by casemates—eight on the main and four on the upper deck. Eight 12-pounder quick firing guns will be placed on the upper deck amidships, and eight others on the main deck, fore and aft. Each of the ship's four "fighting-tops" will carry three 3-pounder Hotchkiss guns, and eight 45 in. Maxim guns will be placed on the boat-deck and bridges. The ship will also carry 17 torpedoes. She is to be completed in June, 1897, by which time the expenditure upon her will have approached the sum of one million sterling.

TRANSMUTATION OF METALS.

In earlier, and as we are pleased to think, less civilized years, alchemists devoted decades of study and experiment to the task of transmuting metals, and they are now remembered with laughter for their pains. Yet their ambition seems to be immortal, for even now, in the closing years of the nineteenth century, several American journals announce that Dr. Stephen H. Emmens has discovered a chemical process by which silver may be transmuted into gold. Scientific men are sceptical. The editors of *The Engineering and Mining Journal* especially have endeavoured to discredit the alleged discoverer. They say that while science does not deny the abstract possibility of such a transformation, many great thinkers being persuaded that all metals are merely allotropic forms of one primitive base, they can not accept Dr. Emmens' unsupported word, and Dr. Emmens, who appears to be working in the interests of a syndicate, declines to expose his processes. It is recalled that Paraff, not so very long ago, claimed to be able to transmute copper into gold, but never succeeded in doing anything except transmuting other people's gold, into his own gold. However, the story told by Dr. Emmens himself in the *Journal* is this:—

It is, of course, out of the question for me to make public the whole of our knowledge in this matter. But I may without danger to our interests give a general explanation of our work which will be satisfactory to the scientific world.

Our starting-point, so far as silver and gold were

concerned, was afforded by the remarkable discoveries of Mr. Cary Lea with regard to the changes that could, by laboratory methods, be induced in the molecular structure of metallic silver. That gentleman discovered a means of causing silver while still in a metallic condition to enter into aqueous solution.

In other words, he discovered a method of reducing metallic silver to a condition of extremely minute subdivision. It was found, as might have been expected by anybody familiar with the periodic law of the elements, that this subdivision of metallic silver was attended by considerable changes in the physical properties of the substance.

The inference was obvious that if such subdivisions could be pushed a stage further, the silver molecules would become dissociated if they were in themselves of composite structure. And as all chemists have long been agreed respecting the reality of such composite structure, we felt absolutely sure of our ground.

Accordingly, when by certain physical methods and by the aid of certain apparatus, we succeeded in bringing about further subdivision of the silver, we were not surprised to find that the substance obtained differed so far from ordinary silver that it could no longer be regarded as the same elementary substance. It seemed to require a new name and chemical symbol.

Inasmuch, therefore, as our theory was that this substance was common to both gold and silver, and in reality was the raw material out of which both gold and silver were constructed by the hand of nature, we named the substance "argentaurum." We also gave it the chemical symbol "Ar."

Dr. Emmens goes on to say that further test showed that this substance was identical, so far as all known properties went, with ordinary gold, and that he believes it to be gold. He estimates that the waste in the transformation is about twenty-five per cent., and the cost sixteen dollars an ounce, so that the profit would be considerable. He adds, in a later statement:

The metal which we have made from silver answers every test to which the United States Government Assay Office subjects the gold offered there for sale. It is, therefore, gold to all intents and purposes. This metal made from pure silver by the process discovered by us could be proved to be gold in a court of law. It not only answers every test of the government mints, but it also has every quality required by the gold of commerce, having the same colour, weight, and strength.

A GLIMPSE OF OLD TIMES.

Mr. Mitsuoka Shichirobei, who resides at Dango-zaka in the Komagome district of Tokyo, is the fortunate possessor of a house to which the Shogun Iyenori paid several visits in old times. The rooms thus honoured have now been restored to all their original artistic beauty, and their owner—we translate from the *Foros* *Choho*—proposes to admit the public to view them. To make the spectacle more entertaining, there is to be, at the same time, an exhibition of some 500 figures, divided into five groups, representing processions of the *Daimyo* of Choshu, Nabeshima, Tajima (Yagyu), Akimoto and Matsudaira, of Dango. The figures are the handiwork of Mr. Yamada Ikuyemon, now Chief Spearsman in the Household Department, who is said to have spent thirty years modelling and robing them. The display commences on the 30th instant and lasts 30 days.

INTEREST ON PUBLIC BONDS.

The *Yomiuri Shimbun* notes that the interest of various loan bonds constituting part of the national domestic debt begins to be paid on November 1st, and will be completely discharged by the 15th or 16th of December. The payments are these:—

Half a year's interest at 5% on Consols amounting to 160 million yen	4,000,000
Half a year's interest at 5% on War Bonds amounting to 80 million yen	2,000,000
Half a year's interest at 5% on Naval Bonds and Pension Bonds amounting to 80 million yen	2,000,000

Total 8,000,000
Such a large sum coming into circulation within the course of six weeks, ought to produce a sensible effect on the money market.

Lieut.-General Nogi, Governor-General of Formosa, family and suite, left Shimbashi Station on Thursday at 10 o'clock. Mr. Hashiguchi, Governor of Daihoku (Taipei) Ken (Formosa), and family accompany them to Formosa.

AMERICAN BANKERS ON SILVER AT 16 TO 1.

A declaration of principles was adopted by the executive council of the American Bankers' Association at a convention in St. Louis on Sept. 22nd. Many of the views contained in the declaration have already been advanced in our leading columns with reference to the course—a reckless course, in our opinion—advocated by Mr. Bryan and his supporters. The document will have much interest for our readers:—

The American Bankers' Association, in its twenty-second annual convention assembled, and representing every section of the Republic, hereby declares that in its opinion the existing commercial depression is immediately due to the attacks which threaten to overthrow the present gold standard of value, and that we further believe our full measure of national prosperity will not be gained until the whole world understands that the dollar of the United States is 100 cents' worth of gold and that the nation intends to keep it at that value.

We believe that an opportunity is presented by the issue of this political campaign to give a lasting definition of the dollar as a money unit, to permanently settle the foundation of an overturn of values, and far-reaching ruin and distress, which a descent to a silver basis would involve.

We warn our countrymen against the rash proposition that this nation should single-handed attempt to legislate silver to a parity with gold at a fictitious ratio.

We declare that the free coinage of silver means monometallism, with gold at a premium, all other forms of our currency at a discount, and the value of the dollar an uncertain quantity, depending each day upon the gold price of silver bullion, with corresponding fluctuations in the value of all kinds of property.

We believe that before the mints could begin to coin silver every dollar of gold would disappear from circulation, thus violently contracting our currency, and that the value of the remaining dollars would be the bullion value of the silver in them measured by the gold standard of the chief money-markets of the world.

We denounce as utterly false the claim that the gold standard is a device of bankers, creditors, and financiers. They have no such power in human affairs, and never had. The gold standard is an edict of commerce translated into law. It was dictated by those who conduct the commerce of the world rather than those who handle the money of the world. It is rooted in a preference lodged in the human breast. Test of the weight of the two metals in quantities of equal value shows how and why traders decided in favour of the money which they could carry with the least burden and use wherever they might go to the best advantage. Gold commands all values because it is the most stable in value. It was not legislated into the world's finance until commerce selected it as a gauge, and it will not be legislated out of use if laws are changed. We assert that mere "money changers" have always found more profit in a fluctuating than in a stable currency, and that one source of revenue which those who thus handle money always had when the money was not stable has been closed up in this country the influence of the gold standard, and that what they have lost by revenue has been gained by producers and merchants. But bankers are not mere money-changers; they are trusted custodians of the money of the world.

"As bankers we are debtors to the extent of our deposits. We have received these deposits in money as good as gold. We desire to return them in money of equal value. It will be impossible for banks, life-insurance companies, mutual benefit orders, building and loan associations to return to their creditors money equal to that which they received if our currency is depreciated to the bullion value of the silver dollar. We have no interest in the metal composing our national standard of value which is not shared by every man who owes a dollar or has a dollar due to him. We desire to have debts due us paid in as good money as we have loaned. We desire to pay our debts in the same way. The banking business is not vitally dependent upon any specific standard or upon any particular kind of currency. It adapts itself to all conditions, but conscious of the needs of our customers, we earnestly desire to see our country purged of the monetary delusions which drive money out of the channels of business. A dollar of fixed value in the world's commerce has the power to make markets, sharpen trade, invite capital, develop resources, and extend our national power and influence. A doubtful or depreciated dollar will blight every man's prospects and prove a curse. As bankers, we want the dollar which will do our country the most good, and commend to all our countrymen the opportunity they now have and which will decide upon the future value of their dollar, and to remove from our land the menace which has destroyed more values and caused more suffering than war or pestilence."

The only point in the above to which emphatic exception must be taken is the assertion that "gold commands all values because it is the most stable in value." This statement implies that gold possesses, above all other metals, some inherent property of stability. But that is a mere postulate. Gold seems to owe its stability, in great part, to the fact that legislation has assigned to it a virtual monopoly of the functions of a money token. Were gold demonetized, as silver has been, were it reduced to the rank of a mere commodity as silver is, it would doubtless fluctuate as silver has fluctuated. Certainly the figures showing the annual production of the yellow metal betray variations not less acute than those of the white.

MR. KAWASHIMA JUN, M.P.

Mr. Kawashima Jun, M.P., has been giving the *Mainichi* the benefit of his views on some needed amendments of the taxation system in his country. He argues that the better control of rivers is urgently needed, and that to obtain the money necessary for this object the Government should reduce the land-tax and raise the money thus saved to farmers and landed proprietors in another form, which, while not adding to the burdens of the people, would produce funds for this much needed project. He urges that the interests of the farming classes are still paramount in Japan, but his financial remedies, as given in the *Mainichi*, are decidedly obscure. One thing is certain, however: he is opposed to Mr. Taguchi's theory that the farmers' burdens are too light. He thinks that Marquis Ito inserted the clause in the Shimonoseki Treaty regarding the manufacture of various goods in China by aliens, as a compliment to foreigners, and he holds that much sense has been displayed in abandoning it, as the lion's share of benefit would have fallen to foreigners. He is at one with Count Kabayama in declaring that the Sovereign of Japan is paramount in his influence in the Cabinet, that his voice is above that of the people of this empire, there being a great difference between Japan's Constitution and that prevailing in England. However, the Cabinet should not disregard the views expressed by the Diet, and he thinks the Home Minister fully intends to court the good opinion of the majority in the House of Representatives.

JAPANESE YARNS VERSUS CHINESE.

It is a very interesting question whether cotton yarns manufactured in Japan will be able to compete with yarns manufactured in China under foreign management. The *Asahi* undertakes to answer it. There are 430,000 spindles already working, or soon to be working, in China, says our contemporary, 230,000 of them being in factories built with foreign capital in Shanghai. On the other hand, the two factories projected by Japanese capitalists would have only some sixty thousand spindles. Moreover, from the financial point of view, it is calculated that after deducting all expenses, and on the hypothesis of complete freedom from taxation, yarns manufactured in China leave a clear profit of 17½ per cent., and yarns manufactured in Japan and carried to China can be sold there at a profit of 10 per cent. If, therefore, the Chinese Government puts into practice the intention now attributed to it, and imposes a tax of 10 per cent on yarns manufactured in China, it is plain that profits accruing on the latter will be reduced to 7½ per cent., as against 9½ per cent. accruing on imported Japanese yarns. We (*Japan Mail*) do not vouch for the accuracy of these figures, but there can not be much doubt that if yarns made in China have to pay an impost of 10 per cent. on leaving the factory, Japanese manufacturers ought to be able to compete.

AMENDMENT IN TAX COLLECTION

The Government issued the Amended Tax Collection system on the 21st instant, and the amendment is to come into force from the 1st prox. Tax collection was hitherto under the control of the Local Offices, but has now been transferred to the Department of Finance, the expansion of taxes making this amendment necessary. The 46 Local Chief Tax Collectors are to be replaced by 38 Senior Tax Collectors to be stationed in 38 different districts. Another important change is the appointment of 108 probationary tax collectors to be selected from junior tax collectors of over five years service, and above the 5th clerical rank. Junior tax collectors at present total about 4,700, but according to the amended Regulations some 600 new clerks are to be appointed.

BANK OF CHINA AND JAPAN, LTD.

A circular forwarded to shareholders states as follows:—The accounts, to June 30 last, from branches have been so far adjusted that the Directors are now able to issue a statement, as promised at the meeting held on April 16 last. The balance sheet on Dec. 31, 1895, showed old fixed deposits outstanding £735,324. Since then there have been repaid Jan. 1, 1896, 10 per cent. £113,178; July 1 1896, 15 per cent., £169,713 16s. 7d.; reducing such deposits outstanding to (40 per cent. of original amount) £452,433 6s. 1d. The proceeds of realisations effected since June, and the installment due next month of 10s. per share of the call of £3 15s., will enable another substantial repayment to be made at the end of this year. The number of ordinary shares applied for and allotted up to date is 106,223, and further applications are still being received. Judgments have been obtained in all suits brought in British Courts by the Liquidator of the Old Bank against defaulting shareholders for the payment of calls, leading in many cases to satisfactory settlements. Chinese and Foreign shareholders did not appear in these Courts, and suits are being instituted by the liquidator in the local Courts in Shanghai, New York, and elsewhere, to enforce payment of calls, and it is expected to obtain favourable judgment also. The six months' working has about met the expenses of establishments, and the service of the Bank has much aided the liquidation of outstandings. The credit of the Institution has distinctly improved.

CORRESPONDENCE.

Our readers must distinctly understand that we are in no sense responsible for that sentiment or opinion of our correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

MIXED COINS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—The proposition of your correspondent "Enquirer,"—that coins composed of gold and silver will always remain of the same value—may catch the fancy at first sight, but on examination appears to be fallacious. The metals in the supposed coin cannot be measured by one another indifferently, but must be subject to a single unvarying standard. If a gold dollar and a silver dollar had been melted together and minted as one coin twenty-five years ago, before the depreciation of silver began, the value of that coin would then have been two dollars. To-day its value would be only one dollar and fifty cents. The gold remains worth one dollar, as at first. The silver is worth fifty cents. If a mixed dollar had been coined in the same proportions, that dollar would now be worth only seventy-five cents. The gold may appreciate in relation to the silver, but its value as a component part of the coin remains precisely what it was. The mixed coin would have no stability unless the coinage value of silver were made fixed and unalterable by universal agreement; and in that case mixed coins would not be necessary.

Yours truly, E. H. H.
Tokyo, October 23rd, 1896.

NEEDLESS GUSH.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I am quite sure that it is not worth one's while to pay attention to every bit of sentimental bosh that appears in these latter days in regard to Japan and its people; but if someone does not occasionally scrape a little gift off these sunset-hued pictures, the glare will be past all endurance. It may be true that in certain decayed aristocratic circles in Japan, there is quite as great reluctance to mention the word money, as there is to do honest work to acquire enough of that article to support family life in comfort. But having somewhat intimate knowledge of the affairs of a gentleman at present living in Satsuma, I hasten to disabuse anyone of the idea that it is a safe place in which to leave out reference to the Tenth Commandment in moral instruction, the Sendai contributor to the *Japan Evangelist*, quoted in your columns, to the contrary notwithstanding. If raising a man's house-rent one-third because of the general rise in prices, and within two months raising it again an equal amount for the expressed reason that the occupant is a foreigner, and it is

customary to get a good round price out of a foreigner, and this on the part of a noble *shisoku*, is not covetousness, what should it be called? I have myself had some direct dealings with the people of that section. I am not sure that I have ever exhibited coin in the presence of what would technically be called a "gentleman," but in general I have never witnessed any greater shock on the exhibition of currency there than is customary in other parts of the world.

There is no especial reason for finding fault with the Japanese as a people. They are of about the same nature as other specimens of the *genus homo*, no better, no worse. But I am heartily tired, and I am sure I have many sympathizers, of hearing them continually treated like a parcel of dear little children, who are to be patted now here, now there, now praised, now apologized for, till one is led to suspect that perhaps after all, some at least of the writers are not sincere, and rather wish to lead the world to believe that the Japanese are a unique collection of emasculated wax dolls.

Yours very truly, SOJOURNER.
October 30th, 1896.

LETTER FROM BOSTON.

(FROM OUR OWN CORRESPONDENT.)

September 30th.
The Presidential campaign is of absorbing interest. You cannot pass along the streets without hearing the question of free coinage discussed by the labourers, and especially the unemployed, that stand at the corners waiting for something to turn up. Protection and free-trade seem to have lost their hold on the minds of the people, and the newspapers are unable to force these questions to the front. McKinley and Bryan work hard, especially the latter, who seems bent on making a tour of the whole of the Northern states. An eloquent and magnetic *extempore* speaker, he has made the best impression everywhere, especially here in Boston, with the single exception of New York where, to the disappointment of the thousands that had come to hear him, he read his speech from manuscript, a mistake he has promised himself not to repeat elsewhere. Bryan's campaign in the East is disapproved of by many of the party managers as a useless undertaking; but throughout the East, even in New York and Pennsylvania, there are districts where silver Congressmen may be elected if the people are sufficiently stirred up, and Bryan, with his chivalry and eloquence, is a man to arouse enthusiasm wherever he goes, and is thus well able to assist his friends in need. His declaration that "the life tenure which relieves an official from all further care is destructive of the highest citizenship and is not to be tolerated in a country like ours," has somewhat injured him with civil service reformers. Significant of the spirit of the campaign is the popularity of a song the refrain of which is "You shall not press the crown of thorns upon the brow of labour," a sentiment first expressed by Representative McCall, of Massachusetts, in 1894; and repeated by Bryan in his famous Chicago speech.

McKinley is almost as active as his young rival. Nearly eighty thousand people assembled at Canton, the other day, to honour him; hand-shaking, reviewing parades, and making brief speeches occupy much of his time. The Congressional Committee of the Republicans has sent out one hundred and twenty-five car loads full of campaign literature, and among it a million copies of Carlyle's speech to the labouring men in Chicago. The Republicans are confident of success, and rely on a sentiment that has always been very powerful in the United States and that Mr. Foraker has thus expressed: "Can we afford to make an experiment station of the White House?" While few of them believe in the possibility of Bryan's election, some are willing to concede that he might succeed in getting the majority of the popular vote.

The Gold Democrats seem to carry on their campaign in a listless manner, considering the third ticket as "a means of keeping in organized form the ancient principles of democracy." Most of them, especially in the doubtful States, will vote for McKinley when election day comes, hoping that any tariff measure later on can be defeated by combination in the Senate, especially as there seems little enthusiasm among the people for another tariff that would again unsettle business conditions. Owing to the American Republican College League and its efforts, most of the students of the country are McKinley men, especially so at Harvard, Yale, and the Wisconsin State University. Even the girls at Smith and Wellesley have started clubs to influence "fathers, brothers, and sweethearts" in the same direction. In the West, however, Bryan is more popular in the colleges, es-

pecially as he is still a very young man. Many college professors have retired their free trade views for a time and purpose voting for McKinley, especially that life-long democrat President Hyde, of Bowdoin.

One fact of the campaign is characteristic of party feeling and discipline. Fifteen States had sent delegates to the Chicago Democratic Convention pledged to resist the adoption of a free silver platform, yet about two months afterwards fourteen of the Democratic State organizations had accepted the Chicago platform unreservedly. The State convention of Maine "resolved, that we take from our state platform the following declaration: 'We oppose the free coinage of silver and favour the single gold standard, unless a different standard is adopted through international agreement,' and that we indorse the national Democratic platform, with Bryan and Sewall." A cooler *volte face* cannot easily be imagined. There are few congressional candidates that can avoid giving definite and binding pledges much as they may agree with the sentiment thus expressed in the *Biglow Papers*:

I don't approve o'givin' pledges;
You'd ought to leave a feller free,
An' not go knockin' out the wedges
To ketch his fingers in the tree.

Japanese tea growers must bestir themselves. The representatives of the Ceylon planters in America are very able men and, what is more, extremely active. In 1894, the consumption of India and Ceylon tea was reported to have been 5,379,542 lbs.; in 1896 the figures rose to 9,283,144 lbs., an increase of over seventy per cent. It is advertised that "only half the quantity of India and Ceylon tea is required as compared with China and Japan." Japanese tea has still a good hold on the country districts of New England, but in Boston it seems to have become less popular of late. The Japanese plum, especially the variety called Botan, recently introduced, seems to thrive well in some parts of the United States, much better than European varieties. It has lately been crossed with American plums, especially in Missouri, with a view to increasing its size, quality, and hardness.

The coming jubilee of Queen Victoria is attracting much attention, and many good words are spoken of her both in private and in the press, and incidentally also of Cousin Bull, who is generally recognized as "a good 'un when you know 'im, but you 'av to know 'im first." Rudyard Kipling has left, and Lord Russell has reached our shores. The former and his family had become very popular among the Vermont farmers, and they may, perhaps, return to the United States.

Boston does not present its usual aspect. The work on the subway, undertaken to relieve the congested state of the business part of the city, does not contribute to enhance the beauty of the Commons, the Public Garden, and Tremont Street. Carts are going and coming, and confusion seems to reign supreme. The citizens are anxious that the work should be done quickly and well, and Contractor Everson bends all his energies to that end. If Boston cannot boast of the fine condition of its streets at present, her citizens rejoice at the steady increase of her foreign commerce, and as the Interstate Commerce Law secures to Boston a fair field and no favour, they are anxious to show that the claim that "everything must gravitate to the metropolis on Manhattan Island" is not based on fact. The wonderful apple crop in New England has sent freight to Liverpool and Glasgow up 75 and even 100 per cent., and there is a total of 3,000,000 barrels that await shipment to Europe. Like all commercial cities, Boston has a large foreign born population, as is attested by "Little Italy" west, and "New Jerusalem" east of Hanover Street, as also by "China Town," a very respectable part of the city, very different from the Chinese quarter of San Francisco. The Hebrews residing in Chelsea recently adopted a special political organization, and control about one-fourth of the votes there. Needless to say that they are nearly all in favour of gold.

The plans for the new Art Museum in Worcester contemplate an expenditure of \$300,000. Japanese art, I suppose, will be as well represented there as it is in Boston. Tokyo is not enjoying a monopoly of "funny" shop signs. In a city not far from Boston there is a restaurant with this sign above its door "All odors executed with despatch." A fit of the blues can be cured in Boston for one dollar a week as advertised in the local papers. Let us hope that the advertiser may not have to take his own medicine. This is a verdict recently brought in by a Maine jury: "Deceased came to his death by excessive drinking, producing apoplexy in the minds of the jury." Latest definition of Christianity's leading doctrine as given by a Chinese at Sunday school: "Buy thow stone, smash window, try catchee, no can catchee, for-givum."

AUSTRALIA AND JAPAN.

By JOHN PLUMMER, M.J.S.

Sydney, September 22nd.

The Hon. Audley Coote, who lately visited Japan in connection with the Pacific cable and other commercial matters, has created something like a sensation in Australia by the somewhat startling views of Japan and Japanese affairs communicated by him to the representatives of the leading papers in Brisbane and Sydney. In the latter city he told a reporter that his opinion of the Japanese was—"that they are like a lot of school-boys who have taken their master by surprise and given him a thrashing, and as certain as the sun will shine to-morrow they will come to grief. They are spending money like water. They have invested between ten and fifteen million pounds sterling in building battleships and making fortifications without thinking for a moment what it will cost to maintain these undertakings. They will not listen to reason, even from their oldest advisers who are still staying in Japan. In fact they have become absolutely insolent. Their export trade is nominal compared with that of China or other countries. There is certainly plenty of coal there, and they export rice, tea, silks, and matting. As soon as they have to enforce taxation to maintain their great navy then there is not the slightest doubt that their internal troubles will follow. At the present time they want and are determined to have an outlet for their surplus population. They are looking around in all directions for a suitable country to send settlers to. I was on one occasion travelling on a railway during my visit with a friend who had been 30 years in Japan, and who spoke the native language fluently. In the carriage were five or six Japanese military and naval officers. My friend said, 'What do you think these men are talking about? Australia.' They say that you are doing nothing to develop Australia—that you have a large country, fine pastoral lands, great forests, and in the north excellent lands for growing rice, coffee, tea, and other tropical products; that you are like a dog in the manger among nations, and that someone else will have to take a good part of Northern Australia and develop it!" The officers went on to say that it was a great pity to see such a great country lying waste. They recognised that England was a useful nation to be allied to in the case of war, but if any ill-feeling occurred between England and Japan the first object of the latter would be to send their best battleships down south to annex a large portion of Northern Australia. This is only representative of the feeling of Japanese regarding this country. It is not surprising that such a small country, teeming with its 45,000,000 of inhabitants should regard Australia with its 4,500,000 with a certain of feeling covetousness."

Mr. Coote went on to relate another circumstance in regard to his apprehension of the Japanese. "When I was coming down in the *Chingtu*," he said, "Mr. Omitsu, representing the Japanese Intelligence Department, was on board. He told me he intended to travel all over Queensland, and thence over the greater part of Western Australia. His object was to find out where labour was required, and where sugar, rice, and coffee could be grown. The information he obtains is to be sent back to the Government of Japan, and to the Japanese press. I found that Mr. Omitsu was provided with all the maps of Queensland showing all the towns, both coastal and inland. He told me where supplies could be obtained. It is remarkable how fully the Japanese are posted up in the resources of other countries. I was informed by one of our consuls in China that during the war Japanese were found in possession of maps of every village and town in China, with particulars of their population and their ability to afford supplies. None of the consuls could conceive how the Japanese had succeeded in getting this information or when they had obtained it, but when the necessity arose they were not slow to make good use of it. In the same way Mr. Omitsu showed me that he was provided with similar maps of Australia."

These utterances of Mr. Coote have occasioned considerable uneasiness in Australia and assisted in intensifying the popular dislike to Asiatic immigration, but there have not been wanting persons having a more extensive knowledge of Japanese matters than is evidently possessed by Mr. Coote, to actively combat his assertions. Among these is a Japanese art-worker, named Inosaki Takuma, resident in Sydney, who has been interviewed by the representative of one of the weekly papers in that city. In the course of conversation, Mr. Takuma, referring to the statements made by Mr. Coote, said,—"I think that gentleman knows nothing about Japan or Japanese intentions, if you ask me [dropping into the vernacular like a

son of the soil]. First of all no naval or military officer even if he ever thought, as he is reported to have spoken, would have given public expression to his feelings in the way stated. Personally, I would not take the least heed of such statements. Japan is certainly going in for a progressive policy, but it is a policy of peace and enlightenment. She wants to light up the dark spots in Asia, and to do that she will have quite enough to occupy her without going so far afield as Australia."

"But how about her large military and naval expenditure?"

"Well, she has to be prepared to protect herself from her neighbours. She is not done with China yet, I suppose, and there is also Russia."

"Mr. Coote says the country will soon go bankrupt, because of the huge expenditure on war material."

"He does not know what he is talking about. Japan, as it happens, has just now a very capable Minister of Finance."

"Then you don't think Japan has any sinister designs upon Australia?"

"No, it is too ridiculous. She is not powerful enough to undertake anything of the kind, even if she had not enough to occupy her nearer home."

"Have you heard anything of the Japanese gentleman who, as ambassador, has come here to spy out the land?"

"No, I don't know anything about him; but I am safe in saying he is not an ambassador. He is very likely an official who has come in connection with the employment of Japanese labour on the sugar plantations in Queensland. The labour is sent under Government supervision, and is returned at the end of three years. Japan does not believe in sending her people away from home. The policy is to keep them, and while there is plenty of occupation in their own land few are likely to leave. There is room for a good many in Formosa. The Japanese will never come to Australia like the Chinese. If labour is found for a certain number they will come and fulfil their contract and return, or most of them. There are only about 50 Japanese in Sydney. The Government keeps up a careful system of registration, and knows exactly where all the people are. If any die abroad it is recorded."

The Australian papers, generally appear disposed to accept Mr. Coote's views. The *Brisbane Courier*, alluding to the awakening of China closely following that of Japan, says:—"It may be confidently assumed that the awakening of China has really begun, and that its development, if less rapid than that of Japan, will be on a much grander scale, and will ere long materially alter the balance of power in the Far East. The large numbers of Chinamen who have returned to their home after long residence abroad must exercise an appreciable missionary influence in the country in the cause of European civilisation. It may be that the present dynasty has become effete, and will disappear. But the Great Powers could not tolerate anarchy in the country, and, if disorder arose, would probably set up a native Government amenable to European influences. In any case there must be progress with such a population, for whether we regard its number, its habit of obedience to authority, or its colossal force if highly organised either in peace or war, we can only assume that China will exercise an important effect upon the future of Australia as well as of Asia. We may pass Asiatic Exclusion Acts, and determinedly exclude both Japanese and Chinamen from our country, but the time may not be distant when irresistible millions will demand reciprocal intercourse and access. Then nothing less than the aggregate strength of the United British Empire will suffice to protect our European civilisation from fusion with Asiatic."

The *Sydney Daily Telegraph*, while expressing an opinion that Mr. Coote's representations are somewhat highly coloured, remarks that the view he puts forth of possible Japanese aggressions "is undoubtedly one that should be considered by the Australian colonies, although not in a spirit of acute apprehension. Japan is bitten by earth-hunger. She is seeking to extend her population over a wider area, and has just realised one aspiration in this direction by acquiring Formosa. It has cost her some trouble to grip her conquest firmly, and it will take her a good deal of time to fully utilise it. But although this occupation is ready to their hand, it is quite comprehensible that the eyes of the enterprising Japanese are roving further afield, and have lighted upon Northern Australia as a promising field for activity. They are bent just now on extending their commercial and industrial relations in every possible direction, and it is as traders that the Japanese immediately contemplate approaching these colonies. The mission of Mr. Omitsu, which Mr. Audley Coote describes, is primarily of an industrial character, and is probably a prelude to a further endeavour

to build up closer trade relations between the two countries. It is easy to see that disappointment is here in store for the Japanese. Notwithstanding the one or two commercial reconnaissances which Australia has lately despatched to Japan, never were overtures made in more half-hearted fashion. Australia is inclined to think she would like to sell, but is in lively apprehension as to the kind of payment she would receive in return. To have to accept cheap Japanese manufactures would be chastisement with whips; to admit coloured immigration from Japan would be chastisement with scorpions. We have not formulated or even discussed any rational policy to guide us in our dealings with these Eastern neighbours; consequently the attitude of Australia must be one of simple aloofness. Undoubtedly when this comes to be well understood it will not propitiate Japanese good will. But to anticipate active Japanese hostility is a long leap. Japanese officers may talk idly and grandiosely of their scheme within earshot of Mr. Coote and no great harm be done. Australians mean to have New Caledonia when they can get it, and have often said so, but at Noumea the Governor sleeps just as soundly in his bed of a night. Mr. Coote's tidings are an eloquent homily to Queensland as to the necessity for federation and a reminder to the colonies generally how precarious the position of Australia would be were it not an integral part of the British Empire. While that is so, menace can only arise to Australia in the event of a greater war in which the naval strength of the empire is overtaxed. In such a case Japan, enrolled upon the side of England's enemies, would be an important factor in the sum from the Australian point of view. No doubt the springing up of a new and efficient naval power in these seas is not a circumstance to be overlooked. To imagine, for instance, Japan a satrap of Russia, is to conjure up uncomfortable possibilities. Happily the present trend of international politics is in the opposite direction. Japan has been thwarted and humiliated by Russia; Great Britain pointedly refused to assist in the browbeating process. For Japan to entrust herself to the mercies of Russia would be a strange way of embarking upon a career of national aggrandisement. It would rather mean surrendering all her cherished dreams of empire."

Recently there has been a large influx of Chinese from Northern Australia into Queensland, and recently the Home Secretary of that colony was asked in the Legislative Assembly certain questions, together with his replies, are appended:—1. Is he aware that Chinese from the Northern Territory of South Australia are still continuing to enter the colony across the border in violation of the law of Queensland?—Yes, but not in large numbers. 2. What steps, if any, have he taken, or is he prepared to take, to prevent the continued influx of these law-evasive coloured aliens?—The law is now enforced by imprisonment for six months of all who unlawfully cross the border. 3. Is he in communication with the South Australian Government on the subject; and, if so, is there any prospect of securing their friendly aid in stopping the influx in question by preventing Chinese from entering the colony in the illegal manner complained of?—The Chief Secretary communicated by wire with the Government of South Australia on the 25th June last, inquiring if they would do anything in their power to protect this colony from this most undesirable immigration. On the 27th June the following reply was received:—"Will inquire into suggested Chinese overflow, and do anything we can to meet your wishes. We fear, however, that we have no power to assist by interfering with exodus. Can you suggest how it can lawfully be done? We think the utmost would be for us to issue notice that you intend to enforce your border law against these immigrants. (Signed) C. C. Kingston, Premier." On the 14th July a reply was sent, suggesting that it should be publicly and authoritatively made known at Port Darwin that all Chinese unlawfully crossing the border would be deported from Queensland by sea to Port Darwin; that instructions should be given not to permit the landing of such Chinese at that port; that South Australia should share with Queensland the cost of returning such Chinese to Port Darwin; and requesting that at their early convenience a reply should be sent whether these suggestions had the approval of the Government of South Australia. No reply whatever has yet been received. Recently, however, I personally reminded the Minister for Agriculture of South Australia of the fact, and earnestly requested him to induce his Government to take some action in the matter. Since then no reply has been received. Whether there is any prospect of securing their friendly aid will be best evidenced to members themselves from the facts now disclosed.

As regards the Japanese population in Thurs-

day Island and in Northern Queensland, it has been ascertained that it is considerably less numerous than had been represented, and that the majority of the immigrants were hard-working colonists. The exceptions are men of the lowest class who are said to systematically, as in Western Australia, import Japanese girls for the most infamous purposes. In New South Wales the Japanese residents are among the most industrious and respected members of the community, leading blameless lives and affording a bright example of public and private morality. But the same cannot be said of the Chinese who not only have their opium dens and gambling houses in all the leading centres of population, but have lately introduced a system of food adulteration on a most extensive scale. A New South Wales paper, alluding to this, says:—"Of late it has been discovered that in Sydney various kinds of jams, pickles, sauces, and other condiments are manufactured in the city from the vilest ingredients and sold as English-made goods by many reputable storekeepers. The Chinese and Asiatics are the individuals who manufacture these food commodities, and the public purchase them in good faith, believing them to be genuine. The majority of them are rubbish or worse, and the question arises as to how the distribution is carried out among the retail grocers. The articles are put up in packets, the labels of which are intended to deceive the purchasers of the goods, and as a safeguard to public health it is high time that some steps were taken to put a stop to this kind of trading. When deleterious compounds can be made in disgusting slums by filthy and degraded opium smokers, to be sold to the unsuspecting public as pure and English-made condiments, it is high time the authorities stepped in and demanded that all goods put upon the market shall bear the honest brand of a genuine manufacturer. Such a step would protect the public against this species of fraud, and it practically rests with the Legislature to see that it shall be carried into effect."

It is a most remarkable fact that while in Sydney all the Japanese stores are smart, well conducted establishments, doing trade almost exclusively with Australians, the Chinese shops are invariably dirty or extremely untidy, and seldom entered by colonials, the customers being exclusively Chinese. There are several respectable Chinese merchants, but they do business chiefly with their fellow countrymen in the provinces, where the Chinese storekeepers occupy a position akin to that held by the Japanese traders in the colonial metropolis, and are much respected both by their neighbours and by all who have business dealings with them.

A CONTRIBUTION TO THE CAUSE OF CHRISTIAN UNITY.

BY THE REV. HENRY S. JEFFERYS, B.A.

"That they all may be one."—S. John XVII. 21-3.

These words were uttered by Our Lord on the night before his crucifixion, when he had instituted the Holy Eucharist, after he had washed his disciples' feet; these object lessons in love and humility being finished, he poured out his heart in prayer to his Father for his apostles.

This prayer is written in the XVII. Chapter of the Gospel of Saint John. Every word is weighty with meaning and deep emotion, but the burden of it all is the unity of the apostles and of their successors.

9. v. I pray for them, I pray not for the world, but for them.

11 v. "Holy Father keep" them that they may be one as we are.

20—for them also that shall believe.

21—that the world may believe.

He sees clearly that it is the mind and will of Christ that his apostles first, and their followers next, should live in love and unity, and that the world is to be converted by a united church.

The cause of disunion is in the pride, the self-will, the stubbornness, and the ambition of the human heart; the apostles themselves had these human frailties. Our Lord's prayer for his apostles was needed. You remember the request of Salome that her sons might be preferred and seated on either side of Our Lord's throne—you remember that there was strife among them as to who should be greatest. You remember that the immediate successors of the twelve, SS. Paul and Barnabas, the apostles had so severe a contention concerning their assistant S. John that they were forced to separate. This very S. Paul is very urgent in his epistles (I. Cor. XII. 25) that there should be no schism in the body (Cf. I. Cor. III. 3-10).

The influence of Our Lord's words and the example and teaching of the blessed apostles continued in the Church for centuries; to be sure there

were schisms and sects and strife and division, but all the time there was pressing upon the conscience of even the most inconsistent heretics and the most obstinate schismatics the persuasion that all these divisions and separations were wrong and contrary to the mind and will of Christ, so that the most popular heretical sects, even those basking in the sunshine of Imperial favour, were gradually absorbed into the One Universal Church. Ulfilas, the heretical bishop, first evangelized the country now called Russia, that is under the sway of the Holy Orthodox Church.

The influence of Arius especially led to the definition of the faith "once for all delivered to the saints," as distinguished from popular opinion. The universal undivided Church has handed this to us in the formula known as the Nicene Creed. In that we say even to this day, "I believe one Catholic and Apostolic Church." The road to unity lies in the direction of making real in our hearts this profession of our lips.

No one denies that the Church that formulated the Nicene Creed was governed by bishops; in fact the council was in the main a council of bishops. It was not necessary to affirm episcopacy because no one denied it, for the presbyterian polity had not been invented, but we find these men asserting the authority of the Apostolic Church. Surely they would not have asserted this had they not believed that they were the heirs of apostolic authority.

The present popular protestant notion that the original apostolate was lost is founded upon no facts; but is an after-thought to bolster up the modern and erroneous doctrine of the "parity" of the ministry. This doctrine of the parity of the ministry is not found in the New Testament and was unknown to the Universal Undivided Church. The theory of the loss of the apostolate has led to at least two attempts to restore it, i.e. Irvingism and Mormonism. As to the doctrine that presbyters are the highest order in the Church, this might have some colour of plausibility if the Universal Church had once in a General Council so decided and had that decision been accepted everywhere by the laity. No such historic claim for the Presbyterian polity is made.

Our Lord's words to his apostles were "So I am with you always." If he had intended to abolish the Apostolic order, he would most certainly have published his decision, and some one in the Church would have remembered it and proclaimed it to the world.

On the contrary, we find the Church electing S. Mathias into the Apostolic College, SS. Paul and Barnabas exercising apostolic authority, and the Epistle to the Galatians written for the purpose of establishing the apostolic authority of S. Paul.

In addition to this, SS. Timothy and Titus exercised similar powers of government and ordination by direct command of S. Paul, acts that point toward their inheritance of a similar apostolic authority. No society can exist without a head, an executive officer, a president of some sort. This is common sense. No one denies that the Apostles were the Presidents of the Church. To whom did they deputate their authority? the seven deacons? or to the seventy elders? If so there might be some record of the fact in Holy Scripture or the writings of the Apostolic Fathers.

On the contrary, we find there the plainest evidences that the episcopal order was everywhere regarded as possessing the succession to the presidency of the Church with apostolic authority. The Church is regarded as a Divine Organism—the Body of Christ—and not a human society. It is One; it is Universal; it is Undivided; its distinctions are geographical and temporary merely for convenience of ministration and government.

Let us try to get back to that state of affairs once more, even if it is impossible to reproduce all the details of the church of the first three or four centuries. How was the Church's unity broken? How may it be restored? The first great enemy to unity was Popery: the doctrine that one of the successors to apostolic authority had power and authority over the others.

As you know well, this growth of the power of the Bishops of Rome was very gradual, and was resisted from time to time through the centuries. It was augmented by the removal of the capital to New Rome or Constantinople, and crystallized by the crowning of Karl the Great (Charlemagne) as Emperor of the West on Christmas day 800. About the year 1000 A.D. there was a hope of the personal advent of Christ that thrilled the heart of Christendom. The text, "The kingdoms of this world are to be kingdoms of Our Lord and of His Christ" was written upon all hearts and murmured by every lip.

The doctrine that the Pope and the Emperor were to prepare the way for Christ was a ruling idea all through the Middle Ages, and gave strength and unity in the midst of violence, robbery, and

disorder. The eastern empire did not share so deeply in these ideas. The Greek mind, wearied with speculations concerning the mystery of the Divine Nature, rested on the formulas of the early church.

There was a drawing away of the Eastern and Western Church, and an ever-widening breach, but the schism was not finally and formally completed until the 10th century. A line drawn through the map of Europe from the Baltic to the Adriatic Sea would roughly mark this division. East of this we find the oriental churches agreeing substantially in doctrine; with national freedom and inter-communion. West of this the Latin Church in which the Imperial idea of power is uppermost.

These distinctive characteristics have continued even to the present day, and we find in the names of the Japanese branches of these churches the ideas of the East and West reproduced. The East insisting upon purity of doctrine, and the West upon Sovereignty. Therefore the names are the *Sei Kyo Kwai*, or the "Straight Teaching Assembly," and the *Tsu-Shi Kyo Kwai*, or the "Lord of Heaven Teaching Assembly." The example of the "Uniates" shows that the Latin Church can for the sake of unity concede the cup to the laity and marriage to the priesthood, nor is the future utterly without hope that there may be a softening of the Petrine claims to heal the first great wound or schism in the Body of Christ. This is a matter for earnest prayer, but to further which we have but little personal influence.

The second cause of the division of Christendom is Protestantism.

There is a popular idea that the Devil and the Pope obtained power over the church at an early date and retained it until Martin Luther, by burning the Pope's bull and flinging his inkstand at the Devil, broke up their combination and created Protestantism.

It is more probable that the daggers of Brutus and Cassius prepared the way for Protestantism when they stabbed Cæsar at the foot of Pompey's pillar. For had the great Julius lived long enough to consolidate his empire, he would, no doubt, have pushed his conquests beyond the Rhine and would have thoroughly subjugated the Teutonic races. Had these peoples once been completely under the yoke of the Roman Emperors they would not have broken off so completely from the power of the successors to their prestige, namely the Popes. This discussion belongs rather to the sphere of hypothetical history; but it is at least interesting to note that the river Rhine was roughly speaking the limit of the Roman military conquests and the limit of the permanent power of the Popes. The nations north of the Rhine became Protestant while the Roman nations south of it remain to this day, in the main, loyal to the Roman See.

Switzerland, partly protestant and partly Roman in religion, is an example of the theory that Protestantism is not merely a revolt against the development of doctrine, but has its causes in climate, race, and language.

We see examples of this in the British Isles. The Teutons of the South ardently accepting the new doctrines of their brother-Teutons of the continent, but with a wiser conservatism (which has always been their strength), retaining intact their ancient Church which had never been completely subjugated to the Papal See. The Scotch-Irish of the North of Ireland, and the South of Scotland, more ardent but less wise, going farther in shaking off the apostolic authority of the episcopacy, while the Celts of the North of Scotland and the South of Ireland, still more ardently and madly devoted to the Roman See and the House of the Stuarts endorsed by it, clinging with the obstinacy of despair.

Time does not allow of the discussion of these interesting theories and their examples in detail.

Protestantism produced dissent, disintegration and, sad to say, in Germany and in New England at least, doubt, and finally infidelity.

With a few exceptions, sporadic and uncertain in their results, it has not had power to re-unite what it has broken.

While the causes that produce disunion are often trivial in the extreme, and while Protestants will often freely unite temporarily in worship and in charitable works, the permanent corporate union of Protestant sects is hardly thought of, much less hoped for by the sectarians themselves.

Popery is centripetal, Protestantism is centrifugal.

Popery has drawn into the body of doctrine much that should have been left to pious opinion, while Protestantism is a system, or rather a lack of system, of denials.

Popery makes a man believe too much, while Protestantism makes him believe too little.

Popery leads to superstition, while Protestantism leads to agnosticism.

What is the remedy for this? The sectarian says, "Let all join our sect!"

There is substantial unity in this cry, but these cries cancelling each other make this method manifestly impossible. Others say, "Let us found a new sect on a basis broad enough to embrace all." This also has been tried with the result of Campbellite, Plymouth-brother, and Quaker sects that have failed to produce the result desired.

The Protestant Episcopal Church of the U.S. of N.A., one of the small branches of the Anglican Communion, some nine years ago published to the world a bases of corporate union which was the first attempt of a practical nature to heal the schisms in the Church. The Anglican bishops followed its example in 1888, and one of the three branches of the Catholic Church has now stated to all Christians throughout the world that the proper basis of unity is to be found in conforming to but four foundation principles.

I.—The Holy Scriptures of the Old and New Testaments.

II.—The Nicene Creed as a sufficient statement of doctrine.

III.—The two Sacraments of Baptism and the Holy Eucharist, with the unfailing use of the formulae and elements commanded by Christ Himself.

IV.—The Historic Episcopate.

This gives up everything that belongs distinctively to the P. E. Ch. in the U.S. or in the Anglican communion that is at all modern in its origin, e.g. the Prayer Book, the 39 Articles, the surplice, etc., and insists only on those things that are essential to the very being of the Church.

This declaration has produced but feeble apparent results, but beneath the surface the waves of an emotion, a longing for visible outward unity are felt by those who are in touch with the spirit of the times.

The Pope himself has responded, not directly to be sure, but probably influenced by the fact that the Anglican Communion had moved so far in the direction of Unity.

The Roman Church by its very development of doctrine, making the Pope's official utterances dogma to be received by the faithful, has made its action easier than that of bodies in which the power is more distributed.

United action of the Archbishop of Canterbury and the President of the House of Bishops of the American Church, would no doubt receive the cordial assent of all Anglican Churchmen.

While the Oriental Church is not centralized, if it could once be aroused to action would, to a large extent, follow the lead of the Holy Synod of the Russian Church.

If these three bodies the Greek, the Roman, and the Anglican Churches would call, not a General Council, but a preliminary Conference, embracing representatives of every sect that calls itself Christian, however heretical, to consider what basis would be acceptable to the vast mass of the Christians in the world for permanent corporate unity—to be sure some obstinate heretics and incorrigible schismatics would become still more irreconcilable, human nature being what it is—but without doubt the heart of Christendom would be stirred to its depths and a long stride would be made towards the day when a General Council would be practicable. In a General Council the Church United in its corporate capacity would speak with a weight and an authority now denied to its divided branches.

The participation of Greek, Roman, and Anglican ecclesiastics even of apostolic rank in the Chicago Parliament of Religions, hand in glove with the representatives of atheistical societies, e.g. Buddhists, leads to the hope that men of like rank might be induced to meet brother Christians, however far away from the Catholic faith.

It took a thousand years to separate the East and West, another 500 to produce the upheaval called Protestantism.

Many sects founded in the most fanatical spirit have now become quite tractable, almost tame in their assertions of their peculiarities. Would John of Leyden, with his plural wives and prophetic utterances, be followed or even tolerated by the Anabaptists of to-day? I trow not. The gentle, soft-spoken Friends no longer go into the "steeple house" and tell the "hiringling" minister to come down from his "preaching box;" it would be impolite.

The old controversies that produced the sects are dead, buried, and forgotten, and would cause only loathing and horror could their ceremonies be torn from the crumbling corpses.

There is a substantial agreement concerning what is really of vital importance among all sorts and conditions of Christians. The differences are very largely matters of opinion, taste, and preference, concerning which large liberty should be allowed to both individuals and societies.

In fact, the great danger to-day, of Protestants especially, is that they are not sufficiently tenacious about the difference between truth and error, and have no clearly defined views as to what is important, and what is trivial in matters of faith. While so far as the older communions are concerned, so far as the laity think about such matters individually, if we subtract from what they are supposed or expected to believe what they really do believe, we should find their position differing but little from that of the original standard of the Faith, i.e. the Nicene Creed.

If it were possible to take a spiritual photograph of the mind and heart of Christendom, we might find some dark spots of heresy like those upon the face of the sun itself, and some extravagances and superstitions spreading out like the corona of the sun beyond its circumference, but the great body of the face of Christendom would shine as the sun in its strength.

Is it too much to hope that when popery has reached its 1000th year and Protestantism it 500 that we may look for their mutual cancellation, and is it too much to pray for that the year of Our Lord 2000 may behold the extinction of the sects and the reunion of the One Holy Catholic and Apostolic Church?

DEATH OF MR. CAREW.

INQUEST.

An enquiry was opened on Saturday morning, at the Royal Naval Hospital, Yokohama, by John Carey Hall, Esq., H.B.M.'s Assistant-Judge, acting as Coroner, into the circumstances surrounding and attending the death of Walter Raymond Hallowell Carew, late Secretary of the Yokohama United Club, that occurred suddenly on Thursday afternoon last. The following jury were empanelled—Messrs. G. Blundell, E. T. Nicholas, J. K. Trafford, T. Rose, and E. Powys.

The jury having viewed the body, the following evidence was taken:—

Edwin Wheeler, M.D., sworn, deposed—I was the medical attendant of the late Mr. Carew. He was ailing on Thursday week. I advised him to go home and keep quiet for a few days. I told him that his liver was out of order, and that he had better remain quiet. On Saturday he had some signs of irritability of the stomach, but part of Sunday and Monday he retained his food. On Monday evening he had extreme irritability of the stomach, and was excessively thirsty. On Tuesday morning I told Mrs. Carew that I thought I would ask Dr. Todd to come round and see him. We had a consultation—Dr. Todd and myself—that afternoon. The only thing that we could find was that the liver was slightly contracted—symptoms of cirrhotic liver—but not enough to account for the excessive vomiting and distress. On Wednesday morning I was told that he passed a very bad night, and slept very little. That morning he had very bad diarrhoea, added to the other symptoms, the motions being of a dark green colour. At tiffin-time I had a letter from Mrs. Carew stating that she did not think her husband was so well, and asking me if I could get Dr. Baetz down from Tokyo to look at him. I telegraphed up, the answer being "Impossible this evening, will to-morrow do?" A little before dinner time, I took the answer up to Mrs. Carew and showed it to her. This was about 7 o'clock. As Mr. Carew had had a rather better afternoon, we decided to wait until the morning. On Thursday morning I went round to the house at 7 o'clock and found my patient considerably worse. I made up my mind to get the deceased into hospital as soon as possible. When I was attending Mr. Boag's funeral, a little after nine, a communication was made to me by Mr. Dunlop, telling me to go and see Mrs. Carew's nursery governess, and mentioning something about arsenic being taken. I went round to Mr. Lowder's, where the children were with the nursery governess. I asked the governess, "What is this idea about arsenic?" She said: "What do you suspect, Doctor?" and I said that "I had suspected it last night and this morning, and had determined to get him into hospital this morning." I did not know who was giving it or whether he was taking it himself. There was a slight delay in getting Mr. Carew into the hospital, owing to Dr. Todd being away for a day, and the junior doctor in charge not liking to take the responsibility. As you (the Coroner) are aware, I asked you to use your influence to get Mr. Carew admittance into the hospital as soon as possible. A little before tiffin I told Mr. Porch, Mrs. Carew's brother, to go up to Mr. Carew's room and to remain there until I returned with a stretcher, and I told him that I thought Mr. Carew was getting arsenic in some form, and I added that he was to see that Mr. Carew was only to have a little milk and soda from

him. A little before two o'clock, Dr. May told me I could bring Mr. Carew round to the hospital. I asked for a stretcher and had him removed to the hospital somewhere in the neighbourhood of three o'clock in the afternoon. After a consultation with Dr. May, I left, saying that I would return at half-past five, but when in the Settlement, about 5 o'clock, a messenger met me with a chit, telling me to come up to the hospital at once. When I arrived I met by Dr. May, who told me that Mr. Carew was dead. I may state that I had a letter, unsigned, which my office-boy told me came from No. 6, with the words, "Three bottles solution of arsenic one week, Maruya." That is about as much as I know of the case, except that Mrs. Carew, I think between ten and eleven on Thursday night, told me, "Doctor, there is one thing I should like to tell you, which I suppose I ought to have told you before. Mr. Carew had a stricture, and he asked me would I get him a small bottle of arsenic, and he also wanted some sugar of lead." I merely replied, "It would have simplified matters if you had told me so before." She answered, "But I can't find the bottle, it was in the drawer at the bedside." I do not know anything further.

The Coroner—You made a post-mortem examination of the body, did you not?

Witness—Dr. Todd and Dr. May made a post-mortem examination of the body. I was present looking on.

The Coroner—In your opinion, Dr. Wheeler, was death the result of natural causes?

Witness—From my view of the body, and in consultation with Dr. Todd and Dr. May, we came to the conclusion that there was no lesion of the body sufficient to justify us in giving a certificate of death from natural causes. Dr. Todd has three exhibits. Deceased was ailing on Friday and the Thursday before. I told him on Thursday that he had better go on to Vichy water again as his old liver complaint was troubling him again. The illness therefore lasted about a week. He was able to get out of bed right up to the day before his death. He took to his bed on Saturday, at what hour I do not know, but then he was always moving about. His wife, a China boy, and the ayah were in attendance, nursing him during his illness; but his wife principally nursed him. Mr. Porch, his brother-in-law, was also in and out seeing him.

The Coroner—Have you any grounds for supposing that the deceased administered the arsenic himself? Do you consider it probable?

Witness—I know nothing further than what Mrs. Carew told me the night after his death.

The Coroner—I said, do you consider it probable?

Witness—I repeat my answer. It is possible but not probable, that he would go on taking a thing that caused him so much pain and distress.

The Coroner—If you had been informed during his lifetime—that is during his illness—that he had been taking arsenic, would that have made any difference in your mode of treatment?

Witness—Yes, certainly. I should have had him removed to hospital at once.

Mr. Trafford—Do you know if arsenic or sugar of lead would have any effect in cases of stricture?

Witness—I have never heard of arsenic or sugar of lead being taken for cases of stricture. Sugar of lead could be applied in the form of a lotion.

To Mr. Rose—Deceased had had bouts of liver in Australia; and in the Straits Settlements he suffered much from malaria, and had to be invalided from there.

Mr. Rose—Then, doctor, are you of opinion that if poison had not been administered, he would have lived a longer life?

Witness—I was surprised to see the healthy state of the viscera. There was only the cirrhotic liver and slight symptoms of bladder trouble—chronic cystitis.

Dr. Percival Marshall May, R.N., sworn, deposed—I admitted Mr. Carew into the R. N. Hospital on Thursday afternoon (Oct. 22nd) about 3 o'clock. He was brought in on the hospital ambulance and immediately removed to his room. When he arrived here he was in a state of collapse and in a most dangerous condition. I administered stimulants to him, and he rallied very slightly. He complained of great difficulty of breathing, and tossed from side to side endeavouring to get his breath. He complained of terrible pains in his chest. His extremities were cold, and he continued in this condition until a quarter-past four o'clock, when he became quite pulseless and in spite of the administration of stimulants died at about twenty minutes, or a quarter, to five.

To the Coroner—I assisted at the post-mortem examination, and agree with Dr. Todd's opinion as to the result of the post mortem.

Staff-Surgeon Howard Todd, R.N., sworn, deposed—I saw Mr. Carew on the Tuesday, at Dr.

Wheeler's request. He was then suffering from great irritability of the stomach. I asked to see what he had vomited, but it had not been kept. I examined Mr. Carew and found that his liver was contracted. I could find nothing else. I recommended Dr. Wheeler to save the vomit and motions for examination, to see what they were like. The next occasion I saw Mr. Carew was after his death, at the *post mortem*, which I performed in conjunction with Dr. May. The result of the examination was to find that his liver was contracted and there was some inflammation of the bladder, but no lesion sufficiently grave to cause death.

To Mr. Rose—I did not see Mr. Carew alive in the hospital. I was not present when he arrived.

The Coroner—Do you concur with me, Dr. Todd, that a further examination of the viscera is desirable?

Witness—Distinctly so.

The Coroner—That there should be a chemical analysis of the contents of the stomach?

Witness—Exactly so.

The Coroner then read the section of the Coroner's Inquest Act in which it is provided that in cases of doubt as to the sufficiency of medical evidence as to the cause of death if the majority of the jury were of opinion that the contents of the stomach and intestines of a body should be chemically analyzed by a professional expert who had not previously been examined, then they should put such requisition into writing.

The jury concurred with the Coroner that the contents of the stomach of the deceased should be examined and analyzed, and on the suggestion of the Coroner, Dr. E. Divers, Professor in the Imperial University of Tokyo—whom the Coroner said was the only man in Japan who could undertake the task, it being of a highly expert and technical character—was named as the expert to conduct the analysis.

It now being some few minutes past noon, the Coroner suggested an adjournment for tiffin. He proposed that the jury and witnesses should re-assemble at the British Court at 2 o'clock that afternoon.

Mr. Trafford said that the funeral had been fixed for 2.30 p.m., and several of the witnesses might like to attend the ceremony; therefore it would be inconvenient for them to attend the Court at 2.

The Coroner said that personally he would like to pay that last token of respect to deceased—attend his funeral—but in view of the seriousness of the case, he thought that the jury would be acquitted of any disrespect if they waived attendance at the funeral.

Mr. Trafford said that perhaps Mrs. Carew would like to attend the funeral.

Mrs. Carew, upon being interrogated by the Coroner, said—I want to attend the funeral, and I desire to give evidence at this enquiry.

The Coroner—Will you attend after the funeral?

Mrs. Carew—Yes.

The Coroner—Then the inquest will be resumed at 2 o'clock at the British Consulate, when the evidence of Mary Esther Jacob, the nursery governess will be taken; and after the funeral, Mrs. Carew will attend.

The inquest then stood adjourned. Upon re-assembling at the British Court-room, Mr. Lowder said that with the Coroner's permission he would watch the case on behalf of the widow of the deceased.

Miss Mary Esther Jacob, was sworn, and deposed—I had nothing to do with the nursing of Mr. Carew except once, when I was asked to take him, on Wednesday night, a glass said to contain brandy and soda. I was having my dinner at the time, upstairs. Mrs. Carew called me, and asked me to see if Mr. Carew would take this glass from me. She said the glass contained brandy and soda and cocaine, as Dr. Wheeler had ordered. He refused to take it. This was the only time I had anything to do with his nursing.

To the Coroner—I have never, in the course of his illness, seen him take medicine. I have never seen Mrs. Carew or other people take medicine to Mr. Carew. I have seen her give things to people to take up to him. I have purchased medicine for Mrs. Carew. This was on Wednesday, the 21st, at Maruya, Benten-dori. It was syrup of lead and Foster's solution of arsenic. I only purchased this once: on that one occasion. I have never seen any use made of the medicine that I purchased. I do not know where this medicine was kept in the bedroom. The two poisons that I purchased were in two bottles; the quantity was not specified on the paper outside the bottles. I had nothing to do with nursing, but I entered the room about once a day to show the children to their father. I was out with the children as much as possible, so I know nothing of what was kept in the bedroom. I do not even know if there is any table-drawer there.

The Coroner—By whose orders did you purchase this medicine at Maruya's?

Witness—By Mrs. Carew's.

The Coroner—Did Maruya ask for a doctor's prescription?—No.

Did you ask for the medicine or was it written on paper?—It was written on paper.

Who wrote the paper?—Mrs. Carew.

Did the man make any remark?—Yes.

What did he say?—He asked me if I was Mrs. Carew, and then said, "Why do you buy so plenty deadly poison?"

What did you reply?—I don't know. I did not know any poisons had been bought before. The man told me that somebody had bought poison the day before, and some the day before that, and that I was to warn Mrs. Carew how she used it. No further conversation ensued. I did not repeat this conversation to Mrs. Carew, but I told Mr. Porch.

What did Mr. Porch say?—I did not think he understood the drift of my remark, because he said he thought it impudent of the man to make any remark about the medicine. There were only the two children present in the dining-room at the time. I did not mention to Mrs. Carew anything at all about this conversation.

Do you know who purchased the other medicines?—Maruya told me that on the 20th it was a boy, and on the 19th, Mrs. Carew. I do not know who the boy was, Maruya would not say, but I imagine it was the *jinrikisha* man.

Did not this conversation with Maruya arouse your suspicions in any way?—Yes. I had been told that Mr. Carew had been very sick, in great pain and very drowsy, and I became very uncomfortable as I had bought some medicine. I do not think anyone assisted Mrs. Carew much in nursing her husband. We fetched and carried for her, but as I was out of the house so much with the children I do not know what went on during the day. Mr. Porch used to go and see Mr. Carew when he came home, to see how he was. He would be in and out of the room now and again.

Mr. Blundell—Did the deceased offer any explanation why he refused that brandy and soda?—He said, "I have taken a whole chemist's shop to-day, and I want a brandy and soda without anything in it—meaning without medicine. He said if he had a brandy and soda he could go to sleep.

To Mr. Rose—I do not know whether deceased knew that I was purchasing the medicine. He never asked me.

To Mr. Trafford—The slip of paper for Maruya bore no signature. The chemist asked me if I was Mrs. Carew. I had never been to the chemist before. I had the little boy and the little girl with me.

To Mr. Rose—I was not aware until the shopman told me, that Mrs. Carew had been there before.

To the Coroner—I left the piece of paper at Maruya.

Mr. Lowder, in answer to the Coroner, said he was not sufficiently instructed at present to ask any questions. He came there merely to watch the case.

A little later witness said in reply to Mr. Lowder—The slip of paper was in the handwriting of Mrs. Carew. I am quite positive of that.

Mr. Reginald Colmore Porch, sworn, deposed—I am the brother-in-law of the deceased. I used to see Mr. Carew very often, from 8 to half-past, from 12 till nearly 2 o'clock, and from 5 in the evening and afterwards. I often saw Mrs. Carew giving him medicine, and he was always a very bad hand in taking it. On Thursday afternoon he was removed to the hospital. I saw him in the hospital and gave him some ice. When I spoke to him he was quite conscious and understood what I said. I might say that Dr. Wheeler made a mistake this morning when he said that Mr. Carew suffered from malarial fever. I believe he was very ill in the Straits, and very nearly died there, on account of his liver. I believe that he was also very ill of the same complaint last spring.

To Mr. Trafford—When the last witness informed me that she had been purchasing poison, I was leaving the room, and did not quite understand her remark. I thought that she was making a comment on the shopman's impudence.

To Mr. Nicholas—Medicines were given, so far as I know, according to Dr. Wheeler's directions.

To Mr. Rose—I do not know why the arsenic was purchased. I have no idea.

To Mr. Blundell—I never saw the three bottles, mentioned by the previous witness, being used. I now know what became of them. The medicine was taken in the ordinary way according to prescription. I can't say whether they were used in a proper way, because I never saw them administered.

To Mr. Rose—I thought it very extraordinary when I heard of such a large quantity of arsenic being purchased. The last witness did not tell

me, the quantity. It never occurred to me to inform the doctor.

To Mr. Trafford—I saw Dr. Wheeler often, but it never occurred to me, when I knew arsenic had been purchased, to inform him about it.

To the Coroner—When the witness told me that she had been down town and purchased the arsenic, I did not know that this was not in accordance with what Dr. Wheeler had prescribed. I knew that arsenic is taken as medicine.

To Mr. Rose—I did not know what Dr. Wheeler had prescribed.

To the Coroner—I have several times seen my sister administer medicines to the deceased. I could not tell you their names, for he had a good many. I never saw any administered from the bottles that the last witness bought nor from similar bottles. I have heard that deceased suffered from stricture; I did not know of it personally. I believe Dr. Munro treated him about three years ago.

Mr. Lowder—Were you present when the deceased left his dwelling to go to the hospital?—Yes, I was.

Was his wife also present?—Yes.

What conversation, if any, took place between them?—Mr. Carew said he did not feel at all well, and I don't think he cared about going to the hospital.

Did he say anything about going to the barber's to get shaved?—I did not hear him say that. I lived in the same house with my sister and her husband.

Did they live on affectionate terms?—Yes, very.

You are able to state that positively, that they were on affectionate terms?—Yes, always. I never knew a quarrel.

Did you ever hear anything to lead you to think that your sister suspected her husband's death was so near?—I did not think it was so serious, but she was very anxious. She told Mr. Parsons that she would like another medical attendant, and told me that Dr. Baelz had been wired for.

She showed wifely anxiety?—Yes, she nursed him night and day. She had no idea that his end was so near. He was quite conscious when he left the house, and Dr. May has said that he rallied after his admittance.

To the Coroner—So far as I know, Mrs. Carew was not assisted by anyone in administering medicines to the deceased. I never saw anyone else do so, but most of the day I was not up at the house.

To Mr. Powys—I believe that sometimes Mr. Carew used to doctor himself.

To Mr. Rose—I do not know whether he did so during his present illness.

Mrs. Edith May Hollowell Carew, sworn, said—My husband has been ailing for some weeks past, but he was not very ill till Thursday, when he came home and said that Dr. Wheeler had ordered him to take Vichy water and to keep quite tranquil. He has had several attacks of liver during the last seven or eight years. He did not get any better on Saturday or Sunday. On Saturday he expressed a wish to go to Kamakura on Monday. I wrote to Dr. Wheeler and asked if he could do so. Dr. Wheeler, after seeing him on Saturday, said that he was afraid he might catch a chill, and advised him not to go down to Kamakura. He did not get any better, and in fact became worse, and I had on Monday to send twice for the Doctor, also on Tuesday. At tiffin time on Tuesday Dr. Wheeler asked me if I had any objection to his calling in Dr. Todd, as he would like to consult him on the case. Dr. Todd gave his evidence this morning, in which I agree. I was present at the consultation. Dr. Wheeler told me that afternoon, that my husband was to have nothing but milk and soda and no stimulants. I can't recollect whether it was before Dr. Todd's visit or afterwards that my husband expressed a wish that he should be given his usual dose of arsenic. I may say that he has been in the habit of taking arsenic in small quantities for some time. I cannot say what kind, for I do not know. I told him that as Dr. Wheeler was treating him, he had better not take it. However, he insisted and begged me to give him some, and I went to cupboard where he kept his medicine but only found an empty bottle, or perhaps a drop in so inside. I remonstrated with him a good deal on his taking arsenic, especially in his present state. He then told me that when I was in England, in 1893, he had been obliged to consult Dr. Munro, and later Dr. Baelz upon a disease which he did not wish me to mention to Dr. Wheeler. I do not know whether Dr. Munro prescribed for him at that time, but later Dr. Baelz had, and I have had this prescription made up for him from time to time. He told me that when he was suffering in such a way, arsenic was the only thing that gave him relief. On Tuesday evening he gave me a big slip of paper, which I have in my possession, on which was

written:—"One bottle Foster's solution of arsenic, one bottle sugar of lead." I told him at the time, that I should not send for the things, but if I did eventually I should tell Dr. Wheeler. On the Wednesday, he again spoke to me of the great pain he was in, and told me that if I did not get the medicine he would send for them himself. I wrote out, on a slip of paper, what he had given and gave it to my governess and asked her to get the things for me. When she returned with the bottles, I gave them to my husband, sealed in the paper in which they were received and told him that I should not allow him to take the mixture at that time, as he was taking medicine from Dr. Wheeler. Within a short time, I thought my husband was worse and I wrote to Dr. Wheeler, saying that I should like to see Dr. Baelz. Dr. Wheeler gave his reply in his evidence this morning. He came and saw my husband that evening, and said that he thought he was slightly better, as he had retained his food, but as he had had such a restless night, he thought it advisable to give him a hypodermic, and gave me two or three cocaine tablets, one of which he told me to give him in a little milk, soda, and brandy. I gave him this about 8 o'clock. During Mr. Carew's illness we experienced great difficulty in getting him to take any medicine, and several times, I had tried various means of getting him to take it. I mixed it up in barley water, in milk, and lime squash. Since Thursday morning I gave him no medicine. The hypodermic that Dr. Wheeler gave him did not have the desired effect. Towards 9 o'clock he became very delirious and very excited. Dr. Wheeler had told me he was dining out that night, so I went round to the house where he was dining and told him that my husband was very excited and unable to sleep. I was absent from the house about half-an-hour. When I returned, my husband was asleep, and apparently quite well. Dr. Wheeler came about 11 o'clock that night and seemed to think that Mr. Carew was better. But he slept for only a very short time; he was very restless, and complained of great thirst. Dr. Todd had advised my giving him, at short intervals, small pieces of ice. He complained of great pain in his back and side, and I called up the servants and had the fire lighted and applied hot water bottles to his feet and side as I saw that his temperature was very low. At 5 o'clock on Thursday morning, I did not like certain symptoms that I saw, and I sent for Dr. Wheeler. He came at 7 o'clock and gave my husband a cocaine tablet, with a little brandy, milk, and soda, and a draught of hydrate of chloral to send him to sleep, which, however, had no effect. At 8 o'clock I felt so anxious about him that I wrote to Mr. Parsons, who came shortly afterwards. I told him that I did not share Dr. Wheeler's opinion as to the satisfactory progress of the case, and that I insisted upon having some other opinion. Mr. Parsons promised to see Dr. Wheeler at once. He saw Dr. Wheeler and came back in a quarter of an hour. His words to me were, "Do not alarm yourself unnecessarily, Dr. Wheeler says that he is quite confident about his case." From 9 o'clock that morning my husband was never conscious for more than a few moments at a time and I saw that he was getting weaker. Dr. Wheeler came again about 12 o'clock, just looked at my husband, who was more or less unconscious at the time, and said—"I have arranged to have him taken to the hospital, he is only going from bad to worse." During Thursday I gave him some beef tea, some milk and soda, with a little brandy in it, according to Dr. Wheeler's instructions. On going up to his room after tiffin, he complained of great pain in his chest; of feeling very sick but being unable to be so. As I thought at the time it might be indigestion, I gave him a little hot water, but it had very little effect in making him sick. Dr. Wheeler arrived about this time, and my husband was taken to the hospital. He was perfectly conscious when he left the house, and although I knew at the time he was admitted into the hospital that he was seriously ill, I had no idea of there being any danger. Several people whom I saw I told that I thought he was going on all right, and it was a great shock to me when I heard at 5 o'clock that he had passed away. Earlier in the day, my brother told me that Dr. Wheeler thought or knew that my husband was taking arsenic. I attached little importance to the remark at the time, as I knew from past experience that my husband had been in the habit of taking arsenic. It never occurred to me to be of any importance. After I heard of his death, and had been told that a *post-mortem* would be held, I remembered the fact that he had ordered, and that I had given to him a bottle of sugar of lead. I went upstairs and opened the drawer where he had placed them when I gave them to him, and found

both bottles missing. I at once sent for Dr. Wheeler. I told him of the facts but at the time he would not say anything beyond what you heard him repeat this morning. I subsequently ascertained that on or about the 20th Oct. Mr. Carew gave a written order to my *amah*, and she sent it to Maruya. Last night I thought it necessary to make a thorough search for the missing bottles, and after a good deal of trouble I found them, at the back of the table which stands by the corner of his bed. Without measuring, I should say that there are about 6 to 8 drops of arsenic left in the bottle and about half of the bottle of sugar of lead. At the time he ordered the arsenic through me, when he ordered the sugar lead, I told him there was a small quantity in a bottle in the stable which had been used some time ago as a lotion for my pony, and I asked him what he wished to do with it. He told me that some years previously he had used it with great effect as an external application for congestion of the liver. I did not again see the two bottles until yesterday. I should like to contradict, if I may, a statement made by Dr. Wheeler this morning that Mr. Carew was invalided from the Straits on account of malarial fever. To my knowledge he has never had malarial fever. He was obliged to leave the Straits owing to nervous depression due to worry and overwork.

To Mr. Lowder—We have lately had unpleasant discussions on a certain point, but generally we were on affectionate terms as husband and wife.

To Mr. Rose—I sent for the arsenic, not because I thought it necessary, but more to please him. I did not think he would take it. He did not appear very ill, when I sent for the arsenic; and I also knew that he was in the habit of taking arsenic. I have known of this for a long time. I know now that it would have been wiser to have told Dr. Wheeler of the arsenic at the time; but my husband did not become seriously ill till the Thursday. I do not know whether Dr. Wheeler knew on that day that my husband was taking arsenic. He never gave me to understand that he knew it.

To Mr. Lowder—I will produce the slip of paper and the bottles. The paper was in his handwriting. The paper I sent to Maruya was copied from it by me.

To Mr. Nicholas—I gave him the bottles sealed. I did not see them again until I found them behind the table.

Mr. Lowder—One witness speaks of three purchases of medicine at Maruya's, you have only spoken of two. Did you ever purchase arsenic there yourself, as the witness says?

Witness—That is not so.

Witness added—I did not wake up to the fact that Mr. Carew was so ill till Wednesday night, because he had been walking about up till then. In fact he was so well when Dr. Wheeler came to see him, that my brother, Dr. Wheeler, my husband and myself were taking and laughing together.

The Coroner here announced that he had telegraphed to Dr. Divers in regard to the chemical analysis of the stomach and had received a reply from Tokyo that the learned analyst could not possibly attend the enquiry and give evidence before Friday.

After some discussion it was determined not to take any further evidence that day, but to adjourn the inquiry until Monday week, Nov. 2nd, at 10.30 o'clock in the forenoon, when the evidence of Dr. Divers, the shopman at Maruya's, and others will be given.

CRICKET.

Y.C. AND A.C. VERSUS THE FLEET.

A cricket match was played on Wednesday, between a team from the Fleet and an eleven of the Club, in cold weather on a perfect wicket. The Fleet was considered the strongest team the sailors have put in the field this year. Johnson's innings of 77 not out, was a good exhibition, the runs being made chiefly by boundary hits. He was well supported at the other end by Goddard who kept up his wicket whilst a great number of runs were scored. White made 40 out of a total of 50 for the first wicket, and he played a free game until caught at third man, off a rather loose ball. The fielding of the naval team was hardly up to usual standard.

The home Eleven declared their innings closed at 2.45 p.m., and with only an hour and a half left for play it seemed that the visitors could not hope to win. Runs came very rapidly for the first two wickets and the scoring was at no time slow. White bowled throughout from the S-tillement end with considerable success, but the bowling from the other end was feeble until Goddard appeared for the second time. Johnson made a good one-handed catch at short mid-on and Showler brought off a brilliant one at point. Score:—

Correct answers from Shogi, W.H.S., W.D.C., J.D., and Omega.

PROBLEM No. 257.

By JAN DOBRUSKY & JOSEF PACIT.

BLACK.

WHITE.

White to play and mate in three moves.

PROBLEM No. 258.

By J. J. GLYNN.

BLACK.

WHITE.

White to play and mate in two moves.

BUDA-PESTH.

Still no news of the result. We take the following from the *New York Literary Digest* of 3rd instant, which is the latest intelligence we have received so far:—

We have received information that the International Tourney at Budapest began on October 1st, and it promises to be equal if not superior to those of Hastings and Nuremberg. Steinitz, Lasker, Pillsbury, Tarrasch, Tschigorin, Maroczy, Janowski, and the other masters who were at Nuremberg will play, while another, Makowicz, will in all probability be among the leaders.

Then comes the great match for the championship of the world between Steinitz and Lasker. When these two experts met in 1873, Steinitz had been champion of the world for twenty-seven years. He was the Grand Champion, for, no other man had ever held the championship for so long a time, Lasker, who had made a phenomenal record in Europe, succeeded in wresting the

championship from the veteran, but the latter has never been satisfied with the result of the match, and claims that his defeat was due not so much to Lasker's superiority, as to the fact that he (Steinitz) was not in good health, and, therefore, did not play his best. Since then, these two have played in three tournaments, in which Lasker came out ahead of Steinitz, and defeated him in every personal encounter. The general opinion is that Lasker will win, although everybody knows that Steinitz is one of the greatest of masters. If Lasker should win, the Chess-world will expect a match between him and Pillsbury. The young American has made a most enviable record. Out of eight games played between him and Lasker, he won four and a half.

SIMULTANEOUS CHESS.

The following is one game (out of 24) contested at Hastings by Herr Marco. Black wins in fine style:—

GAME No. 593.

RUY LOPEZ.

WHITE. Herr Marco. 1—P to K 4 2—Kt to K B 3 3—B to Kt 5 4—B to R 4 5—Kt to B 3 6—B takes Kt 7—P to Q 4 8—Kt takes P 9—Castles 10—K Kt to K 2 11—Kt to Kt 3 12—P to B 4 13—P to K 5 14—K to R sq. 15—Q to B 3 16—Q to R 5 17—Kt takes Kt 18—P to B 5 19—Q to Kt 4 20—B to Kt 5 21—B to R 6 22—Kt to Kt 3 23—B to Q 2 24—Kt to Q sq. 25—P to Kt 3 26—P to B 3 27—Kt to K 3 28—Kt to R 5 29—Kt to B sq. 30—B to K sq. 31—Kt takes B 32—Q to R 4 33—K to Kt sq. Resigns.

BLACK. Mr. H. F. Cheshire. 1—P to K 4 2—Kt to Q B 3 3—P to Q R 3 4—Kt to B 3 5—P to Q 3 6—P takes B 7—P takes P 8—B to Q 2 9—B to K 2 10—Castles 11—B to K 3 12—P to Q 4 13—B to B 4 (ch.) 14—Kt to Kt 5 15—Kt takes R P 16—Kt takes R 17—P to B 3 18—B to B 2 19—P takes P 20—B to K 2 21—B to B 3 22—K to R sq. 23—R to Q Kt sq. 24—Q to K 2 25—P to K 5 26—R to Kt sq. 27—P to B 4 28—P to Q 5 29—P to K 6 30—P to Q 6 31—P takes Kt 32—R to Kt 4 33—Q R to Kt sq. Resigns.

Advancing the wrong pawn; he should have played P to B 5 first, which would have stopped Black's continuation by Kt to K 5; after which P to K 5 could have followed.

There is no answer to this move. Pretty and effective.

If 20—B to R 6, Q to B 3, 21—B to Kt 5, P to K R 4, and Black escapes triumphantly.

The advance is cleverly managed. Vigorous play.

THE CHESS-MASTERS.

The London Times publishes the following interesting table:—

Albin, Adolf.—Born 1848, in Bucharest, aged 48.
Bardeleben, Curt von.—Born 1861, Germany, 35.
Bird, Henry E.—July 14, 1830, West of England, 66.
Blackburne, Joseph H.—December 10, 1842, Manchester, 54.
Burn, Amos.—Dec. 31, 1848, Hull, 48.
Engelisch, Berthold.—July 9, 1851, Austria, 45.
Gunsberg, Isidor.—Nov. 2, 1854, Buda-Pesth, 42.
Janowski, D.—Dec. 1868, Wolkowisk, Russia, 28.
Lasker, Emanuel.—Dec. 24, 1868, Prussia, 28.
Marco, Georg.—Nov. 29, 1863, Czernowitz, 33.
Maroczy, Geza.—March 3, 1870, Szegedin, 26.
Mason, James.—Nov. 19, 1849, New York, 47.
Mieses, Jacques.—Feb. 27, 1863, Leipzig, 33.
Pillsbury, Henry N.—Dec. 5, 1872, Somerville, Mass., 24.
Pollock, W. H. K.—Feb. 21, 1859, Cheltenham, 37.
Porges, Moritz.—March 22, 1858, Prague, 38.

Teichmann, R.—Dec. 24, 1868, Attenburg, Germany, 28.
Tschigorin, Michael I.—Oct. 31, 1850, St. Petersburg, 46.
Tinsley, Samuel.—Jan. 13, 1847, in Hertfordshire, 49.
Vergani, Beniamino.—In Italy, aged (?) 40.
Walbrodt, Carl A.—Nov. 28, 1871, Amsterdam, 25.
Winawer, Simon.—March 6, 1838, Warsaw, 58.

The following is quoted by Gunsberg as an example of "Hard luck" in Chess.

GAME No. 594.

BLACK.—BLACKBURNE.

WHITE.—PORGES.

Black has a won game, but he lost as follows:—

15—..... 15—P to Kt K 4
16—P takes P 16—P takes Kt
17—K to R sq. 17—K to R sq.
18—Kt to B 3 18—R to Kt K sq.

Black ought to have simplified matters by taking the knight.

A grievous error; Black could have maintained his advantage and attack by P to R 6.

21—Q to K 4! 21—R takes P
A desperate plunge; but he had to lose a piece any way.
22—P takes R 22—B takes P
23—Q takes B (ch.) 23—P to B 3
24—B to Kt 4! 24—B to B 3
25—P to B 3 25—Resigns.

GAME No. 595.

A pretty Evans Gambit.

WHITE. M. Michael. 1—P to K 4 2—Kt to K B 3 3—B to B 4 4—P to Q Kt 4 5—P to B 3 6—Castles 7—P to Q 4 8—Kt takes K P (a) 9—P takes Kt 10—Q to Q 5 11—Kt takes B 12—Q to B 3 (c) 13—Q to Kt 3 14—B to K Kt 5 15—B to B 6 (f) 16—P takes P 17—K R to K sq. (h) 18—Q to R 4 19—R to K 5 20—Q R to K sq. 21—R to K R 5 22—B to Q 3 23—K to R sq. 24—P to B 4

BLACK. A. Thomas. 1—P to K 4 2—Kt to Q B 3 3—B to B 4 4—B takes Kt P 5—B to R 4 6—Kt to B 3 7—Castles 8—Kt takes Kt (b) 9—Kt takes P 10—B takes P 11—Kt takes Kt 12—Kt to R 5 (d) 13—K to R sq. (e) 14—Q to K sq. 15—P takes B (g) 16—R to K Kt sq. 17—Q to B sq. 18—Kt to B 4 19—R to Kt 3 20—Kt to K 3 21—Q to Kt sq. 22—R takes P ch. 23—Kt to Kt 4 (k) 24—Resigns (l)

NOTES.

(a) "Richardson's" attack.
(b) 8—..... Kt takes K P is the correct reply. The text move is simply playing White's game.
(c) Better than 12—Q to R 5, 13—Kt to K 5, 14—B to Kt 3, P to Q 4!
(d) The B Kt by this move gets right out of play. An alternative continuation, and one worthy of notice, is 12—..... P to Q 4, 13—P takes P, e.p., Q to B 3, 14—Q takes Q, P takes Q, 15—P takes B, B to K 3, etc.
(e) This seems best; 13—..... P to Kt 3 would lose the exchange or worse e.g., 14—B to R 6, 15—B to Kt 5 followed by 16—Q to R 4, or 15—Q to Kt 3 would give a winning attack for White.
(f) A daring sacrifice.
(g) 12—R to Kt sq. is much better; if then 16—K R to K sq., Q to B sq., and Black may take the B with safety.
(h) A very fine move. If 17—..... R takes Q, 18—R takes Q ch., R to Kt sq., 19—Q R to K sq., P to R 3, 20—B to Q 3, and White mates in two.
(i) 12—..... R to Kt 3 seems best here; if then 14—P to B 4, P to Q 3, 15—P to B 5, R to Kt 5, 16—R takes P ch., Q takes R, 17—Q takes R, Kt to B sq., if then 18—R to K 5, Q to R 3, and if 19—Q to Kt sq., with plenty of light left.
(j) There is nothing to be done. White has played excellently. Black's unmoved Q P has been his stumbling block all through.

GAME No. 596.

One of Blackburne's simultaneous games.

EVANS GAMBIT.

WHITE. Mr. Blackburne. 1—P to K 4 2—Kt to K B 3

BLACK. Amateur. 1—P to K 4 2—Kt to Q B 3

3—B to B 4 3—B to B 4
4—P to Q Kt 4 4—B takes P
5—P to B 3 5—B to R 4
6—Castles 6—Kt to B 3
7—P to Q 4 7—P takes P
8—B to R 3 8—P to Q 3
9—P to K 5 9—Kt to K 5
10—R to K sq. 10—P to Q 4
11—B to Kt 5 11—Kt takes Q B P
12—Kt takes Kt 12—B takes Kt
13—Kt takes P 13—B takes Kt
14—Q takes B 14—B to K 3
15—Q R to B sq. 15—Q to Q 2
16—Q to Q R 4 16—K to Q sq.
17—R takes Kt 17—K to Q B sq.
18—K R to Q B sq. 18—K to Kt sq.
19—Q to B 6 19—Q to B sq.
20—Q to Kt 5 20—B to Q 2
21—R takes P 21—B takes Q
22—R takes P ch. 22—Q takes R
23—B to Q 6 ch. 23—Q to B 2
24—B takes Q mate.

KORE CHESS CLUB.

At a small informal meeting in the Gymnasium, says the *Chronicle*, it was decided to form a Chess Club, as a branch of the K. R. & A. C., with Mr. Bardens as president and Mr. E. T. Bethell as Secretary. Rules for the Club were discussed, and various suggestions for the programme of events were referred to for the Secretary to put into shape for the next meeting. It was decided to meet every Monday, beginning 2nd November, at 5 p.m., leaving players the option of arranging their games before or after dinner. The first event will be a general tournament for the purpose of "breaking the ice" and providing a basis on which evenly-matched teams can be made up. It is proposed to arrange, if possible—

(1) A general tournament, to run through the whole season, each member playing each other member the best of three games, or perhaps two games only, and counting the aggregate.

(2) A weekly problem-solving competition for points.

(3) A small charge, say 5 *sen*, on every game played in the Club, match or otherwise, the money to be paid by the loser towards a chess trophy; and a book to be kept for recording the name of every player and every game he wins, match or otherwise, the one who wins most in the season to get the trophy. The book to be always open for reference.

(4) Matches, say one for the second Monday in each month such as—

Concession *versus* Hill.
International.
Professions.
Married *v.* Single.
Over 30 *v.* Under 30.
Interport—Japan ports at any rate.
Handicap.
Simultaneous play.

It is of course impossible to fix the programme definitely until it is known who is coming in, and it is hoped that on Monday next the meeting will be able to settle everything, vote on the various proposals, and get started on the tournament.

MAIL STEAMERS.

THE NEXT MAIL IS DUE

From America per O. & O. Co. Thursday, Nov. 5th.
From Europe, via Hongkong per M. M. Co. Wednesday, Nov. 4th.
From Hongkong per P. M. Co. Tuesday, Nov. 3rd.
From Hongkong per P. & O. Co. Sunday, Nov. 2nd.
From Hongkong per C. P. R. Co. Thursday, Nov. 5th.
From America per P. M. Co. Saturday, Nov. 14th.
From Canada, &c. per C. P. R. Co. Monday, Nov. 13rd.

* *Belgia* left San Francisco via Honolulu on October 17th.
† *Ernest Simon* (with French mail) left Hongkong on October 24th.
‡ *City of Peking* left Hongkong on October 27th. § *Assens* left Nagasaki on October 27th.

THE NEXT MAIL LEAVES

For Victoria, B.C. per N. P. Co. Sunday, Nov. 1st.
For Europe, via Shanghai per M. M. Co. Sunday, Nov. 1st.
For America per P. M. Co. Friday, Nov. 6th.

PASSENGERS.

ARRIVED.

Per British steamer *China*, from San Francisco:—Mr. Leopold Abenheim, Mr. Rudolph Abenheim, Mr. J. Abe, Mr. L. L. Bailey, Mrs. E. J. Bell, Mr. H. R. Bostwick, Mr. G. B. Brajevich, Captain Wm. Crichton, Mr. W. T. Carley, Mr. Mr. Robt. Christie, Mr. H. Colbrow, Mr. A. E. Cottier, Mrs. C. Cottier, Mr. and Mrs. C. H. Capen, Mr. W. B. Curtis, Mr. W. W. Curtis, Miss E. P. Chamberlain, Lieut. C. W. C. Deering, Miss Agnes Erwin, Commander O. W. Farnholt, U.S.N., Mr. and Mrs. C. B. Fernald, Mr. W. J. Gorham, Mr. Eric Gumprecht, Miss Elsie Gregg, Mr. and Mrs. C. B. Hale, Mr. and Mrs. W. S. Newhall, Miss T. E. Phelps and maid, Mr. and Mrs. N. R. Salisbury, Mr. J. Sakamoto, Dr. Geo. L. Tait, General Wm. D. Whipple, U.S.N., Mr. Geo. W. Weeks, Mr. W. H. Wiley, and Miss L. Wirrick in cabin. For Shanghai:—Mr. Rudolph Daschneid and Mr. J. W. Synder in cabin. For Hongkong:—Mr. and Mrs. Jay May Tong and daughter in cabin.

Per British steamer *Monmouthshire*, from Victoria, B.C., via Honolulu:—Mr. and Miss Glahn, Mr. Jackson, and Mr. Van Phon Lee in cabin; Mr. and Mrs. Clark in second class, and 46 Japanese in steerage. For Hongkong:—Mrs. and Miss Parsons and Mr. Brightwell in cabin; 26 Chinese in steerage.

Per British steamer *Empress of India*, from Vancouver, B.C.:—Mr. J. Hector Smith, Mr. and Mrs. Armitage, Lieut. Col. Cotton Jodrell, M.P., Mrs. Cotton Jodrell and maid, Misses Cotton Jodrell (2), Mr. J. M. Ringen, Mr. Robt. Patterson, Mr. Lewis Guanl, Rev. and Mrs. Rowland and 2 children, Miss Swartz, Mrs. A. Maddock, Mr. A. Maddock, Mr. and Mrs. H. Maddock, Miss Jennings White, Mrs. Jennings-Mills and maid, Rev. R. F. Cobbold, Mr. James Troup, Mr. and Mrs. C. G. Howen, Miss Hardwick, Mr. and Mrs. Sale and 2 children, Mr. and Mrs. C. S. Harrison, Mrs. and Miss Morgan, Mr. R. H. Percival, Mr. and Mrs. Vroom, Mr. C. H. Waters, Mr. C. F. Villiers Chapman, Mr. and Mrs. Geo. Buck, Mr. and Mrs. H. Payne-Whitney and maid, Mr. W. Gibson, Mr. Jas. H. Hart, Mr. H. S. Safford, Rev. J. Huber, Mr. S. E. Whittall, Mr. A. W. H. Whittall, Mr. W. Peer Groves, Mrs. L. S. Abbey, Mr. J. Miyaki, Dr. and Mrs. Renout, Mr. G. Ishisaki, Mr. R. Layui, Mr. and Mrs. Price and 2 children, Mr. and Mrs. P. R. Chandler, Mr. and Mrs. Spooner, Mr. W. G. Norris, Mr. M. White, and Mr. R. M. Galloway in cabin; 14 passengers in second class, and 415 passengers in steerage.

Per German steamer *Daphne*, from Hongkong:—Mr. Boas, Mrs. Ohkisan, Mr. Tanzon, and Mr. Takasi in cabin; 12 passengers in steerage.

Per British steamer *Olympia*, from Hongkong via ports:—Dr. J. J. Underwood, Miss Sutro, Mr. W. Retz, Mr. H. A. Poole, and Mr. H. G. Waggott in cabin.

Per Japanese steamer *Yokohama Maru*, from Shanghai via ports:—Mrs. Howitz, Mr. and Mrs. Barber, Mr. and Mrs. Baggandge, Mr. Chen, Mr. A. Spitzel, Mrs. A. Spitzel, Mr. J. Vronis, Mr. F. Truscott, General Okamura and family, Messrs. E. O. Kenyon, G. C. Murray, A. Buddi, Jos. W. Sprague, and R. Yamashima in cabin; Mr. K. Otsuka, Mr. S. Miura, and Mrs. S. Yahagi in second class, and 39 Japanese and 3 Chinese in steerage.

DEPARTED.

Per British steamer *China*, for Hongkong, via Kobe, Nagasaki, and Shanghai:—Mrs. Lida S. Ashmore, Mr. Wm. Ashmore, Jun., Miss Ellak Church, Mr. Kwei Ping Hong, Mr. Tung Ping Foo, Mr. and Mrs. J. Mannish, Mr. J. W. Bolles, Dr. Tait, Mr. E. V. Thorn, Mr. S. Komor, Baron G. de Gunsburg, Mr. Geo. B. Brajevich, Captain Wilson Walker, Mr. Hunter Sharp, Mr. J. T. Smith and daughter, Mr. H. W. Lea, Mr. John Will, Col. C. de Wogack, Captain Wm. Crichton, Mrs. E. J. Bell, and Mr. W. Tallers in cabin.

Per British steamer *Empress of India*, for Hongkong via ports:—Mrs. and Miss Harris, Miss Wells, Mrs. J. C. Hall, Misses Hall (3), and child, Mrs. E. Osborne, Mrs. G. E. Cox, Miss Biliho, Miss Wauchope, Messrs. W. H. Drummond, C. Georg, J. S. Hagari, R. T. Coulter, C. H. Balfour, R. J. Davis, H. G. Waggott, Jas. Budge, Dr. W. J. Willes, Mrs. R. S. Gardiner, Mr. R. S. Gardiner, Miss R. S. Gardiner, Mr. S. W. Cummings, Mrs. S. W. Cummings, Mr. and Mrs. W. D. Graham, Messrs. H. Anley, Chuy Chu, Cheng Cheng Ying, Mrs. T. W. Cheng and son, Mr. H. H. Horsey, Mrs. P. T. Pollock, Messrs. Lo Chuk Tung, Lam Pak Tsun, F. G. Sale, Capt. Fillet, Mr. H. S. B. Brindley, Mrs. E. J. Dorn, Mrs. and Miss Gorham, Mr. C. H. Fearon, Lieut. von Diedrichs, Mrs. Rothven, Mrs. Goddard, Captain Lei, Mr. E. Junker, Mr. R. A. de Villard, and Dr. Paul Ritter in cabin; Messrs. Julio Toplong, K. Katsuyama, S. Sugiyama, Lei, and Mrs. Lei in second class, and Mr. Ah Loy, Mrs. Lo and 2 children, and Mr. Chang Lee and son in third class.

Per Japanese steamer *Kobe Maru*, for Kobe:—Mr. and Mrs. Yoshitaka and 2 children, Captain E. S. Barstow, and Mr. B. Kusumoto in cabin; Messrs. A. Herd, H. Williams, and Y. Goto in second class. For Kagoshima:—Mrs. Tojio and 2 children, and Mrs. Tojio in cabin. For Shimonoseki:—Mr. T. Inagaki in cabin. For Shanghai:—Mrs. C. F. Seaman and Mr. S. W. Ugenin in cabin; Mr. J. Murao and Mr. H. Baufoed in second class, and 52 passengers in steerage in all.

REPORTS.

The British steamer *China*, Captain Seabury, reports:—Left San Francisco the 8th October; experienced strong westerly to north-west winds till the 22nd, thence to port northerly winds and fine weather. Time, 15 days, 4 hours, 33 min.

The British steamer *Empress of India*, Captain O. P. Marshall, reports:—Left Vancouver, B.C., on October 14th, had strong, head winds and very rough weather in general to port. Delay caused one on account of leaving day late.

The Japanese steamer *Yokohama Maru*, Captain Swain, reports:—Left Shanghai the 24th October at 12.10 p.m.; had light, increasing to moderate, south-east winds and strong south-easterly swell up to approaching Goto Island; thence to arrival at Nagasaki, the 26th, at 2 a.m., had moderate north-west winds and slightly unsettled weather, with occasional showers. Left Nagasaki the same day at 5 p.m.; had light to moderate north-west and north-east winds and clear weather up to arrival at Shimonoseki, the 27th, at 5.30 a.m. Left Shimonoseki at 11.20 a.m.; had moderate north-east breeze and clear weather up to arrival at Kobe, the 28th, at 7.15 a.m. Left Kobe the 29th at noon; had moderate southerly breeze, moderating to light variable airs, clear weather and slightly confused sea when passing Oshima at 8 p.m.; thence to Rock Island, which was passed the 30th at 9.30 a.m., had moderate north-winds, fine, clear weather and comparatively smooth water; thence to arrival at Yokohama at 3.15 p.m., had moderate to light north-easterly winds and continued fine, clear weather. Saw nothing of importance during the voyage.

VESSELS ON THE BERTH.

For BAKAN, Hongkong, Singapore, Colombo, Penang, Port Said, Marseilles, London, and Antwerp, November 28th, at Noon, the "YAMAGUCHI MARU."—Nippon Yusen Kaisha.

LATEST COMMERCIAL.

IMPORTS.

Tone still dull. Several reasons are advanced for this state of things. Financial stringency, Race holidays, and all sorts of excuses. Importers generally are not very happy and rather envy their brethren in the Export branch. Probably things will soon settle down to a more satisfactory course.

COTTON PIECE GOODS.

	PER YARD.
Grey Shirtings—8 1/2 yds, 33 inches	\$2.40 to 2.80
Grey Shirtings—9 yds, 33 inches	2.75 to 3.20

EXPORTS.

RAW SILK.

Another speculative movement, chiefly in full size Filatures and Re-reels for America. It is thought by some operators that after the Presidential Election next week there will be a strong revival of commerce generally in the States. It is also admitted that best grades of Filatures and Re-reels will be in small supply here this season. Consequently "buyers for the rise" are *en evidence*.

QUOTATIONS.

Filatures—Extra 9/11, 10/12 den.	\$880
Filatures—Extra 13/15, 14/16 den.	870
Filatures—No. 1, 10/13 deniers	850

THE GREATEST WONDERS OF MODERN TIME

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN. HOLLOWAY'S OINTMENT

Uncertain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and arresting and subduing all inflammations. Mr. J. T. Gouge, in his account of his extraordinary travels in China, published in 1894, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas—and the demand became so great that I was obliged to lock up the small remaining 'stock'."

Sold by all Chemists and Medicine Vendors throughout the World.
May 2nd, 1896.

MILKMAID BRAND CONDENSED MILK

The "Milkmaid" Brand is guaranteed to contain all the cream of the original milk. In the process of manufacture nothing but water is removed, nothing but the best refined sugar added.

Avoid low-priced brands from which the cream has been abstracted, and ask for the "Milkmaid" Brand, the best for all purposes.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, NOV. 7TH, 1896.

SUMMARY OF NEWS.

BARON KAWADA, President of the Bank of Japan, is dead.

MAJOR MCKIVLEY has been elected President of the United States.

MARQUIS ITO is now in receipt of a pension of *yen* 2,250 from the State.

THE Chinese Consulate at Yokohama will be opened on the 10th inst.

CAPTAIN PEARNE, of the O. & O. steamship *Gaelic*, has died at Hongkong.

H.I.M. THE EMPEROR held a Birthday review at the Aoyama Parade Ground on Tuesday.

THE Chinese Consulates at Kobe, and Nagasaki were opened on the 3rd inst.

THE Tenth Session of the Imperial Diet will be convoked about the 25th of December.

MR. H. J. SNOW has received the appointment of Manager of the Yokohama United Club.

A MANCHESTER firm has signed a contract to despatch one thousand cotton weaving looms to Japan.

MR. OSHINO and other promoters of Yamagata Ken are now starting the Uno Railway, sixty-five miles in length, to run from Sakata Okumi-ori,

Yamagata Ken to Akita City, Akita Ken. The Company has a capital of *yen* 2,800,000.

THE Yokohama Cricket Club beat an eleven from Her Majesty's ships by 28 runs on Tuesday.

THE submission of the Matabele Chiefs continues, and it is believed that the fighting is virtually over.

It is rumoured that **Mr. Hatoyama Kazuo**, will shortly be appointed a Minister from Japan to a foreign Court.

COLONEL LIEBERT and a party of German officers will sail shortly for China to organise the Chinese army.

THE Jury have returned an open verdict in the inquiry conducted by the British Consul into the death of **Mr. W. R. H. Carew**.

THE idea of establishing a Bank in Formosa backed by a capital of *yen* 5,000,000 prevails among capitalists.

THE Yokohama Specie Bank recently opened a Branch at Formosa with the consent of the Finance Minister.

THE cloth market at Ashikaga is now at a standstill; prices have reached a very low scale, and business is suspended.

AMATEUR theatricals were given at the Shōreikai, Tora-no-mon, Tokyo, last evening by a company of foreign ladies and gentlemen.

THE gold mines at Kufun and Kinso, in Formosa, have been handed over to Messrs. Fujita & Co. and Mr. Tanaka Chobei respectively.

TUESDAY being the Emperor's Birthday, was devoted to holiday-making in Yokohama, and the town was profusely decorated. The weather was perfect.

T.I.M. THE EMPEROR AND EMPRESS will leave the Palace on the 11th inst, at 2 o'clock for the Akasaka Detached Palace to view the chrysanthemums.

ON Tuesday evening Count Okuma, the Foreign Minister, and Countess Okuma, gave a ball at the Imperial Hotel, Tokyo, to a large and distinguished company.

Two hundred emigrants to Hawaii from Hiroshima, Yamaguchi, Fukuoka, and Kumamoto left this port on Saturday for Honolulu by the British steamer *Allmore*.

A VOLUNTEER Steam Fleet will be organized in Japan in the near future. Connected with this scheme is a Joint-stock Company backed by a capital of *yen* 10,000,000.

MAJOR-GENERAL SHIOYA, who was appointed Commandant at Wei-hai-wei in succession to Lieut. General Nishi, left Shimbashi Station on Tuesday at noon for his post.

THE British store-ship *Humber*, that collided with the quarantine steamer *Kumagawa Maru*, of the Osaka Shosen Kaisha, has paid \$25 to the Kanagawa Kencho as compensation.

A TELEGRAM from Nagasaki on the 30th ult. states that a conflagration broke out at Nishi Kakitau-ori, Nagasaki Ken, and about one hundred and twenty-two houses are said to have been burnt.

On the 3rd inst. at 11 o'clock, Count Matsukata, all the Ministers of State, all the Privy Councillors, members in the *Kinsei* and *Yakono-ma*, and Princes Tokugawa Iyesato and Konoye Atsumaro, Marshals Yamagata and Oyama, as

well as all the Foreign Representative, had audience with T.I.M. the Emperor and Empress in the Howo-no-ma, where refreshments were served.

COUNT INOUE and Baron Mori, with some of their followers, left Shimbashi Station on Tuesday morning for Yokohama, where they took the *Yamashiro Maru* and sailed for Yamaguchi.

AN extraordinary meeting of the Saitama Branch Hospital of the Red Cross Society is to be held at the Omiya Park on the 8th instant. H.I.H. Prince Komatsu is expected to be present.

THE Tokyo City Assembly having decided to urge the abolition of the Special City Regulations, as a first step a committee will call on Count Kabayama, Home Minister, to present a petition to that effect.

FIFTY female nurses who are to be employed in the hospitals at Tainan, Taichu, and Taipei, (Formosa) left Shimbashi Station on Thursday evening for Kobe, where they will take steamer for Formosa.

LORD DUFFERIN, speaking at a banquet in Belfast, stated that the international situation more than ever imposed on Great Britain the necessity of being in a state of perfect preparation to meet all emergencies.

It is said that **Marquis Saionji**, late Minister for Education, will leave Japan on or about the 29th inst. for a tour through Europe. He will visit England and other European countries, and probably return about August next year.

THE famous old pine tree at Karasaki, known as one of the eight principal features of Omi, was completely covered by water when Lake Biwa overflowed its banks, and it was feared that the tree would die. But it is now found that it has not suffered any ill effects.

THE Japanese men-of-war *Fuso* and *Chiyoda* left Sasebo on the 4th instant for Kobe; the *Yoshino* put into Yokosuka on the 5th, from Tsu; the *Banjo* left Kure for Shinagawa the same day; the *Takachio* left Nagasaki for Sasebo the same day.

MARQUISES ITO AND SAIONJI, President and Vice-President of the Japanese Code Investigation Committee, having been released from their posts at their own request, Count Matsukata, the Premier and Viscount Kiyoura, Minister for Justice, were appointed President and Vice-President respectively.

THE Import trade does not improve, in fact stagnation has arrived at a point where quotations for Textiles may be withdrawn. The stringency of the money market is responsible for this state of things, and some anxiety is felt by buyers, who are unable to come into the market, as well as sellers, who cannot find purchasers. In the Metal trade, news from the home side forces buyers into the market, and a fair amount of stock has been moved at unaltered quotations. There is a steady trade in Kerosene; prices are high and deliveries have been good. The value of Sugar has somewhat declined, and arrivals have exceeded sales. There has been a large business in Raw Silk for the United States, holders having been fairly current, but very little has been done for Europe. In Waste the business has also been good, at advancing rates for suitable fibre. The demand in the Tea trade has slackened, and the stock of leaf has a tendency to accumulate. Exchange has fallen a point.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The news of Mr. McKinley's successful election to the Presidency of the United States of America has been the only topic of common interest to the Tokyo papers during the week. They regard the event with satisfaction, tempered, however, by a certain measure of foreboding as to the tariff prospects for Japan. But the *Yiji* assures the public that no apprehension need be entertained. It bases the assurance on information obtained from persons thoroughly versed in American affairs. Protection, those persons say, has already reached such a point that any attempt to raise the tariff would certainly evoke formidable opposition from the side of the consumers, apart from the extreme improbability of such a measure being endorsed by Congress and the Senate.

The *Shogyo* warns the public not to be needlessly alarmed about the panic so persistently predicted by certain pessimists in Japan. Our contemporary sees no solid reasons for the outcry. The pessimists have no cause for their alarm other than the feverish excitement of the people to start one enterprise after another. But these enterprises can hardly expect to reach the point of being practically launched, in view of the recent tightening of the money market and the fall of stocks. A great part of the enterprises will disappear before even the first installment of the subscription has been called up, or even before a charter can be obtained from the Authorities. Companies now calling in subscriptions were established, in the main, prior to the war, and as these have a solid foundation, they can hardly be expected to cause any agitation in the economic world. The trifling financial complications that have occurred in certain localities were due either to an abuse of the credit system, or to the failure of speculators who had attempted to do banking business without capital. Those troubles will pass away without doing any perceptible injury to the public economy.

The *Kokumin* appeals to the nation on behalf of the Korean refugees in Japan. The treatment enjoyed at the hands of the Japanese by such prominent Koreans as Pak Yong-ho, Prince Whwa, and Li Chun-yong (grandson of the Prince Parent), was formerly of a most cordial description. But after the Ito Cabinet had blundered in its Korean policy and begun to incur the displeasure of the great Northern Power, a sudden change came over the attitude assumed towards the refugees, and in deference to Russia they were left to shift for themselves as best they could. Now that the duty of protecting them has been handed over by the Ito Cabinet to the Matsukata, the *Kokumin* advises the latter to take such measures as shall enable the Koreans to live as their birth and position entitle them to do. The Prince is staying in Japan by way of preliminary to undertaking a tour through the west, and the grandson of the Tai Wön-kun came here to inspect the state of national affairs. To extend appropriate assistance to these persons could not reasonably be twisted into a pretext for offence on the part of other countries. Funds may be publicly given to them by the Imperial Household or by the National Treasury. If certain considerations deter the Government from doing the same by Pak and other political refugees, then other means, as paying their expenses out of the secret service fund and so forth, may be devised. At any rate, it is the duty of the Matsukata Cabinet to rescue them from their embarrassments and enable them to pass their time contentedly in Japan.

The *Yiji* doubts whether the Government has succeeded in divesting itself of the old prejudices about taxation, and whether it really sees that the means of raising revenue are not limited to a land tax alone, as was the case in the pre-Restoration period. That doubt is engendered by observing that, while imposing taxes of almost every conceivable description, the rates seem to be determined in accordance with

the ruling interest on money, as was always the case when, during feudal times, extraordinary imposts had to be levied over and above the regular land tax. It advises the Government to abolish obnoxious and not very profitable sources of revenue like the census registration tax, income tax, and so forth, and to boldly increase the tax on *saké*, which, originally 2 yen per *koku*, was subsequently raised to 4 yen, and now to 7 yen. Nevertheless, the rate is still far below that imposed in any other civilized country. Supposing the original price of one *koku* to be 10 yen, a tax two, three, or even four times the present rate should be charged. The expenses needed for expanding the national armaments could thus be obtained. Even if the rate be doubled, a revenue amounting to 40 million yen at least could be derived from the tax on *saké* alone.

While admitting that to waive the privilege of free manufacture in China was unavoidable on Japan's part, the *Nichi Nichi* wonders at the great noise made by the pro-Government papers, which call this the opening success of the new Foreign Minister. They ignore altogether that Count Okuma has merely followed in the path marked out by his predecessor. The terms already conceded to Western Powers by China were the minimum that Japan ought to accept in exchange for giving up that privilege. Yet, not only do those papers extol their idol for having succeeded in "exacting" the minimum, but they are even shameless enough to count China's public engagement not to repeat a violation of the Treaty, as one of the conditions obtained in return for the renunciation of the manufacturing privilege. If a nation were content to abandon on such senseless grounds, privileges already obtained by it, then its treaties with other Powers would soon be reduced to mere nonentities. The action of the pro-Government journals in this instance reminds the *Nichi Nichi* of the old Japanese saying *hiki no hiki taoshi* (save me from my friends).

Fresh from the impression produced by the Birthday Ball given by the Minister of Foreign Affairs at the Imperial Hotel, the *Yomiuri* wishes to suggest to Count Okuma the advisability of effecting certain changes in this practice. The custom of giving a ball on the Emperor's Birthday was inaugurated, if the *Yomiuri* remembers aright, when Count Inouye held the portfolio of Foreign Affairs, and had its origin in the desire to transplant foreign social habits and customs into Japan. The effort has failed. Balls and the wearing of foreign garments by Japanese ladies have fallen into disfavor. The only faint reflection of the vogue that these usages seemed at one time likely to acquire, is observed at the Birthday Ball. Now when a Foreign Minister, in the capacity of the people's representative, gives an entertainment to foreign notables, it should certainly have a national character, and be typical of the customs of the country. From that point of view, the people surely can not find it agreeable to see their Foreign Minister entertain foreign guests at a ball that is altogether out of touch with the customs of the country. Even as a means of entertaining foreign guests, does it really conduce to their enjoyment to invite them to a ball in such a small building as the Imperial Hotel, and to have dancing among such a confused throng of people? If foreign guests have any taste, and the *Yomiuri* does not doubt that they have, a quiet and refined entertainment in Japanese style would be far more acceptable to them. Why not, on future occasions of the kind, give an entertainment by day instead of a soiree, and abandon the ball in favour of a garden party? Why not invite foreign and Japanese guests to a beautiful and artistic park, like that of the Hama Detached Palace? The *Yomiuri* disclaims any wish to discourage friendly intercourse between Japanese and foreigners. On the contrary, it is highly concerned by the fact that such intercourse is not so satisfactory or so intimate as it ought to be. Moreover, it thinks that, as a means of encouraging genuinely friendly intercourse, entertainments

given by the Foreign Minister are very important. None the less, in social relations with others, the Japanese should not depart much from their usual customs, or foreigners from theirs. A proper and gradual assimilation of the two must be aimed at. Any sudden change in a Foreign Minister's method of entertaining foreign guests may not be feasible in the West, where customs are so strongly rooted, but no such difficulty presents itself in a Far-Eastern State.

The *Tokyo Asahi* is glad to hear a rumour that the Government contemplates appointing a special Investigation Committee as a preliminary to the approaching enforcement of the Revised Treaties. The going of such Treaties into operation has no precedent in the history of the world. It signifies the commingling of two different races on terms of equality, and any error committed at the outset may exercise grave influence on the welfare and even the very existence of the country. No effort should be neglected to ensure the satisfactory conduct of affairs. The greatest attention must be paid in selecting members of the Investigation Committee. In order to impress the members and the public with the gravity of the business and with the great responsibility attaching to the discharge of such duties, the *Asahi* suggests that the members should be appointed by the Emperor.

The *Chuo* calls attention to the object lesson furnished by the unsatisfactory results of the bourses established in almost every local town of importance during the past few years. The number aggregates over 150 throughout Japan, but an inspection recently made by the Department of Agriculture and Commerce shows that at least two-thirds are struggling for existence, especially in the case of Gumma, Ibaraki, Tochigi, Nagano, Chiba, and Yamaguchi. Some bourses have already given notice of dissolution, and others are contemplating a similar step. Such a fate is sure to overtake enterprises started under the influence of temporary excitement.

The *Shogyo* urges that the Osaka money market should be purged of the abuses that have culminated in the present trouble. Our contemporary invites special attention to the necessity of abolishing the general clearing house, which it declares to be not only inadequate as a means of organizing and developing the system of credit, but also frequently liable to actually derange the smooth and regular course of the money market. For though avowedly an establishment for balancing cheques, it is really a place where currency is bought or sold by competitive processes. The result is that, in times of briskness or dullness alike, rates are pushed far beyond normal figures, and the facilities of circulation afforded by this mechanism often degenerate into tools for speculators, with the result that no small embarrassment is caused to genuine and upright bankers. Unless, therefore, an institution so liable to abuse be done away with, troubles such as that now disturbing the Osaka market, will be sure to occur again, whatever temporary palliatives be applied.

While maintaining that apart from any question of material interest, but simply for the sake of upholding the national prestige, Japan must oblige the Korean Government to acquiesce in her proposals for laying the Seoul-Fusan Railway, the *Yiji* wishes to draw the attention of the projectors to the importance of not sparing money in agitating for the attainment of their scheme. They must be well aware how, even in Japan, square and fair argument alone does not suffice to attain any object promptly, but that the un-sparing use of money conduces highly to that end. How much more must this be the case in Korea where money exercises a most potent charm?

The *Mainichi* writes ruthlessly about the alleged corruption in the Railway Bureau, or rather, dishonesty on the part of Mr. Haraguchi, Chief of the Construction Section of the Bureau.

Devoting an article of three columns to the subject, the *Mainichi* declares that the gambling propensities of that expert vitiate the atmosphere not only of the Section presided over by him, but also of the whole Bureau, and that projectors of railways are wont to take full advantage of his weakness when they set themselves to obtain charters from the Government. Our contemporary wishes it to be understood that the important relation in which the Construction Bureau stands towards the railway system of the country has made the public disclosure of these unpleasant facts a duty, and it concludes its article by urging the authorities to prosecute strict inquiries into the corrupt state of the Bureau.

The *Nippon* wishes to have three Government Offices abolished, namely, the Department of Colonization, the Legislative Bureau, and the Metropolitan Police. Whatever may be said about the future, the *Nippon* can not discover in past events any warrant for maintaining the Department of Colonization. There are only two bureaux in the Department, the Southern (Formosa) Bureau, and the Northern (Hokkaido) Bureau. But Formosa has a Governor-General specially appointed by the Emperor, and though his duties are chiefly administrative, he can, at the same time, easily discharge the function of superintending the colonization affairs of the island. Hence no inconvenience would be experienced if the Governor-General's Office were made directly subordinate to the Cabinet, or if a seat in the Cabinet were given to the Governor-General. As to Hokkaido, that district was managed satisfactorily by the Hokkaido Administration Board before the Department came into existence, and there is no necessity whatever to enlist the latter's services. Nor are emigration affairs so extensive as to be beyond the control of either the *Noshomusho* or the *Gaimusho*. The *Nippon* learns that the Department was created merely for the sake of offering a seat in the Cabinet to Viscount Takashima, and now that the Viscount holds, at the same time, the portfolio of War, that necessity is no longer sensible.

The Legislative Bureau was necessary before the inauguration of the Diet, its functions being to draft and unify projects of law proposed by various Departments of State. But there is no such necessity now that the Supreme Legislative Office, the Diet, exists. Any one maintaining to-day that the continued existence of the Bureau is essential, must be regarded as impugning to the capacity of the Diet. The continued existence of the Metropolitan Police Board is equally unessential, though it was undoubtedly needed during the agitated days before State affairs were settled on a sound basis. It is now simply productive of friction with the Tokyo Municipal Office in questions of jurisdiction. It should be abolished, and the local police system of Tokyo should be given a wider scope.

EDITORIAL NOTES.

THE ORIENTAL HOTEL, LIMITED.

THE following is the report for presentation to the shareholders at the fifth annual ordinary general meeting, to be held at the Municipal Hall, Kobe, on Tuesday, 10th inst.:—The Directors have now the pleasure to lay before the shareholders a statement of the company's accounts for the year ended 31st August, 1896. The total earnings in working account during that term amount to \$91,097.42, showing a profit of \$27,721.85 in that account. On reference to the statement of accounts it will be observed that the nett profit for the year amounts to \$25,787.51, and after making provision for depreciation, viz.:—On steam launch \$987.51, there remains a balance of \$24,800. An interim dividend of 5 per cent. on ordinary shares for the half-year ended 28th February, 1896, was paid on the 26th March last, absorbing \$3,700, leaving now available for distribution the sum of \$21,100. From this the directors

recommend the payment of a further dividend of 3 per cent. on ordinary shares, making 8 per cent. for the year. They also recommended the distribution of a surplus sum of \$8,880 in equal parts to ordinary and founders' shares, in accordance with Articles of Association, making the total return to shareholders for the year 14 dollars per share on ordinary shares, and \$55.50 per share on founders' shares, and that the balance of \$10,000 be carried to the credit of reserve account, bringing this account up to \$20,000. The company have recently completed the construction of the Annexe on Lot 87, Concession, a handsome three-storied building, containing bedrooms, reception rooms, bar and billiard room, and usual offices on ground floor, which was opened for the reception of visitors on 15th July last. The hotel premises are now lighted throughout by electricity supplied by the company's own plant. In order to meet the cost of the construction of the annexe and its furnishing, the Directors on the 1st July last issued debentures to the extent of \$75,000 redeemable on the 1st July, 1901, bearing interest at the rate of 7 per cent. per annum, payable half-yearly. The property of the company has been maintained in an efficient way and the buildings are in first class order and condition. Directors.—In accordance with Article 90 of the Articles of Association, Mr. A. H. Groom retires from office but offers himself for re-election. Auditors.—In accordance with Article 129 of the Articles of Messrs. H. J. Rothwell and C. Tulloch retire from office, but offer themselves for re-election.

LADIES' INTERNATIONAL READING ROOM.

THE Yokohama Circle of the King's Daughters, having elected their honorary members as a Board of Directors, have set on foot a much needed association that will be known as the Ladies' International Reading Room. In the prospectus that has just been issued we learn that "the Ladies International Reading Room is based on broad principles of social benefits from which narrowness, selfishness, and provincialism shall be excluded. No rigorous rules or disagreeable regulations shall hamper the freedom of the Reading Room." Some 180 subscribers have been obtained, at a fee of \$1 per annum, and the following ladies are office-holders for the year: President, Mrs. Theodore J. Morris; Directors, Mesdames Stuart Eldridge, F. Grösser, J. C. Hubbard, J. F. Lowder, H. Loomis, X. Salabelle, E. Scidmore, and N. F. Smith; hon. sec., Mrs. C. B. Siedman; hon. treas., Mrs. E. Wheeler. Magazines will be the form of literature provided; and the room is rented at the Public Hall.

"EN ROUTE."

MESSEURS. L. LEROY and H. Papillaud, two French journalists, have arrived in Japan on their trip round the world. These gentlemen left Paris about 22 months ago, without a franc in their pockets. At Nice they published a small paper, and soon after started *En Route*, a journal that they issue at the most important places at which they call. Principally in French, *En Route* also contains many columns in Italian, Turkish, Guzerati, Cambodian, and Chinese, for the ninth issue was published in Peking, the first foreign paper every printed in that venerable city. They have over 4,000 subscribers to *En Route*. Messrs. L. Leroy Papillaud will stay in Japan some three or four weeks and intend issuing a number of their journal here, which will be embellished by many wood-cuts and process blocks. Then they will travel home via America.

LUMBER FOR KOBE.

THE American schooner *Prosper*, Captain Johannesen, arrived in port last Saturday with a cargo of lumber. Upon receiving orders from her consignees she departed on Sunday for Kobe where she will be discharged.

DEATH OF CAPTAIN PEARNE.

MR. B. C. HOWARD, the Agent of the O. & O. Steamship Company at Yokohama, informs us that he has received intelligence from Hong-kong that Captain W. G. Pearne, of the O. & O. steamer *Garlic*, died at that port on the 4th

instant. Captain Pearne had been greatly upset by the accident that befel his vessel near Shimonoeki, and it is feared that this preyed on his mind. He was greatly liked in the Eastern ports.

A DIFFERENT VERSION.

It appears says the *N.-C. Daily News* that Mr. Troughton of H.M.S. *Grafton* was not drowned a boat accident after all. He was shooting on the bank of the lake at Sivouch, when he shot a duck, which fell into the lake. He took off his clothes and swam off to get the duck, and it is supposed that he got entangled in the weeds and was drowned. His body had not been recovered after two days' dragging for it.

GERMAN CRUISER IN COLLISION AT NAGASAKI.

JUST as the German cruiser *Prinzess Wilhelm* was leaving Nagasaki harbour on Monday, says the *Kobe Chronicle*, she collided with the steamship *Hyson* which was coming in at the time. The *Prinzess* got some of her boats damaged and some other minor gear carried away, but proceeded upon her way after a few hours' delay. As far as was known up to the time of departure of the *Empress of China*, no damage was done to the other vessel.

FIRE IN NAGASAKI.

ON the 29th ult, 123 houses were destroyed by fire at Hongo, Kaminoura, Nagasaki, and one man was injured. The fire originated in a bath house.

THE "SHIMPO-TO'S" PLATFORM.

The *Shimpo-to* will hold a general meeting of the Party on the 1st November, and according to the *Mainichi Shimbun*, the subjects to be adopted on that occasion for submission to the Diet next session, will be, revision of the Press Regulations, of the Public Meeting and Political Association Regulations, and of the Publication Regulations; the abolition of the Peace Preservation Regulations, of the Premonition Law, of the Imperial Ordinance relating to travel to Korea, and of the Special Municipal System; the reduction of Administrative Expenditures; the improvement of the Formosa government; the question of the Formosa garrison; the shortening of the time for the increase of the Navy; the abolition of the house tax in the Registration Tax System; the amendment of the Law of Election for the Lower House of the Diet; the amendment of City, Prefectural, and District Government System; the amendment of the Saké Brewing Tax; of the Tobacco Monopoly Law; of the Business Tax; of the Law for Encouraging Navigation and Shipbuilding; of the Mining Law; of the Industrial and Agricultural Bank Law; and the introduction of projects of law bearing on forestry, on the government of Hokkaido, irrigation, on the customs tariff, on State properties, and so forth. That, it must be confessed, is a pretty extensive platform. If the politicians that set themselves to the task of legislation in Japan can swallow even a small portion of what they bite off, they are very remarkable men.

JAPAN'S FOREIGN REPRESENTATIVES.

Baron Hayashi, Japanese Representative in Peking, is expected to return to Japan at the beginning of next month, and it is supposed that he will be sent to St. Petersburg in place of Baron Nishi, who is now in Tokyo. The *Tokyo Shimpō*, from which we take this forecast, adds that Mr. Komura, formerly Japanese Representative in Söul, and now Vice-Minister of Foreign Affairs, is likely to succeed Baron Hayashi in Peking, and that Mr. Kato, Japanese Representative in London, will probably take Mr. Komura's place at the Foreign Office, unless Count Okuma decides to bring Mr. Hatoyama there, which is not improbable.

The *Nippon Yusen Kaisha* opened a branch office at Bombay on the 1st inst. and the former branch that was in charge of Messrs. Tata Co. has been abolished.

THE MEETING OF THE DIET.

According to the *Yorodeu Choho*, the rescript convening the Diet will be issued about the 11th instant, and the Houses will meet on the 22nd or 23rd of December. The official opening of the 9th session took place on the 25th of December, last year, but on this occasion the ceremony will be two or three days earlier, so as to allow time for passing, before the end of the year, a Bill postponing for one year longer the operation of the Civil Code and the remaining portion of the Commercial Code. These Codes, issued in 1890, were to have become operative from January 1st, 1892, but the Diet, in its 1st session (1891), decided that their operation should be deferred for five years, in order to allow time for thorough revision. Thus, according to that resolution, they ought to go into force from the 1st of next January. But although the greater parts of both Codes have been duly revised, and the revisions passed by the Diet, it is found impossible to complete the remaining portions in time to submit them to the House during the approaching session, and consequently the necessity arises for obtaining the Diet's consent to a further postponement. It is a little difficult to foresee the time at which the whole Codes will be in operation. Assuming that the Diet meets for its 11th session in November, 1897, that the remaining laws are submitted on the opening day, accompanied by a message of urgency, it is just within the bounds of possibility that they may be passed before the end of that year, and may go into force from ~~June 1st~~ 1898. They would then have been a full year in operation before the arrival of the time for abolishing Consular Jurisdiction. But that is a very close calculation. If, as is not improbable, the Diet does not take final action until the closing days of its 11th session, that is to say, February, 1898, then the Civil Code could scarcely be put into force before January 1st, 1899, and there would remain only half a year to test its working before the maturity of the Revised Treaties.

As for the character of the approaching session, an impression gains ground that things will pass quietly. The reasons for such a belief are that no serious question agitates the public mind at present, and the Liberals, having been from the outset favourable to Count Matsukata's entry into the Cabinet, will refrain from attacking his administration. It is true that they opposed Count Okuma's return to power, but Count Okuma being Minister of Foreign Affairs, can be assailed in that sphere only, and just now no pretext for assailing him presents itself. The fact is that the Cabinet could from the first count on the support of the *Shimpo-to*, and by following as closely as possible on the lines of the Ito policy, it hopes to disarm the hostility of the *Yifu-to*. Such is the forecast. But political horizons in all countries are subject to swift changes, and Japan is not exempt from the rule.

COUNT OKUMA AND THE SPECIAL ADMINISTRATIVE INVESTIGATION COMMITTEE.

Count Okuma, in his capacity of President, addressed the Special Administrative Investigation Committee on the 30th ultimo. An epitome of his speech is given by the *Yiji Shimpo*. He said that the main object of administrative adjustment had hitherto been to effect financial economies. The Diet had evinced its desire in that sense in the first session by cutting down expenditures to the extent of six million yen, and the Government had subsequently made efforts in the same direction, but without any marked success. The present Ministry did not propose to make economy a prime aim, or to do anything calculated to impair the efficiency of the administrative machine. The result of the Committee's investigations might go to show a necessity for increased expenditure in some directions. If so, the required increase would be made without hesitation. On the other hand, wherever retrenchment was found to consist with efficiency, it would be resolutely undertaken. Above all, no effort should

be spared by officials of every degree, from the highest to the lowest, to establish friendly relations with the people, to treat them with all consideration, to pay full and speedy attention to their requests, and to avoid all perfunctoriness in the transaction of business. One of the abuses of the time was confusion and duplication of official functions and looseness of the chain of responsibility. The Committee should direct its investigations towards these points, so as to provide every possible facility for the transaction of business, and should also consider the feasibility of abolishing or combining bureaux.

BIRTHDAY BALL IN TOKYO.

The Birthday Ball given by Count and Countess Okuma on Tuesday in the Imperial Hotel was one of the most successful that has been seen in Tokyo. Outside, the large building was illuminated from roof to base with fairy lamps of various colours, producing an effect of great brilliancy and softness. Inside, the decoration was simple but very telling, wreaths of leaves and flowers being wound round the rafters and pillars of the dancing salon. The number of guests exceeded any previous record, and though the whole ground floor of the hotel was utilized for the occasion, it seemed at first scarcely possible that space could be cleared for dancing. Count and Countess Okuma, assisted by Mr. Mitsuhashi and Mr. Yoshida, received the guests, and it was noticeable that His Excellency supported the fatigue of the evening without apparent inconvenience, though the numerous social and official functions that had occupied the day were in themselves sufficient to tax his strength severely. At ten o'clock, their Imperial Highnesses Prince and Princess Arisugawa, Prince and Princess Nashimoto, and Prince Kanin arrived. Dancing commenced almost immediately afterwards, and was kept up until one o'clock, when the Yokohama guests, of whom an exceptionally large number were present, left for Shimbashi, to catch a special train provided for their convenience. Supper was served in five rooms, but so numerous were the guests that a division into three relays became necessary. We need scarcely add that the Japanese, ladies and gentlemen alike, took almost no part in the dancing. That particular phase of Occidental civilization, with all its interesting concomitants, has completely failed to take root in Japan.

THE SAWA FIRM'S DIFFICULTIES.

If information published by the *Chuo* about the Sawa Firm's difficulties be authentic, there would seem to be scarcely any hope of discovering a satisfactory solution. The proprietor of the Firm is reported by our contemporary to have already left Japan. Abandoning the management of the Firm to his farther, he started for America by the *Kinshiu Maru*, that cleared from Yokohama for Portland on the 15th Oct. Before he set out, one of his legal advisers recommended him not to remain in the United States of America, inasmuch as an extradition Treaty exists between that country and Japan, but to proceed at once to Italy. The total amount of the Firm's liabilities, reported at first to be from 300,000 to 400,000 yen, is growing apace as investigations proceed, and according to inquiries carried up to the 27th Oct., the sum is now estimated at more than a million yen. The liabilities are believed to consist chiefly of cheques that the proprietor of the Firm was obliged to issue for the purpose of carrying the accounts of the Nippon Weaving Company of Kiryu, with which the Firm was and still is closely connected. Mr. Mayeda Masana, who is on intimate terms with the proprietor of the Firm, was asked to exert himself on its behalf. Accordingly, he represented to the Premier the critical condition of the Firm and the wide disasters that its ruin would produce in the chief weaving districts of Kwanto. He finally succeeded in obtaining from Count Matsukata a promise that steps would be taken to

induce the Nippon Ginko to accommodate the Firm to the extent of 150,000 yen. But Mr. Mayeda's efforts and the Premier's consideration are apparently destined to prove abortive, owing to dissensions between the Kiryu Company and the Sawa Firm. The sum of 150,000 yen furnished by the Bank of Japan is to be applied to meet the most pressing needs of the Company, but a section of the latter's Directors hold that such an amount cannot effect more than a temporary adjustment of the Company's accounts, and therefore, when the shareholders, suspicious of the real condition of the Company's business, begin to scrutinize its affairs closely, it is conceivable that the Directors may even be prosecuted on a charge of wilfully concealing the true state of affairs. Rather than incur such a risk, the Directors should boldly present an exact statement of their proceedings and place themselves at the mercy of the shareholders. The real and the nominal shareholders are equally indignant, the former because the Directors raised money by an improper use of the power entrusted to them; and the latter, because their names were unwarrantably employed. Quite a number of shares were booked in the Company's list in the names of clerks and shop-boys employed by the Directors, though the employees themselves were originally quite ignorant of the fact. The Directors were induced to take that step with a view to raising money by hypotheccating the shares. But the shares having fallen considerably since the publication of the embarrassment in which the Company is placed, creditors who had advanced money on the shares served notices on the nominal holders, to the latter's intense amazement, the purport of the notices being that the deficit caused by the fall of the shares must be made good as quickly as possible. Not until then did the shop-men become acquainted with the use that had been made of their names. They are said to be so incensed against their employers that they contemplate taking legal action against them on a charge of uttering forged documents. To intensify the complication, Mr. Sawa Kichitaro, father and legal representative of the proprietor of the Firm, refuses to have anything to say as to the affairs of the Company. Under such circumstances, it must prove extremely difficult to reach any satisfactory settlement of the affairs of the Firm and the Company.

PEST IN FORMOSA.

From the appearance of the pest in Taipei on the 28th ult. up to the 1st instant, some 48 cases were reported, four-fifths of the patients being Japanese. Of that number, 15 succumbed to the fell disease. It is said that Kelung and Tamsui are still free from the contagion. At the instance of the Central Sanitary Association, ships coming from Formosa are to be quarantined from the 5th inst. at Moji, Shimonoseki, Nagasaki, Wada-misaki (Kobe), Shimonoseki, and Yokohama. When the new Governor-General of Formosa had proceeded as far as Kobe on his way to the island, a telegram reached him from the Minister of Colonization informing him of the outbreak of the plague, and advising him to postpone his departure. The Governor-General thanked the Minister for his advice but declined to accept it, nor could his mother and wife be persuaded to remain in Japan: they started from Kobe with him on the 18th ultimo. The epidemic has carried away Capt. Arai Sei, a retired officer, who had been staying in Formosa for some time. He was exceptionally well versed in Chinese affairs, and had played a conspicuous part, directly or indirectly, in connexion with the Japan-China War. Several tours had been made by him through China, where he possessed many friends of great influence. It was he that established a commercial school as well as a bazaar in Shanghai, his idea being to educate Japanese students for business purposes in China. The school failed, but it supplied interpreters to the Japanese troops during the war.

THE NEW TREATY BETWEEN
CHINA AND JAPAN.

THE new Treaty between China and Japan secures to the latter Power all the privileges enjoyed by the most favoured Western nation having treaty relations with China. The Treaty is more complete than any of those already existing, inasmuch as it embodies various provisions which, in the case of other countries appear, not in their original treaties with China, but in subsequent conventions. This remark applies to trading passports, and, above all, to the much-vexed question of *likin*. After endless complaints from foreign merchants and long negotiations with the Government in Peking, arrangements were ultimately concluded guaranteeing exports and imports against domestic taxation greater than one-half of the Customs duties. In other words, it was agreed that an article of foreign produce or manufacture might be carried from its port of arrival to any market in the interior of China on payment of a tax equal to one-half the duty levied on it by the Customs; and that an article of Chinese produce and manufacture purchased in the interior of China might be carried to a place of export on payment of one-half the duty leviable on it when leaving China. These provisions as to "commutation taxes" appear in the body of the new Treaty. It is also worthy of note that the Japanese negotiators have been careful to provide against all obscurity as to the duration of the Treaty. The vagueness that disfigured Japan's treaties with Foreign Powers in this respect was responsible for a situation that all must be anxious to avoid in future. The new Treaty is to run for ten years, certain, at the end of which time either of the High-Contracting Parties has the right to demand a revision; but if no such demand be made, nor revision be effected, within six months from the termination of the ten-year period, then the Treaty and Tariffs are to remain in force without alteration for ten years longer. The most note-worthy changes, however, are embodied in the 11th Article. Hitherto, the mercantile privileges secured to foreigners under treaties with China or Japan have been personal, not national. Thus, articles imported or exported by the subjects or citizens of such and such Powers were to receive such and such treatment, the articles being distinguished by the nationality of their exporters and importers, not by the country from or to which they were carried. The new Treaty, however, provides distinctly that "the Tariffs and Tariff Rules shall be applicable to all articles upon importation into China by Japanese subjects *or from Japan*, or upon exportation from China by Japanese subjects *or to Japan*." The words here italicized indicate the new departure. Another innovation is that freedom of im-

portation and exportation is greatly extended, inasmuch as the Treaty provides that all articles not expressly limited or prohibited by the Tariffs and Tariff Rules may be freely imported into and exported from China. As an example of the working of this provision the case of machinery may be instanced. The fact that machines and machinery were omitted in former treaties furnished to the Chinese a pretext for refusing to allow their import. All limitations of that character are now finally precluded. It is further to be noted that the tariff guaranteed to Japan by this Treaty is the Tariff now in force between China and Western Powers. Thus no change can be made in that Tariff unless Japan is a consenting party. On the other hand, Japan recovers complete tariff autonomy *vis-à-vis* China. She also recovers judicial autonomy. In those important respects the Treaty is not reciprocal. As for additional and generally enjoyable privileges secured by the Treaty, they seem to be, first, the non-exclusive character of the schedule of importable and exportable articles, as noted above; secondly, a greatly improved system of Customs drawbacks; and, thirdly, provision for the establishment of bonded warehouses. The drafting of the Treaty is incomparably superior to that of any of its predecessors, and is evidently the work of men familiar with all the difficulties and misunderstandings due to the inexperience or ignorance of previous negotiators.

Not the least important feature of the Treaty is the omission of any reference to the manufacturing privilege secured by the Shimonoseki negotiators. Japan has, in fact, waived that privilege so far as concerns China's right to tax articles manufactured by Japanese subjects within her territory. We have already commented on this subject, and need not again refer to its significance and probable consequences.

THE HONGKONG "DAILY PRESS"
ON "TOO LATE."

THE Hongkong *Daily Press* has taken pains to convict us of assuming a false position, because, in an article published some time ago, we drew an amused comparison between, first the lurid colours used by certain journalistic artists to paint the picture of approaching submission to Japanese criminal jurisdiction, and, secondly, the extremely limited practical import that the question really has for the foreign community as a whole. We are not a little surprised to find that a temperate and usually discriminating journal like our Hongkong contemporary can be betrayed into such a strange perversion of our obvious meaning. Its criticism of our article conveys the impression that the very small intrusion of penal laws into the life of the average citizen was alleged by us as justifying indifference on his part to their character, and as furnishing a sufficient argument

against the reluctance of the foreign residents to pass under Japanese jurisdiction. Indeed, the *Daily Press*, with all semblance of gravity, proceeds to apply to China's case its own erroneous interpretation of our contention, and asks whether extraterritoriality might safely be abolished in China on the strength of the argument that "police tribunals, jails, and forced labour have no place in the life of a respectable individual." Even assuming that our language had been so curiously clumsy and involved as to warrant our contemporary's flagrant mistranslation of it, surely the *Daily Press* might have reflected that no moderately sane person could be silly enough to assert the proposition thus attributed to us. But, in truth, our language was not obscure at all. We wrote:—"It will not be supposed, of course, that in pointing out the absence of any appreciable connection between criminal procedure and the lives of ordinarily respectable folks, we under-rate the importance of good penal laws and their efficient administration. Were we not persuaded that Japanese criminal codes and Japanese courts have long ceased to offer just ground for complaint, we should certainly oppose the abolition of Consular jurisdiction." In the face of this most explicit provision against misconstruction, why has the *Daily Press* attributed to us the very view that we disclaimed, and why does it descend to mere persiflage by asking a senseless question about the abolition of extraterritorial jurisdiction in China? A stranger misunderstanding could scarcely be conceived. Our article set out by quoting a wild prediction made by a Kobe journal that the foreign residents, by their apathy, had "sown the wind and were about to reap the whirlwind." "What is this whirlwind," we asked, "that is to play such havoc in our peaceful existences?" And then, having shown how little the average man need be disturbed by penal laws; how satisfactory are the safeguards that will still remain for foreigners; how happily the Japanese themselves live under these laws that are held up as such sources of terror; and having protected ourselves against misconstruction by declaring that, despite all the above considerations, we should oppose the abolition of Consular jurisdiction were we not persuaded that Japanese criminal codes and Japanese criminal courts had long ceased to offer just ground for complaint, we concluded by saying that, under such circumstances, to talk of the foreign community's "reaping whirlwinds" and "working out its own undoing," was to substitute emotion for judgment. Where, in all that, is there a loop-hole large enough to admit the Hongkong journal's charge that we treated the matter with levity? Where is there anything to warrant it in isolating, and presenting as an independent proposition, an argument avowedly put forward for the

sole purpose of showing the want of proportion between, on the one hand, the true relation of criminal laws to the lives of ordinarily respectable folks, and, on the other, the wholesale suffering predicted for foreigners when they pass under Japanese penal codes? We can assure our Hongkong contemporary that with every one of its theses, abstracted from their critical purpose, we heartily agree, but in so far as they are intended to traverse our own views, they are quite irrelevant, since they find no contradiction in anything we have written. Of course the article of the *Daily Press* has been carefully reproduced in Kobe and Yokohama. Its anti-*Japan Mail* tone would have secured that notice for it under any circumstances. We make our opponents a hearty present of it. If they are content with their ally, we should be indeed captious did we begrudge their satisfaction.

"XX" ON SILVER.

A CORRESPONDENT, "XX," after dealing with some points in a communicated article that recently appeared in these columns, asks the *Japan Mail* to "answer one question," namely, why we "fear the free coinage of silver by the United States." Our answer is simply that we do not fear it at all, except in the sense that a partial remedy may serve to defer the permanent cure of a disease. It has seemed to us that to awaken the world to a true appreciation of this great financial problem, any step tending to temporarily assuage the ills inflicted by the demonetization of silver had better be avoided, for until the sense of suffering grows keener and more general, international cooperation to effect a cure can hardly be commanded, and without international cooperation nothing really thorough will be achieved. The practical endorsement of bimetalism by an immense financial power like the United States, must act as a partial palliative, thus postponing a final settlement. Moreover, it would leave untouched one of the most serious features of the trouble, namely, fluctuating exchanges between silver-using and gold-using countries. To that extent we should regret independent action on the part of the United States. But the objections that we have urged of late to Mr. BRYAN'S programme can not for a moment be ascribed to "fear of the free coinage of silver in America." Our protests have been based solely on the question of ratio. In affairs demanding the utmost delicacy of treatment a measure so heroic as the sudden doubling of the gold price of silver for coinage purposes, seems to us to travel far beyond the limits of sound finance. We are persuaded that it would plunge the whole civilized world into disasters, and would so fatally discredit the bimetallic movement in the eyes of the general public as to defer for

many years a satisfactory solution of this great problem.

Incidentally our correspondent ascribes to us the contention that "silver has been, and is, a truer and more stable standard of value than gold." It has not been our intention to maintain that theory, for though advanced, and ably discussed, by writers of note, the demonstration seems to lack conclusiveness. Besides, such an argument would be appropriate to the cause of silver monometallism, rather than to that of gold-and-silver bimetalism. What we have asserted for many years is that the two metals in combination constitute a much more stable source of monetary supply than either of them independently, a fact incontestably proved by reference to figures. We are in agreement with "XX" on all essential points of the bimetallic question; but if, as would appear, he advocates the free coinage of silver in the United States at a ratio of 16 to 1, we emphatically differ from him.

It will not be out of place to refer here to another question recently discussed in our correspondence columns, namely, the question of a composite coin. "Inquirer" opened the discussion by asking why a coin composed of equivalent parts of gold and silver "should not always remain of the same value," since the depreciation of the one metal would be corrected by the appreciation of the other. In stating his proposition, "Inquirer" wrote: "The silver dollar, for the sake of argument, is worth fifty cents; therefore, 412 grains of silver plus 12 grains of gold are worth one gold dollar" (12 grains of gold being the equivalent of one silver dollar). To this, another correspondent, "E.H.H." replied that "Inquirer's" project was fallacious, and assigned these reasons:—

The metals in the supposed coin cannot be measured by one another indifferently, but must be subject to a single unvarying standard. If a gold dollar and a silver dollar had been melted together and minted as one coin twenty-five years ago, before the depreciation of silver began, the value of that coin would then have been two dollars. To-day its value would be only one dollar and fifty cents. The gold remains worth one dollar, as at first. The silver is worth fifty cents. If a mixed dollar had been coined in the same proportions, that dollar would now be worth only seventy-five cents.

Any one considering the above two views must at once ask, "what is a cent?" Both writers use the "cent" as a unit of value without defining what it is, and that want of precision constitutes the real difference between them. In the eyes of "E.H.H." the cent is always the rooth part of a certain weight of gold, and he naturally finds it arithmetically impossible that a fixed weight of gold together with a fixed weight of silver can permanently represent the same number of gold units, whatever fluctuations may take place in the ratio between the two metals. But although "Inquirer," by improperly introducing the term "cents," exposed himself to misinterpretation of that nature the gist of his proposition remains intact. A coin composed of gold and silver can not, of course, have any immutable ex-

pression in terms of either metal alone, unless the ratio between them is fixed and unalterable. But it can have an immutable value in terms of other commodities—that is to say, immutable so far as concerns independence of any change in the ratio between the metals themselves. Suppose, for example, that a gold dollar and a silver dollar, each exchangeable for a lb. of tea, had been melted together and minted as one coin twenty-five years ago, and suppose that independent causes had not interfered in the interim to affect the price of tea, then the composite coin would to-day purchase two lbs. of tea, just as it did a quarter of a century ago, for its gold part would be worth $1\frac{1}{2}$ lbs. and its silver part worth $\frac{1}{2}$ lb. In a word, the purchasing power of such a coin would be a constant quantity, and we should have a currency not only based on the two metals instead of on one alone, and therefore uninfluenced by fluctuations in their respective production, but also perfectly stable for the purposes of a medium of exchange. When we pass to silver-using countries, where the purchasing power of the white metal in terms of general commodities has not fallen as much as its purchasing power in terms of gold, a composite coin, such as we are considering, would buy more tea to-day, other things being equal, than it would have bought twenty-five years ago. For that reason we pointed out, when discussing the matter in a previous article, that in order to reap the full benefits of a composite coin, all nations must agree to employ it. Some may contend that if international agreement be an essential preliminary, the simplest way would be to fix a ratio between the two metals at once. But that is precisely the difficulty. The monometallists argue that, although a ratio might be fixed by agreement, it could not possibly be maintained in face of the great variations that mark the annual supply of the two metals. No such difficulty would exist were a composite coin in universal use. Fluctuations in the interchangeability of silver and gold would be automatically corrected by the coin itself, so far as its monetary functions were concerned.

SEISMIC WAVE CONTRIBUTIONS.

We read in the *Nichi Nichi Shimbun* that the contributions received from various sources for the relief of the sufferers by the Seismic Wave of June last, have reached a large figure. The Japan Society in London sent about thirty thousand yen, and the *Nichi Nichi* itself collected something like sixty-five thousand. Adding up the subscriptions from all sources, an aggregate of six hundred thousand yen, approximately, results. Our contemporary calculates that when that total has been distributed among the distressed, they will be found to have received from 140 or 150 yen to 50 or 60 yen each. The unfortunate people, adds the *Nichi Nichi*, are reported to be overwhelmed with gratitude. Raised from misery to comparative prosperity, and provided with means to carry on their occupations, many of them have wept tears of thankfulness for the charity of foreigners.

MONTHLY SUMMARY OF THE
RELIGIOUS PRESS.

In No. 60 of the *Shūkyō*, a Unitarian Organ, appears, both in Japanese and English, the reply of Dr. Clay MacCauley to Dr. Katō Hiroyuki's queries respecting the meaning of certain terms appearing in the *Shūkyō* in its declaration of principles from month to month. Dr. Katō asks (1) What do you mean by the word "rational" in your principle that in Religion, not traditional authority, but rational and scientific truth, is the basis? (2) When you speak of the free study of Religion do you allow me to investigate the question of the existence of God? "I should like to answer Dr. Katō's questions to his entire satisfaction," says Dr. MacCauley, "but I fear that I am unable to do so from the very fact that the character of Unitarianism is such that no one Unitarian can authoritatively declare what may be the beliefs or non-beliefs of any other Unitarian. Unitarians are free associates in religion and have never yet united in making a dogmatic creed or test of denominational fellowship." Dr. MacCauley then proceeds to state that all Unitarians believe in God, but that there are among Unitarians "as many forms of belief in God held as there are theological speculations which have been honoured in the history of human thought;" and that many Unitarians are in association with "the reverent agnosticism of much of modern thought." In reference to the sense in which the word rational is used in the *Shūkyō* statement of principles, Dr. MacCauley says, "The distinction between scientific and rational truth here made is between truth that is capable of demonstration by observation and experiment along with the other methods of science, and truth that lies beyond the range of demonstration and must be accepted as a dictum of the reason or the higher mental intuition. The facts of religious history, for example, come within the range of science, but universal ideas such as of infinity, and of the absolute, of the perfect good, truth, and beauty, and the like, issue from and depend upon the higher operation of the human mind itself."

It is announced in the October number of the *Shūkyō* that the magazine is to be considerably improved from next month. Special attention is to be given to Comparative Religion, Evolution, Philosophy, and Sociology. The number just referred to contains an article by Mr. Yokoi Tokiwo on the character of modern civilization, in which the writer maintains that what is called the modern spirit is quite different to anything that existed in ancient times. It also furnishes an account of the Religious Conference held in Shiba on September 26th, based on the report of the meeting given in the *Mainichi Shimbun*. The meeting was attended by about 50 persons, who belonged principally Dr. to the progressionist sections of the sects they represented. The Buddhists belonged to the *Shin* or Zen Sects. The Shintoists were represented by Mr. Shibata, who it will be remembered was present at the Chicago Religious Conference, and who is a regular contributor to the *Shintō organ*, the *Yui-itsu*, and Mr. Maruyama. More than half of the Christians present belonged to the Kumi-ai body or to the *Nihon Kiristokyo kai*. Only two or three Methodists attended. No meeting of the kind has been held in Japan before. As was only natural, the greatest variety of opinion has been expressed as to its utility and probable effects. The *Shūkyō* approves of the movement, regarding it as a praiseworthy attempt to promote concord among the sects, to remove misunderstandings and to facilitate united efforts in the carrying out of enterprises in regard to which there is no difference of opinion among the various sects. The *Shūkyō* thinks that the union of Buddhism and Christianity cannot be effected, and even if it were the result could not be satisfactory.

We read in the magazine quoted above that not a few young men who have hitherto been dependant on the churches for support while

carrying on evangelistic work, are taking to business. Three causes are assigned for this. (1) The strong feeling throughout the country, since the war, in favour of business pursuits. (2) The difficulty of making a living by preaching in the present impecunious state of many of the churches. (3) Uncertainty as to the future of Christianity in Japan, the very foundations of which appear to be in danger of removal. It seems to be a case of making friends of the mammon of unrighteousness in order to provide for possible future emergencies. The change of occupation, observes the *Shūkyō*, may have been a matter of necessity, but what surprises us is that the Christians to whom we refer have lapsed into immorality, and have discarded the virtues of which they once spoke so highly. The mouths which hitherto have preached total abstinence are now imbibing *sake*, and the men whose voices have been raised against licensed prostitution are to be seen wending their way to brothels. The unclean spirit which once was cast out of them hath taken unto himself seven other spirits more wicked than himself, and they have entered the hearts of these men and dwell there. Against their renunciation of the life of an evangelist we have nothing to say, concludes the *Shūkyō*, but what we feel it our duty to protest against is their descent to the level of brutes.

The *Shinri*, the organ of the German Church, has articles on the following subjects (1) "Japan and Christianity;" (2) "Practical Christianity," by the Rev. H. Minami; (3) "Introduction to Dogmatics," by the Rev. Dr. Christlieb; and (4) "The approach of Buddhism and Christianity to each other."

(1) The first article contends that Christianity alone is worthy of universal adoption in Japan. The writer thinks that the insufficiency of the three ancient creeds of the country has been proved, but expresses dissatisfaction with the type of Christianity most common in this country. According to this organ Christian teachers do not possess an adequate knowledge of Theology, Christian believers lack experience and deep faith, and Christian churches are not properly organised. Christians of sufficient influence to act as an antidote to the worldly spirit of the nation are very scarce. The majority swim with the tide. The late war increased Japan's responsibilities as the leading power in the East, and has given her an opportunity, which she ought not to lose, of becoming a light-bearer to her neighbours.

(2) Mr. Minami accuses the orthodox section of the Christian Church of laying too great stress on dogma, on mere theories. Many orthodox Christians object to the inquirer who comes to them with a number of arguments against Christianity, informing him that his reliance on reason alone is wrong; but they do not seem to remember that the religious theories which they habitually enunciate are all rational deductions, conclusions drawn from certain real or supposed premises. The only way to recommend Christianity to the masses is by showing what practical Christianity really is. Since even in countries where Christianity has been taught for centuries, there is a growing reluctance to admit many of the premises on which Christian teaching rests, it is hardly to be supposed that a Japanese who hears of Christianity for the first time will quietly accept the dogmas which orthodox preachers lay before them. Mr. Minami urges preachers to leave abstruse questions alone and address themselves to answering such questions as:—"What is the meaning of human existence? What is the most powerful influence in man's life? Of what does human happiness consist. Is the value of human life relative or abstract? On what occasions should men sacrifice themselves and on what occasions is it their duty to take steps for the preservation of life, and the like."

On the much-talked-of *rapprochement* of Buddhism and Christianity the *Shinri* observes that while approving of the scheme, even if carried out, it would not result, as many suppose, in the creation of a new religion. Religions are not brought into existence by ecclesi-

astical councils or conferences. They are the creations of individuals. The genius whose individuality is strong enough to impress itself on his contemporaries and who gives doctrines to the world which are worthy of perpetual preservation needs no councils to back him. Whatever friendly conference may take place no new doctrines will result. Mutual edification and enlightenment may be looked for, but nothing beyond.

The *Uchū Shinkyō* 宇宙神教 (Universalist) publishes an article on "Experimental Religion." The writer remarks that Pilate's question, "What is truth?" is frequently asked nowadays by persons who are bewildered by the multiplicity of religious sects and religious teachers which the world contains. In the opinion of the *Uchū Shinkyō* the truth taught by Christ did not by any means silence all the doubts of inquirers. There were many things that he did not know. Though he opened the gates of knowledge, he was not able to satisfy the longings of certain minds. What he did teach was that the deepest truth can only be learnt by experience. Not by the study of Christian records, but by leading a Christian life is the higher plane of Christian thought reached. Christianity is to be regarded rather as a life to be lived than as a fountain of knowledge designed to satisfy the cravings of the intellect. The organ just quoted in an article entitled "Intellectualism and Religion" condemns the self-sufficiency of those who rely on scientific knowledge alone, and urges the cultivation of religious feeling, without which any amount of intellectual development fails to enable a man to live an exemplary life.

Professor Toyama's confession of faith, of which we gave an epitome in our last summary, has evoked criticism in various quarters. The *Shūkyō* is of opinion that Professor Toyama has failed to do justice to a class of individualism that is altogether distinct from the welfare of society as a whole. Many parts of the life of the individual concern that individual only, argues the *Shūkyō*, and have no direct bearing on the life of society. In Professor Toyama's opinion it is the duty of the individual in all things to subject himself to society, and he explains evolution as implying the sacrifice in all cases of the individual to the race. But Herbert Spencer plainly shows that, though in the lower orders of animals there is this subservience of the individual to the species, when we come to the stage of progress which man has reached, we find that the life and welfare of the individual assumes an importance altogether new. If the ultimate effects of actions be considered, there can be no such thing as a collision between altruism and egoism. The relation of the individual to society is such that the welfare of the one must prove eventually that of the other. On the subject of the immortality of the individual soul, the *Shūkyō* thinks that nothing can be decided. Scholars are agreed in thinking that we have no data to go on in attempting to arrive at a conclusion. In the present state of our knowledge it would be unwise to speak dogmatically on this side or the other. In teaching religion to give undue prominence to the doctrine of a future life, to rewards and punishments to be dealt out by gods or divinities (*hotoke*) as evidences of approval or disapproval of the acts of man, the *Shūkyō* deems injurious. There are three subjects which will never lose their importance as long as man's reason remains what it now is. They are Truth, Virtue, and Beauty. Under whatever names these three may be known to the world, the things themselves will never perish. They have developed as man's reason has developed. But they exist apart from his reason. They were discovered and not invented by the mind of man. These three constitute religion, and a knowledge of them is one of the principal factors to be relied on in individual development.

Commenting on the same subject, the *Uchū Shinkyō* observes that Professor Toyama's confession of faith is by no means original. It is a repetition of what has often been said before. The Professor admits that in many instances

the premises on which his conclusions depend are not altogether reliable. Hence too much importance should not be attached to the essay as a whole. The theories in which the Professor believes are very much mixed, some of them being by no means worthy of implicit reliance. Take the uniformity of nature as an example. Now how far has this theory been established? No further than man's limited experience has been able to test it. There are laws of nature of which we know nothing and perhaps never shall know anything. We cannot say of that part of nature that is unknown to us that it is uniform, as it may be the opposite. What the Professor says about external and internal sanction, continues the *Uchū Shinkyō*, seems to us to be fanciful in the extreme. All actions are determined by the individual. There is no such thing as external and internal sanction. Whatever external circumstances or authority may influence the individual in coming to a decision, does not alter the fact that the final decision on the course to be pursued rests with him and with him alone. Hence in reality all actions prior to their taking place are sanctioned by the individuals performing them. The *Uchū Shinkyō* next takes exception to Professor Toyama's remarks on the judgment passed by reason on pleasure, and purposes in its next issue to discuss other topics suggested by the Professor's confession of faith.

The *Nihon-jin*, the *Mujintō* (Buddhist), the *Bukkyō*, the *心海 Shinkai*, the *Dōshikyōiku*, (Christian), the *如是 Nyōse* (Buddhist), the *Kyōku-jiron*, the *Seikyō Shimpō* and the *Nihon Shūkyō* all have articles on Professor Toyama's views. The opinions expressed in these magazines differ little from those we have already given. The different organs are agreed in thinking that there is nothing original about the views championed by Professor Toyama. The *Nihon Shūkyō* says that the essay may be taken as representing the opinions of the majority of the professors of the Imperial University and of scholars generally in Japan and the West. The objection to Professor Toyama's essay on the ground that it is not original the *Nihon Shūkyō* thinks weak, as in the world of philosophy and literature entirely new theories are not to be looked for. Our familiarity with any given views is no argument against them. There is truth in the saying that "what is new is not true." It is not to be supposed, however able a man may be, that he can give to the world an entirely original view on egotism and altruism and kindred subjects.

On the 15th inst. was issued the first number of the *Sendan*, a new Buddhist organ. If the first number is an indication of the standard of excellence to be reached by the *Sendan*, it will hardly be ranked as a first class Buddhist magazine. The new publication objects to playing the rôle of a sectarian organ; it aspires to be the mouth-piece of thoughtful Buddhists of all sects, and intends to discuss a number of out-of-the-way subjects connected with religion. The first number has articles entitled, "A word to Students of the doctrines of the Zen Sect," "Foundlings"; "On Indian Names," by Dr. Inouye Yenryō; "A standard to be followed in the Choice of a Religion." Also the report of a lecture by Dr. Motora Yūjirō on "Loyalty and Filial Piety and the Ethics of Pleasure."

The Roman Catholic organ, the *Koye*, continues its attacks on Buddhism. In the last number certain parts of the life of Shaka Muni are subjected to criticism, the authenticity of the traditional account of his early life being questioned. The *Koye* is publishing the lives of certain Japanese Christian believers of Hideyoshi's time. The paper, for it hardly merits the title of magazine, is poorly edited, and as a literary organ very low in the scale of Christian publications.

The *Kyōrin*, a Shin-tō organ, urges the importance of propagating the Shin-tō faith in Formosa. The natives should be taught to worship *Tenshōkō-daijin* and be informed

of the origin of Japan's greatness. For out and out conservatism the *Kyōrin* has few equals among religious organs. In an article on "Japanese aspiration" in the number now before us, the writer showers scathing ridicule on the applauders of Japan's modern feats of valour and display of enterprise, and reminds his fellow-countrymen of the explorers and adventurers of Hideyoshi's and Ieyasu's time, when Japanese figured conspicuously in Luzon, Siam, and elsewhere. The ambition and projects of modern Japanese appear puny when compared with the brilliant enterprises of their ancestors, concludes the *Kyōrin*.

The *Nyōse*, in an article on which it calls "The Collapse (頓挫) of Christianity," refers to the present state of the Dōshisha as a proof of the slender influence exercised by Christianity over its adherents. The institution, says the *Nyōse*, has been declared independent, but every one who knows the facts of the case is well aware that the establishment has been converted into an arena for the display of faction, discord, and friction (*bunreitsū, fūwa and atsureshi*).

The *Kirisutō Kyō Shimbun* writes in lofty strains respecting the refusal of Christians to convert themselves into mere instruments for the furtherance of State interests. The Christianity in which we believe, says this organ, is designed to bring within the limits of its "Kingdom of heaven" all nations of the earth; and if this conception of its mission be not mistaken, it is superfluous to remark that it never can be exclusively the religion of any particular age, nor the religion of any particular country or race of people. It is impossible that that which is designed for all time, all places, and all nations should be confined to the fixed limits prescribed by the advocates of nationalism, whose voices are heard so loudly in this country at the present time. But while it cannot be thus hampered, its universality enables it to embrace within its fold such single nations as may wish to enter.

The organ from which we have just quoted, speaks regretfully of the decline of evangelistic zeal, as follows:—"It seems to us that the evangelistic spirit is about to become extinct and that carnal influences are about to hold sway over men's minds."

It is most desirable, observes the *Kirisutō Kyō Shimbun* in another place, that the Churches should have men whose Christianity is thorough and whose knowledge of Divinity is thorough. But when both qualities are unattainable the preference should be given to the former.

No 119 of the *Bukkyō* discusses the difficulty of educating Buddhist priests. Regarded from whatever point of view, the undertaking is beset with obstacles, says this organ. Funds are deficient, there is a great dearth of suitable teachers. Candidates for holy orders are not forthcoming in sufficient numbers, and those who offer themselves for training have as a rule not been properly grounded in elementary knowledge. Then the difficulty of making a choice of subjects and finding suitable text books is considerable. Different sects and different temples each have their standard of learning and attainment, and how to cater for each is no easy task.

The *Awoyama Hyōron* publishes one of those earnest protests against the spirit of the age and the worldliness of certain professing Christians with which regular readers of this organ are so familiar. The writer complains that instead of moulding public opinion, Christians are being moulded by it. Some seven or eight years ago the ambition of girls who had graduated at Christian Schools was to become the wives of pastors or evangelists, but now they object to the restraints imposed on them by this kind of life, and prefer to marry men of business or school-teachers, their one object in life being pleasure. The remedy for the alleged spiritual decline from which the Church is suffering, is, according to the *Awoyama Hyōron*, a resurrection of the spirit of Apostolic times.

In the same magazine Mr. Takenouchi Nan-zō writes on the number of illegitimate children

born in Japan. Quoting from statistics covering the period from 1889 to 1893, this writer asserts that the proportion of illegitimate children per every hundred legitimate is over 6.28. The number has steadily increased every year, the rate of increase during the period from 1886-1893 was 2.54 in proportion to each 100 legitimate births. Among illegitimate children, females are largely in excess of males. As regards the locality of birth, *Hokkaidō* heads the list, the proportion of illegitimate births to legitimate ones there reaching 32.43, Osaka follows with 21.47, and Nara Ken is next with 11.85, while Nagano Ken stands at the bottom of the list with an average of 2.18 per cent. for the period under review.

The Greek Church organ, the *Seikyō Shimpō*, refers to the names which it is the fashion to apply to the Japanese Christians belonging to the Greek Church. They are called "Adherents of the old religion" (*Kyūkyō*), "Followers of Nicolai," "Blind followers of the Russian Emperor." There is no foundation in fact, observes this organ, for any of these epithets, as Greek Christians have no political connection with Russia whatever. The *Seikyō Shimpō* complains that hitherto efforts to render the churches independent have failed. Three great wants of the Greek Church are said to be (1) Books written in an attractive manner. (2) Earnestness of purpose in young evangelists. (3) Sunday Schools and Text-books for the same. The Christians belonging to the Greek Church contributed 700 *yen* towards the Seismic Wave Relief Fund.

The *Rikugō Zasshi* supplies its readers with a goodly list of thoughtful articles. Among them are "A Spiritual Counterpart to Material Progress," by Mr. T. Yokoi. "The theory that conscience originated with physical strength," examined by Mr. Onishi Shukun. "Tschu-hi's (朱子) Conception of Human Nature." "The Moral Problem raised by Dr. Katō." "Individual evils considered from a Utilitarian Standpoint." In the first of these articles, the gist of what Mr. Yokoi says is as follows: It is very plain that European civilization has two distinct elements, one being material and the other spiritual. The Japanese who have resided in Western countries are mostly impressed with the former. But there are some who have studied and appreciated the literature and the religion of the West. What is now needed is that the latter class should make their influence felt in Japan. It is very certain that the nation is becoming more and more extensively materialistic, and if nothing is done to turn the tide, there is no saying that a people constituted like the Japanese may not in 20 years' time find life quite unbearable. National instinct may rebel against the deadly oppression of the materialistic yoke to which we are being subjected. We think we foresee a day when all the natural joy which as a nation we have known in the past may be turned to sorrow. The only way to avoid such a misfortune is to provide an antidote for the evils of ultra-materialism, which antidote is furnished by the spiritual elements of the system of civilization which it is our aim to adopt and assimilate.

The *Nihon Shūkyō* is of opinion that the numerous defects of the religions of the present day are to be traced to the deficiencies and imperfections of religious professors. They are lacking in caution, do not practise introspection, need awakening and greater benevolence of feeling.

Dr. Katō, in the pages of the *Taiyō*, has drawn attention to the want of enlightenment shown by religious devotees, as evinced by the readiness with which ridiculous theories concerning the origin of the various disasters from which the country has suffered during the past 12 months have been received, and maintain that all these events may be accounted for in a natural manner without reference to supernatural agency. To this a writer in the *Nihon Shūkyō* replies that he has no objection to the scientific explanations of the calamities in question, but

that at the same time it is desirable to use them for religious and moral purposes. He thinks they are designed to draw men's attention to their negligence in religious matters.

The same organ contains an article entitled "my Views on Religion," by Mr. Shimada Saburō, the gist of which is that the progress of religion must be commensurate with that of society generally. It is more important, says Mr. Shimada, to study the causes of, than to concentrate attention on, the things themselves. All things point to the existence of an invisible agency which has power to choose its line of action. Mr. Shimada says that he is a believer in Christianity in as far as it lays stress upon this truth, and that he has a high opinion of Christian morality. Christian miracles, however, he rejects. Modern science has rendered it impossible to believe in them. With those who say that people who refuse to accept the miracles are no Christians he cannot agree. To him it seems that the existence of natural laws implies a law-giver. Hence the existence of a God seems only a logical inference from what we see in nature. In reference to the immortality of the soul, continues Mr. Shimada, an attempt has been made of late to create a substitute for the old doctrine. It is said that living beings exist on in other forms for ages after the event we call death, that the effects of men's actions and lives are written on the page of history that men live in posterity, and so on. I cannot see much difference between the effects of the old doctrine and those of the new, observes Mr. Shimada. I see no objection to the new teaching provided it can be shown to rest on a thoroughly scientific basis. Speaking of the relation of religion to philosophy, Mr. Shimada says it resembles the relation of the system of arithmetic known of old to the Japanese to the mathematics of the present day, introduced from the West. Religion states what are considered to be facts and gives no adequate explanation thereof. For the latter we must look to philosophy. Religion, concludes Mr. Shimada, seems to me to resemble general laws of health, which it is the duty of every right-minded person to observe. Where the laws are not sufficiently explicit or minute, medical science comes to the rescue. Religion furnishes us with general rules, which need to be supplemented by the experience of every-day life and by information gathered from various sources. To me, concludes this writer, there is something ennobling in high class religious belief. It is important to remember that religion is a life to be lived rather than a theory to be discussed.

The *Nihon Shūhō* publishes an article by Mr. Anezaki Masaharu which compares Christian teaching with the doctrines of the Buddhist Shin Sect. A summary of this article we now give. In regard to origin, Christianity and Buddhism have much in common. They were both founded by single individuals. They both proclaimed a way of salvation and taught how heaven or paradise was to be reached. They both recognised the fact that there was a vast gulf between the unlimited being that governs the universe and limited man, and they devised steps to bridge over this gulf. Shaka and Christ each acted as a medium of communication between God and man. In the old controversy about 自力, *jiriki* (one's own strength) and 他力, *tariki* (strength of another) men went to extremes. Christianity, like the Shin sect, teaches that men are saved not by their own efforts, but by those of another, namely Christ. Thus the sense of both Christianity and Buddhism is one and the same. But the Shin sect is wrong in explaining the *tariki*, or reliance on another to be opposed to *jiriki* or self-reliance: it being plain that both principles are necessary in the scheme of salvation. There is truth in the contention of the advocates of what is called the 佛性教, *Bussai-Kyō*. They allege that by self-examination, self-denial and the practice of virtue a man may convert himself into a Buddha. The heart that discovers the true way is already a Buddha. It is only

in the case of those who have made this discovery that the help of another is really of benefit. Just as in Buddhism it is taught that each individual follower of Shaka may himself become a Buddha by following the prescribed method, so in Christianity it is taught that not Christ alone is the son of God, but that each individual Christian may become a son of God. Man, too, is represented as being made in the image of God. According to Christian doctrine men are not saved alone by the atonement of Christ. The exertions of each individual concerned are necessary to his salvation. Hence, like Buddhism, Christianity proclaims the doctrines of self-reliance and reliance on Divine aid, either that of Christ or the Holy Spirit, side by side, and the two doctrines are of equal rank in both. Since the two religions thus resemble each other, there ought to be nothing to prevent their working in harmony with each other in Japan. In certain quarters the reports which have recently been circulated in reference to the amalgamation of the two religions have been ridiculed and declared to be impossible of realisation as long as there is so much bigotry on both sides, but what is there to hinder two creeds whose teaching is alike from uniting with each other?

FORMOSA ITEMS.

Though convinced of the necessity of prohibiting opium in Formosa, its new rulers were at first obliged to adopt a policy of gradual suppression. They considered it dangerous to put a sudden check on the custom. But subsequent inquiries, according to the *Yomiuri*, have led the Authorities to alter their minds. They are of opinion that the exemption of the natives from malarial fevers, to which Japanese are so susceptible, is mainly due to the use of opium. This discovery has caused even such a pronounced abolitionist as Surgeon-General Baron Ishiguro to doubt the wisdom of entire suppression. When Messrs. Ozaki Yukio, M.P., and Shiba Shiro, M.P., waited on the Minister of Colonization a few days ago, His Excellency referred to this subject, at great length, and told them that, even if suppression be feasible, the Government strongly advocates the prudence of avoiding such a step until the sanitary condition of the island is improved. The *Yiji* says that the Formosan Authorities have appointed Messrs. Samuel Samuel and Co. and the Okura Firm sole agents for the drug in Formosa.

The Board of Audit is placed in an embarrassing situation with regard to the auditing of the Formosan finances. The establishment of a Branch Office was announced some time ago, but as no funds are set aside in the Budget for the current year for this purpose the Board applied to the Department of Finance to have an appropriation made from the Second Reserve. Meanwhile, repeated inundations have not only exhausted the Reserve but have even cut into the Surplus Revenue. Thus the New Government cannot consent to provide for the establishment of a Branch Office of the Board this year, or even next, and the item has been struck from the Budget for the next fiscal year. The auditing of the finances of the State being the proper function of this Board, it is of course impossible for it to leave untouched the finances of Formosa. The only plan open is to establish a special section within the Board and to supervise the accounts of Formosa from a distance. It is said that the Government may introduce, in the coming session of the Diet, an amendment of the Law, so as to provide for the establishment of a Branch Office of the Board of Audit in Formosa.

Colonel Samejima, the new Head-Councillor of War of the Middle Section, will start for Sendai in a few days to visit Lieut.-General Sakuma, Commandant of the Middle Section, who is now laying ill at Sendai. Thence the Colonel departs for Osaka to take up his new appointment.

THE FORMOSA RAILWAY COMPANY.

It is stated that the Imperial Household Department has purchased ten thousand shares in the Formosan Railway Company, and that eight or nine Chinese residents of the island have also subscribed. The charter provides that the work of construction must be undertaken within three months, and that after 30 years the Government shall be entitled to purchase the lines, paying for the shares the average price commanded by them during the preceding three years.

The prospects of traffic on the Formosan lines are not sufficiently enticing to account for the popularity of the new company's shares, nor is there any Government guarantee of interest on capital invested. But the Company has applied for, and obtained, it is said, certain valuable privileges. These are (1) That all land required for the track itself, the stations, the workshops, the storehouses, &c., shall be given free of cost, wherever State land is available, and shall be obtained for the company at a moderate price when private ownership is concerned. (2) That, within fixed limits of space and time, the company shall be permitted to extract by mining, free of all and every impost, whatever coal it requires for engines, workshops, &c. (3) That the railway now laid between Taipeh and Hiong-san, via Sin-tek, and the military line from Takow to Kagi shall, after the completion of the works of reconstruction and repair now in progress, be handed over to the Company free of charge, together with the rolling stock and all other appurtenances. (4) That places for making bricks, digging earth, manufacturing cement, quarrying stone or mining coal, shall be given to the Company on the terms mentioned in the first article. (5) That within the limits of public convenience, forests for obtaining timber for sleepers or other purposes connected with the line, shall be given to the Company free of charge. (6) That where lines are required for conveying the materials enumerated in Articles (2), (4), and (5), land for constructing such lines or for other necessary purposes, shall be given to the Company on the terms mentioned in the first Article. (7) That all materials required for the construction and working of the lines shall be admitted free of import duty. (8) That not only while the preliminary surveys and the works of construction are in progress, but also after the lines are opened to traffic military protection shall be provided if necessary. (9) That the above facilities and privileges shall be similarly granted to the Company in respect of the Kelung-Gilan railway, the Taipeh-Tamsui railway, the Hongsoa-Hengchun railway, and such other railways as the Company may undertake to construct in proportion as the need of facilities of communication increases in the island. Provided that, prior to the commencement of the work of construction by the Company, it shall be competent for that Government either to undertake itself, or to grant to some other Company, the building of any line in the case of which urgency seems to exist, and which the Company is not prepared to begin at once.

All these concessions render the Company's outlook tolerably hopeful. It does not appear to us, however, that the State is asked to do too much under the circumstances. When Formosa is furnished with railways running round and across the island, its condition will be enormously different from what it is at present.

On the 28th October, a charter was granted to Baron Yasuba and others, projectors of the Formosan Railway Company, the conditions relating to the work of construction to be determined after deliberation by the Governor-General's Council. The estimated capital is 15 million yen, but so popular is the scheme that already that sum has been subscribed thrice over. An understanding between the Governor-General's Office and the Railway Company has been arrived at on some cardinal points, as, for instance, the transfer of the existing Railway in Formosa to the Company; and the method of working it after the completion of the reconstruction operations between Tai-peh and Sin-tek; the hire or sale of the State Railway

between Kelung and Tai-peh, which will have been reconstructed by April next; the free grant of land required for building the trunk line of over 270 miles, and the supply of timber for sleepers; the posting of troops along the various routes; the remission of import duties on materials for railway construction; special privileges to facilitate the obtaining of earth for the work; and the conversion of private land lying along the routes into State land with the object of ceding it to the Company. We read in the *Tokyo Asahi*, that the Company has experienced some embarrassment on account of lack of experts to undertake the laying of railways. The services of Mr. Masuda, one of the chief experts of the Railway Bureau, used to be procurable for the preparation of plans and estimates, and the Company had counted on his assistance in the present case also. But when an application in that sense was made to the Department of Communications, the projectors were told that Mr. Masuda could not be lent as he was constantly required in connection with the Government Railways. The only recourse left for the projectors was to engage foreign experts, a step that their feelings of patriotism rendered repugnant. They therefore represented to the Department of Communications that if they had to construct railways in Formosa with the aid of foreign experts, they would rather give up the project. But the prompt building of lines in Formosa being an affair of paramount importance, the Department of Colonization and the Governor-General exerted their influence on behalf of the Company, and at last the Minister of Communications was obliged to waive his objections, and to assent to the employment of Mr. Masuda. It is said to have been on this account that the issue of a charter was unduly delayed.

We give the above on the authority of the vernacular press, but the alleged attitude of the Company with respect to employing the services of foreigners is altogether too unpractical to be credible. Everybody understands and sympathises with the desire of the Japanese to manage their own affairs without recourse to foreign aid, but there are limits to that kind of patriotism. If the Directors of the Formosa Railway Company objected to employing Western experts on the ground that their services are much more costly than those of Japanese, and that, other things being equal, they preferred to work with people of their own nationality, no criticism need be offered. But they are represented as taking the girlishly sentimental line that rather than construct railways in Formosa with the assistance of foreign experts, their choice would be to abandon the work *in toto*. We do not believe that men like Baron Yasuba could be so wanting in common sense, and we trust, for their own sakes, and for the sakes of their shareholders, that they do not intend to conduct their enterprise on such short-sighted lines. After all, the services of foreign railway experts are simply a marketable commodity like anything else that a man buys when he has need of it. To be consistent, the Directors of the Formosa Railway Company ought not to procure their rails and rolling stock from Europe or America, since these play as important a part in the construction of a railway as do the engineers that survey the route and superintend the works. We suspect that our vernacular contemporaries have greatly exaggerated the position taken by Baron Yasuba and his colleagues. Incidentally we cannot but be struck by the inconvenience that Japan is evidently suffering from want of technical experts. Numbers of fairly competent men have graduated from the University and technical colleges year after year, but in the present brisk state of industrial enterprise, their services are immediately in demand. From every direction we hear the same cry, yet the objection to employing foreigners remains unshaken. It is not a matter of sentiment, in our opinion, but a matter of expense and general convenience. After all, think how the projectors of an enterprise in England would receive the idea of employing French or German experts, supposing that these spoke only their own languages, were entirely strange to English ways, lived a life

markedly different from that of an Englishman, and demanded twice or three times the pay received by Englishmen in similar posts. There is evidently an explicable side to the question of employing Europeans or Americans in Japan.

KOREAN NEWS.

By a very timely coincidence the *Soul Independent*, in a leading article, contains some comments that come as a prompt and direct reply to the charge just preferred against the American missionaries by Japanese newspaper correspondents in *Sōul*. The charge was that the American missionaries are working hand-in-glove with Russia, and are thus contributing to the ultimate overthrow of Korean independence. Ignorant, of course, that any such accusation has been made, the *Independent*, speaking of the annual meeting of the Korea Mission of the Presbyterian Church, North, U.S.A., says:—"The missionaries very properly stand aloof from matters political. . . . The fact that Protestant Missionaries have held aloof from political entanglements and have eliminated the word 干渉 "influence" from their working vocabulary has disarmed suspicion, and to-day the word protestant missionary is a synonym for unostentatious, sympathetic, impartial friendship. And what is of equal value, *unwavering loyalty to the King*." We fear that this claim of complete "aloofness" from politics would be exceedingly difficult to establish. Wittingly or unwittingly, some of the missionaries were unquestionably drawn into the vortex of politics during the stirring events of last spring and autumn. Besides, what does the *Independent* think of Bishop Corfe, who constantly publishes letters on Korean politics, and whose bitter predilection against the Japanese often betrays him into injustice ill-becoming his cloth? Looking at *Sōul* affairs with all the impartiality we can command, it is impossible to be blind to the fact that there exists in the Korean capital a social coterie of which the leading members are the Russian Representative, certain American missionaries, the Secretary of the United States Legation, the editor of the *Independent*, and their wives. If politics are excluded from social intercourse in a place like *Sōul*, the fact is very surprising. Why should they be, indeed? If they are included, then we can not altogether deny the facts from which Japanese correspondents deduce their inferences, though the inferences may possibly be exaggerated. It is plain, too, that ladies play a very large rôle in Korean politics. What Japan wants in *Sōul* is a representative who not only speaks English well and is a sociable, pleasant fellow, but also enjoys the assistance of an English-speaking, clever wife. The Japanese have to emerge from the Oriental camp in *Sōul* and get well into the Occidental.

The precincts of the Finance Department in *Sōul* must present an interesting spectacle every day. When the Department was established, it took over the debts of the Royal Household to various tradesmen in the city. The total indebtedness was \$82,400. Last year, the Department paid one-half of that sum. This year, it is attempting to quiet the creditors by a further installment of one-half of the remainder. But the tradespeople, declining to be satisfied, assemble, day after day, in large numbers outside the Department and clamour for their coin. Their importunity has not yet been successful.

In our last budget of Korean news we reported the robbery of nearly eight thousand yen from the Government Granary in *Sōul*, under circumstances that reflected strongly on the efficiency of the guards. It appears that the Minister of Home Affairs subsequently ventured to address a memorandum of reprimand to the Chief of Police, but the latter, who thinks himself quite as great a personage as the Minister sent back the document with a reply that he did not propose to receive any such communications from the Home Department. He then, to relieve his offended dignity, tendered his resignation twice, but the King would not accept it. It is a pity that Count Inouye could not

remain in *Sōul* to straighten out the chain of official responsibility.

Municipal reform is beginning to be talked of in Korea. Every traveller in that country has told ugly tales of the dreadful condition of the streets and roads, and reformers are turning their eyes in that direction. For the purpose of raising funds, a tax on tobacco stores and wine shops is suggested. There are eleven hundred of the former and four hundred and seventy-five of the latter in *Sōul*. Korean financiers do not seem to have thought, hitherto, of sources of revenue all-important in Western countries, tobacco and alcohol, but doubtless they will soon develop a keener perception of financial possibilities. Meanwhile, the new Governor of *Sōul* has issued a proclamation forbidding the filthy habits that have hitherto made the city so obnoxious, and directing the citizens to take various steps of a sanitary nature. If the provisions of the new regulations be enforced, *Sōul* will be metamorphosed, and there appears to be a possibility that they may be enforced, for the police are authorized to arrest any one violating them. It is noteworthy that the regulations include the rule of the road as observed in the Occident. We mentioned in a recent issue that the office of Governor had been given to Mr. Ye Cha-yun, and that great things were expected from a man so enlightened and possessing so much experience of Western ways. Mr. Ye seems likely not to disappoint these hopes. If he commences his official career by converting *Sōul* into a clean city, he will have achieved a feat big enough to fill a whole record.

CHINESE NEWS.

It appears that the suppression of the Mahomedan rebellion in Kansu is to cost the Imperial Treasury three million taels, in addition to sums already expended in moving troops from distant places to reinforce the local forces.

The projected *éméute* in the Chinchow district of Kuangtung might have proved a serious affair had it not been discovered in time. From documents in the possession of the Second in Command, it appears that he had upwards of eight thousand men at his disposition, that the object of the rising was to overthrow the dynasty, and that the first proceeding was to have been the destruction of a Roman Catholic chapel at Tsanping.

It is believed in Tientsin that Li Hung-chang will be restored to a higher place than ever in Imperial favour. The belief is founded on an impression that a progressive programme for China having received the endorsement of all the Western Potentates by whom Li was received on his recent visit to the Occident, and Li being openly recognised by them as the exponent of such a programme, the Pekin Government will have no choice but to place the control of affairs in his hands. Neither the Pekin Government, however, nor the now powerful conservative party in Pekin see with the opened eyes that Li brings back from his travels, and unless the Foreign Representatives in Pekin are prepared to violate the canons of diplomatic etiquette by interfering in China's domestic affairs, it is difficult to perceive how the influence of the Sovereigns they represent can be exerted in Li's behalf. His expositions of China's comparative helplessness may gain vigour from the object lessons that he received in Europe, but will continue to fall in Pekin on that deafest of all ears, the ears that will not hear.

Some years ago an Imperial edict was issued in China authorizing the construction of a railway from Pekin to Hankow, and the great Viceroy Chang was entrusted with the work. He began at the very beginning. He opened coal and iron mines and established iron and steel foundries. But these enterprises never reached a stage of practical utility, and the Viceroy has handed them over to Shêng, Tao-tai of Tientsin, who has now being appointed Chief Commissioner of Railways in the Chinese Empire. Shêng's appointment has been followed by another Imperial edict authorizing

the construction of a line from Hankow to Canton. Thus the great Western railway of China, now projected, will be some 1,200 miles long, the distance in direct line from Peking to Hankow and from the latter place to Canton being 650 and 500 miles, respectively. The capital is to be supplied partly by the Chinese and partly by Americans through the medium of the Wharton-Barker syndicate, represented in China by Mr. Bash. There has been strong competition among the various Occidental nations for this work, and the United States has won the day chiefly because each of the other competitors preferred American success to the success of a European rival.

THE SCOPE OF AN INQUEST.

There seems to be a pretty generally entertained opinion that the inquest into the circumstances attending the death of Mr. Carew has been carried beyond the proper limits of such an inquiry, and that legal experts, appearing to watch the case on behalf of the widow, should not have been allowed to interrogate witnesses. We are unable to share that view. A Coroner's jury may bring in a verdict of murder or other homicide against any one; the Coroner is competent to commit a person to prison for trial, certifying the material evidence to the court, and binding over the proper persons to prosecute or give testimony at the trial. It is also within his discretion to accept bail for a person found guilty of manslaughter. In view of these functions of the jury and the Coroner, it is plain that an inquest differs from a genuine trial in one particular only, namely, that the jury's finding does not carry with it any punitive force. Why, then, should not the Coroner and the jury receive all the assistance that can be rendered by skilled barristers, and why should not a person upon whom the evidence tends to fix suspicion, obtain the assistance of counsel and be granted all the facilities for defence that he or she would enjoy in a court of law? A verdict of guilty rendered by a Coroner's jury is not conclusive, but even though subsequently reversed by a law court, it may inflict a terrible stigma and involve suffering and shame that could have been averted by recourse to the very processes now stigmatized as *ultra vires*. If any critic of the methods adopted at the Carew inquest were placed in the position of Messrs. Lowder and Walford's client, his ideas of the proper scope to be granted to counsel would at once undergo enlargement. After all, the prime object is to get at the truth, and it would be difficult, we think, to point to an inquest where the elucidation of the facts has been more plainly promoted by the action of counsel than in the present case. If barristers are permitted to be present for the purpose of watching the case on behalf of a client, does it not follow incontestably that they must be permitted to put questions to witnesses? Otherwise, their presence becomes a mere farce: they are converted into recorders, and cease to be legal experts. This contention derives still greater strength when we remember that counsel attending an inquest are suffered to cite witnesses on behalf of a client. Who is to question such witnesses intelligently if the barrister, who alone is fully conversant with the points they are summoned to elucidate, be forbidden to interrogate them? Sticklers for an imaginary code of etiquette may urge that the Coroner should be made the universal channel of communication, but such a rule would simply impede progress without conferring any benefit whatever. We ourselves would be pleased to see a still further extension of Mr. Consul Hall's wise liberality, in the shape of permission for counsel to address the jury. Why should they not do so? They are there to prevent suspicion unjustly attaching to a client, and if they can marshal the salient points of the testimony in a clearer and more convincing form by addressing the jury—a feat for which their legal training and experience eminently qualify them—why on earth should they not be allowed to do so?

THE SITUATION IN KOREA.

The Söul correspondent of the *Tokyo Economist* gives a very interesting *exposé* of the situation of affairs in Korea. He commences by translating a leading article from the last issue of the *Korean Independent*; an article commenting on the Korean policy of the fallen Ito Cabinet, and detailing the hopes entertained by the writer about the policy of the new Cabinet in Tokyo. The periodical, as everybody knows, is edited ostensibly by Mr. "Philip Jaisohn," but really by a clique of American Missionaries in Söul. (We quote, but do not endorse.) The article in question betrays the predominating sentiment that these American Missionaries and their Korean fellow-thinkers entertain towards the new Japanese Cabinet, namely a sentiment of fear. It is analogous to the feeling that men secretly conscious of crime experience at the sight of a policeman. Evidence can abundantly be adduced to show the existence of deliberate attempts to create terror of Japan. When, for instance, a certain Japanese diver, engaged in raising a steamship or war-vessel sunk on the coast of Korea, sought to pass a box of dynamite through the Customs at Ninsen, the article was peremptorily excluded; and when Mr. Hara was about to leave Söul for Japan, the Court were thrown into a state of indescribable commotion, every one whispering that the Japanese Minister would suddenly return to Söul, would besiege the Russian Legation, and would carry away the King, who, on hearing this rumour, was so alarmed that he ordered his attendants to provide for him a safe retreat. It is evident, continues the same correspondent, that somebody must be fanning this Japan-phobia sentiment of the Koreans, so as continually to widen the gap between them and the Japanese. Under the circumstances, a brief account of the situation of affairs in the peninsula may be useful. Since the incidents of February and November, Russia has been steadily developing her influence in Korea. The Russian Representative is clever and astute in promoting the interests of his country in the Peninsula. He does not interfere in any way with the appointment or dismissal of Administrative officials, or with changes in the Administrative system, but confines himself to establishing his influence more and more firmly in the Court and in military circles. Other foreigners in Söul, as Americans, French, and English, are so cleverly manipulated by the Russian diplomat that unwittingly they serve as mere tools for promoting the ambitious designs of the Northern Power. The unhappy change that has overtaken American effort and influence is particularly conspicuous. Instead of being agents of evangelization, the Americans have become evil factors for hastening the downfall of Korea. The "English Language Faction" is still able to maintain its ground, simply because it is backed by Americans that constitute a force in Korean politics. Witness how, while detested by conservative Koreans, Phillip Jaisohn still enjoys a certain influence; witness how the late Minister of Education, powerful as he was among the reigning Conservatives, had to resign merely because he incurred the displeasure of these American missionaries. Japan has failed to recognize this power, and her efforts are, therefore, thwarted to a greater or less degree by the Americans. But the more astute Russian Representative, having enlisted the Americans as allies, is able to push forward his designs without difficulty. All these points deserve profound consideration by the Japanese Government in formulating a new Korean policy.

Another conspicuous feature in Korea is the steady economic encroachment of foreigners, as, for instance, the Wiju-Söul Railway project by Frenchmen, the Ninsen-Söul project by Americans, the forestry concessions granted to Russians in northern Korea, and so forth. All these privileges obtained by foreigners from Korea will be practically impossible to revoke, for they are given, not to Governments, but to private persons, and no political change that may overtake Korea can dislodge the latter from their pre-

scriptive rights. Russia steadily pushes her economic interests in Korea. The President of the Russo-Chinese Bank is still staying in Söul, for the purposes, it is rumoured, first, of making advances to Korea on the security of a portion of her territory; secondly, of uniting the still unborn Korean Bank with the Russo-Chinese Bank; and thirdly, of obtaining the privilege of carrying on the coinage operations in the peninsula. In short, Russia is expanding both politically and economically in the Peninsula.

SPANISH RULE IN THE PHILIPPINES.

Mr. J. W. Davidson, who recently visited Manila in the interests of the *Hongkong Daily Press* and the *North China Daily News*, has sent to those journals correspondence containing terrible charges against the Spanish Authorities. They are accused of torturing their prisoners in the most merciless manner, employing for the purpose some of the infamous implements with which the history of the Inquisition has made us familiar. The *Daily Press*, while writing in guarded terms, evidently attaches credence to these stories, and suggests that the Japanese Government may possibly interfere diplomatically to put a stop to such inhuman practices. We have not re-produced any of the letters, for we find it impossible to credit their contents. The testimony of eye-witnesses is not forthcoming, and without it no one can be justified in arriving at a conclusion. Indeed for our own part, we are inclined to be very sceptical. The Spaniards are not naturally a cruel people, nor is it likely that they would deliberately resort to methods incapable of ultimate concealment and certain to alienate the sympathies of the civilized world. Moreover, it must not be forgotten that in the first accounts published about the rebellion in the Philippines, the insurgents were represented as having resorted to savage cruelties against the Spanish priests and nuns. Now, the tables are turned, and the Spaniards themselves are placed in the dock. Where does the guilt lie? Our readers will probably agree that judgment must be suspended.

Since writing the above, further correspondence (over the signature of "Alpha") in the *Hongkong Daily Press* confirms Mr. Davidson's assertions. "Alpha" says:—"You will have already heard of the abominable atrocities committed by the authorities to extort confessions from the arrested persons, whether innocent or guilty. Anything that may be written is not severe enough, and it is to be hoped that Europe will raise her voice in protest, as she has done before on the Bulgarian atrocities and more recently with reference to the Armenians and Crete. The Black Hole of Manila surpasses even that of Calcutta and the incident is perfectly true." (It should be noted that the affair of the Manila black hole has been shown to have been free from any element of deliberate cruelty.) "In justice to the Captain-General be it said that, on hearing of it, he was so disgusted and annoyed that he kicked the Lieutenant on duty down the stairs and threatened the Lieut.-Governor with arrest."

The same correspondence—for which we have not space to-day—alleges that the rebellion is very far from being put down, and that matters are daily growing more serious. The rebel stronghold is at Imus in Cavite province. From twenty to thirty thousand men, tolerably armed, are said to be assembled there, and everything seems to depend on the result of the Spaniards' attack upon the place. The Governor-General is reported to have stated that he needs twenty thousand soldiers to quell the insurrection.

THE UNITED STATES ELECTION.

News has been received at the United States Legation in Tokyo, by Reuter's Agency, and the Banks, that Mr. McKinley has been elected. We never, for our own part, entertained any doubt that such would be the case.

THE REBELLION IN THE PHILIPPINES.

[FROM A CORRESPONDENT.]

The following appeared in all the Manila papers:—"A most touching scene took place in the village church of Guiguinto (Province of Bulacan) on Sunday last after high mass. The schoolmaster of the village, Eugenio Catanding, solemnly abjured, in the presence of all the inhabitants of the parish, his adhesion to the abominable and nefarious sect of Freemasons, to which he had previously belonged, exhorting at the same time his fellow villagers never to listen to the doctrines of such an unclean sect, but defend always the integrity and honour of our beloved Spain. After concluding this act of abjuration, a heavenly choir of voices chanted the hymn 'Pardon, oh! my God,' and then the zealous and active priest of the village, the Rev. Friar Leocadio Sanchez, delivered a most impressive and fervent address to the assembled parishioners, setting forth the evils of Freemasonry, which he concluded by saying had been introduced by the devil himself."

On Monday, 12th October, 151 unfortunate natives and half-castes were shipped off to Spain en route for Fernando Po by the steamer *Manila*. Not content with condemning these poor wretches to exile—if they should ever be fortunate enough to reach their destination—and confiscating all the property of those having anything to lose, at the last moment they were robbed of even the little their relatives and friends had provided them with for their long and pitiless journey. Amongst them were many well-to-do natives whose only offence is probably the heinous crime of being Masons, and a most distressing scene occurred on the quay previous to their embarking in the tender, when their wives, families, and relatives came to bid them probably their last farewell. These had brought them clothes and what money they could rake together, which the Spanish soldiers and officials under whose escort they were condescending enough to allow them to receive without any objection, but once on board the steamer *Manila* the cupidity of these officials could not resist the temptation of securing ill-gotten gains. The exiles were here stripped naked on deck, minutely examined, and every cent they possessed in money was mercilessly taken from them, amounting altogether to some \$1,200, besides all their clothes except those they stood in. From one man a valuable gold watch and chain was taken, from another his gold rimmed spectacles, both being told that such luxuries would not be required in the place they were going to! The poor wretch from whom the spectacles were taken begged hard for their return on account of his defective eyesight, but his entreaties were of no avail and he merely received a kick for an answer.

These unfortunates will arrive in Spain in winter without any but the scanty tropical clothing they stand in, and it will be only natural if many die off with pulmonary diseases. It may be here mentioned that the Spanish authorities neither provide food nor clothing for the exiles in the places they are deported to, but the unfortunate people are turned loose and made to forage for themselves as best they can. This does not so much matter when exiled to other islands in the Archipelago or to the Carolines or Marianas, where the proverbial hospitality of the native race will always stand them in stead, but in a foreign and sickly place like Fernando Po, with no resources at their disposal, God have pity on them! The Spaniards are openly expressing their hopes that the climate and conditions will soon settle those that don't die on the way or are allowed to drop overboard. This is the treatment such a glorious, magnanimous, and loving mother extends to her children, which the local gagged and servile press is so effusive in praising!

Large amounts of money have been lately collected for the families of the soldiers killed and wounded in action, but it is doubtful if ever the actual sufferers or their relatives will receive any benefit from the same, more espe-

cially the loyal native troops. It is well-known that of the immense quantities of cigars and cigarettes liberally given by the different factories for the use of the army very little if any has been distributed amongst the native troops who have remained loyal.

You will have already heard of the abominable atrocities committed by the authorities to extort confessions from the arrested persons whether innocent or guilty. Anything that may be written is not severe enough and it is to be hoped that Europe will raise her voice in protest, as she has done before on the Bulgarian atrocities and more recently with reference to the Armenians and Crete. The Black Hole of Manila surpasses even that of Calcutta, and the incident is perfectly true. In justice to the Captain-General be it said that on hearing of it he was so disgusted and annoyed that he kicked the Lieutenant on duty down the stairs and threatened the Lieutenant-Governor with arrest.

On 13th October 1,100 more troops arrived from Spain in the steamer *Anto Lopez*, making about 3,000 since the outbreak.

The idea prevalent in Hongkong, according to last papers received, that the rebellion was put down is the very opposite of the truth. Far from this being the case, matters are daily becoming more serious. The inexplicable delay in attacking the rebel stronghold at Imus, in Cavite province, has allowed the natives to assemble there in large force, variously estimated between twenty and thirty thousand, most of whom are armed, many of them with the most modern Mauser rifle, as the wounds inflicted on Spanish soldiers testify. They have thrown up earthworks on the most approved modern principles and strongly entrenched, clearly denoting that they are not devoid of European assistance. It is openly stated that some Spanish officers have gone over to them. Imus is one of the most commanding positions around Manila; from it branch off roads to Manila, Cavite, the villages to west of Cavite, to the province of the Laguna, and, what is far more important, to the hills giving communication to the province of Batangas, which latter communication is evidently being made free use of, as daily skirmishes are taking place between the rebels and the Spanish troops, with very doubtful results for the latter. So far there can be no doubt the rebels have decidedly the advantage, and on the 13th October, near Talisay, in Batangas, and between this and the Laguna district, a very sanguinary battle was fought, in which the Spaniards lost their colonel and two captains killed, one lieutenant severely wounded, besides 80 rank and file killed and 100 made prisoners, and the rebels captured 5,000 rounds of ammunition. As usual, the papers guard an absolute silence on this subject, but from the feeling observable in the *Escolta* it is evident a depression exists, and this morning (15th) at 3 a.m. 500 Spanish soldiers were despatched in all haste by steamers to the Laguna, about the same number of Indian troops being sent yesterday. Away to the east, in the province of Morong, about 25 miles from Manila, some heavy fighting has taken place within the last few days, and yesterday a further outbreak occurred near Bocaue, in Bulacan province, and on the line of railway from Manila to Dagupan, some 14 miles from Manila. A party of rebels 1,000 strong attacked and captured the village of San José, in Nuevo Ecija province, some 60 miles from Manila, also to the north. It is also reported that a steamer has landed a cargo of arms and ammunition on the Pacific coast of Luzon, a thing not at all unlikely and extremely easy to undertake.

Everything now is dependent on Imus. Should the Spaniards meet with a repulse there—a thing not at all unlikely—then matters will be very serious and an immediate general rising may be looked for all round.

Arrests continue to be made, especially of those who have any property to lose, and each day's official *Gazette* publishes orders confiscating some poor unfortunate's property. This will be a fine time for hungry office-seekers and penniless officers for enriching themselves on

the spoils, a golden opportunity that will be taken due advantage of. The cream will go to these people, leaving the skim milk only for the Government. It is said the latter is trying to negotiate a loan of six million dollars with the Banco Espanol Filipino, giving as a guarantee the confiscated property of the rebels!

A few days back, in a night attack in Batangas province, the rebels attacked a Spanish column, but a second column coming up to the latter's assistance, the rebels quietly retired and the two Spanish columns, taking each other for the enemy, kept up firing causing a loss of 19 killed and 42 wounded, before the mistake was found out.

The banqueting and entertaining of the newly arrived officers from Spain are now the order of the day, and some of the speeches herewith enclosed will serve to give you an idea of the Spanish feeling towards the natives, and will enlighten the world somewhat as to the cause of the dissatisfaction resulting in the rebellion. It is idle to compare these natives with the Malay race of Java and the Malay Peninsula or with the native races of India. In intelligence they are quite equal to the Japanese and had they been under English rule for half the period they have been subject to Spain they would unquestionably have made their mark in the world. They are docile and tractable, require only to be ruled with justice, and give very little trouble. They are also fairly honest and had it not been for the examples set them by dishonest rulers, who have for ages made them a target for systematic plunder, thieving would be hardly known. As a proof of this I call attention to the various Igorrote tribes in the mountain districts of North Luzon, still only partly subdued. There, away from baneful Spanish influence and retaining their own faith, thieving is a vice quite unknown.

Many writers wish to attribute the present revolution to the extortions of the Friars. This is not quite right; on the whole their influence has been for good, and although they have no doubt ignored their vows of chastity and poverty, still they have often been the means of preventing greater extortions on the part of the Spanish officials, especially in the provinces, and if they have sometimes sinned against the sixth commandment they are simply mortals like the rest of us and it is unjust to cast the odium of the present state of affairs entirely on them.

A man who has shone high above everything in the present troubles is Governor-General Blanco, of whom Spain or any other nation may justly be proud. To his serenity and calmness Spain at the present moment owes her possession of the islands and the white race probably their lives. Had the wholesale shooting of suspected natives clamoured for by the majority of Spaniards on the first ebullition of excitement taken place, the populace would have turned desperate and a wholesale slaughter of Europeans taken place in retaliation.

Wholesale arrests of prominent natives continue to take place and the province mail steamers just arrived have brought some well-known people, whose only crime is probably the very heinous one in Spanish eyes of having money.

16th October.

The Governor-General returned from Calamba yesterday afternoon, where he has been inspecting the rebel positions, and it is now reported that he requires 20,000 Spanish troops to quell the rebellion. Some severe fighting has taken place in Batangas province around Tuy, Calaca, and Balayan, where bands of natives 2,000 strong have generally succeeded in forcing the troops to retire. The immense estate of Nagsagbu, belonging to Mr. Pedro Roxas, the richest man in the islands, and who was fortunate enough to escape to Singapore, having been confiscated by the Government, was to have been taken possession of by the Judge of Batangas, but the rebels have forestalled him and are in full possession of the place, after driving out the troops on duty, over 70 odd.

Every day balloons are being sent up from the rebel lines on all sides of Manila and are plainly

visible. These are evidently signals for some preconcerted attack.

This morning it is reported 800 men belonging to one of the native regiments have revolted, but so far there seems to be no confirmation of this. That something is wrong, however, is evident from the hurried return of the Governor-General and large reinforcements of Spanish troops sent up via the Laguna.

SOME SPEECHES MADE AT A BANQUET TO NEWLY ARRIVED OFFICERS FROM SPAIN ON 13TH OCTOBER.

Senor D. RAFAEL COMENGA—Gentlemen, in the name of the Spanish Casino, which in the present time does not grudge any sacrifice, I welcome our brave soldiers who are around us and filling us with joy and enthusiasm, full of love for the country, gratifying us like a wave of fresh juvenile blood now running through our veins by magic art. (Great and extraordinary applause.) Welcome then ye who are to be the bulwark and stay of our honour. (Fresh applause, drowning the voice of the speaker.) Ye have just arrived in time; the cannibals are still in the woods, the beast of prey is still hiding in his lair—(bravo)—and the hour has come to exterminate the savages: all ferocious animals should be killed—(hear, hear)—bad weeds must be plucked by the roots. (Great applause.) The object of war is destruction; its civilising virtue works like a burning iron on the ulcer, destroying its corrupt tissues in order to secure a perfect cure. Show no pardon! (Hear, hear.) Destroy! Kill! Pardon is a prerogative only belonging to the king and not to the army, to the city, not to the camp, and believe me from there, from that historic, honoured, and dear old land of Spain which we all love with delirium, no words of peace come against these traitors; on the contrary, rigorous punishment and justice which the voice of the people clamours out shall be severe, and not tempered with mercy. (Frantic applause, several times repeated, entirely drowning the speaker's voice.) Soldiers! you are the arms of Spain. Execute, exterminate if necessary; amputate the vile members to save the body; cut the withered branches which impede the circulation of the sap in order that the tree may burst forth anew with fresh leaves and flowers. (Sr. Panarando: "That is the way to speak." Bravo and great applause.) The variety of uniforms which you see mixed up here will clearly show you how necessary war has been and still is. These you see here in battle array are not military men (speaking of the volunteers) but civilians, who in view of an infamous rebellion, steeped in obscurity, fleeing from the light like infernal animals, have been obliged to shoulder arms and exchange their place of the brette, the office desk for the horse, the pen for the rifle, and all for the glorious flag of Spain, which we have sworn like you to die for rather than see it humiliated. (Great applause and Viva Spain.) We are not playing at soldiers; we are defending the country and our lives. (Frantic applause.) Spain conquered this land, thanks to the incomparable efforts of Juan de Salcedo, the strategy and tactics of Martin de Goiti, and the sound policy of the patriotic Miguel Lopez de Legaspi. From time immemorial after each truce, after each profession of friendship followed a rising. (Voices, "It is true; it is true." Silence, silence.) Our beloved country was able to say to these people, because we have the Divine right and the force of our arms, like the poet said to the Turks:—

Vile slave of vile Constantinople, I will bind thee with my chain and I will crush thee with my might.

(Great applause)—But no, we did not do this. We raised thee to the condition of cavaliers, the sons of those ruffians who came from China, we made their posterity noble and slew the yellow necks of their most deadly enemies. We have made them doctors, lawyers, chemists, engineers, soldiers, and even ministers of religion, and they in return, not troubling themselves to rectify the instincts of their race, bite the hand which cared for them, they rise up against a nation which has enriched them and which has made them pass in three hundred years, in a less period than any other nation, that long voyage which commences in a savage and ends in civilization. (Great and deafening applause.) Tell me now if they have any cause for rising, for having made them human beings out of savages—(Hear, hear.) If some native troops were not dying side by side with us, we might become desperate and abandon the civilizing influence carried on by our fathers. But dying side by side with us they redeem their caste and become worthy of our respect and our love. To these heroes I drink. Soldiers! You belong to a grand nation, not like the rest of them who count their days of glory by the victories they obtain, but by the reverses we suffer. I be heart of every true Spaniard is prouder of the disasters of Sagunto, Nu-ancia, Otumba, Zaragoza, and the 2nd of May, than the taking of Antwerp, the siege of Milan, the battle of Cerinola, and the victory against the Tralalcas. It seems that victory always bows to the flag of red and gold, which without doubt we have placed in our emblem to show that in the hour of need neither gold nor blood has any value for us. (Enthusiastic and frantic applause.) Well, gentlemen, I think we must rectify our history and begin to count our days of glory according to results. If you accept my thoughts, drink with me for the triumph that is near at hand; for the victory we shall gain the day that our valiant troops go out to the campaign led by such brave officials, to whose health I drink and invite you also to drink. (Thundering applause.)

Many other speeches of the same kind were given, but the foregoing serves to give an idea of the whole.

ALPHA.

—Hongkong Daily Press.

Major-General Shioya, who was appointed Commandant at Wei-hai-wei in succession to Lieut.-General Nishi, left Shimbashi Station on Tuesday at noon for his post.

The Tenth Imperial Diet will be convoked about the 25th of December.

TREATY OF COMMERCE AND NAVIGATION BETWEEN JAPAN AND CHINA.

His Majesty the Emperor of Japan and His Majesty the Emperor of China, having resolved, in pursuance of the provisions of Article VI. of the Treaty signed at Shimonoseki, on the 17th day of the 4th month of the 28th year of Meiji, corresponding to the 23rd day of the third month of the 21st year of Kuang Hsu, to conclude a Treaty of Commerce and Navigation, have for that purpose, named as Their Plenipotentiaries, that is to say:

His Majesty the Emperor of Japan, Baron Hayashi Tadasu, Shoshi, Grand Cross of the Imperial Order of the Sacred Treasure, Grand Officer of the Imperial Order of the Rising Sun, Minister Plenipotentiary and Envoy Extraordinary; and His Majesty the Emperor of China, Chang Ven Hoon, Minister Plenipotentiary, Minister of the Tsung-li-yamen, holding the rank of the President of a Board and Senior Vice-President of the Board of Revenue;

Who, after having communicated to each other their Full Powers, found to be in good and due form, have agreed upon and concluded the following Articles:

Art. I.—There shall be perpetual peace and friendship between His Majesty the Emperor of Japan and His Majesty the Emperor of China, and between their respective subjects, who shall enjoy equally in the respective countries of the High Contracting Parties full and entire protection for their persons and property.

Art. II.—It is agreed by the High Contracting Parties that His Majesty the Emperor of Japan may, if he see fit, accredit a Diplomatic Agent to the Court of Peking and His Majesty the Emperor of China may, if he see fit, accredit a Diplomatic Agent to the Court of Tokio.

The Diplomatic Agents thus accredited shall respectively enjoy all the prerogatives, privileges, and immunities accorded by international law to such Agents and they shall also in all respects be entitled to the treatment extended to similar Agents of the most favoured nation.

Their persons, families, suites, establishments, residences, and correspondence shall be held inviolable. They shall be at liberty to select and appoint their own officers, couriers, interpreters, servants, and attendants without any kind of molestation.

Art. III.—His Majesty the Emperor of Japan may appoint Consuls-General, Consuls, Vice-Consuls, and Consular Agents to reside at such of the ports, cities, and towns of China which are now or may hereafter be opened to foreign residence and trade, as the interests of the Empire of Japan may require.

These officers shall be treated with due respect by the Chinese Authorities, and they shall enjoy all the attributes, authority, jurisdiction, privileges and immunities which are or may hereafter be extended to similar officers of the nation most favoured in these respects.

His Majesty the Emperor of China may likewise appoint Consuls-General, Consuls, Vice-Consuls, and Consular Agents to reside at any or all of those places in Japan where Consular officers of other nations are now or may hereafter be admitted, and, saving in the matter of jurisdiction in respect of Chinese subjects and property in Japan, which is reserved to the Japanese Judicial Courts, they shall enjoy the rights and privileges that are usually accorded to such officers.

Art. IV.—Japanese subjects may, with their families, employes, and servants, frequent, reside, and carry on trade, industries, and manufactures or pursue any other lawful vocations in all the ports, cities, and towns of China, which are now or may hereafter be opened to foreign residence and trade. They are at liberty to proceed to or from any of the open ports with their merchandise and effects and within the localities at those places which have already been or may hereafter be set apart for the use and occupation of foreigners, they are allowed to rent or purchase houses, rent or lease land, and to build churches, cemeteries, and hospitals, enjoying in all respects the same privileges and immunities as are now or may hereafter be granted to the subjects or citizens of the most favoured nation.

Art. V.—Japanese vessels may touch for the purpose of landing and shipping passengers and merchandise in accordance with the existing Rules and Regulations concerning foreign trade there at all those places in China which are now ports of call, namely, Ngau ching, Tai tung, Hu-kow, Wusueh, Liu-chi-kow, and Woosung, and such other places as may hereafter be made ports of call also. If any vessel should unlawfully enter ports other than open ports and ports of call in China or carry on clandestine trade along the coast or rivers,

the vessel with her cargo shall be subject to confiscation by the Chinese Government.

Art. VI.—Japanese subjects may travel, for their pleasure or for purposes of trade, to all parts of the interior of China, under passports issued by Japanese Consuls and countersigned by the Local Authorities. These passports, if demanded, must be produced for examination in the localities passed through. If the passports be not irregular, the bearers will be allowed to proceed and no opposition shall be offered to their hiring of persons, animals, carts, or vessels for their own conveyance or for the carriage of their personal effects or merchandise. If they be without passports or if they commit any offence against the law, they shall be handed over to the nearest Consul for punishment, but they shall only be subject to necessary restraint and in no case to ill-usage. Such passports shall remain in force for a period of thirteen Chinese months from the date of issue. Any Japanese subject travelling in the interior without a passport shall be liable to a fine not exceeding three hundred Taels. Japanese subjects may, however, without passports go on excursions from any of the ports open to trade, to a distance not exceeding one hundred Chinese li and for a period not exceeding five days. The provisions of this Article do not apply to crews of ships.

Art. VII.—Japanese subjects residing in the open ports of China, may take into their service Chinese subjects and employ them in any lawful capacity without restraint or hindrance from the Chinese Government or Authorities.

Art. VIII.—Japanese subjects may hire whatever boats they please for the conveyance of cargo or passengers and the sum to be paid for such boats shall be settled between the parties themselves, without the interference of the Chinese Government or officers. No limit shall be put upon the number of boats, neither shall a monopoly in respect either of the boats or of the porters or coolies engaged in carrying goods, be granted to any parties. If any smuggling takes place in them the offenders will of course be punished according to law.

Art. IX.—The Tariffs and Tariff Rules now in force between China and the Western Powers shall be applicable to all articles upon importation into China by Japanese subjects or from Japan, or upon exportation from China by Japanese subjects or to Japan. It is clearly understood that all articles the importation or exportation of which is not expressly limited or prohibited by the Tariffs and Tariff Rules existing between China and the Western Powers, may be freely imported into and exported from China, subject only to the payment of the stipulated import or export duties. But in no case shall Japanese subjects be called upon to pay in China other or higher import or export duties than are or may be paid by the subjects or citizens of the most favoured nation, nor shall any article imported into China from Japan or exported from China to Japan, be charged upon such importation or exportation other or higher duties than are now or may hereafter be imposed in China on the like article when imported from or exported to the nation most favoured in those respects.

Art. X.—All articles duly imported into China by Japanese subjects or from Japan shall, while being transported, subject to the existing Regulations, from one open port to another, be wholly exempt from all taxes, imposts, duties, *lekim*, charges, and exactions of every nature and kind whatsoever, irrespective of the nationality of the owner or possessor of the articles, or the nationality of the conveyance or vessel in which the transportation is made.

Article XI.—It shall be at the option of any Japanese subject desiring to convey duly imported articles to an inland market, to clear his goods of all transit duties by payment of a commutation transit tax or duty, equal to one-half of the import duty in respect of dutiable articles, and two and half per-cent. upon the value in respect of duty free articles; and on payment thereof a certificate shall be issued, which shall exempt the goods from all further inland charges whatsoever. It is understood that this Article does not apply to imported opium.

Article XII.—All Chinese goods and produce purchased by Japanese subjects in China elsewhere than at an open port thereof and intended for export abroad, shall in every part of China be freed from all taxes, imposts, duties, *lekim*, charges, and exactions of every nature and kind whatsoever, saving only export duties when exported, upon the payment of a commutation transit tax or duty calculated at the rate mentioned in the last preceding Article substituting export duty for import duty, provided such goods and produce are actually exported to a foreign country within the period of twelve months from the date of the payment of the transit tax; all Chinese goods and

produce purchased by Japanese subjects at the open ports of China and of which export to foreign countries is not prohibited shall be exempt from all internal taxes, imposts, duties, *sekin*, charges, and exactions of every nature and kind whatsoever, saving only export duties upon exportation, and all articles purchased by Japanese subjects in any part of China, may also, for the purposes of export abroad, be transported from open port to open port subject to the existing Rules and Regulations.

Art. XIII.—Merchandise of a *bond fide* foreign origin, in respect of which full import duty shall have been paid, may at any time within three years of the date of importation, be re-exported from China by Japanese subjects to any foreign country, without the payment of any export duty, and the re-exporters shall, in addition, be entitled forthwith to receive from the Chinese Customs drawback certificates for the amount of import duty paid thereon, provided that the merchandise remains intact and unchanged in its original packages. Such drawback certificates shall be immediately redeemable in ready money by the Chinese Customs Authorities at the option of the holders thereof.

Art. XIV.—The Chinese Government consents to the establishment of Bonded Warehouses at the several open ports of China. Regulations on the subject shall be made hereafter.

Art. XV.—Japanese merchant vessels of more than one hundred and fifty tons burden, entering the open ports of China, shall be charged tonnage dues at the rate of four *mace* per registered ton; if of one hundred and fifty tons and under, they shall be charged at the rate of one *mace* per registered ton. But any such vessel taking its departure within forty-eight hours after arrival, without breaking bulk, shall be exempt from the payment of tonnage dues.

Japanese vessels having paid the above specified tonnage dues shall thereafter be exempt from all tonnage dues in all the open ports and ports of call of China, for the period of four months from the date of clearance from the port where the payment of such tonnage dues is made. Japanese vessels shall not, however, be required to pay tonnage dues for the period during which they are actually undergoing repairs in China.

No tonnage dues shall be payable on small vessels and boats employed by Japanese subjects in the conveyance of passengers, baggage, letters, or duty free articles between any of the open ports of China. All small vessels and cargo boats, however, conveying merchandise which is, at the time of such conveyance, subject to duty, shall pay tonnage dues once in four months at the rate of one *mace* per ton.

No fees or charges, other than tonnage dues shall be levied upon Japanese vessels and boats, and it is also understood that such vessels and boats shall not be required to pay other or higher tonnage dues than the vessels and boats of the most favoured nation.

Art. XVI.—Any Japanese merchant vessel arriving at an open port of China, shall be at liberty to engage the services of a pilot to take her into port. In like manner, after she has discharged all legal dues and duties and is ready to take her departure, she shall be allowed to employ a pilot to take her out of port.

Art. XVII.—Japanese merchant vessels compelled on account of injury sustained or any other cause, to seek a place of refuge, shall be permitted to enter any nearest port of China, without being subject to the payment of tonnage dues or duties upon goods landed in order that repairs to the vessel may be effected, provided the goods so landed remain under the supervision of the Customs Authorities. Should any such vessel be stranded or wrecked on the coast of China, the Chinese Authorities shall immediately adopt measures for rescuing the passengers and crew and for securing the vessel and cargo. The persons thus saved shall receive friendly treatment, and, if necessary, shall be furnished with means of conveyance to the nearest Consular station. Should any Chinese merchant vessel be compelled on account of injury sustained or any other cause to seek a place of refuge in the nearest port of Japan, she shall likewise be treated in the same way by the Japanese Authorities.

The Chinese Authorities at the several open ports shall adopt such means as they may judge most proper to prevent the revenue suffering from fraud or smuggling.

Art. XIX.—If any Japanese vessel be plundered by Chinese robbers or pirates, it shall be the duty of the Chinese Authorities to use every endeavour to capture and punish the said robbers or pirates and to recover and restore the stolen property.

Art. XX.—Jurisdiction over the persons and property of Japanese subjects in China, is reserved exclusively to the duly authorized Japanese Authorities, who shall hear and determine all cases

brought against Japanese subjects or property by Japanese subjects or by the subjects or citizens of any other Power, without the intervention of the Chinese Authorities.

Art. XXI.—If the Chinese Authorities or a Chinese subject make any charge of complaint of a civil nature against Japanese subjects or in respect of Japanese property in China, the case shall be heard and decided by the Japanese Authorities.

In like manner all charges and complaints of a civil nature brought by Japanese Authorities or subjects in China against Chinese subjects or in respect of Chinese property, shall be heard and determined by the Chinese Authorities.

Art. XXII.—Japanese subjects charged with the commission of any crimes or offences in China, shall be tried and, if found guilty, punished by the Japanese Authorities according to the laws of Japan.

In like manner Chinese subjects charged with the commission of any crimes or offences against Japanese subjects in China, shall be tried and, if found guilty, punished by the Chinese Authorities according to the laws of China.

Art. XXIII.—Should any Chinese fail to discharge debts incurred to a Japanese subject or should he fraudulently abscond, the Chinese Authorities will do their utmost to effect his arrest, and enforce recovery of the debts. The Japanese Authorities will likewise do their utmost to bring to justice any Japanese subject who fraudulently absconds or fails to discharge debts incurred by him to a Chinese subject.

Art. XXIV.—If Japanese subjects in China, who have committed offences or have failed to discharge debts and fraudulently abscond, should flee to the interior of China or take refuge in houses, occupied by Chinese subjects or on board of Chinese ships, the Chinese Authorities shall, at the request of the Japanese Consul, deliver them to the Japanese Authorities.

In like manner if Chinese subjects in China, who have committed offences or have failed to discharge debts and fraudulently abscond, should take refuge in houses occupied by Japanese subjects in China or on board of Japanese ships in Chinese waters, they shall be delivered up, at the request of the Chinese Authorities made to the Japanese Authorities.

Art. XXV.—The Japanese Government and its subjects are hereby confirmed in all privileges, immunities and advantages conferred on them by the Treaty stipulations between Japan and China which are now in force; and it is hereby expressly stipulated that the Japanese Government and its subjects will be allowed free and equal participation in all privileges, immunities, and advantages that may have been or may be hereafter granted by His Majesty the Emperor of China to the government or subjects of any other nation.

Art. XXVI.—It is agreed that either of the High Contracting Parties, may demand a revision of the Tariffs and of the Commercial Articles of this Treaty, at the end of ten years from the date of the exchange of the ratifications; but if no such demand be made on their side and no such revision be effected within six months after the end of the first ten years, then the Treaty and Tariffs, in their present form, shall remain in force ten years more, reckoned from the end of the preceding ten years, and so it shall be at the end of each successive period of ten years.

Art. XXVII.—The High Contracting Parties will agree upon Rules and Regulations necessary to give full effect to this Treaty. Until such Rules and Regulations are brought into actual operation, the Arrangements, Rules, and Regulations subsisting between China and the Western Powers, so far as they are applicable and not inconsistent with the provisions of this Treaty, shall be binding between the Contracting Parties.

Art. XXVIII.—The present Treaty is signed in the Japanese, Chinese, and English languages. In order, however, to prevent future discussions, the Plenipotentiaries of the High Contracting Parties have agreed upon that in case of any divergence in the interpretation between the Japanese and Chinese Texts of the Treaty, the difference shall be settled by reference to the English Text.

Art. XXIX.—The present Treaty shall be ratified by His Majesty the Emperor of Japan and His Majesty the Emperor of China, and the ratifications thereof shall be exchanged at Peking as soon as possible, and not later than three months from the present date.

In witness whereof the respective Plenipotentiaries have signed the same and have affixed thereto the seal of their arms.

Done at Peking this 21st day of the 7th month

of the 29th year of Meiji, corresponding to the 11th day of the sixth month of the 22nd year Kuang Hsu.

THE PRESIDENTIAL CAMPAIGN.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—You have well spoken when you designate the present campaign waging in the United States as one of the most exciting upon record.

The whole country is delicious; some politicians crying one thing and some another, while the greater part of the people are not even conscious of the real cause of the uproar. The money question, although one of the least of the many questions at stake, is supposed to be the all-important issue, and because of man's cupidity, he can be more easily excited over that than over almost any other. Therefore it is taken as a pretence to divert attention from the real and vital issues of the campaign. If the question of "free silver" were the only one, or the main one, it would matter little which party should win. Even though a mistake be made now in that one point, it would naturally correct itself in a little time. But the glitter of the fifty cent. dollar seems to blind the people to the real and vital questions. For instance, the question of the right of the Federal Government to protect itself, its property, its mails, &c., with or without the aid or consent of the State is a hundredfold more important than the "free silver" question, and yet is almost entirely lost sight of. Even Mr. Bryan has publicly criticized the President's action in sending troops to Chicago to quell a riot when the local government could not, or would not, preserve order, and he has declared that if elected he will never take such action except at the request of the State.

Of late there has been a strong and ever increasing public sentiment in favour of restricting criminal and pauper immigration from European countries; in favour of stricter naturalization laws, and of ballot reform, which are likely to receive but little attention though of such great importance, because of the great ado about "Free Silver."

Last month thousands of children were refused admission into the public schools of New York city because of "lack of room." While in that city, thousands of the public money is annually unlawfully appropriated to support sectarian parochial schools, asylums, &c. These children, whom this wealthy city is unable to educate, are also prevented from learning trades because of the rules of the labour unions. It thus appears that, if possible, the condition of New York city will be worse in the coming generation than it is at present. But not only in New York city, but everywhere, the same fight against our public schools is going on.

These are some of the questions which, when compared with the money question, are about on a par with a bleeding artery compared with a hole in a man's pocket.

And these are the topics upon which debate is not invited, about which it is desirable to keep the people in ignorance, therefore this "Free Silver" cry is raised as a pretence. We await the result of the election on the third of next November not because our greatest fear is that hereafter our salaries may be paid in fifty cent. dollars, but because we believe, and are anxious to see it demonstrated, that there are still loyal and true citizens enough to not only prevent our country falling farther under the influence of Rome, but to redeem it and once more declare our independence.

Yours very truly,

H.W.S.

"THE OUTLOOK IN THE UNITED STATES."

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—The *Japan Mail* has given its readers its views of the political prospects, anticipating the defeat of Mr. Bryan in the presidential race. From

the fact that it has seemed necessary to assess all the monopolies, combines, corporations, insurance companies, banks, trusts and stock boards, in fact all the advocates of the gold standard, to the extent of many millions, it would appear that the silver craze had assumed proportions that engendered alarm in the minds of the Republican campaign managers, alarm that decided them that arguments other and beyond what platform orators and a subsidised press could advance were needed to counteract the logic of the silver advocates and Mr. Bryan's influence, so lightly considered by the *Japan Mail*. All this appears to be a strong indication that the success of Mr. McKinley was not so assured as his managers would have the world believe. It is a cardinal point with political managers to claim everything as favourable to their side, an old device to stimulate confidence in the breasts of the wavering.

I give you the opinions of two friends of mine, one a Republican and the other a Democrat. Both are watching the political campaign, both are considered experts in politics. The Republican writes, "I will venture, but do not bet on my opinion, so here goes. Bryan will be, in my opinion, most overwhelmingly defeated; had the election occurred within a fortnight after the nomination, the result would have been entirely different." The Democrat writes, "I believe Bryan will be elected, the solid south and the solid west will do the business: a large number of people anticipate trouble over the election in the event of Bryan's success. Henry George prophesies that Bryan will carry Ohio and Michigan: these estimates are based upon his own personal observations in those states." Thus the outlook appears to these two gentlemen. Both letters bear the same date, Oct. 7th. The agony will soon be over, and my belief is that W. J. Bryan will be the winner in the race.

Yours, &c.,

X.

October 31st, 1896.

[We are bimetalists. Yet we have never entertained, and do not entertain, the faintest belief that the American people will elect Mr. Bryan. Our faith in their sound common sense and keen business instincts is too strong.—Ed. J.M.]

"THE DOLLAR OF THE FATHERS."

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In the *Japan Mail* of October 23rd is printed a communicated article headed "The Dollar of the Fathers" which is an excellent example of the state of mind that the exigencies of a keenly contested election can produce. The article has a seeming fairness of tone, even aims at being dispassionate, and yet nearly every important statement made in it is coloured by a prejudice that is clearly ineradicable from the minds of a certain class of gold advocates. Not to waste too much of your space, I will note only a few of the misstatements.

1.—The writer says: "The (silver) crisis has been suddenly and unexpectedly precipitated by the party leaders in America," etc. This statement is untrue. Since 1876, there has been hardly a session of Congress in which the silver party has not exerted every means in its power to pass a free coinage bill. During the past twenty years it has invoked, begged, and threatened for this result. Only a monetary Rip van Winkle could declare this crisis sudden and unexpected.

2.—He says "the statistical data essential to a thorough understanding are almost entirely out of reach." This is a most extraordinary remark. The number of scholarly books on this subject, as well as pamphlets, and magazine and newspaper articles on the question of the standards have multiplied almost to a wearisome degree in the past twenty years. The writer has probably not taken the trouble to read the evidence which, if multiplied ten times, would probably not convince men of his calibre.

3.—He quotes the "Fathers" merely to prove that they believed that gold and silver could, under certain conditions, vary in value to each other. Nobody has even questioned this. Neither Locke, Newton, nor any other of the old monetary authorities denied this, yet they did not advocate a monometallic standard. The point is that when one money drives out another it does not prove that the one driven out is the better. For instance, between 1850 and 1860, silver in France almost entirely disappeared from circulation, and was replaced by gold to the great benefit of the world's metallic coin. Yet this displacement did not injure French economic interests, though at the time the change was going on not a few alarmists predicted disaster for France. Other examples might be given of the same kind, but they are unnecessary.

The "Fathers" indeed said many things, and they can be quoted more in favour of a bimetallic than a monometallic standard. Jefferson's words are classic: "I concur with you that the unit must

stand on both metals;" and Hamilton was still more emphatic: "To annul the use of either of the two metals as money is to abridge the quantity of the circulating medium, and is liable to all the objections that arise from a comparison of the benefits of full with the evils of a scant circulation."

4.—He says further: "In 1853 the white metal ceased to be legal tender for more than 5 dollars" (in the United States). This is entirely untrue. The Act of 1853 related only to subsidiary silver coinage and had nothing whatever to do with the standard silver dollar. *Ex uno disce omnes*. If such statements are given only to make out a case, how very poor the case must be. The writer of the article does understand the real functions, purposes, and effects of money. He seems to think that because two metals may vary somewhat to each other in value, one metal alone is better than both. But this is to miss the real point. He confounds an equal weight of gold or silver with the stable value or purchasing power of money. Money is never primarily, but only incidentally, a commodity, and it should not be subject to changes of value like an ordinary commodity, if we can possibly avoid them.

In conclusion, will the *Japan Mail* answer one question? The *Mail* has an honourable record in having been one of the earliest journals to support the cause of silver. Its main contention has been that silver has been and is a truer and more stable standard of value than gold. The disasters that have occurred in the world of Commerce since 1873 must be ascribed not so much to the decline of silver as to the appreciation of gold, and the result of such appreciation has been the augmentation of all debts, national, local, and private, and of all fixed obligations. If the *Mail* still stands by its former doctrine why does it fear the free coinage of silver by the United States? Will not the United States by abandoning the single gold standard turn from a false to a true measure of value? Will she not restore in a measure that parity between the two metals which will tend to stop the vicious movement toward an appreciating gold standard? Will she not step down from a position of very unstable equilibrium to a position of safety and stability, and, by the prosperity that must needs follow such a change, demonstrate to the world the absurdity of the present gold mania with which we see a large party of men afflicted both in Europe and America?

XX.

November 2nd, 1896.

THE DEATH OF MR. W. R. H. CAREW

ADJOURNED INQUEST.

The adjourned inquest into the circumstances attending the death of Mr. Walter Raymond Halliwell Carew, who died in the Royal Naval Hospital last Thursday week, was resumed at the British Court on Monday, before J. Carey Hall Esq., Acting Assistant Judge, acting as Coroner. The jury were Messrs. J. K. Trafford, E. Powys, T. Rose, G. Blundell, and E. T. Nicholas.

The Court room was crowded, and upon the Court being opened,

Mr. Litchfield said that he appeared on behalf of Her Majesty's Government.

Mr. Lowder then rose and asked permission for Mr. A. B. Walford to be associated with him on behalf of the widow of the deceased, to ask questions and address the jury if necessary.

The Coroner announced that as Dr. Divers could not get away from his duties in Tokyo until a certain hour, and could not appear in Court until 11 o'clock, he proposed taking the evidence of other witnesses that the jury had asked him to have brought before the Court.

Mr. Litchfield said that the management of the inquest lay entirely in the hands of the Coroner; whether he admitted Counsel to appear or not was entirely at his discretion.

The Coroner said that as they wanted evidence not arguments he proposed to call witnesses before he heard Mr. Lowder's proposition.

Mr. Lowder—Before any further step is taken, I rise to make formal application to recall Mrs. Carew so that she may give a supplemental statement.

The Coroner—You have written to me that you would make this application to the jury.

Mr. Lowder—I did.

Mr. Coroner—Mr. Lowder, gentlemen of the jury, wrote to me officially on the 25th of October that he proposed recalling Mrs. Carew, and I replied that I saw no objection. But since the 27th, when Mr. Lowder and Mr. Walford called on me and gave me a general impression of the nature of the evidence they proposed bringing, I have changed my mind, and I now give it you as my opinion, gentlemen of the Jury, that it would be a waste of

your valuable time to hear that evidence now. I think I shall have your concurrence when I say that there will be no disadvantage to Mrs. Carew if we adopt that procedure. The case so far has tended to throw suspicion on Mrs. Carew, and I think it will be better for her to hear the whole of the case before she makes this statement. Unless Mr. Lowder can convince me of what disadvantage she will be put to, I will call the other evidence first.

Mr. Lowder—My position is simply this, that I did not wish the jury to think that Mrs. Carew postponed her supplementary statement to the end and then made up her story as it went along.

The Coroner—If that is all your ground, then I have no hesitation in calling upon Mr. Buchanan Dunlop, whose presence has been asked for by the jury.

Mr. C. Buchanan Dunlop was sworn.

The Coroner then said that Dr. Wheeler in his evidence had stated that Mr. Buchanan Dunlop had made a certain statement to him in consequence of which he went and saw Miss Jacobs; would witness tell the jury what he knew about this.

Witness—I suppose the best way will be to tell how it came about that I made this communication to Dr. Wheeler. On the morning of the day of Mr. Carew's death, my children's nurse came to me in great distress. She said she had seen Mrs. Carew's nursery-governess, and that she must speak about what that young lady had said. She said she must speak; she would speak. She then said she had met Mrs. Carew's nursery-governess, Miss Jacobs, coming away from Maruya's. Miss Jacobs said: "I must tell Dr. Wheeler of this poison"—I am not quoting her exact words, only such as I remember the general tenor to be. "If I don't speak now it will be on my conscience all my life should Mr. Carew die." This is what my nursery-governess repeated to me and I disabused her from her view. I merely said: "I could not believe such an awful suspicion—I could not believe it. She was, however, so importunate that upon walking up the hill to the funeral of the late Mr. Boag, I decided to warn Dr. Wheeler; to tell him; to warn him. I particularly wished him to go and see Miss Jacobs herself, not knowing anything about the matter myself.

Mr. Niel Gordon Munro, M.B., C.M., Edin., was next sworn.

The Coroner said that Mrs. Carew in her evidence had said:—"He (Mr. Carew) then told me that when I was in England, in 1893, he had been obliged to consult Dr. Munro, and later Dr. Baelz, upon a disease which he did not wish me to mention to Dr. Wheeler. I do not know whether Dr. Munro prescribed for him at that time." Did you prescribe for him at all, Dr. Munro?

Witness—I prescribed for the late Mr. Carew in 1893. It is a long time ago, but I find on making enquiries at the dispensaries that I did not prescribe arsenic for him, and this I have obtained in writing from the chemists. I thought it best to refresh any memory on the point at once. I may add that I have a very strong impression, I can hardly call it recollection, that Mr. Carew told me then that he had occasionally taken arsenic. This was in 1893.

To the Coroner—It is some time ago, and my memory of his words is not vivid in regard to it: it is a strong impression.

To a Juror—I have a distinct impression of the late Mr. Carew saying something about his taking arsenic while I was prescribing for him. He said, I think, that he often took arsenic and that it gave him great relief. The malaria poison that he may have had in his system would have been soothed by the administration of arsenic. Stricture is often aggravated by previous malarial attacks. The treatment of stricture would necessitate drugs other than arsenic.

Mr. Trafford—Did you ever prescribe sugar of lead for the late Mr. Carew?—Not that I recollect.

To Mr. Rose—He never asked me to prescribe sugar of lead or arsenic to him.

To Mr. Litchfield—I understand that the late Mr. Carew consulted Dr. Baelz some time after I had treated him. I treated him for one thing, and I understand that Dr. Baelz treated him for another.

To Mr. Lowder—Malarial poison would affect stricture.

Hayashi Sichichiro, a shopman in Maruya's store, cautioned, deposed—I am a shopman or *banto*, and in the course of last month I sold some arsenic to a foreigner. I sold arsenic on the 19th, 20th, and 21st. I do not recollect very well to whom I sold it on the 19th, but probably it was Mrs. Carew. On that occasion I sold one ounce, in a bottle. On the bottle was a label inscribed "Fowler's solution of arsenic." I also sold a bottle of sugar of lead to the same person. This was on the 19th Oct., and I sold it to a foreign woman. I did not pay particular attention to her appearance,

and do not think I should recognise her. Some conversation took place before I sold the arsenic.

The Coroner—What was the nature of the conversation?—First I asked what she wanted the dangerous poison for, and whether she knew how to use it.

What did the buyer say?—I do not recollect whether she made any reply, so I asked her if it was for external application. I thought it was for external application, seeing that sugar of lead was being bought at the same time.

Was that the only conversation that passed?—The buyer said that the medicines were for external application. I told her to take care in using the poison afterwards. The medicines were not paid for at the time.

Did the buyer bring a doctor's prescription or any paper?—No, she wrote the names of the two medicines at the shop.

Have you that paper?—No, when she paid I tore it up.

When did she pay?—I think on the 20th.

Did you receive the money?—Yes.

Did you meet the buyer of the poisons afterwards?—I can't recollect her face very well, as I am not quite sure.

Look at the lady sitting next to Mr. Lowder (Mrs. Carew)—and see if you recollect.

Witness—I do not remember the face well. The person sitting there has come to my place to buy things before; but I do not recollect her as the person who come on the 19th October.

The Coroner—Are you quite certain that that lady did not come on the 19th?—I cannot say, I think it must have been some one from Mrs. Carew's house.

Was the paper given to you on that occasion signed in any body's name?—I am sure that the words "Mrs. Carew" were written on that paper.

Mr. Nicholas—He has said nothing so far of any other date but the 19th.

Witness—A messenger resembling a boy came and bought some arsenic and a bed-pan. He brought a writing with him. It was in Mrs. Carew's handwriting, I suppose.

To Mr. Rose—On the 19th I sold one-third of an ounce of sugar of lead, and an ounce of arsenic to the lady.

To the Coroner—The boy came on the 20th. He was an employé of Mrs. Carew's. On the 21st Miss Jacobs came and bought some Fowler's solution of arsenic and some sugar of lead. The boy brought some writing on the 20th.

What became of it?—I gave it to the person who settled the account on the 24th.

Was there any writing brought on the 21st?—There was no signature, but the handwriting was the same as that of the day before.

To Mr. Nicholas—On the paper was written "Fowler's Solution of Arsenic."

The Coroner—Was this selling of poisons to Mrs. Carew contrary to the Japanese regulations in regard to Apothecaries?—It was a mistake; I sold them contrary to the regulations. I heard that Mr. Carew had been using this arsenic, and I knew that if foreigners went to foreign chemists they could get the poisons. I was told on the 19th that the buyer of the poisons had been using arsenic.

Mr. Trafford—Had the witness sold arsenic to Mr. Carew before that date?—No, I did not.

To Mr. Nicholas—Previous to the 19th I did not know that he had used arsenic.

To Mr. Rose—No *amah* came to the shop on either of the dates mentioned. There were different persons on the separate days. I do not remember the face of the messenger very well who came on the second day.

To Mr. Nicholas—I heard some time before this that Mr. Carew was continually taking arsenic. He (Mr. Carew) said to someone that he was taking some kind of poison sufficient to kill an ordinary man.

To Mr. Rose—Mr. Carew himself never purchased any poison.

Dr. Divers wished to put a question but was not allowed.

To Mr. Litchfield—I heard from a foreigner that Mr. Carew was taking poison.

How long before the 19th was this?—It is a very old story.

Was it from a foreign woman that you heard it?—A man.

When you sold the poison on the 19th was the chit written in the shop, or was it brought by the woman; or did she simply ask for the medicine, pay for it, and take it away?—I am sure she wrote the paper in the shop.

On the 20th a boy brought a chit, was this the chit?—(Paper shown)—Yes.

Mr. MARUYA,

Please give Bearer

1 Bed pan,

1 Bottle Fowler's Solution of Arsenic,

169, Bluff, E. M. H. CAREW.

20, 10.

Mr. Litchfield—I put it in evidence before the jury.

On the 21st, the woman who came for the medicine then, did she bring a writing with her, or did she write it in the shop?—She brought it with her.

Have you kept that writing?—As she paid with ready money at that time, I tore up the paper and threw it away.

What money did she bring with her, a five-yen note, one-yen note, or what?—I do not recollect very well.

On the 19th, 20th, and 21st, how were the bottles wrapped up—the arsenic only—if they were wrapped up?—There was a label belonging to the firm on the bottle, inscribed "Fowler's solution of arsenic;" then the bottle was wrapped up in paper, the label being inside.

That piece of paper, now shown you, was applied for on the 24th by two women, who came together?—Yes.

They paid for the medicines and obtained the paper?—Yes.

Mr. Rose—Were those bottles sealed on the outside?—Yes, with sealing wax.

The Coroner—On all three occasions?—Yes.

Mr. Rose—Was it labelled poison outside?—No, poison was marked on the bottle, below the covering.

Mr. Lowder—Do you enter the sale of poisons in a book?—We do not; we have the doctor's prescription.

Then your evidence has been given from recollecting, not from entries in your books?—Yes.

May not you be mistaken in supposing that you sold sugar of lead on the 19th?—I am not mistaken.

Might it not have been on the 18th or 17th that you sold it?—I am sure it is the 19th, because I looked up the entry in my book.

But you have just told us that you do not keep books?—Yes, I do register these things up in a book, I mistook the interpreter's meaning.

Do you remember Mrs. Carew coming to your shop on the 17th October?—I do not remember well.

Are you well acquainted with Mrs. Carew's features?—I do not know very well, but I believe the person sitting next you is Mrs. Carew.

Did she purchase some antipyrine on the 17th?—I was not there, so do not know. Some other person may have sold it, I was not there.

How was this person dressed, with whom you had a conversation on the 19th?—I do not recollect very well; but I think either in black clothes or grey clothes.

Did she speak in English?—Yes.

And you replied in English?—Yes.

Had she any child or children with her?—I am pretty sure there were no children.

Did I understand you to say that she did not pay on the 19th, but paid on the 20th?—She paid the amount on the 20th in ready money.

Was it the same lady who bought the medicine on the 19th who paid for it on the 20th?—It was the same person.

And you are not sure that it was Mrs. Carew?—I am not sure.

That which was bought on the 20th was paid for on the 24th?—Yes.

And that which was bought on the 21st was paid for at the time?—Yes.

Who are the two women that came on the 24th and paid for that which was purchased on the 20th?—Miss Jacobs and another, the person sitting next her now.

Both ladies at this point stood up—Miss Jacobs and Miss Christopher, and were identified by witness.

Mr. Lowder—Who was the foreign gentleman that told you that Mr. Carew was in the habit of taking poison in large quantities?—I do not like to say, as the gentleman was kind enough to tell me; but I know him well.

I insist upon your telling—Kobayashi Beika.

And when did Kobayashi Beika give you this information?—About the 25th of last month.

Dr. Baelz, of Tokyo, was then sworn. He deposed—Mr. Carew came up once to consult me, but unfortunately I can not find any notes of it. It must, or might have been, a year ago; I can't say exactly. I generally make notes, but in this case I can't find them. After seeing the prescription that Mr. Lowder has shown me, I recollect that Mr. Carew came up to consult me about a pain in his bladder. There was no arsenic in the prescription. I never saw him afterwards.

To Mr. Trafford—There was no sugar of lead in the prescription.

Dr. E. Divers, of Tokyo was the next witness. On being sworn, he said—My examination of the stomach and other internal organs of the deceased is not yet complete, but is sufficiently complete for the purpose of the inquest, and will be con-

tinued this week in case any further evidence is required. I have found arsenic, more particularly in the liver. I find it difficult to speak about the lead, for fear that what I may say would have an effect on the minds of the jury. I will say that I have met with a substance that promises to be lead. The arsenic that I found in the organs of the deceased is sufficient to account for the death, because the illness, as described by the medical attendant is just such as might be caused by arsenic. The organs sent to me show that deceased was a healthy man, so far as these organs are concerned. I state therefore to this Court that my opinion is that deceased died from the effects of arsenic, and I come now to the question, how that arsenic was received by the deceased. Arsenic is an important medicine, as well as a widely known poison. It will therefore be well for me to state a poison dose and a medicinal dose of arsenic. The largest medicinal dose of arsenic, that is ordinary medicinal white arsenic, is about the 1/15th of a grain. Much less may be used, but I give that approximately as the largest dose that would be prescribed. The ordinary preparation of arsenic for medicinal use is Fowler's Solution and is administered in a dose of eight drops. A poisonous dose, the smallest fatal dose, according to the very widest experience of the effect of this poison, is two grains. In making this statement I am only giving an opinion based on wide experience, in asserting that a smaller dose could not cause death. A poisonous dose of Fowler's Solution of Arsenic is half an ounce. Were it taken under favourable conditions a smaller dose would have effect. The ratio between the medicinal and poisonous dose is one in 30; or on ordinary occasions one in 60. Arsenic is used often with great effect in minute doses for neuralgia, pains in the stomach, heart-burn, and in those cases where the illness seems to be due to malaria. The malaria, more especially of tropical climates, often producing fever, intermittent or non-intermittent, but of an obscure character, is often determined by the medical practitioner by the effect of arsenic in giving relief. Persons who suffer from what is popularly known, or called, "liver," also suffer from stomach trouble; and it would seem natural enough that the deceased may have learnt from some medical man of the effect of arsenic in allaying the symptoms and pain that he occasionally may have experienced.

The difficulty in regard to this proposition is that if the deceased found relief by treating himself for liver in this way, he would not have consulted his medical attendant for this disease. Arsenic also proves useful, more or less, in the treatment of spasmodic diseases, and it is possible that it would prove useful in relieving distress in stricture in the urinary passages. But I know of no medical record of such a practise: it is only supposition. But if it did happen that a medical man, or an expert, had discovered that arsenic gave relief in such a case, I think it highly probable that such a fact would be known, because medical men publish such discoveries in the columns of the medical papers. The fact that such a manner of treatment has not been recorded makes one slow to think that the ailments for which the deceased had been suffering had been treated by his medical practitioner with arsenic. The next matter for consideration, in my connection with the case, has been, supposing that deceased took arsenic habitually, could he have done it for the mere pleasure? For, as is well known, there are medicines of the narcotic class that are taken for their effect upon the imagination and the sensations, and it might be so in the case of arsenic. But, unless we include the case of the Syrian peasants, who take quantities of arsenic to assist their respiration—with that exception I do not know of any recorded case where arsenic would be taken for the mere pleasure. Arsenic, I might state here, will relieve pain, gastric pain, and very probably structural pain. Whether the deceased had been in the habit of taking arsenic habitually, which may account for the presence of arsenic being introduced into the house, or whether it was administered to him by another without his knowledge is another aspect of the case presented to me. Another aspect is: would such use of arsenic account for the reception by the deceased of the arsenic that killed him. Now, arsenic is not a cumulative medicine, and will not collect in the system and so further affect the action of a poisonous dose. That is the experience of the large body of medical practitioners. Arsenic is a medicine that is rapidly eliminated from the system, by the urine principally, by purging, and vomiting. We must therefore turn to the history of the illness itself to study how the arsenic was administered to Mr. Carew. The illness lasted for seven or eight days, the symptoms were not so acute at first, then they varied, became very intense, less so, then again severe, till the tune of death. He was in a state of

collapse when he entered the hospital. The duration of life after a poisonous dose of arsenic has been taken would, in my opinion, be very short, two or three hours: it might be even three or four days. There are cases on record of a longer period; cases that lasted after the acute action of the poison was over and in which death gradually followed from exhaustion. I have therefore concluded from the evidence that I have heard of the medical history of the case that the poison was received by deceased in several doses during his last illness and not in a dose at the commencement. And now comes the question whether this poison was administered by deceased himself or by another person unknown to him. In connection with this part of the subject, I should state that arsenic is not only widely used as a medicine, but is also the most widely used of all poisons. It is much less used in cases of murder by poisoning in England and Europe than it was, owing largely to the Poisons Act, and other measures, causing arsenic to be put up in soot or stained with indigo. Arsenic is a subject that is colourless, odourless, and practically tasteless unless taken in a highly concentrated form. It is a substance that is soluble in aqueous fluid; can be dissolved in fluid containing slight medicaments, hence in solution cannot be perceived. Fowler's solution, is therefore coloured and flavoured with an odour so as to prevent it from being mistaken for water. But the medical doses in which it is administered are so small that the colour and odour are not easily recognised. In this case I looked for arsenic when the stomach was examined. I found it quite fresh when it was opened by me. There was no odour of volatile poison, or of lavender, the odour with which Fowler's solution is usually flavoured. The fact of the want of sensible properties in arsenic has caused it to be a substance most used by persons with intent to kill another. Suicidally arsenic has often been taken, but there is such a painful result produced by the action of the poison upon the stomach that it is very rare indeed that any one would administer a second or a third dose. The effect of taking arsenic is very depressing on the mental and bodily faculties, taking away all inducement to do anything. The dose, in all likelihood, would not be repeated. There is one case on record of a man taking a dose and then three or four days afterwards another. In that case it was proved by the medical practitioner that the first dose was taken on a full stomach and was vomited, with no effect. He then took the other dose a few days afterwards. It is therefore very unlikely that a person who has suffered from the effects of a dose of arsenic would take a second, knowing its effects. As to administering it by misadventure any one accustomed to use it for medical purposes would hardly give it in poisonous doses because of the difference between the medicinal and poisonous dose. As to the medicinal doses of arsenic being one that can be increased by custom, whether one can become habituated to its use, there are persons who have made their living—fire-eaters and arsenic-eaters—who have positively swallowed white arsenic in large doses, having obtained the power of receiving it. Then we know of the Styrian peasants, but I think I am right in saying that medical men find that the dose does not require to be increased, but that the ordinary dose does require to be lessened. In ordinary cases we do not meet with the rapid power of becoming accustomed to the medicine which necessitates larger doses. Therefore it is highly improbable that, beginning with small doses, larger doses would become to be required, and if they were required, that they would act violently as in the case of one unaccustomed to it. Taking into consideration all these matters, I have come to the conclusion that the deceased died from the effects of arsenic, that that arsenic has been administered to the deceased by another person, and that it has been administered to him unknown to himself. This decision is one that I have drawn from the facts I have stated, and has nothing to do with the general evidence of the case.

The inquiry then stood adjourned for an hour. On resuming after dinner,

Hayashi, Mariya's shopman, had his statement translated and read over to him. He said that on the 19th, when he sold the poison to the European lady, he thought that she was Mrs. Carew, as she wrote that name on the paper. When he asked her if the poison was for external application, she said that it was for external use. He had heard that Mr. Carew had been in the habit "using" not "taking" poison for some long time. They entered the sale of poisons in the firm's day-book, and they must have a doctor's prescription before they could sell medicine or poison.

Dr. Divers was then recalled to allow of the Jury or Counsel putting questions to him.

Mr. Rose—I would like to ask Dr. Divers how long the fatal dose of arsenic was taken before death?—I could not give you a very useful opinion,

because I did not see the deceased. I only know what the symptoms were from the medical evidence as reported in the newspapers; and the last day of his life is singularly devoid of details. He seems to have been on that day in a state of collapse, therefore it would not have been on that day that he had any medicine. Further than that I cannot give any opinion.

Mr. Nicholas—Did you notice any traces of lead in the stomach?—As you wish me to say something on that point, I will tell you that I noticed—I was not seeking for it—that the contents of the intestines yielded a slaty black sulphide. After suitable treatment I would have a black compound; sugar of lead would form such a compound; arsenic produces a bright yellow. I am not in the least prepared to say that there was no lead in the stomach, the probabilities are it was the other way. It is probable that half an ounce of sugar of lead would cause death, and the symptoms would be somewhat similar to those of arsenic, but it is not probable, in my opinion, that sugar of lead caused death. It would have been of interest to have told the Court positively, because it would have shown the internal administration of lead, but I am not prepared to speak positively. Lead might have been administered to check hæmorrhage, and hæmorrhage is a known result of arsenical poisoning.

Mr. Rose—You cannot give any idea of how long after taking a fatal dose of arsenic death would be caused?—If a man under medical treatment, deprived of full meals, took a poisonous dose of arsenic, I should expect him to die in from six to twelve hours—that is the usual experience. If a person in full health, after a full meal, were to take solid white arsenic it might require a long period to be fatal in its effects; but if solution of arsenic were given on a relatively empty stomach you might expect the result to be very rapid. As I mentioned in my evidence this morning, I consider that arsenic was continuously administered in poisonous doses—dangerous doses—during the eight days of his illness.

Mr. Litchfield had no question to put.

Mr. Lowder—What quantity of arsenic did you find in the viscera?—That is just a question I cannot answer. I can give you an opinion, but I do not wish my opinion to have too much weight with the jury. I have not yet gone far enough with the analysis to be able to discover it in weighable quantities yet. In any case it would be very small, perhaps $\frac{1}{10}$ part of a grain, perhaps only one twentieth; and $\frac{1}{10}$ in the liver. There was much less in the contents of the bowels, some traces—certainly unweighable quantities—in the stomach. I intended to devote myself to that matter afterwards, but it is too late for this inquest unless it is adjourned. It is not my fault; I have lost no time but have devoted myself to the case day by day, and I cannot possibly be to blame for not being ready. The only thing I can be blamed for is in answering hurriedly, by telegraph, and saying that I could be ready by Friday. I have worked alone and I am responsible for the examination, so that I can swear to my own statements.

Mr. Lowder—Do I understand you to say that the amount of arsenic already discovered is sufficient to cause death?—Yes, but I think you do not understand me. When I find in the liver of a person the tenth part of a grain of arsenic, I should expect certainly that the dose had been many grains. A number of cases are on record in which the amount of arsenic given has been known and the quantity of arsenic found on examination has been known, and there would not be one hundredth part of the arsenic found of the amount known to be taken. Arsenic is often vomited, or passed through the urine, and got rid of in other ways, and the statement I meant to convey was that the arsenic found by me was ample evidence of arsenic having been given in doses sufficient to cause death. That does not prove that death was caused by arsenic: it is only a scientific opinion.

Mr. Lowder—Do you consider it possible could that three one-ounce bottles of Fowler's Solution have been administered in three days?—I should not think so. Nothing is impossible; but I should say that three one-ounce bottles would not be administered in three days.

Mr. Lowder—Do you think that two ounces could have been taken or administered in three days?—Consistent with the existing facts, you mean? That seems to me the same question as before. Of course you understand I distinguish between what is taken and what is offered to a person, between a draught and the quantity swallowed. With an irritable stomach a lot might be thrown up again. If you ask if two ounces were administered, I should say I could not give an opinion. If you ask if it were really drunk out of a vessel into which it had been poured I should say no. I may mention here that Fowler's Solution prepared

by the Japanese is practically of the same strength as that prepared by the British pharmacopœia.

Mr. Lowder—Should you consider it a startling proposition that a person accustomed to take arsenic in the shape of Fowler's Solution could take an ounce bottle in from four to five doses without harm to himself?—Within what time?

Mr. Lowder—I do not state a time.—You mean a quarter of an ounce at a time?

Mr. Lowder—Yes, could he take that dose without harm to himself?—That I cannot deny. It is highly improbable that he would be able to take that quantity, but we have records of men taking three or four grains of solid white arsenic, but then we have also the fact that they take it solid, dry, without drinking and avoiding drink, and it rapidly passes through their bodies, but they are special cases, not known among Western Europeans. I don't wish my statement to have too much value; there are men in large medical practice who are better qualified to give an opinion than I am.

Mr. Lowder—I ask you because the evidence that I intend to bring is that the deceased was in the habit of taking this solution and that he divided an ounce bottle into only four or five doses, and so took the arsenic for a long series of years?—That would be very startling. It might be in accordance with the experience of some medical practitioners, but not with persons that one usually mixes with. I should have wished that Dr. Bætz had been asked some questions on the point. So far as my knowledge of practical work and of reading and studying medical works and medical jurisprudence goes—and I was Lecturer on the subject for some years—such cases are not recognised as occurring among Western Europeans.

Mr. Lowder—Then I take it your answer is not derived from the very latest authorities on the subject?—Yes, from the very latest. Dr. Lauder Brunton, one of the lecturers and physicians at St. Bartholomew's Hospital, who is regarded as the highest authority on the action of medicines, in his enumeration of cases of this kind mentions simply no cases of tolerance of arsenic among Western Europeans. He mentions that there are cases of tolerance, but not known to Western European races. The only cases known are in Syria—that is the stock illustration and has been verified. But there they take the arsenic solid, white, and dry. I have heard of persons taking moderate doses of arsenic, but I shall be astonished to hear of persons taking such large doses of solution of arsenic.

Mr. Lowder—Can you give me a reference to the authority you have cited?—A large volume on Therapeutics. I forget the exact title.

Mr. Lowder—A quarter ounce bottle of solution would contain one grain, would it not?—It would be equivalent to one grain.

Mr. Lowder—I think you told us the least fatal dose was two grains?—Of which we have good records. That is of white arsenic. One grain might produce very distressing symptoms of poisoning by arsenic.

Mr. Lowder—One-quarter ounce bottle would not be equivalent to a fatal dose?—No, not for solid arsenic, but we cannot test these solutions properly, because you cannot kill men for experiment, and effects on animals are of no value.

Mr. Lowder—But the least fatal dose of white arsenic would be two grains?—I should conclude that it would be at least as active in solution, or rather it ought to be more active, because it is in solution. Solid arsenic sticks in the stomach, but when it is in solution the passing into the body should be more rapid.

Mr. Lowder—That is not a fact derived from known cases?—That is my own opinion.

Mr. Lowder—But there have been known cases of poisoning by white arsenic and the least fatal dose is two grains?—Yes.

Dr. Divers' examination being concluded, he asked permission to add a further statement. He said—I should point out, that if evidence showed that there are cases of persons who could swallow one, two, or three grains of arsenic without suffering, those persons would require much larger doses of one ounce, two ounce, or three ounce bottles to produce similar poisoning effects to those suffered by other individuals from taking smaller quantities. But such cases do not usually occur among those we meet. That seems to be the difficulty. We know there are persons who take large doses for respiration, but that does not seem to apply here.

Mr. Joseph Schedel, chemist, sworn, deposed—I am a chemist and druggist in Yokohama, on my own account for about 5 years. From time to time since 1893 I have supplied drugs and chemicals to Mrs. Carew's household. I have the prescriptions with me that I have made up for them. They include five bundles and one chit. I have also a list of all medicines supplied since 1893. Among these prescriptions is one for arsenic. It is a prescription of Dr. Wheeler's, given on Oct. 11th, and is for Fowler's Solution of Arsenic. This

was repeated twice, on the 17th of October and 21st. The orders were signed by "E. M. H. Carew." Before October of this year I had never supplied arsenic in any shape or form to the Carew family. I do not remember who brought the note on the 21st October.

To the Coroner—On the 17th of October I believe a Japanese servant brought the note, but I cannot remember distinctly. [Exhibits put in.]

"Please send one bottle of quinine and refill accompanying bottle.

E. M. H. CAREW."

(Copy)

"Please send me a small bottle of Fowler's Solution of Arsenic, the same as before. I cannot send the empty bottle, as it is broken.

E. M. H. CAREW.

To Mr. Lowder—These were half ounce bottles. To the Coroner—I never supplied the late Mr. Carew with arsenic myself, and have no reason to suppose that he was in the habit of taking arsenic. I have not, in the course of my experience, heard of arsenic being taken externally in cases of stricture.

To Mr. Lowder—The bottle now shown me is the one supplied by me on the 21st. It is addressed to W. R. H. Carew, Esq., and is so addressed in my assistant's handwriting; but it might have been for Mrs. Carew for anything I knew.

Mr. Lowder—Then you can't give any explanation yourself why it is so addressed?—The writing is that of my assistant.

Radical Greer, otherwise known as Hanaya Chiyaki, cautioned, deposed.—I was in the employ of Mrs. Carew at the time of Mr. Carew's death. I went into her employ on the 17th March of this year. I know that Mr. Carew was taken ill either on a Friday or Saturday. I was employed in the dining-room.

Did you ever go into his bedroom?—When letters came I used to take them in.

Did you take any food to him?—I use to take the food in at first, when they had meals together in the bedroom.

When did Mr. and Mrs. Carew stop eating together?—I do not well remember but think four or five days before Mr. Carew died.

After that did you take beef-tea, food, eatables, to Mr. Carew?—Yes, I took some beef-tea.

Anything else?—Some corn-flour; I remember nothing else.

Did you take those by your mistress's orders?—I took them according to Mrs. Carew's orders.

Did you receive them from Mrs. Carew, or get them from the kitchen?—I got them from the kitchen.

Did you in any way assist in nursing Mr. Carew while he was sick?—I was once by the side of Mr. Carew in the morning while Mrs. Carew went to her meal.

During that time did you supply Mr. Carew with any medicine?—The bell rang, and Mr. Carew asked for some soda-water. I put some soda-water into a glass at his request, and placed it by his side.

Did Mr. Carew put anything into the glass beside the soda-water?—There was something in the glass before I put the soda-water in.

Did you ever see Mr. Carew help himself to medicine?—I gave the glass to Mr. Carew and went out of the room.

The interpreter repeated the question to which the witness answered—I do not know.

Mr. Litchfield—Were there any bottles near the bedside at this time?—I did not notice.

Was it your duty, or if not, whose duty was it, to clean the bedroom?—It was another woman's duty, but she was ill and did not clean the room.

To Mr. Rose—I did not go to Maruya for Mrs. Carew for medicine.

You did not fetch any medicine for Mr. Carew?—Yes, I did bring some for him.

How long ago was that?—I do not remember very well, but either on the 18th or 19th October. I received a memorandum from the hands of my master. I do not remember the size of the bottle, but it was small. I do not recollect whether it was one or two bottles. During Mr. Carew's illness, he would not allow the room to be cleaned. He did not approve of it.

Mr. Trafford—Where did you buy the medicine that Mr. Carew asked you to get?—I sent the letter by a jinrikishaman to Maruya.

Then you have never really purchased any medicine yourself for Mr. Carew?—No.

To the Coroner—Mr. Carew was ill for about a week. I remember his dying on the 22nd.

Now during that five or six days before his death, who nursed him?—Mrs. Carew kindly nursed him.

Only Mrs. Carew?—Generally, Mrs. Carew only. Did Mrs. Carew receive no assistance during those six days?—I only know of Mrs. Carew nursing him.

Did you ever assist in nursing Mr. Carew?—Only that once when Mrs. Carew was at breakfast.

Did you ever see Mrs. Carew give her husband medicine?—Mrs. Carew prepared the medicines at the side of Mr. Carew, at the bedside, and I was not present then.

Mr. Lowder—Witness has been talking about Mr. Carew's room, was not the room occupied by Mr. and Mrs. Carew as husband and wife?—It was a common bedroom.

When Mr. Carew told you to purchase the medicine, or sent for a bottle through you, was not Mrs. Carew at church?—She was out of the house, she was not in.

Do you remember if it was on a Sunday?—It may probably have been so.

At what time of day was it when he gave you the order?—It was in the afternoon, four o'clock perhaps.

Had Mrs. Carew taken the children with her that day?—As I did not see the children, probably she did take them.

Prior to the 15th of October did Mr. and Mrs. Carew live on affectionate terms with each other?—They were on very good terms; very good indeed.

Was there any alteration in the terms on which they lived after the 15th October till Mr. Carew's death?—There was no change in the relations. Mrs. Carew was extremely kind.

Do you know of any reason whatever, why Mrs. Carew should administer poison to her husband?—There is no reason that I know of.

Did Mrs. Carew keep her medicine in a little cupboard on the mantel-piece of the room of which you have been speaking?—There were bottles of medicine in there.

Mr. Carew's dressing-room was in the verandah opening from that room?—It was.

Did he keep his medicine on the top of his chest of drawers in a little cupboard?—I did not take any notice.

The Usher of the Court at this period brought in a small fender.

Mr. Lowder to witness—Do you remember whether there were bottles of medicine kept in a cupboard of the sideboard downstairs?—There were bottles scattered about.

I am speaking of medicine bottles?—Yes, there were small medicine bottles scattered about, but how many I do not know.

Do you remember that fender as the one in use in Mrs. Carew's bedroom?—It is.

Mr. Lowder—I should like the fender taken charge of by the Usher.

It was now nearly 5 o'clock, and candles had been lighted in the Court room for some time.

The Coroner said that it rested with the jury whether they should adjourn then, or go on with the inquest.

Mr. Trafford—Can we finish to-night?

The Coroner—Well, I intend calling Ah Why, Mr. Carew's Chinese houseboy, the two shopmen at Maruya's, and I have been told by the police that the *betto* and cook of the Carews could both furnish evidence. Then Mrs. Carew has to be consulted. Did Mr. Lowder intend bringing evidence?

Mr. Lowder—Yes, Mrs. Carew will also be recalled, and her examination will not possibly be finished in less than two or three hours.

The Coroner—With justice to Mrs. Carew we could not finish to-night?

Mr. Lowder—It is quite impossible.

The Coroner—That settles the matter.

Mr. Lowder—I have an application to make. I ask that you should bring before this Coroner's Court, a person of the name of Annie Luke, a British subject, who was in Yokohama on the 29th of October last. I personally have made every endeavour and spent much time in trying to ascertain her whereabouts so that she might be produced this morning. I now apply to you to have such proper measures taken to ascertain the whereabouts of Miss Annie Luke, so that she may be in attendance when we reassemble.

The Coroner—I will do my best. Now gentleman, to-morrow being the birthday of the ruler of the land in which we are at present living, I think that it would be but a suitable mark of respect if we adjourn over that day. We will meet again at 9 o'clock on Wednesday morning.

THIRD DAY'S PROCEEDINGS.

Proceedings were resumed at 9 o'clock on Wednesday morning, in the Inquest concerning the death of Mr. W. R. H. Carew. J. Carey Hall, Esq., Coroner; Messrs. Trafford, Powys, Rose,

Blundell, and Nicholas were the appeared jury; Mr. H. C. Litchfield for the Crown; Messrs. Lowder and A. B. Walford for the wife of the deceased.

Mr. Lowder said he had a few more questions to ask the *amah*.

Permission being given, he said—Do you remember one night of Mr. Carew's illness, Mrs. Carew leaving the house to go in search of Dr. Wheeler?—I do remember it.

Do you remember it was in the evening?—Yes.

While Mrs. Carew was absent did any one come to the door?—Mrs. Carew said that we might go to bed after she went out. Just after she went away a bell rang. I answered the door.

Who was it?—A woman.

Was it a woman whom you have seen before?—No, I had never seen her before.

Can you give any description of her?—She was rather tall, dressed in black clothes, but I do not remember her face.

Do you remember her hair?—I did not notice.

Was she veiled?—I did not notice owing to the dim light.

What did she say to you?—She asked if Mr. Carew was in.

And then?—I said that Mr. Carew was ill and that Mrs. Carew had gone to fetch Dr. Wheeler.

What did she then say?—She enquired where Mr. Carew's room was.

And what was the answer?—I said that Mr. Carew was upstairs and she then went away without saying a word.

Did this visitor show any signs of distress, was she crying?—I did not see her exhibit any signs of distress. I left the door unlocked, as Mrs. Carew had said that we might go to bed.

Mr. Litchfield—Was this the only occasion on which you saw this woman?—It was the first time that I had seen her, for I do not let visitors in, and therefore see little of them.

Had you ever seen this woman calling at Mr. Carew's house before?—I never saw her.

The evidence of the *amah* was then translated and read over to her. She had some corrections to make. Mr. and Mrs. Carew stopped eating together two or three days before he died. She went to Mr. Carew's bedside one morning, at Mrs. Carew's orders, while Mrs. Carew was at breakfast, but at that time she did not give Mr. Carew anything. On another occasion, when Mrs. Carew was out of the house, Mr. Carew's bell rang and I went upstairs to his room. It was then that I gave him some soda-water in a tumbler, at his request. There was some medicine, or something, in the glass before I poured the soda-water in. I put the glass down at his side, and then left the room. The order Mr. Carew gave me to send to Maruya's was in writing—a chit.

To Mr. Lowder—There was no key or lock to the cabinet in which Mrs. Carew kept her medicines.

To the Coroner—I did not see any medicine bottles on Mr. Carew's chest of drawers. There were bottles scattered about the side-board of the dining-room. The woman who called on the night that Mrs. Carew went for Dr. Wheeler was a little taller than Mrs. Carew. The woman also asked "What has Mrs. Carew gone to do at Dr. Wheeler's."

Mr. Lowder (to the Coroner)—Will you ask what reply witness made?

Witness—I said that as my master was very ill my mistress had gone to fetch the doctor.

The Coroner—Was Mrs. Carew absent from home, at Miyanoshita, towards the end of September?—Yes; she left Yokohama on the 26th.

And returned?—She was absent about four or five days; returning at the beginning of October.

During the time Mrs. Carew was at Miyanoshita, Mr. Carew remained in Yokohama?—He remained at the house.

At what time during those days did he come home to the house; did he keep late or early hours?—Sometimes early, sometimes late.

What were Mr. Carew's hours for returning home when his wife was at home?—I do not remember very well, but I think generally between 5.30 and 6 o'clock.

Now, whenever Mrs. Carew happened to be absent, were his hours any different?—Sometimes he used to come back at 6.30, sometimes at 7.30 o'clock while Mrs. Carew was absent.

Mr. Lowder—May I put a question on that examination?

The Coroner—Certainly.

Mr. Lowder, to witness—Didn't Mr. Carew accompany his wife, when she went to Miyanoshita, that day being a Saturday, and return on the Monday?—Mrs. Carew, Mr. Porch, and the children, and I think Mr. Carew, went on the Saturday, and I think he returned on the Monday.

And then did not Mr. Carew go up to Miyanoshita on the Friday to fetch them?—I do not remember very well; but I believe he went for the children.

Did not Mrs. Carew return on the Friday alone and then Mr. Carew went up to Miyanoshta on the Saturday for the children?—Mrs. Carew came back bringing with her the Chinese boy.

And the next day, did not Mr. Carew go up and fetch the children?—I think it was so; probably on the next day after Mrs. Carew's return he went and fetched the children.

Mr. Lowder, to the Coroner—If this evidence is necessary, Mrs. Carew can supply it.

Ah Kwong, was then called.

Mr. Lowder—I am sorry to trouble your Honour once again in regard to the last witness, but I have it that Mr. Porch went up to Miyanoshta with the family on the Saturday and returned on the Monday with Mr. Carew.

The Coroner—Is it important?

Mr. Lowder—I do not understand the purport of these questions, so do not know.

The Coroner—They were suggested to me by Mr. Litchfield, who is watching the case.

Mr. Lowder—Then it will be important to elicit the whole of the truth of these movements.

The Coroner then put the question to the *amah*. Witness—I think it probable that Mr. Porch did come back with Mr. Carew on Monday.

Ah Kwong, in answer to the Coroner, said—I am the boy employed by the late Mr. Carew. I had to wait at table. I do not know how old I am. He was cautioned to speak the truth.

The Coroner said that he did not expect that this witness could throw much light on the matter, and he proposed dismissing him with the concurrence of the Jury.

The boy said he had never seen Mrs. Carew give her husband any medicine. He was then dismissed.

Kuroyanaki Junsei, the *betto* of Mrs. Carew, said—I have given Mrs. Carew's pony medicine. It was a white powder. I do not know whether it was a poison, on what it was called. I obtained it from Mrs. Carew. I only gave the pony a small amount of the medicine—only a very little.

How long had you been in the habit of giving this white powder to the horse?—For four or five days.

When?—In the spring.

Of this year?—Yes.

Not since?—Not since the spring.

For what purpose did you give the pony the medicine?—The pony had caught cold and I gave it the powder for that.

How did you give it, in water or solid?—I sprinkled it among the fodder.

The Coroner—Those questions were suggested by the statement of Mrs. Carew that she had arsenic given as an emulsion to her pony, and I thought it well to probe the thing to the bottom.

Mr. Lowder—Have you not been using sugar of lead recently, as an external application, for a sprain received by the pony?—I did.

The Coroner—Last month?—It had fever of the leg and I mixed some medicine in water and applied it.

Do you know what kind of medicine it was?—Mrs. Carew told me to bring a bucket of water and she poured some drops into the water.

Was it a fluid medicine?—Yes.

Do you know its name?—No.

What day, last month, was it?—I fancy it may have been the 27th or 28th of last month; I fancy that was the time.

Mr. Rose—Did you only give this medicine once?—I only applied it once, as the pony got better and I did not apply to my mistress for any more.

Only once in October?—I only used it once.

The Coroner—Do you remember the size of the bottle?—It was so thick (indicating with his fingers).

Mr. Lowder—Are you not confusing October with September?—It was more than two weeks ago.

On reading over the evidence, the man thought that probably he applied the liniment in September.

Mr. Trafford—Was it before or after Mr. Carew's death?—Before his death. I think a good deal before, but I can't recollect exactly.

The Coroner called for the two shopmen from Maruya's, but neither were present. He said that as they were not in Court this would conclude the evidence that he had to call. He would now take Mrs. Carew's evidence.

Mr. Lowder said that he must have the two men called, their presence being absolutely necessary. The Coroner—Then I will see that they do attend later on, if that will do.

Mr. Lowder—Very well.

The Coroner—Did I understand you to say on Monday that you would like to address the Jury.

Mr. Lowder—Yes, if necessary.

The Coroner—Do you claim that as a right?

Mr. Lowder—No, as a privilege.

The Coroner—Can you give me any precedent?

Mr. Lowder—I have not looked up any cases. The Coroner—But it would be unusual would it not?

Mr. Lowder—Perhaps it is unusual for Counsel to apply for permission to address a Coroner's jury.

The Coroner—I am not inclined to depart from the usual practice. I shall be obliged if you will elicit and bring forth from Mrs. Carew by questions all the points that you would have introduced in your arguments.

Mr. Lowder—That I will do; it was the knowledge of that that made me say on Monday that Mrs. Carew's supplemental statement would take two or three hours.

The Coroner—Then it is understood that you do not address the jury?

Mr. Lowder—Very well, sir.

The Coroner—I should like to ask Mrs. Carew a question before Mr. Lowder begins his examination. Mrs. Carew, did Dr. Wheeler ever prescribe arsenic for your late husband?—Not that I am aware of.

Then under what circumstances was the first bottle of Fowler's Solution procured from Mr. Schedel on Dr. Wheeler's prescription?—Dr. Wheeler prescribed arsenic for my malarial fever.

When was this?—On the 10th of October last.

Where was it?—At the Boat-house.

Will you state what conversation passed then?—I should like before I do so, to say what conversation I have had with Dr. Wheeler with reference to my malarial fever, a week before.

The Coroner—State it in your own way.

Witness—I have no recollection of the date whatever, but it must have been in the first week of October, that I told Dr. Wheeler I was suffering again from malaria; that the large doses of quinine which I had been taking, and was taking at the time, had lost their effect, and I should like him to prescribe for me again. He thereupon suggested my going on with the arsenic, which he had prescribed for me, and which I had taken regularly for three months in October, November, and December, 1894. During that conversation, I told Dr. Wheeler that I did not think myself that the arsenic agreed with me, although it undoubtedly benefitted the malaria. I cannot remember that very much more was said on that occasion, but on the 10th of October, at the Boat-house, Dr. Wheeler said that he was sorry to hear, or sorry to see, I had not derived much benefit from my visit to Miyanoshta. I am not prepared to state whether the suggestion came from Dr. Wheeler on myself, that he should then and there write me a prescription of the same nature as that which I had taken on previous occasions. He tore a piece of paper off the Regatta programme and wrote the prescription which was produced in Court on Monday. I myself did not take the prescription to the Normal Dispensary as the day on which the prescription was made up was a Sunday, but I quite see how the mistake occurred in Mr. Carew's name being on the label, because I sent my own prescription on the Sunday with a prescription written by Dr. Wheeler for Mr. Carew.

Mr. Lowder—When you came before this Court on the 24th of October, you had come straight from the funeral of your husband?—Yes.

You had not heard the evidence given by Miss Jacobs?—No.

And you were unaware that any suspicion had been directed against yourself in regard to the death of your husband?—At that time I was.

On ascertaining that fact, you instructed me to write to the Coroner to tender you as a witness in order to supplement the evidence you had given?—Yes.

In your evidence on that first day you apparently said, "I remonstrated with him a good deal on his taking arsenic, especially in his present state. He then told me that when I was in England, in 1893, he had been obliged to consult Dr. Munro, and later Dr. Baelz upon a disease which he did not wish me to mention to Dr. Wheeler." Did you mean that he then told you for the first time, or that he reminded you of the fact?—I should have left out the word "then." I should have said that he reminded me that he had been obliged to consult other doctors; the reason he mentioned it was because he was afraid that during his last illness I should mention the fact to Dr. Wheeler.

You stated on that occasion that you had only once sent for arsenic at the request of your husband?—Yes.

And now you find that you were mistaken in giving that answer?—Yes, on the 27th of October, when my husband had a conversation with me and gave me the piece of paper, I remonstrated with him a great deal. In the evening I recollect writing to Maruya's for a bed-pan. I cannot say that I have any recollection whatever of writing for the arsenic, but I know that I must have done so, as my writing is conclusive evidence. The *amah*

brought me on Tuesday night the parcel which was received from Maruya's. She gave it to me as Dr. Wheeler and I were leaving the bedroom, and I told her to put it on the chair in the passage upstairs. The bed-pan was not taken out of its wrapping until the following morning. I am positive that I had no idea that arsenic had come into the house that night, because I had no recollection whatever of ever seeing the bottle which is said to have contained arsenic. I wrote a chit to Maruya shortly after I sent for the bed-pan for a bottle of chlorodyne.

In answer to a question that I put to you last Saturday week, as to the general affectionate relations prevailing between your husband and yourself, you answered:—"We have lately had unpleasant discussions on a certain point, but generally we were on affectionate terms as husband and wife." On what point did you have these unpleasant discussions?—On money matters.

On money matters alone?—Yes.

You have in your own right £500 a year?—Yes.

And have had ever since your marriage?—Yes.

That is partly your own money and partly an allowance made you by your father?—There were £400 of my own, and £100 allowed me by my father.

And this money was remitted to Japan twice yearly?—Yes.

Up till last June in whose name was the remittance made out?—In Mr. Carew's name.

Last June a remittance of £250 arrived as usual?—I have reason to suppose that it did.

Prior to last June how had your husband treated this remittance, what did he do with the proceeds?—He kept the sum at his own account, and up till about a year and a half ago, he would give me money when I required it. But at my suggestion he then opened an account for me at the Chartered Bank, and besides giving me a monthly allowance for household expenses, would on receipt of the half-yearly remittances from England, deposit a sum in my name, varying from 500 to 800 dollars, more or less, as I asked for it. The remainder, it was understood, was to be used by him at his own discretion.

That was till about a year and a half ago?—No, this was the arrangement with the bank. This went on till last June.

Now in June, what conversation took place between you with reference to the remittance that should have arrived by then?—It was in the month of July that I first spoke to him on the matter. I had expressed surprise that the money, which I knew ought to have been sent from England, had not yet arrived. I do not remember his answer at the time, but upon my repeating it, some days after, he told me that the money had come, but that he was then unable to let me have any. I repeatedly had to ask him to explain why he had such an immediate want for that money, but as he could give me no satisfactory answer, I was obliged to make other arrangements respecting the way in which the remittances were sent out from home. I thereupon saw Mr. Dickinson.

Mr. Lowder—He was a friend of the family was he not?—He was.

Witness, resuming—I saw him as to the best way of arranging the matter.

Your object being to have the control of the money in your own hands?—Yes.

Then?—As Mr. Dickinson knew, and always had known, more about my affairs than most people here, he wrote home for me some time during the summer, and subsequently advised me to go and tell Mr. Jackson, of the Hongkong Bank, of my wishes, and to get him to help me in the matter, which he did.

Was that the only controversy you ever had with your husband?—Absolutely.

Did it make any difference in your marital relations?—None whatever.

Your husband had no private fortune of his own?—None.

Recently he expressed to you a wish to purchase a house, did he not?—Yes.

You agreed with him that it would be desirable?—Yes, with the consent that I should first have to get from my father.

Did you write to your father for his consent?—I did and he wrote me to the effect, that he would be willing to let me have £2,000, to invest in house property, provided Mr. Carew could give a satisfactory report of the house, also providing that the title-deeds should be made out in my name. Upon that we entered into negotiations with Mr. Blad, a resident here, for the purchase of a house; with the result that we negotiated to purchase a house for the sum of \$13,000. The bargain has only been relinquished in consequence of the death of my husband.

Your husband was Manager of the Yokohama United Club, was he not?—Yes.

He recently expressed a wish, did he not, to

give up his position at the Club and go into business?—Yes, some eight or nine months ago he first expressed that wish.

And asked you to assist him?—Yes.

What business did he think of entering upon?—At that time he had no special line of business in view. He had repeatedly expressed his wish to me and to others, that he might leave the Club and go into business in Yokohama. Where upon I wrote to England, to an uncle of mine, who is also one of my trustees, and asked him whether I could realise a sum of money which I had in my own right, to enable Mr. Carew to go into business. His reply to me was, that he did not think it advisable to realise any of my money, but that there was no harm in telling me that he had left me money in his will, and that if it would be of any service to enable Mr. Carew to go into any business, and provided that he (my uncle) approved of the investment, he was willing to advance me the money at once.

The Coroner—Pardon me, Mr. Lowder, but is this line of evidence relevant to the case?

Mr. Lowder—Yes.

The Coroner—Very well.

Mr. Lowder—What sum of money was to be advanced?—Nothing was settled definitely, but roughly it would be from £8,000 to £10,000. Mr. Carew at once made enquiries, and finally decided that he would like to go into a silk firm here.

The Coroner again interposed.

Mr. Lowder—I will explain why I consider it necessary to introduce this evidence. I am endeavouring to show absence of motive.

The Coroner—Very well.

Witness—Do you wish me, Mr. Lowder, to give the name of the firm?

Mr. Lowder—If there is any doubt as to the truth of your statement, yes. But I don't think the firm would care to have it appear. I will write it on a slip of paper and show it to the Coroner and the Jury.

The Coroner—I don't think that is necessary. Its bearing on the case is very remote.

Mr. Lowder—I take the responsibility for introducing the evidence, whether your Honour sees the relevancy or not.

Mr. Lowder then wrote the name of the firm on a slip of paper and it was handed to the Coroner and the Jury.

Examination continued—But for Mr. Carew's death he would, with your money, have purchased an interest in that firm?—Yes.

To the full amount that your uncle was prepared to advance?—Yes.

You have every reason to believe that everything had been settled?—Yes, so far as I know. As the head of the firm is not in Yokohama, it would have been necessary to write to him on the matter.

His reply had not been received?—Not yet.

But his agent or partners fully approved of the proposition?—Yes.

Mr. Lowder—That concludes that line of evidence. You were married?—In the early part of 1896. My parents did not approve of the proposed marriage.

After your marriage, did you and your husband live together on terms of affection?—From the time we were married till the time he died.

Nothing whatever occurred to create dissension between you, except what you have mentioned this morning?—Nothing.

You were always very frank with him, and he with you?—Yes.

On all subjects?—Yes, on all subjects.

Did he soon after his marriage mention to you the name of Annie Luke?—Yes.

Where did she reside relatively to your residence?—In the west of England?

Where did you reside?—In Somersetshire. She lived in Devonshire, I believe.

What did he tell you at that time with reference to her?—At that time, very little, beyond that he had seen a great deal of her. The conversation at the time made so little impression on me that, so far as I can remember, he gave me to understand that he had been amusing himself with her, prior to his meeting me, or marrying me.

Did this arouse any feeling of jealousy in your mind?—None whatever.

And you did not mention her name again until quite recently?—Until quite recently.

He also told you that prior to his marriage he had begotten children that were still alive?—Yes.

For one of those children you provide support, do you not?—Yes.

That did not create any dissension between you or any jealousy in your mind?—None. I should like to explain that the conversation as to the circumstances that Mr. Lowder is now referring to, took place at Singapore and I never knew of this until some four months after my marriage.

Mr. Lowder—I am now about to enter upon

some new evidence, and if it is convenient we might adjourn till after the luncheon hour.

The Coroner—It is not yet quite twelve o'clock and I intend to sit until half-past twelve, with the concurrence of the jury.

Mr. Lowder, to witness—Soon after your marriage did you learn that your husband had been in the habit of taking arsenic?—About nine months after.

Where were you then residing?—At a place called Sungei Ujong, in the Straits Settlements.

Do you know why he took it?—I have no idea. He had suffered from ill-health for a great number of years, which illness obliged him to leave the Straits 15 months after my going there with him.

He was in the Government employment, was he not?—Yes.

And would have been entitled to a pension had he remained another 11 months?—Yes.

He had to leave the Straits in consequence of illness?—Yes.

What that illness, was you do not know?—It was called nervous depression, but his illness had more or less puzzled his medical attendants. But they put it down entirely to the climate, and as he has never suffered, or very rarely so, from the same since he left, I imagine that to be the cause.

Do you know if arsenic had been prescribed for him in the Straits?—Yes, I do.

By whom was it prescribed?—By the head doctor of the Singapore Hospital. I think he was called Dr. Simons.

How much did he use to take at first?—I have no recollection of the prescribed dose, but on his return to Singapore, I should suppose he was taking 4 or 5 drops, three times a day. I have no reason to suppose at that time that he was taking more.

Did he continue to take arsenic from that time?—Periodically from that time until the time of his death. Without it being prescribed for him?—Yes.

Was he willing or unwilling to call in a doctor when he was unwell?—Most unwilling. I think I may safely add, that with the exception of his being obliged to consult Dr. Munro and Dr. Baelz, he has never consulted any doctor since his arrival in Japan without my sending for the doctor myself.

Dr. Wheeler?—Yes.

On the occasion of his last illness, who sent for Dr. Wheeler?—I did. I wrote to him on the morning of the 15th. I am positive that he would not have sent for Dr. Wheeler himself. He said that I was not to send for him, but I was anxious and wrote and asked Dr. Wheeler to see my husband at the Club, which he did.

In reference to medicine, what was his opinion, was he not opposed to it?—No not to medicines. He has frequently told me, and that almost up to the day of his death, that he never had, and never would, believe in doctors. He was in the habit, at various times, of trying a good many patent medicines on his own account.

Shortly before his last illness, for instance, he was taking Mother Seigel's syrup, was he not?—Yes.

You stated in the early part of your evidence this morning that in the Straits you were in the habit of giving your husband doses of arsenic?—Yes, frequently; every day.

And you would measure it out in drops?—Yes, I always used the drops.

Later he has always dosed himself?—Yes. It was only during his illness in the Straits that I was accustomed to give him the arsenic myself.

Later he would use this arsenic without measuring it?—Yes.

He has been in the habit of doing so for a long time?—Yes, and because he has been so much in the habit of taking arsenic as a pic-me-up, he would pour a small quantity out, add water and drink it off.

Did he not generally keep a small bottle on the sideboard in the dining-room?—Yes.

Is this the bottle he kept?—Yes.

There was no label on it?—No. There never has been so far as I know.

Later, at what time of day did he use to take it?—Directly after breakfast. By that I mean after the breakfast he used to take—an egg and milk.

You have made an experiment, have you not, with an ounce bottle, filling it with water, and pouring out the quantity that he used to take?—I have found that an ounce bottle would contain for him about five doses.

On the last occasion you stated that you had found three bottles, two behind the table in your husband's bedroom, and the other in the cupboard where he used to keep his medicine?—Yes.

Are these the two bottles you found behind the bedroom table?—Yes.

Bottles handed in, one labelled "Sugar of Lead,

Z. P. Maruya & Co., pharmaceutical and dispensing chemists, 28, Bentendori, Yokohama, the other "One ounce Fowler's solution of arsenic, Z. P. Maruya," etc.

Are those the two bottles that you discovered after your husband's death behind the small table at his bedside?—Yes.

Now you spoke of another bottle which you found in the cupboard in which your husband kept his medicine, that has a label written on in another hand, "Fowler's solution," underneath "Poison," and no label of Maruya's, is that the bottle?—Yes.

I now hand you a bottle bearing the label "chloral hydrate," with the word, "poison," in Japanese and English, and ask you if you also discovered this bottle in the cupboard where your husband kept his medicines?—Yes.

Mr. Lowder—I would call attention to the fact that the cork of that bottle bears the same inscription as does the cork in the bottle said to be from Maruya's.

Have you any knowledge of the purchase of that chloral hydrate?—None whatever.

Had you even seen such in the house before?—Never.

Or a similar bottle?—Never.

I will ask you whether this is the prescription which you spoke of this morning as having been sent by you on the 11th of Oct., with the one given to you by Dr. Wheeler on the previous day?—I suppose it is, but I have no recollection.

Mr. Lowder—I will call your Honour's attention to the fact that the prescription is dated the 11th October; that bears out what Mrs. Carew told the jury this morning.

Witness, after referring to the prescription, said—I recollect now that it was given to me by Dr. Wheeler in the bedroom, and I wrote the address on the back.

Mr. Lowder—The date on the prescription that Dr. Wheeler gave you, for yourself, on the 10th, has been put on since?—Yes, probably at the Dispensary.

Mr. Lowder—Nothing hangs on this, I only intend to corroborate every statement made by Mrs. Carew, and it is only reasonable to call attention to this fact.

The Coroner—Quite so.

Mr. Lowder then held up a broken bottle and said—Is this the remains of the bottle sent to you by Mr. Schedel on the 11th Oct.?—That is the original bottle sent me.

It is addressed to your husband?—Yes, but I have explained how that very palpable error had been made.

Is that the bottle with reference to which you wrote to Mr. Schedel on the 17th Oct. to have refilled?—Yes, it was.

Is it the bottle that you wrote to Mr. Schedel on the 20th, to say that it was broken, and you wanted another bottle of the solution in its stead?—Yes.

And is this the bottle you received on the 21st?—Yes.

[All the bottles were put in.]

Will you describe where you kept your medicines?—I keep my medicines in a small bamboo cabinet that stands on the mantelpiece in my bedroom.

Is that the fender [produced] that was immediately below the mantelpiece in your room?—Yes, it is.

And is that stain, the stain caused by your knocking over the bottle of solution that was on the mantelpiece?—Yes, I think the date of this was the 19th; but my recollection is rather vague.

It was shortly after it came?—Yes.

It has been wiped over since?—Yes, by the servants, but has not been touched since you said that it was to be brought into Court.

Mr. Lowder—I should like that stain analyzed if any doubt exists as to it.

You thought no more about the broken bottle till I made inquiries?—That is so.

When was it discovered?—Yesterday morning.

Where was it discovered?—My amah, not the one that has been giving evidence this morning, had to clear up the room and collect the broken glass, so I told her that it was necessary that the bottle should be found. She said she thought she could not find it, having thrown it away a few days previously. The bottle was eventually found in an ash heap at the back of the servants' quarters. This amah's name is Hana Yuasa.

Mr. Trafford called attention to the passage of time.

The Coroner said he was willing to adjourn for an hour.

But Mr. Blundell pointed out that this was too short for business men who had office work to arrange during the recess. An adjournment was accordingly made till 2 o'clock. On reassembly,

Mr. Lowder said—Since the recess this morning, Mrs. Carew—in fact just as we entered the Court—handed me this bottle?—Yes.

The Coroner—This is a bottle?—Yes.
Mr. Lowder—Where did you find it?—I found it in the cupboard where my husband kept his medicine, and during his illness, I was in the habit of giving him doses from it. It is said to be made from the prescription of Dr. Baelz; that is what it is said to be.

The Coroner—I see that it comes from the Normal Dispensary and bears the number 13,934.

Mr. Lowder explained that when Dr. Baelz called on him to produce the prescription he had drawn up for Mr. Carew, he mentioned this No. 13,934, and said that it was his usual prescription for irritation of the bladder. He offered the paper for what it was worth. Probably the original might be in the possession of the Court.

Mrs. Carew—Mr. Hall, the original is not among the papers Mr. Schedel has produced, because Mr. Carew lost the original and had to go to Mr. Schedel and procure a copy of the prescription; this is a copy of it.

Examination continued—Where did you find this bottle?—In the drawer of the cupboard in which my husband kept his medicine.

Where was that situated?—On a chest of drawers in his dressing-room.

Where was that dressing room?—It was the verandah really, leading out of our bedroom, and used by him as a dressing-room; my medicines were kept where I have described. I had several large bottles of medicine in my cupboard that were prescribed for him in his last illness. I kept them there because they were too large for the drawer in which he kept his own medicines.

You wish me to hand this bottle in to the Court, now, because, having smelt it, you believe it contains arsenic?—I believe it does.

Mr. Lowder (to the Coroner)—It is now open to you, sir, to have this bottle and its contents tested. I make no application, but hand it in with that remark.

To Witness—Do you call to mind the 10th of October?—Yes. It was Saturday, the day of the regatta.

It was a very wet afternoon, I believe?—Yes. Do you remember a visitor coming to your house that afternoon?—I do.

At about what time?—About 2 o'clock.

You went to the door yourself, did you not?—No, I was sitting in the dining-room at the time writing, and heard the China-boy say "Arimasen," "no have got." Thinking the China boy was making a mistake, I myself went out of the door.

Whom did you see there?—There was a lady there, who to me was an apparent stranger. When she saw me she came into the hall and said, "Are you Mrs. Carew?" I replied in the affirmative, and she then said that she wished to see Mr. Walter Carew. I said I was very sorry that he was not at home, but that if she would give me her name or card, and tell me the nature of her business, I would tell Mr. Carew. She said that she must and would see him herself. If she could not do so that afternoon, then it must be the following morning. She refused to tell me anything of herself, beyond giving me a card. I at once wrote to Mr. Carew.

Mr. Lowder—Stop one moment. I produce a card marked "M. J." with the letters, in the right hand corner, "A. L." with the date "1888," and ask you if that is the card?—Yes, it is.

Tell me where she produced this from?—From a bag. She took out of the bag a packet of cards and produced this card.

Now, can you describe her?—She was slight and tall, but she was so heavily veiled that I am not prepared to describe her features. The only conversation that took place between us was in the hall. She struck me as being fair rather than dark.

If you were to see her again, could you recognise her?—I should not like to say that I could.

Have you ever seen, to your knowledge, the Annie Luke referred to in the early part of your evidence?—No.

After seeing this lady, you wrote to your husband, did you not?—Yes.

And you found this letter among your husband's papers after his death?—Yes.

Mr. Lowder read the letter, that was as follows:—

Dearest Walter,—A most mysterious (lady) came here just now and asked to see Mr. Walter Carew. I told her you were not in, when she said she would call again early this evening, about 4.30, as she must see you. She would give me no name, nor any reason for her visit. She came about ten minutes ago (2 o'clock) and seemed most distressed at not finding you in. I proposed to let you know and said you be so then. She said "this afternoon or tomorrow morning I must see him." I shall go round to Mrs. Walter's about the tennis cakes at any event. I think it too wet to go down to the Boat-house, but may come if it clears. Will you be back to see "Your Woman in black?"

If not what message shall I tell Rachel to give her. Enclosed is her card.
Saturday.

Yours, EDITH.

Did you go down to the Boat-house that afternoon?—Yes. That was where I saw Dr. Wheeler, and where he gave me the prescription.

Did you meet your husband at the Boat-house?—Yes, I mentioned, before a dozen people there, about the visit of this mysterious lady, and he was subject to very much chaff.

You chaffed him I suppose?—Yes, we all did. He told me that he had received my note, that he had replied to it, and that I must have missed the messenger. He said that he would be back at 4.30. I remained at the Boat-house myself for a couple of hours. I was subsequently given to understand that the lady did not keep her appointment.

The following day, the 11th, was a Sunday, and it was the custom of your house that the governess and children should lunch with you in the middle of the day?—Yes, and we all lunched together, myself, my husband, and my brother. The topic of conversation was the mysterious caller of the previous day.

Was it a serious conversation?—Quite the reverse. At the time I thought that the lady was more or less a myth; that she had no business with my husband, as she had no appointment. This joking about the mysterious lady went on till about the evening of Monday, the 19th.

Mr. Lowder—I wish to complete the story of this mysterious woman in black, and will therefore depart a little from the line, in order to bring in other letters in sequence.

The Coroner—Very good.

Mr. Lowder—I now propose to ask you, whether, after your husband's death, a letter was not found by you among his papers?—Yes.

And you did not know the contents of the letter until after his death?—Not until after his death.

Mr. Lowder—This letter is marked private, bears no date, but on the postage stamp and the two office tags is the date 13th October, and my suggestion is that it was in Mr. Carew's possession on the 13th October.

I must see you, why have you done nothing since you got my two cards, or perhaps she never let you get them. I cannot meet her again, she makes me mad when I think of what I might have done for you. I cannot give you any address; I am living wherever I can find shelter but you can find and help me if you will, as I know you will, for the sake of old times.

Mr. Lowder—Was that the letter you discovered after your husband's death?—Yes.

The Coroner—Gentleman of the jury, I call your attention to the handwriting of the letter.

Mr. Lowder—I am much obliged to your Honour for calling attention to a point that I had omitted. I am assuming that the letter was received on the 13th: did your husband come home to dinner that evening?—No, he dined at the Club.

What time did he come home that night?—I think it was about a quarter to two.

In what state was he?—He was not quite sober.

Was he in the habit of coming home in that state?—No.

On the 16th or 17th, did you receive an envelope containing a letter written in your husband's handwriting, addressed to Miss Annie Luke, Post Office, Yokohama?—I did. I have destroyed the envelope in which the letter was enclosed.

The letter enclosed was in your husband's hand writing?—Yes.

Mr. Lowder read the letter:—

I feel greatly distressed about you, and ever since I got your card last Saturday have been endeavouring to find you. I wish to and will help you if I can only find you. Meet me this evening at 5.30 p.m. on the Bund opposite the Club Hotel.

Wednesday, 14th Oct.

Is the address on the envelope and the letter in your husband's handwriting?—Yes, certainly. They were sent to me anonymously.

On the 19th October, did you receive anonymously another envelope with this piece of patchwork inside?—Yes.

The envelope is addressed to Mrs. Carew, 169, Bluff, and has never been gummed; where was it found?—It was left at the house by a jinnikisha man; I was not present when it came.

Mr. Lowder—I am unable to read the whole of it, as it has been torn up and then pasted together again. It is dated 15/10/96, and was written at the Yokohama United Club. It is in Mr. Carew's handwriting.

Yokohama, United club.
15.10.96.

Dear —

Many thanks for your chit, I am feeling a little better but still need — M. — thanks — ing.
He — to my — talked — not — ut — my being — age of — indic? and ha — — noked me — E all d — except Vichy Water, a — — which I have ordered — sent to the house I b — — Fred \$13.00 for the h — — — nor heard not — Fearfully, etc., etc.

Witness—I recognise this as being in my husband's

band's handwriting, and that the envelope is in, or appears to be in, the same handwriting as that of the letter signed "Annie."

On the 24th of October another letter was delivered anonymously and laid on your doorstep?—Yes.

It is addressed to Mrs. Carew, 169, Bluff. I suggest that the envelope is in the same handwriting as that of the other envelopes, and I further suggest that this letter is in the same handwriting as that of the other letter, but this I leave to the Coroner and the jury to decide.

beware, dare to speak one word of the truth, and you shall never leave Japan alive

The Coroner—Do you think you will finish tonight?

Mr. Lowder—I have not much more to ask Mrs. Carew; it depends upon the cross-examination.

On the first of November, you received, through the post, another letter, that you believe to be in the same handwriting as the previous letter?—Yes, so far as I can tell.

Mr. Lowder—It bears no date, I will read it now:—

I have done what I can for you, true I made you suffer, but I have written to Mr. Hall and to Mr. Lowder, Yokohama will be troubled no more by A.L.

My suggestion is that all these letters are in the same handwriting. On the same first of November, I think, I received and showed to you a letter?—Yes.

Mr. Lowder—Now, if the Court thinks it necessary, I will interpose for a few moments and be sworn, and will then produce the letter.

The Coroner—Just as you wish. I do not know what this line of evidence is intended to prove. As to your being sworn, I do not think it would lend greater weight with the jury than at present.

Mr. Lowder—I consider that the letter should be put in, and will therefore waive being sworn, and read it now.

Mr. Lowder—I do not know you, probably have never seen you, but I gathered from Saturday's papers that you will be acting on behalf of the wife of the man who was to me the world and more than the world. Dead men tell no tales; no, no dead women either for I am going to join him. Do you know what waiting means for 8 long weary years. I have watched and waited. Watched till I knew he would grow tired of her that silly little fool. And then I came to him. What is the result. We between us electrify Japan. I have never professed to be a good woman, but for the sake of a few lines, I do not see why I should let a silly innocent woman be condemned for what she knows nothing about, and for what she never will know anything about, and for which when you get this no one on this earth could enlighten her. She is a silly fool, otherwise she would not have treated the last two weeks as she has done. By the time you get this I shall be well on my "way" (?) to join him, my twin soul. You may call this what you like, but I think deep down in my heart I write this for the sake of the boy who is so like his father. Let his mother take heed that he enter not into temptation.

I shall write to the Coroner.

29th October.

A.L.

Mr. Lowder—I am now about to ask for the letter received by the Coroner.

The Coroner—Would you like to read it?

Mr. Lowder—I would like to see it; I have never seen it up to the present. (Letter produced and read.)

Hall, Esq.,

The Coroner,

The English Court, No. 171, Yokohama.

Mr. Hall,—I have just finished a letter to Mr. Lowder, so cannot begin this to you in quite the same way. Shall I begin it with the truest and wisest saying on this earth? "Woman is at the bottom of every thing." In this case it is so. For, between us we have bamboozled the lot of you — the chemist — the doctor, and last but not least that fool his wife. I stop here because my last act on earth shall be a merciful one, and as I am going to join him, my twin soul, I will exonerate that little fool from any share in helping us to meet each other. I have done my work well, and am taking good care to escape the lot of you and the law. My letters will not be posted till Sunday morning when I shall be —? The world will call me mad; I am, however, sane enough for what I am going to do I am sane enough to accomplish my end. That as we were divided in life we were not in death. I wonder whether if out of all this community there is one who can sympathise with me who goes out to meet her maker.

29 October

A.L.

Mr. Lowder—The first of these letters is dated the 13th, the next 14th, the letter to your husband is dated the 15th. I will now ask you if you have not given me instructions to make every endeavour to discover the person who passes under the name of Annie Luke?—Yes, certainly.

And I have informed you that so far my efforts have been unsuccessful?—Yes.

On Thursday, the 15th, your husband came home and never left the house again?—No. He came home at 2 o'clock on Thursday afternoon.

What was he complaining of then?—Liver. I wrote to Dr. Wheeler that morning because he was unable that morning to accompany me to the race-course, as was his usual custom. He complained a great deal of pain, and said he thought he was

going to have an attack of liver. I do not think he anticipated a long illness. He has had long attacks of liver, but not these last few years. On Friday, the 16th, he seemed to be rather worse. He walked about the house, but did not go down to office. From Friday till Tuesday night he was unable to retain his food. On Thursday, the 15th, Dr. Wheeler went and saw my husband at the Club, in answer to my letter. I am not certain whether he came to the house on the Friday. I wrote to Dr. Wheeler on the Saturday, as my husband wanted to go down to Kamakura from the Saturday to Monday. Dr. Wheeler wrote at first he might go, but after seeing him on Saturday changed his mind and advised my husband not to go to Kamakura, as he thought it might increase the chill, from which he thought my husband was suffering. On Saturday he could not keep his food down more than five minutes. I attached no importance at first to these symptoms, but on the Sunday I thought that the medicine that Dr. Wheeler had prescribed was not benefitting him at all, and was probably the cause of the sickness from which he was suffering. On the 17th, the Saturday, I went to Maruya's shop in person and purchased a tin of anti-pyrene, which I did not pay for. The *banto*, who appeared on Monday, was the man who served me. On or about the 17th, I received an anonymous letter, but made no mention of it to my husband at the time, because Dr. Wheeler told me that he was to be kept as quiet as possible and he must sleep. On Sunday, the 18th, I went to church in the afternoon, and some time afterwards learnt that during my absence he had sent the *amah* to order some poison from Maruya. On my way back from Church, I called on Dr. Wheeler to tell him that I could not account for what I considered the curious nature of Mr. Carew's illness. Dr. Wheeler was not in his house, so I sent a note round about 6 o'clock in the evening, when Dr. Wheeler came. I think it was on that occasion that Dr. Wheeler told me that the medicine he had ordered for Mr. Carew, was not sufficiently strong to carry off the effects of the illness from which, on the Friday night, or Saturday night, Dr. Wheeler told me that Mr. Carew was suffering. He told me that he considered that it was a slight chill on the liver, seriously aggravated by an excessive use of alcohol, and then told me that his course of treatment would be to enable Mr. Carew to throw off all such effects, and his words to me were, "After this attack, Carew will be in better health than he has been for years." He also told me to try and argue seriously with Mr. Carew as to the very serious effects the use of alcohol was having on his constitution.

On Monday, the 19th, a suggestion has been made that somebody who signed your name, but was not recognised as yourself, ordered a bottle of arsenic and a bottle of sugar of lead, now did you go to Maruya on that date and order those things?—I did not. I have no knowledge that those were ordered. I have never signed a chit "Mrs. Carew;" I always sign chits as the one produced in Court on Monday. I only left the house on the 19th in the very early morning, when I went to the race-course. I returned about half past 7 o'clock. Nearly the whole of the morning was occupied in carrying out the usual Monday duties of the house, which are always carried out by me. I did not leave the house on Monday, after coming back from the racecourse. I do not remember that anything special occurred on the Monday evening as regards Mr. Carew's illness, except that he was very restless. During the middle of the night he himself spoke to me of the girl who calls herself Annie Luke. He expressed to me a very great wish to see her, and, without telling me very much, led me to believe that he had treated her very badly and told me that he must in some way make amends to her. I purposely refrained from telling him that I had in my possession an anonymous letter, as on that Monday he seemed to me not so well, and I did not wish to worry him in any way. But I told him that we would discuss the matter more fully when he was better.

Did you make any objection to his making amends to her?—No. The whole of the conversation, however, did not last more than 10 minutes, because I did not see that a conversation of such a nature could be discussed in a short time. He did not say to me that he had led the person to believe that he would marry her. As I said before, he only led me to believe that in some way he had behaved very badly to her; all of which had occurred previous to our marriage. He did not tell me whether he had met her on the 14th, and I did not ask him. I told him that I knew he had been in correspondence with her, but I did not tell him I had the letters. In the afternoon, when my brother returned from the office, I was called downstairs to see a visitor, and Mr.

Carew, who was then more or less wandering seemed to believe that the lady who had been to see me was Annie Luke. Seeing this, I said to him, "Oh, I have had a visitor, guess who it is?" He immediately replied, "Annie," I said, "Yes she has been here, I have had a long talk with her, I am going to look after her, and I am going to take care of her." This was of course absolutely untrue, and I only said it to pacify him, and I never heard him mention her name again in my presence. My brother was present at the time. On the morning of the 20th I thought he was weak, and we were quite unable to stop the sickness, and at Dr. Wheeler's suggestion—who came at mid-day—I agreed that Dr. Todd should come round and see the patient. I can recollect nothing further that took place at the consultation than I gave in my previous evidence. Towards evening on Tuesday, the 20th, Dr. Wheeler came round again at about half-past six, and as my husband had not been able to sleep, and the sickness had not decreased, he and I gave Mr. Carew a hypodermic injection, which unfortunately had the very reverse of the desired effect. He became very excitable, thought he saw insects and animals crawling over his bed, which alarmed me more or less, so that I decided to go and see Dr. Wheeler himself, as I knew that he was dining out. Dr. Wheeler came about half-past eleven. I had found him at the place where he was dining and gave him my message. He said, "Don't be alarmed, it is the effect of the hypodermic." I did not quite see his argument, and requested him to come round later, which he did at 11.30. I was absent from the house about 40 minutes. This was the only evening during the illness of the deceased that I went out to see the Doctor. Mr. Carew was very importunate that I should send for some arsenic. Very early in the morning, about 4 o'clock, a few hours after Dr. Wheeler had left, the effects of the hypodermic having worn off, Mr. Carew became extremely weak. I called the servants up, and had a fire lighted to get hot water. Dr. Wheeler came on Wednesday morning, and did not seem to think that there was anything at all serious, but as I had never seen such symptoms before, I wrote to Dr. Wheeler at tiffin-time on Wednesday, requesting him to send for Dr. Baelz. It was just about that time that I gave him the sealed parcels that had come from Maruya. I had seen Mr. Parsons earlier in the morning. He inquired after Mr. Carew and said that he thought that it would be a good plan for Dr. Wheeler to call Dr. Baelz in. Dr. Wheeler came in the evening and gave me Dr. Baelz's reply. It was a telegram running:—

Oct. 21st, 1896. Dr. Wheeler. Impossible to-day, would to-morrow evening do? BAEZ.

After seeing Mr. Carew, Dr. Wheeler said, "He is so much better, that I see no occasion to send for Baelz." He said, "I think that in this case, it will be a needless expense; let us wait and see how he is to-morrow, because as he has retained his food since noon yesterday, he is decidedly better." He passed a very restless night, however. I had to call the servants up and applied hot water bottles to his feet and side to keep him warm, and sent off again for Dr. Wheeler, about 5 o'clock in the early morning on Tuesday. During the time Dr. Wheeler was in the room on Wednesday, Mr. Carew was in bed. He had been sitting up before. I considered Dr. Wheeler so casual as to the patient's condition when he came on Thursday morning, at 7 o'clock, that at 8 o'clock I wrote to Mr. Parsons. I told him that I did not wish to be anxious if there was no cause for anxiety, and I told Mr. Parsons that he would probably get the truth out of Dr. Wheeler, as to whether he considered Mr. Carew was seriously ill or not, as I gathered from Dr. Wheeler that there was no cause for any alarm. I told Mr. Parsons to again tell Dr. Wheeler, that I must insist on his sending for Dr. Baelz. I gave Mr. Parsons's reply in my last evidence. Dr. Wheeler returned at half-past eleven. He did not go to the bedside, but said, "I have made arrangements to remove him to the English Hospital, he is only going from bad to worse." I then asked him if he considered Mr. Carew was in a serious condition; he gave me no reply whatever, but walked out of the door. Dr. Wheeler came again at half-past two, bringing a stretcher from the hospital. Mr. Carew had some beef-tea, and corn-flour for tiffin, but he seemed to collapse almost immediately afterwards. He was taken to the hospital by Dr. Wheeler and my brother, about 3 o'clock. I went as far as the Hospital gates, walking by his side. I met Dr. May at the gates, and told him I understood there was a rule prohibiting any lady going into the Hospital, but I hoped that Dr. Todd would allow me to go in that evening to see how Mr. Carew was getting on. Dr. May told me, that he was not in a position to accede to my request, but

promised to write and let me know; either as to how my husband was, or as to whether I could go and see him. It was a very great relief to me, after five days' nursing, to know that my patient was off my hands, and I never for one moment realised, even at the last, that there was any serious danger, and it was a most terrible shock to me to receive Dr. May's communication at half-past five that evening.

Now Mrs. Carew, during your husband's illness did you administer arsenic to him, either by his request, or without him asking you to do so?—Never.

Or sugar of lead?—No.

Did you ever see him take either poisons during his illness?—No.

You spoke, the last time that you were examined, of a piece of paper given by your husband to you, and from which you copied the note you gave Miss Jacobs to take to Maruya's, is that the piece of paper?—Yes. [Paper put in.] The names of the medicines are not in Mr. Carew's handwriting, the writing on the back is in his handwriting.

Mr. Lowder explained that he had suggested in a question put to Mrs. Carew at her first examination, that this paper was all in Mr. Carew handwriting; Mrs. Carew did not intend to adopt that suggestion when giving her answer and he wished to have the impression corrected.

The Coroner said that was certainly the impression that he had gained.

Mr. Lowder—I am trying, in this question, to remove the impression.

The Coroner to Mrs. Carew—Is this in your handwriting?—No. I don't know whose writing it is.

Mr. Lowder—I should like the point cleared up.

The Coroner—The impression left on the minds of the jury by Mrs. Carew's answer was that this paper was in her husband's handwriting.

Mrs. Carew—I was under the impression at the time that Mr. Lowder was referring to my husband giving me the paper.

The Coroner—You now wish to correct the impression?—Yes.

The Coroner (to Mr. Lowder)—What suggestion do you offer?

Mr. Lowder—I make no suggestion at all. I simply wanted it cleared up to your satisfaction that it was only Mr. Carew's handwriting on the back.

The Coroner—Quite so.

Witness—I recognise this piece of paper as belonging to a note having reference to a letter directed to me at Miyanoshta that miscarried. That letter, of which this was the draft, was written, I believe, after my husband's return from Miyanoshta. The writing must therefore have been written after the 2nd of October.

And now, in reference to the sugar of lead used on your pony?—Sugar of lead was purchased in June or July for the purpose of external application, to be dissolved in water and then applied to the pony. It has never been used since that time so far as I know. The liniment to which the *betto* referred this morning was Elliman's Emulsion. On the 26th Sept., I went with my nursery-governess and the two children to Miyanoshta, followed in the evening by Mr. Carew and my brother. The two latter returned to Yokohama on the Monday, the 28th. I had to keep an appointment with Mr. Carew on the Saturday, so returned to Yokohama on the Friday night. Mr. Carew went up to Miyanoshta on the Saturday, my brother and I being left alone. I have never sent Dr. Wheeler's prescriptions to Japanese to make up; Mr. Schedel made them up from a certain date, and I occasionally sent them to North and Rae. On the 20th, my husband was able to walk about but most of the time he was sitting up. He might have gone into the nursery had he so desired.

The Coroner—I have just received a communication from Dr. Divers saying that he is ready to complete the statement he made on Monday. It will take only a few minutes. I propose calling him now.

Dr. Divers then said—I have completed my examination of the internal organs of the late Mr. Carew, and I have to report concerning, firstly, arsenic; secondly as to lead. Arsenic in more or less quantity I have found to be more or less universal in the matter sent to me. In the liver the quantity was one sixth of a grain of oxide of arsenic; smaller quantities in the other organs. In the stomach, when opened and the contents poured out, there were on the surface near the gullet entrance, several minute specks adhering to the stomach wall, of a white pasty substance. Just in the gullet, before it passed into the stomach, two or three little white particles, the whole of this matter

—very minute altogether—consisted of white arsenic. That is to say, consisted of a substance that was not solution of arsenic, but solid arsenic. It is practically impossible to imagine that this white arsenic could have come back from the solution by the chemical action of the stomach. The only conclusion that I can arrive at, under the circumstances, is that solid white arsenic is one of the substances exhibited to the deceased. When this is exhibited and swallowed, causing death, it is usual to find patches of white, pasty matter sticking to the walls of the stomach. Finding these minute specks, was, however, to me, in this case, a surprise. The quantity, as I have said, was so small that I did not get such full and complete evidence of its nature as to make me feel satisfied to speak about it until I had proceeded further and got confirmatory evidence of the general presence of arsenic. That is all about arsenic. As I said at my first examination, it is not likely that sugar of lead killed or contributed to kill the deceased. But as was felt—judiciously felt—by one of gentlemen of the jury, the presence of lead in the internal organs of deceased is important evidence of intent to kill, or not. The intestines which were sent to me unopened, contained nearly a quart of liquid matter—liquid excrement—entirely devoid of the odour of such matter, odourless practically, but of a slate-black colour. These contents of the intestines I have found to contain lead, in small, but distinctly positive, quantity, enough to have coloured the intestinal contents from the well-known blackness of the sulphide of lead. If sugar of lead, or other salts of lead meets in the intestines with sulphur compounds it will be converted into sulphide.

Mr. Lowder—My client is somewhat exhausted by the long strain put upon her this afternoon, and while not making an application that will inconvenience the jury, I should be pleased if an adjournment could be taken now.

The Coroner—Certainly.

A Jurymen—To-morrow is mail-day.

The Coroner—Gentlemen of the jury, while regretting that any of your business engagements should be upset by the discharge of urgent public duties, I think that the seriousness of this case makes it imperative that the Court shall sit to-morrow, mail-day or no mail-day. We will meet at 10 o'clock, however, and then later on I may consider the advisability of an afternoon sitting.

FOURTH DAY'S PROCEEDINGS.

The Inquest was resumed on Thursday morning at 10 o'clock, under the circumstances attending the death of Mr. W. R. H. Carew.

The Coroner—Gentlemen of the jury, Mrs. Carew was giving her evidence yesterday, when her examination was interrupted by Dr. Divers, who had come specially from Tokyo, to continue his statement as to the contents of the viscera of the deceased. Mrs. Carew is now present and the jury can put to her any questions they wish; unless Mr. Lowder has some further questions to put.

Mr. Lowder—No sir, but it has just occurred to me that Mrs. Carew was not sworn yesterday; but I take it that her statement was in continuation of her evidence of a previous day.

The Coroner—Mrs. Carew was sworn at the beginning of the inquest, and that applies to all the evidence she has given.

Mr. Lowder—Thank you.

The Coroner—Have you any further question to ask.

Mr. Lowder—There is just one. Did you not, accompanied by a friend of yours, go to Maruya's recently and endeavour to obtain information there?—I did.

Without finding any information whatever?—That is so.

Mr. Litchfield—I shall not ask any questions.

The Coroner—There is one question that I should like to ask you, Mrs. Carew. Have you any knowledge of the source whence your late husband obtained the arsenic which you say he was in the habit of taking; was it from a foreign or a Japanese store?—I am afraid, Mr. Hall, that I cannot give you any definite information as to that; Mr. Lowder, very possibly, will be able later on, to give you the information.

The Jury had no questions to ask.

Mrs. Carew's statement was then read over to her. She added—I do not wish to say that I have ever seen Mr. Carew take arsenic in the house more than once a day; it was always after breakfast.

The Coroner—Have you any more witnesses to call, Mr. Lowder?

Mr. Lowder—If you please, Mr. Dickinson.

Mr. H. V. Dickinson, sworn, said—I am a resident of Yokohama and a friend of the Carew family, and have been so for a very long time.

On what terms did Mr. and Mrs. Carew live together?—On affectionate terms.

You were aware of a money difficulty arising between them in July?—Not then, but at a later date.

At what later date?—Towards the end of August.

After this money difficulty had been settled, did you notice any difference in their marital relations?—No.

They continued to live on the same affectionate terms?—Yes.

Do you remember a conversation with the late Mr. Carew with reference to arsenic?—I recollect, years ago, when they were living at Dzushi, he told me that on one occasion when they were living in the Straits, he had nearly killed himself with an accidental over-dose of arsenic. I recollect this in a general way, I do not remember the details of our conversation.

On the day of Mr. Carew's funeral were you standing at the back entrance to the Club in Water Street?—I was coming up to the Club.

Did you notice a woman there?—Yes.

Was she moving?—No, she was not moving on; she was standing loitering near the Water Street entrance to the Club.

Was she in great distress?—Yes. She seemed to be trying to repress her signs of distress.

Were there tears in her eyes?—She had been crying.

Can you describe her at all?—She was a fairly tall woman, about 5ft. 4in., I should think, and slim. I did not take much notice of her dress.

Was she fair or dark?—More fair than dark.

Have you ever seen her before?—No.

Nor since?—No.

Do you think you could recognise her again if you saw her?—It is possible, but I am not sure.

Mr. Rose—Did Mr. and Mrs. Carew accompany each other to parties, dances, etc.?—In Yokohama? Yes, in Yokohama?—Yes; so far as I know, they were very much taken up with each other.

Mr. Litchfield had no questions to ask.

Mr. Max Kaufmann was then sworn. He said—I am a German subject resident in Yokohama, and was a friend of the late Mr. Carew. I remember playing a game of billiards with him on the evening of Tuesday, 13th October last.

Something struck you as odd in his manner on that occasion, will you describe what it was?—Well, I met him at the Club after dinner, and he seemed in good spirits, just as a man might after a good dinner, or after having a glass or two too much. We had a game of billiards then, which he was perfectly able then to play well enough, and during the game, some how or other, I do not know why, he always repeated and kept repeating a French sentence, saying, "Le moment est arrive ou'il faut faire la chose." He repeated that over and over again, I don't know how many times, but possibly twenty-five.

The Coroner—The meaning of the phrase, gentlemen, is "The moment is come when the thing must be done—or, the time has come and the thing must be done."

Mr. Lowder, to witness—Had in any reference to the game you were playing?—It had no reference whatever to the game we were playing. I did not even know to what he was referring.

Mr. Lowder—I will draw attention to the fact that this sentence, or phrase, was used by deceased on the evening of the 13th of October, the date according to our supposition that deceased received the first letter signed "Annie." (To Mr. Kaufmann)—Do you remember, some time ago, meeting Mr. Carew in the urinal of the Club, when he appeared to be suffering great pain?—Yes.

Did he, at that time; make any remark about his taking arsenic or poison?—He mentioned to me, at that time, that he was in the habit of taking arsenic more than an ordinary man could stand; something to that effect, it might be the average man, or something similar.

Mr. Litchfield had no questions to ask; neither had the jury.

Mr. Porch was next recalled. He said—I recollect, on Sunday, the 11th October, when Mr. and Mrs. Carew, the children, myself, and the nursery governess were lunching together, that we were all laughing and joking with Mr. Carew about the mysterious visitor of the day before. I remember it perfectly well. This joking was carried on for some days. I remember a conversation that took place between Mr. and Mrs. Carew, in their bed-room, on Tuesday, the 20th October.

Will you repeat it to the best of your recollection?

—The conversation was about Annie Luke. Mr. Carew asked Mrs. Carew if she had had a visitor. Mrs. Carew said, "Yes, guess who it is?" Mr. Carew said he could not guess, and Mrs. Carew told him it was Annie Luke. She also added that she knew where she was living, and

that she would do her best to help her. I never heard Mr. Carew refer to Annie Luke again.

Mr. Nicholas—Did you see any of the letters that have been read, before Mr. Carew's death?—Not until after his death.

Mr. Rose—Do you know where she (Annie Luke) lives?—I have no idea.

Do you think she is now in Yokohama?—I could not tell at all.

Mr. Nicholas—You did not see any of these letters till after his death?—No, I did not.

Mr. Lowder—You saw the card referred to marked "M. J." and "A. L." in the corner?—Yes, I saw that on Saturday, the 10th.

Mr. Kobayashi Beika, was then sworn, and examined by Mr. Walford. He deposed—I am a resident of Yokohama, and was acquainted with the late Mr. Carew.

You were in Court, last Monday, and heard a shopman of Maruya's say that you had made a statement to him that you knew that Mr. Carew had been in the habit of taking poison?—That is correct.

After that you came and volunteered a statement to me?—I did.

Was that statement correct?—It was.

Will you repeat it to the Court?—The statement that I made may not be of much value, but it happened in this way. About a year, or perhaps nine months, ago, I was taking tiffin at the Yokohama United Club, and Mr. Carew happened to be at the same table. How the conversation drifted into this channel I do not know, but I happened to tell Mr. Carew that I had taken medicine for what is known as "bucking-you-up," which medicine contained strychnine. Mr. Carew then said, "Oh that is nothing, I take enough poison to kill six men; I am obliged to do so." That is absolutely all I know about it.

Mr. Rose—Do you know if this referred to arsenic?—I do not know; I have only knowledge of the conversation that took place at that time.

Hanaya Asa, cautioned, deposed—I am an *amah* in the employ of Mrs. Carew. I was called to clean up a mess that had been made in the bedroom through a bottle having been broken in the fender. I have forgotten the date.

What did you do with the broken bottle?—The bell-rang and I was told to clear up the mess. I gathered up the fragments of glass and threw them away by the side of a broken lamp shade, near to a small bush.

The day before yesterday, did you receive orders to look for the broken bottle?—I did.

Did you find it in the place where you threw it away?—Yes.

Is that the bottle (exhibit "I" shown)?—It resembles it.

Mr. Lowder—I now wish to give evidence myself. The Usher accordingly administered the oath.

Mr. John Frederic Lowder, sworn, deposed—I recognise the envelope which is marked B2, and the letter that is inside it, as the envelope and letter that were received by me on the 1st of this month. I recollect a conversation that took place between myself and the deceased a long time ago. On seeing me about to enter Brett and Company's shop, he said, "Why do you go to a European drug-store; unless for some particular prescription I always send to the native drug-stores." I don't pretend to give the exact words, but that was the nature of the conversation. I made the acquaintance of Mr. and Mrs. Carew in the year 1890; they joining at Singapore the ship in which I was returning to Japan. From that time I have known them well; I may say, intimately, and I have never known them to be on any but the most affectionate terms.

No questions were but.

Mr. Lowder—I do not know if any witnesses are here from Maruya's?

The Coroner—They were ordered to be here, as you expressed a wish to examine them.

Upon enquiry being made it was reported that neither of the shopmen was present.

Mr. Lowder—It is a matter of importance that they should be present. I will give you an outline of the evidence I wish to obtain. Mrs. Carew on Saturday, Oct. 17th, went the Maruya's and purchased some antipyrine; I wish that statement of hers to be corroborated. And I also wish to ascertain what was supplied on the Sunday, while Mrs. Carew was at Church, on the occasion when Mr. Carew sent an order there for some medicine. I want to ascertain that evidence most particularly.

The Coroner—An adjournment is necessary, not only for an opportunity of hearing these men, but also owing to the new aspect of the case that was developed by Dr. Divers' evidence last evening. I have thought it to be only my duty to ask the Japanese police to make examination and enquiry at the Japanese drug-stores as to what amount of solid arsenic was sold or supplied by them during last month. This they have kindly promised to

do; so an adjournment will be necessary. To-day is mail day, and I wish to consult the convenience of the gentlemen of the jury as far as possible. I propose that we now adjourn till to-morrow afternoon till 2 o'clock. The inquest stands adjourned till that hour, when the evidence of the police and other witnesses will be taken.

LATEST TELEGRAMS.

(REUTER'S "JAPAN MAIL" SPECIAL SERVICE.)

London, Nov. 2.

A great parade has been held in New York, at which upwards of 130,000 business men attended, in favour of Mr. McKinley and sound money. Great enthusiasm was manifested.

The Republicans, while professing the utmost confidence as to the result of the Presidential election, admit the existence of a large doubtful vote.

London, Nov. 4.

Mr. McKinley has been elected President.

London, November 5.

Mr. McKinley's election was a sweeping victory, large majorities being recorded from the Eastern, Northern, Central, and some of the Southern States. A great Republican majority in the next House of Representatives is assured, probably also in the Senate.

The result of the election has produced a favorable impression on the Bourses in London and New York, and on the Continent. The papers of Great Britain and the Continent rejoice at the result.

(FROM THE "N.C. DAILY NEWS.")

London, Oct. 24.

A sensation has been caused in London, a Chinese doctor named San Yat-yen, who it is stated had been concerned in a conspiracy at

Canton to overthrow the dynasty, having been imprisoned since the 11th inst. at the Chinese Legation in London.

It is reported that he was inveigled thither by Chinese, but has managed secretly to inform his friends of his detention.

Detectives are watching the Legation day and night to prevent his clandestine removal to China.

Later.

Lord Salisbury, in a sharp note, has demanded the immediate release of Sun Wen Yat-yen—whose real name is Sun Wen—and he was handed over yesterday afternoon to the Foreign Office.

London, October 30.

The submission of the Matabele Chiefs continues, and it is believed that the fighting is virtually over.

Lord Dufferin, speaking at a banquet in Belfast, stated that the international situation more than ever imposed on Great Britain the necessity of being in a state of perfect preparation to meet all emergencies.

CHESS.

(All Communications to be addressed to the Chess Editor.)

The Yokohama Chess Club meets on Monday and Thursday in each week, at the Club Hotel, No. 5, Bund, from 5 p.m. to 11 p.m.

Visitors to Yokohama, and Officers of ships (whether Navy or Merchant service) who are Chess-players, are welcome to use the Club during their stay in this port.

The Tokyo Chess Club meets at the Tokyo Hotel, every Friday, from 1 p.m. to 7 p.m.

J.S.G.—Delighted to hear from you, and sorry you did not write sooner. We hope that you will be a constant and regular contributor in future.

BUDA-PESTH TOURNEY.

Still no news at the time of writing. But, before we go to press there should be some information as to the result.

PROBLEM NO. 259.

By J. PILNACEK.

White to play and mate in three moves.

PROBLEM NO. 260. By K. MAKOVSKY.

White to play and mate in two moves.

We take the following interesting games and matter from the *Scotsman*, in which journal Mr. David Forsyth has a splendid Chess-column.

GAME NO. 597.

PHILIDOR'S DEFENCE.

WHITE. D. M. Crank.	BLACK. D. Forsyth.
1—P to K 4	1—P to K 4
2—Kt to K B 3	2—P to Q 3
3—B to B 4 (a)	3—P to K B 4 (b)
4—P to Q 3	4—P to B 5
5—Castles	5—P to K Kt 4
6—Kt to Q B 3	6—B to Kt 5
7—Kt to Q 2	7—P to K R 4
8—Kt to Q 5 (c)	8—P to B 3
9—Kt to Q B 3	9—P to R 5
10—P to B 3	10—P to Kt 6
11—P to K R 3	11—Q to Kt 4 (d)
12—Kt to K 2	12—P to Q 4
13—P takes P	13—B to Q B 4 ch.
14—K to R sq.	14—B takes P
15—Kt to K 4	15—B takes P ch.
16—K takes B	16—P to R 6 ch.
17—K to R sq.	17—P to Kt 7 ch.
18—K to R 2	18—P takes R (Kt) ch.
19—Q takes Kt	19—Q to K 2
20—P takes P	20—Kt takes P
21—B takes Kt	21—R takes B
22—Q takes P	22—R to Kt 2 (e)
23—Q to R 5 ch.	23—K to Q 2
24—Kt takes B ch.	24—Q takes Kt
25—B takes P	25—Q to B 7 ch.
26—K to R 3	26—Q takes P ch. (f)
27—Q takes Q	27—R to K R sq. ch.

Resigns.
(a) An orthodox continuation but considered inferior 3—P to Q 4.
(b) This move is unsatisfactory in this form of the opening. White should continue 4—P to Q 4. P takes K P; 5—Kt takes P, P takes Kt; 6—Q to R 5 ch. with the better game.
(c) A useless move, but the game is not conducted on either side according to approved principles, otherwise such extraordinary positions would not have occurred. It looks more like a game at odds.
(d) Black's first deviation from a pawn play.
(e) Black invites White to check at R 6 as his doing so would entail loss of the Q or mate.
(f) Apparently not foreseen by White. Black could also win here by 26.... R to K R sq.

GAME NO. 598.

TWO BISHOPS OPENING.

WHITE. D. Forsyth.	BLACK. R. Rankin.
1—P to K 4	1—P to K 4
2—B to B 4	2—B to B 4
3—P to Q Kt 4	3—B takes Kt P
4—B to Kt 2 (a)	4—Q to K 2 (b)
5—P to K B 4	5—P to Q 3
6—Kt to K B 3	6—Kt to Q B 3
7—Castles	7—B to K 3
8—B to Kt 5	8—B to B 4 ch.
9—K to R sq.	9—P to B 3
10—P takes P	10—B P takes P
11—Kt takes P	11—P takes Kt
12—Q to R 5 ch.	12—B to B 2
13—R takes B	13—Q takes R
14—Q takes K P ch.	14—B to K 2
15—Q takes B P	15—R to Q sq.
16—B takes Kt ch.	16—P takes B
17—Q takes B P ch.	17—R to Q 2
18—Kt to B 3	18—B to B 3
19—Kt to Kt 5	19—K to B sq. (c)
20—B to R 3 ch.	20—Kt to K 2
21—Q takes R	21—B takes R
22—Q to Q 8 ch.	22—Q to K sq.
23—B takes Kt ch.	23—K to B 2
24—Kt to Q 6 ch. and wins.	

(a) This move is given as best by Jaenisch in reply to refusing the gambit by 3.... B to Kt 3. An play upon it in the gambit accepted is to be found in the books on openings, and as far as we can learn the move was first played at the Edinburgh Chess Club recently.

(b) The point of the gambit, as compared with Evans, is that White can play P to K R 4 before Kt to K B 3. Black can prevent it by 4.... Q to B 3, but the Queen is not well posted there

We believe the best defence is 4.... P to Q 3; 5—P to B 4, Kt to Q B 3; 6—Kt to K B 3, B to Q B 4, preventing White casting White can then play 7—P to K Kt 3, still threatening to win the K P.

(2) Though an interesting and novel form of game, it has no claim to accuracy. Whether the attack obtained by the gambit compensates for the sacrifice is doubtful, but that is so in all gambits. Results justify the means.

EVANS GAMBIT—STONE-WARE DEFENCE.

The following game was undertaken by two Dundee players with the view of testing the defence to the Evans Gambit which Pillsbury ventured at the Hastings Tournament, viz.:—5..... B to Q 3.

GAME No. 599.

EVANS GAMBIT.

WHITE. H. J. Thoms.	BLACK. P. Sandeman.
1—P to K 4	1—P to K 4
2—Kt to K B 3	2—Kt to Q B 3
3—B to B 4	3—B to B 4
4—P to Q Kt 4	4—B takes Kt P
5—P to B 3	5—B to Q 3 (a)
6—P to Q 4	6—P to K R 3
7—Castles	7—Q to B 3
8—R to K sq.	8—P to K Kt 4
9—P to K R 3	9—K Kt to K 2
10—B to K 3	10—Kt to K 3
11—P to Q 5	11—Q Kt to K 2
12—B to K B sq. (b)	12—P to Q Kt 3
13—Q Kt to Q 2	13—B to K 2
14—Kt to Kt 3	14—P to Q B 4
15—P to Q R 4	15—B to B 2
16—P to Q R 5	16—P to Q 3
17—P takes P	17—B takes Kt P
18—Q Kt to Q 2 (c)	18—B to B sq.
19—Q to R 4 ch.	19—K to B sq.
20—Kt to B 4	20—B to B 2
21—K R to Kt sq.	21—Kt to Kt 2 (d)
22—Kt to Kt 6	22—B takes Kt
23—R takes B	23—P takes R
24—Q takes R	24—B takes P
25—Q to Kt 7	25—B to Kt 5
26—Kt to R 2	26—P to R 4
27—Q takes P	27—Kt to B 5
28—Q to Kt 2	28—B to B sq.
29—P to Kt 3	29—R to Kt sq.
30—P takes Kt (e)	30—Kt P takes P
31—B to Q 2	31—K to R 2 ch
32—K to R sq.	32—Q to Kt 3
33—Kt to B 3	33—B to Kt 5 (f) and wins.

(a) This is the move which Pillsbury was bold enough to venture at Hastings. It is by no means new, but has been long neglected. Kieseritzky, half a century ago, attempted to establish its validity by playing it against Anderssen and other contemporary masters, but only with occasional success.

(b) Early foreseeing the attack which Black is preparing against the King's position.

(c) White has not made the most of his advantage as first player. He has no attack worth the Pawn he sacrificed, while Black is now out of difficulties.

(d) A fine move preparatory to Black's 24th move B takes P.

(e) It is obvious that Black wished White to capture the Kt and White should not be so ready to do so. White has a bad position, but his destruction was not necessarily immediate.

(f) All very cleverly played. If now 33—B to Kt 2 or K 2, B takes Kt, B takes B; 35—Q to Kt 4.

The following consultation game was played at the Boston Chess Club, in 1892, by William Steinitz against H. N. Stone, assisted by J. F. Barry in the first part of the game and by H. N. Pillsbury in the latter part. It was arranged that the Stone-Ware Defence should be the opening adopted. The notes are by Mr. Steinitz, and appeared in the *New York Tribune*.

GAME No. 600.

EVANS GAMBIT.

WHITE. Steinitz.	BLACK. Allies.
1—P to K 4	1—P to K 4
2—Kt to K B 3	2—Kt to Q B 3
3—B to B 4	3—B to B 4
4—P to Q Kt 4	4—B takes Kt P
5—P to B 3	5—B to Q 3 (a)
6—Castles (b)	6—Kt to B 3
7—P to Q 4	7—Castles
8—R to K sq.	8—P to K R 3 (c)
9—Q Kt to Q 2	9—P takes P
10—P to K 5 (d)	10—P takes P (e)
11—P takes B (f)	11—P takes Kt
12—Q takes P	12—P takes P
13—Q takes P (g)	13—Kt to K sq.
14—Q to K Kt 3	14—P to Q 4 (h)
15—B to Q 3 (i)	15—K to R sq.
16—B to R 3	16—R to K Kt sq.
17—P to R 4	17—Q to B 3
18—Q R to Q Kt sq.	18—B to B 4
19—B takes B	19—Q takes B
20—R takes P	20—Q to Kt 3
21—Q to B 4	21—P to B 3
22—Q to Q R 4	22—R to Q B sq.
23—R to Q 7 (k)	23—Q to B 4
24—R to K B 7	24—Q to Q 6 (l)
25—P to R 5	25—Kt to K 4 (m)
26—R takes Kt (n)	26—P takes R
27—Kt takes P	27—Q to Kt 8 ch. (o)

28—K to R 2
29—Kt to Kt 6 ch.
30—R takes Kt (q)
31—Kt to B 3 ch.
32—Q to K B 4
33—R takes P ch.
34—Q takes P ch.
35—B to Kt 2 ch.
36—B takes R ch.
37—Kt takes R

28—Kt to B 3 (p)
29—Kt to R 2
30—R to B 2 (i)
31—Kt to R sq.
32—R to Kt 2
33—P takes R
34—R to R 2
35—R to Kt 2
36—K to Kt sq.
37—Resigns.

(a) First suggested and practised by Kieseritzky. The idea was taken up a few years ago by Mr. Stone, one of the leaders of the Black party in the present game, in conjunction with the late Mr. Ware, and this peculiar defence has been named after those two players, who have adopted it in hundreds of games against strong opponents, with a large balance of the score in their favour.

(b) The waiting attack which was much in favour with the late Captain Mackenzie.

(c) Messrs. Stone and Ware considered this essential to this defence. We doubt its special ability, and it is evidently contrary to general principles of development.

(d) Ill-considered. P takes P was certainly better.

(e) For the Black Allies, it has now obtained an overwhelming array of Pawns by sacrificing the Piece at once, e.g., 20—B takes P; 21—Kt takes B, Kt takes Kt; 18—R takes Kt, P to Q 4; followed by P takes P, and then, accordingly, P to Q 5 or P to Q 4.

(f) Withdrawing Kt to Kt 3 or to K B sq. would have given the adversaries another good opportunity of sacrificing a piece for Pawns, and the game might have proceeded—22—Kt to B sq., Kt takes P; 23—Kt takes Kt, R takes Kt; 24—R takes B, P to Q 3; 17—R to Kt sq., P to B 3; followed by P to Q 4, &c.

(g) M ch. stronger was 12—B to Q 3, with the probable continuation P to Q Kt 3 for Kt to K sq.; 14—R to K sq., with an excellent attack; 15—Q takes P, R to K sq.; 16—R takes R ch. Q takes R; 17—R to K sq.; 18—Q to Q sq.; 19—Kt to R 4, followed by Kt to B 4, with a powerful attack.

(h) 14—Kt to K 2, which is apparently strong, is hardly as good for White would continue—15—R takes Kt, Q takes R; 16—H to Kt 2, and if 16—Kt to R 3; 17—R to K sq., Q to Q sq.; 18—B to Q 5 and should win.

(i) Best. 13—B takes R P, P takes K B; 16—R takes Kt, Q to B 3 would have lost.

(j) White threatened Kt to Kt 5, which would have been very strong, for instance, in the following line of play:—17—Kt to B 3; 18—Kt to Kt 5, P takes Kt; 19—P takes P, Kt to Kt sq.; 20—P to Kt 6, P takes P; 21—Q takes P, Kt to B 3; 22—P to Kt 2, P to Q 3; 23—R to K 4, R to K sq.; 24—R to R 4 ch., R to Q 5; 25—R to R 7, &c.

(k) 23—R to Q B sq. was hardly satisfactory, on account of 23 Kt to K 4; and if 24 Kt takes Kt, R takes R ch.; 25 B takes R, P takes Kt with a good centre attack. Still worse would be the variation for White 24 R takes R, Kt takes Kt ch.; 25 K to B sq. best; if K to B sq., White mates by Q to Q 4, Kt to K 8; 26—Kt 3, Q to Kt 5; attacking the Rook and threatening mate in two moves.

(l) If Q to Kt 3 instead of White intended to throw the onus of disturbing the position on the opponents by B to Q Kt 2.

(m) This exposes them to a powerful attack. Q to H 5 would, however, have been insufficient to relieve them, as White would keep up pressure by Q to Q 3 eventually in reply to Q takes P.

(n) An interesting sacrifice.

(o) Q to B sq. was better, though even in that case Black would have been tied up by the reply Kt to Kt 6 ch. followed by Q to K 4.

(p) 28—Q takes P might have led to a "firework" termination, thus:—29—Q to K Kt 4, Kt to B 3; 30—Kt to Kt 6 ch., K to R 2; 31—Q to H 5, Q takes B; 32—Kt to B 8, dbi. ch., K to R sq.; 33—Q to R 8 ch., Kt takes Q; 34—Kt to Kt 6 mate.

(q) The adverse game becomes dissipated after this effective move.

(r) There was no real remedy. If 30—P takes R; 31—Q to Q 7 ch., R to Kt 2; 32—Q takes R and wins. The rest explains itself.

GAME No. 601.

Notes by GUNSSON.

FRENCH DEFENCE.

WHITE. Maroczy.	BLACK. Rev. T. C. Chatto.
1—P to K 4	1—P to K 3
2—P to Q 4	2—P to Q 4
3—Q Kt to B 3	3—K Kt to B 3
4—P to K 5	4—K Kt to Q 2
5—P to B 4	5—P to Q R 3
6—P to Q R 3	6—P to Q B 4
7—P takes P	7—B takes P
8—Q to Kt 4	8—Castles
9—B to Q 3	9—P to B 4
10—Q to R 3	10—Kt to Q B 3
11—P to K Kt 4	11—Kt to Q 5

This move is not necessary.

Black could also have played B takes Kt, followed by Kt to B 4. This would perhaps have been better still on the last move.

12—K Kt to K 2	12—P to K Kt 3
13—Kt takes Kt	13—B takes Kt
14—Kt to K 2	14—B to R 2
15—P takes P	15—K P takes P
16—Q to Kt 3	16—Kt to B 4
17—P to K R 4	17—Kt to K 5
18—B takes Kt	18—Q P takes B
19—P to R 5	19—Kt to Kt 2
20—B to Q 2	20—B to Q 3
21—Castles Q R	21—Q to K sq.
22—B to Kt 4	22—R to R sq.
23—Q to Kt 5	23—B to Kt 3
24—P takes P	24—P to R 3
25—Q to B 6 (ch.)	25—K to Kt sq.
26—R to Q 6	26—B to K 6 (ch.)
27—K to Kt sq.	27—B to Q B 5
28—K R to Q sq.	28—Resigns.

If Q to B 5 instead, White plays 24—B to K 7.

White conducted the game with overpowering strength; he took admirable advantage of the position at every turn. Black cannot do anything to prevent R to Q B.

GOOD WORDS BY PILLSBURY.

In an article contributed to the *New York World*, Pillsbury expresses his conviction that there is no study so beneficial to youth as the study of chess. "It is primarily of benefit in inducing the habit of fixing the attention upon a given situation, and bringing the mind to work upon the question of the proper action to be taken—action and reflection thus going hand in hand. Also, like poetry and music, it stimulates the imagination; and it teaches steadfastness and intrepidity in the face of impending danger and loss. With all this it contains in practice the element of competition—the splendid element which, in every manly nature, redeems toil and makes labour light."
